Emperor of Austria will be the signal for a rising in Hungary, where preparations for asserting independence are now in progress, and there will also be further trouble in the Balkan peninsula; from which Russia expects to derive great profit. The three greatest Powers are Russia, England and America. Russia's policy is most decidedly aggressive. America is becoming more and more so, and England is determined to keep all she has and to expand wherever a good opportunity of doing so offers. Now if Japan expects to confront these Powers successfully, she must expand too. It goes without saying that she must be prepared for a war with Russia. But there is nothing alarming about this. She is well prepared and in my opinion would come off victorious. Having taken Manchuria, she could train a number of Chinese soldiers and take measures for holding this rich territory to all time. Even though Germany and France should decide to help Russia, with England neutral, they could not render any very effective assistance, for these Powers are still largely dependent on English ports for their coal. Some argue that Russia if defeated at first would try her luck a second and a third time. This is not unlikely, but once having established ourselves in Manchuria what would there be to fear? Every new war would be utilised by us for enlarging our borders; for marching on Siberia and occupying the coast adjacent to our own shores. We should have this advantage over our foes that the Chinese everywhere would welcome our rule. Acquainted as we are with their ancient customs, their form of government, their script, their antipathies and their ways of life, we could rule them better than the Russians. By showing kindness and consideration to the populace, by carrying out the principles of what is known as *Osha* (王者) government, we should have no difficulty in establishing ourselves firmly. There are those who say that we had better make terms with Russia, give her Manchuria and take Korea. But I am deadly opposed to any such compromise. It would never work. Korea has always worshipped great Powers and if she saw that Russia had taken Manchuria she would at once incline towards her, intrigue with her, and take steps to get rid of us. This is a time in which as a nation we must rise to the occasion, make a big resolve and keep to it. Let our possession of Manchuria become the ideal of the nation. A nation without an ideal is of no use. (*Nipponjin ippan kono risô wo motte moraitai, risô no nai kuni wa dame desu.*)

From this view Baron Otori Keisuke, who has made a special study of Chinese questions, dissents. His opinion, as stated in the *Taiyô*, is that Japan should certainly not go to war with Russia on the Manchurian Question. Such a war would certainly last a year and a half or two years. Japan's navy would no doubt be more than a match for the Russian fleet, but Japan's success on shore is not so certain. Even if the Russians retreated before her, it would be a mere temporary move, and to follow up the enemy over hundreds of miles of uncultivated territory would involve a drain on Japan's resources such as she could ill afford to meet. Situated as she is now, Japan's best policy is to take immediate steps for training Chinese soldiers and qualifying them to withstand Russia successfully, says Baron Otori. This they can be made to do. Chinese troops showed themselves to be more than a match for Russians during the war last year. Japan should act indirectly; and if she plays her cards well, will accomplish her purpose by means of the Chinese without involving heavy expenditure.

Viscount Tani Kanjô expresses himself as follows: The world is saying that though Russia withdrew her secret treaty with China bearing on Manchuria, in point of fact she is in actual possession of the province, and hence Japan ought to go to war with her. But on what pretext can Japan declare war? And having declared it, with Russia well established at Port Arthur, Taliwan and Vladivostok, we should find that we had embarked on a very difficult enterprise. My opinion for many years past has been that Japan should expand southwards and that she should leave the north to other Powers,

Her constant interference in Korean affairs has always seemed to me to be a mistake. It has only excited Russian jealousy and increased the difficulty of the political situation there. At the time of our war with China I was not in favour of our retention of the Liautung peninsula and I gave my reasons for this to Count Itô at the time, when I said, "Even granting that we were on the whole successful in governing the province, the effects on our military men would be anything but good." I was glad that the Liautung peninsula had to be given up and that eventually we got possession of Formosa. . . . As regards our going to war with Russia, I am not in favour of it, as it is certain that we could never really disable Russia without marching to St. Petersburg, which is out of the question. Russia has a way of surviving temporary defeat and of pursuing her policy undisturbed a short time after. The Crimean war did her little real harm, and in that case two great Powers were against her. To go to war with Russia would prove a most profitless business to us, so the less said about the matter the better. To embark on such a war would be like setting fire to our own premises. We are not ready for any such huge undertaking, and our policy should be to husband our resources and increase our armaments and thus prepare ourselves for any eventualities that may arise later on.

Both Baron Otori and Viscount Tani are intimately acquainted with military affairs and we see that they are both in favour of making terms with Russia.

* * *

The *Tokyo Asahi Shimbun* a short time ago published an article entitled *Chūgakkō to Jitsugyōgakkō* (Middle Schools and Business Schools) which gives a good account of the actual state of affairs in the educational world. We cull from the article the principal facts stated. The number of graduates of Middle Schools increases steadily every year. In 1895 it stood at 30,700; in 1896, at 41,200; in 1897, at 52,600; in 1898, at 61,500; in 1899, at 69,300 and in 1900, at 80,000. And even so there are a great many graduates of High-class Elementary Schools that are unable to enter Middle Schools owing to the keen competition. Could all the available candidates be accommodated, the number of entrances would mount up to 150,000. At the present time it is correct to say that not half of the candidates for admission to Middle Schools are successful. The attendance at Elementary Schools of children who have reached the school age is not quite so encouraging as are the figures given above. In 1895 it stood at 61 per cent., and in 1900 it had only increased to 73 per cent. What it seems to us desirable to do is to decrease the number of Middle Schools supported by local funds and increase the number of Business Schools. Dr. Kikuchi in his address to the Prefects assembled in Tokyo a few months ago seemed in favour of pursuing this policy, but he does not seem to have quite made up his mind about it. Among schools that train students for practical life, agricultural schools are the most numerous and industrial schools come next. This shows in what direction the public taste goes and the Government cannot do better than increase the number of these schools to suit the growing demand. In 1896 there were 16,000 pupils in Business Schools (*Jitsugyōgakkō*); in 1897, 20,200; in 1898, 21,700; in 1899, 24,700 and in 1900, 30,000. The rate of increase is not more than half of that of the number of pupils attending *Chūgakkō*. The country's pressing needs demand that more talent and skill should be devoted to wealth-producing industries, and the Mombushō should at once take this subject in hand.

* * *

In the *Keiōgijuku Gakuhō* appears a report of an address by Mr. Kadono Kunoshin at the Graduation Ceremony of the Institution on "Excessive Formalism," which we epitomise as follows:—It is constantly said by foreigners that there is a great deal of useless nomenclature, ceremony and red-tapeism in the East as compared with the West; and this is doubtless true. As regards Japan for many centuries she followed in the wake of China in this matter, though she was always far

behind her teachers. In modern times there has been much curtailment of ancient usages and ways, but in their place in some walks of life Western rules of procedure have been adopted and followed much more punctiliously than they are observed by the nations that formulated them. What we fail to do is imbibe the spirit of these rules. Hence it is that we become slaves to the letter. It is very much the same in Russia, we are told. I once read a tale that reminded me of what takes place in this country over and over again. Near St. Petersburg is a lake on which people are allowed to skate for a certain fixed time during the year. Even the hour for stopping skating is fixed and the government officials are most strict in enforcing the rules. Once it happened that the time for skating closed when a man was half way across the lake. He went to the other side, but was told he could not land as the time was up. He returned to his starting point, but was told that he could not land there either, as the time was up. Whether the man is still on the lake I can not say; but in this country we could match such stories without difficulty. Discretion in the application of rules is in many instances entirely wanting, and one often hears officials confessing that the application of rules causes endless inconvenience, and yet they still apply them. Though we do not advocate making rules to break them, yet the spirit of a law or a rule is of far greater importance than the letter, and discretion should be given to officials in such matters. In schools this slavishness to the letter is very evident. Most pupils only study for the sake of the degree to be obtained by passing the necessary examinations, and after they have passed these they care nothing about study. I was struck when in France by what a Director of a large school where the teaching of politics was a specialty said to me. I asked him how many graduates had passed through his school. He said he really did not know, as it was optional with students whether they received a certificate of graduation or not, and most of them did not, expecting to make their way in life without any such testimony to what they had accomplished at school. One of the objects of the *Keiōgijuku* is to break down the formalism that is so much encouraged by the exclusive policy of the Mombushō in the matter of education.

A WATER BELT AROUND THE WORLD.

The easy western water route to the Indies sought by Columbus is yet to be laid open. Balboa, as he stood on the mountain heights overlooking the Pacific, thought that he was on the brink of the discovery. Hendrik Hudson, a century later, sailed up the river that bears his name, and believed that the secret was his. But the time-lock for the opening of the Pacific treasure house was not set for the fifteenth century, nor even for the nineteenth.

Three routes in general have been proposed for canals from the Atlantic to the Pacific. The first is across the Isthmus of Darien at its north-west point—the famous Panama route. Another takes advantage of the mighty inland lake of the Nicaragua and its tributary rivers. The third is through Mexican territory, across the Isthmus of Tehuantepec. The Tehuantepec route is not at present a live issue, says *The Chautauquan*:—"Twenty years ago it was revived by the daring proposition of James B. Eads, the famous American engineer, whose jetties on the Mississippi yet stand as a monument to his genius. Mr. Eads's proposition was to build a railroad across the isthmus from ocean to ocean over which the largest vessels could be bodily transported. This plan is not wholly a dream, for just such ship railways on a smaller scale are already in operation.

"Japan needs our southern cotton. The Isthmian canal would bring New Orleans 6,000 miles nearer that expanding market. California would no longer send her wheat around the Horn, but would have a European market nearer by 8,000 miles. Much of her fruit would also be forwarded by the same route. The state of Washington has 170,000,000,000 feet of yellow and red fir yet uncut. Oregon has 25,000 square miles of timber

land, and the canal would place these forests 10,000 miles nearer the Atlantic. The manufacturers of the Atlantic and gulf states would have a water route that would bring them 10,000 miles nearer China, Japan and the Pacific islands. Much of this trade would continue to go across the continent by rail. But the more bulky goods must find a cheap water route.

"The advantages of the American canal are not to be measured by the savings now possible. Clear-headed prophets are looking forward through the new century for vast commercial operations of which the present aggregate, wonderful as it is, is but the beginning. If this country can multiply its trade fifteen-fold in one hundred years, what will the end of another century disclose? The new canal is to be built, not for a decade, nor even for a century, but it is to be a perpetual waterway between the world's two mightiest oceans.

"In the westward course of empire the Pacific has become the new theatre in the struggle for the world's commercial supremacy. To-day less than a tenth of the world's commerce is carried upon its waters. When China awakens, even as has Japan, when the Philippines begin to develop a tithe of their hidden wealth under the fostering influences of American leadership, when the Australian confederacy shall have conquered the southwestern continent, when our own empire beyond the Rocky mountains shall have attained some measure of its coming greatness, who can estimate the number of freighted ships that shall then traverse the Pacific? A continent to-day divides the two oceans. The severing of that land barrier, which would complete the equatorial water belt around the world, would accomplish its full share in working out the results."

SWIMMING AND DIVING.

The swimming races and diving competitions of the Yokohama Amateur Rowing Club, which had been postponed because of inclement weather the previous week, took place on Saturday afternoon. The weather was, of course, warm but a cool breeze kept the temperature down at the bathing barge, where the events took place. The water was rather choppy and a strong flood tide ran across the course, so that the times were not specially brilliant, though the contests were all interesting. No one could touch Herbert Goddard in the swimming races for which he went out, but H. Y. Irwine made a good try in the quarter mile and succeeded in getting within a couple of lengths of the leader at the finish. The headers were all won by J. F. Drummond, whose performances were most graceful; Carst got within one point of him for the running headers off the spring-board, but in the other events he was undeniably superior.

The judges were Dr. Wheeler, Mr. F. J. Hall, Mr. W. Goddard, Mr. R. Hay; and Mr. F. J. Hall also acted as time-keeper.

Committee:—H. C. Litchfield, President; P. S. Bent, Captain; Dr. E. Wheeler, C. Thwaites, H. Keswick, W. M. Squire, W. Goddard, L. Mottu; H. A. Poole, Hon. Treasurer, H. E. Hayward, Hon. Secretary.

Following were the results:—

I.—100 YARDS.	
H. Goddard.....	Scratch
S. H. Kuhn.....	2 seconds
H. Y. Irwine.....	4 seconds
J. Helm.....	2 seconds

Goddard, starting from the scratch position, caught his men with comparative ease and won by about seven yards. Kuhn and Irwine all but tied for second place. Time, 1.27½.

II.—RUNNING HEADER FROM SPRING BOARD.

J. F. Drummond.....	1
W. M. Carst.....	2
J. F. Marques.....	0

Drummond won this event with 49 points Carst second with 48.

III.—LONG DIVE.

J. F. Marques.....	1
O. Strome.....	2
W. B. Mason.....	0

The long-dive resulted in Mason, after industrious exploration of the harbour, coming up after

the others only a few yards from the Bathing Barge. Stromer also steered a very erratic course. Marques was the winner with an under-water swim of 110 feet.

IV.—RUNNING HEADER FROM TOP OF BARGE.

J. F. Drummond	1
W. M. Carst	2
J. F. Marques	3

Drummond won this competition with 53 points, 11 of which were for entry, 13 for recovery, 15 for take-off, and 14 for general elegance; Carst was second with a total of 46, 10 for entry, 10 for recovery, 12 for take-off and 14 for general elegance. Marques scored 36 points.

V.—1/4 MILE.

H. Goddard	Scratch	1
H. Y. Irvine	Scratch	2
J. Helm	10 seconds	3
W. B. Mason	5 seconds	4
S. H. Kuhn	10 seconds	5

The quarter mile course consisted of four trips between the barge and the pontoon, the latter being rounded twice. Goddard assumed the lead before they reached the pontoon the first time, Kuhn second, and Helm next. Irvine caught up and took second place but Goddard finished two lengths to the good, Helm third, Mason fourth and Kuhn last. Their times were: Goddard 8.12; Irvine 8.20; Helm 8.40; Mason 9.06 and Kuhn 9.54.

VI.—STANDING HEADER FROM TOP OF BARGE.

J. F. Drummond	1
J. F. Marques	2
W. M. Carst	3

Drummond won this easily with a total of 40 points. Marques was second with 32, and Carst third with 31.

VII.—100 YARDS.

(For Non-Winners.)

S. H. Kuhn	4 seconds	1
E. M. Barnby	5 seconds	2
W. B. Mason	2 seconds	3
W. M. Carst	3 seconds	4

Kuhn won this, Barnby pressing him somewhat, but only gaining second place; Mason was third.

YACHTING.

Five 39-raters started on Saturday at 12.30 to race for the "Maid Marion" Cup and another prize—the *Maid* herself not going out. This race, it may be remembered, had been postponed. At the outset there was a strong breeze, which afterwards dropped a little only to freshen again, and the bay was crossed in good time. In the event *Golden Hind* came in well ahead, and even outside her allowance of 5m. 13s. won the first prize easily, taking also two record points while *Mary* was second and took one point. *Huante* gave up. The times were:—

	Finish.	Corrected.
	h. m. s.	h. m. s.
<i>Mary</i>	3.33.40	3.33.40
<i>Spray</i>	4.02.15	3.52.12
<i>Golden Hind</i>	3.26.30	3.21.17

Five of the cruising class raced for the "Kingfisher" Cup, *Daimyo* and *Svanhild* making a good match over most of the course. *Asagao* stuck well to them, however, and by the aid of her 30 minute allowance won the cup easily; *Mosquito* with a similar advantage making a good second. The times were:—

	Finish.	Corrected.
	h. m. s.	h. m. s.
<i>Daimyo</i>	4.25.50	4.25.50
<i>Svanhild</i>	4.29.30	4.29.30
<i>Mosquito</i>	4.43.05	4.13.05
<i>Surprise</i>	4.59.10	4.29.10
<i>Asagao</i>	4.41.30	4.11.30

The 17-rater race arranged for did not start. Four 12-raters had quite an exciting time, one capsizing twice and another once. Eventually *Titania* came in first at 3.21.20 and so won the "Surprise" Cup, *Vera* being next at 3.27.20.

It seems that our report of the cruisers' race on Saturday hardly did justice to *Asagao*, which not merely won the first prize without the aid of her 30 minutes' allowance but was first on club handicap for which the corrected times were:—*Asagao* 4.25.42; *Daimyo* 4.25.50; *Svanhild* 4.29.30; *Mosquito* 4.36.03; *Surprise* 4.51.00.

THE MAPLES HOTEL.

An extraordinary general meeting of the shareholders of the *Maples Hotel* was held on Tuesday afternoon for the consideration of the advisability of liquidation or other means of closing the company's business. Among those present were Messrs. P. B. Clarke, K. F. Crawford, C. Glahn, C. Olsen, E. P. Bishop, J. E. de Becker, H. Sato, and Dr. Munro.

Mr. Clarke was voted to the chair.

On the motion of Mr. Bishop seconded by Mr. DE BECKER it was agreed that the press be admitted.

The minutes of last meeting were read and confirmed.

The CHAIRMAN stated that the directors at a recent meeting had decided to ask Messrs. C. D. Moss, F. O. Stuart, F. Retz and one member of the Russo-Chinese Bank to be present.

On the motion of Mr. Bishop seconded by Dr. MUNRO it was decided to admit those gentlemen. Mr. Moss responded to the invitation, and produced a transfer of shares, which, however, was unregistered, but which might place him *en rapport* with the meeting.

On the motion of Dr. MUNRO seconded by Mr. BISHOP, Mr. DE BECKER was elected to take the vacant seat at the directors' board rendered vacant by the resignation of Mr. R. Ward.

At this point the following balance sheet was placed before the meeting:—

THE MAPLES HOTEL COMPANY, LIMITED.
PROFIT AND LOSS ACCOUNT FROM 1ST NOVEMBER, 1900, TO 30TH JUNE, 1901.

To Receipts from:—	Y
Board and Lodging	11,193.38
Bar, Billiards, Tennis, &c.	4,807.26
	16,000.64
Balance being Loss	11,111.86
	27,112.50
By Balance, being Loss as at 31st Oct., 1900	Y
1900	2,229.30
Payments for:—	
Provisions	6,718.01
Wines, Cigars, &c.	3,395.64
Wages	5,159.79
Expenses (including Repairs)	6,154.09
Advertising	516.75
Interest	1,953.95
Fire Insurance	691.97
Taxes	293.90
	27,112.50

BALANCE SHEET AS AT 30TH JUNE, 1901.

LIABILITIES.	Y.
Share Capital	74,900.00
Divided as follows:—	
8% Cumulative Preference Shares:	
350 Shares of Y.100 each fully paid up	35,000.00
Ordinary Shares:	
399 Shares of Y.100 each fully paid up	39,900.00
	74,900.00
Mortgage Account:—	Y.
1st Mortgage at 7% Interest	25,000.00
2nd Mortgage at 8% Interest	15,000.00
	40,000.00
Loan Account	1,000.00
Sundry Creditors, including Interest on Mortgages	7,486.90
Overdraft with Russo-Chinese Bank	3,301.87
	126,688.77
ASSETS.	Y.
Purchase Price of Land, Buildings, Machinery, Fittings, Furnishing, &c.	99,900.00
Alterations and Additions thereto	11,311.71
Sundry Debtors	1,969.12
Value of unexpired Fire Insurance Premiums	143.78
Value of Stocks in hand, as per Manager's valuations:—	
Provisions	Y 204.11
Wines, Cigars, &c.	1,333.52
	1,537.63
Cash in hand	894.67
Balance being Loss	11,111.86
	Y 126,688.77

Yokohama, 20th July, 1901.

I have examined the accounts of the *Maples Hotel* Co., Ltd., for the period from 1st November, 1900,

to 30th June, 1901, and have found the same to be correctly stated and sufficiently vouched and instructed and I certify that in my belief the above Balance Sheet exhibits a true state of the Company's affairs at the latter date, subject to the remarks that no allowance has been made for depreciation and that there are still some questions pending between the Directors and the vendor as to the latter's liability to refund certain amounts paid by the Company.

FRANK O. STUART, C.A., Auditor

P. B. CLARKE,)
N. G. MUNRO,) Directors.
C. GLAHN,)

I have examined the above Balance Sheet and have found it to be correct.

(Signed) SATO HARUO, Inspector.

Mr. DE BECKER asked a number of questions with reference to the accounts which the Chairman and Dr. Munro answered, their replies being supplemented by statements from Mr. F. O. Stuart, who afterwards arrived.

As to an allusion at the end of the accounts to "the vendor" Mr. Stuart said he understood the vendor to be Mr. J. H. Ranger. He had asked Mr. Litchfield, the company's lawyer, whether the liabilities which Ranger undertook to pay off had been paid and Mr. Litchfield said he could not express an opinion.

After some conversation, Mr. DE BECKER proposed "that the accounts as submitted to the meeting be passed without prejudice to any subsequent right of action which the company may find itself in a position to assert against third parties at a later date in connection with its outstanding debts as on April 30th, 1900."

Mr. BISHOP seconded and this proposal was agreed to.

Mr. DE BECKER said there had been a great number of versions about town as to the proceedings of the last meeting, and it seemed to him that it would be a good thing to make a statement as to how the company really stood, the connection between this company and the old one, etc., so as to show who was to blame. If it was thought advisable to have such a statement he was prepared to make it.

The feeling of the meeting being that Mr. de Becker should make the statement, he was asked to do so by the Chairman.

Mr. DE BECKER then said he had gone over documents placed at his disposal by Dr. Munro and Mr. P. B. Clarke and he had had access to the former books. He then read the following statement based on the facts thus brought under his notice:—

1. The *Maples Hotel* was originally established as a Sanitarium by Drs. Munro and Baetz and Messrs. E. B. and P. B. Clarke as the proprietors thereof. It was not a Company and not a juridical person but simply a syndicate or association of four persons engaged in a joint undertaking.

2. Owing to certain financial reasons and at the suggestion and persuasion of Mr. J. H. Ranger, it was agreed to float the concern as a Limited Liability Company under the laws of Japan, it being understood that the Company—i.e., The *Maples Hotel* Co., Ltd. should "undertake, pay, satisfy, and discharge all the debts, liabilities, and obligations of the old concern whatsoever," and that it should "adopt, perform, and fulfil all contracts and engagements binding upon" the original syndicate, and in order to effect this object Mr. Ranger was entrusted with very extensive powers by the original proprietors—powers which he in my opinion construed and used somewhat too liberally if we consider the intentions and interest of the other parties concerned.

3. On the 17th April, 1900, a meeting of the promoters was held to organize the Company, and the result was that the Company was declared organized with a Capital Stock of yen 39,900 the first Board of Directors elected being Messrs. J. H. Ranger, W. Grautoff and H. Gunn, the two latter names being of gentlemen more or less identified, I believe, with Mr. Ranger.

4. On the 6th June, 1900, a meeting was held in the course of which the Directors were instructed to secure the registration of an amendment to the original Articles of Association, by which amendment the Company was authorized to increase their capital stock by the sum of yen 35,000 and the Directors of the Company instructed to issue preference shares in return for "property, credits or cash payments, or in return for deliveries made partly in property, partly in credits, and partly in cash, in such amounts and proportions as the Directors may approve and accept." This amendment was passed (1st) for the

purpose of enabling the Company to find funds with which to pay off their outstanding liabilities among which liabilities were included the liabilities of the old syndicate which the Company was formed to take over; and (2nd) to provide a certain amount of working capital.

5. On the 7th June a meeting was held and the following resolution was passed:—"Resolved that three-hundred and fifty preference shares, fully paid up, be issued in favour of Mr. J. H. Ranger in consideration of his having financed the Company through its difficulty, and having assumed or settled various debts and obligations of the Company to carpenters, engineers, pay rolls, florists, tradesmen and other outstanding bills on the first day of May, 1900."

After an adjournment of 15 minutes, the Secretary of the Board of Directors reported that "he finds that various accounts of the Maples Hotel Co., prior to May 1st, 1900, have been duly settled or assumed by Mr. J. H. Ranger, and that the resolution of the general meeting has been duly complied with by him, and that he will proceed, as secretary of the Board, to register in the Court the issuance of the preference shares to J. H. Ranger."

* * * All details having been complied with according to law, Mr. Ranger agrees as follows: "1. the undersigned, subscribe for the number of preferred shares of the fully paid-up capital stock of the above-named Company, set opposite my name, the same to be paid for by me in assuming various debts of the old Company, comprising carpenters, engineers, pay rolls, florists, tradesmen, and other outstanding bills up to May 1st, 1900. (Signed) J. H. Ranger, 350 shares." and the Inspector of the Company, Mr. E. B. Clarke, reported to the meeting "I find that the three hundred and fifty shares of preference stock authorised by the Board of Directors and sanctioned by the stockholders' meeting have been subscribed to by Mr. J. H. Ranger. (2) That the subscription was paid for in full by cash or credit. (3) That I, as inspector, approve of the entire transaction and consider the same satisfactory in all respects. (4) Further, that I am satisfied and convinced that the consideration is sufficient for the issuance of the 350 shares of the preferred stock."

(Signed) E. B. Clarke."

6. It has been stated that both the Secretary and the Inspector reported that Mr. Ranger had settled all the obligations he had assumed, and that the meeting passed a resolution freeing him from liability: this is not correct. The resolution contains the words "assumed or settled." The Secretary reported duly "settled or assumed," and Mr. Ranger under his own signature stated that the preference shares were to be (a distinct future tense) paid for by me in assuming various debts of the old Company. As there was no "old" Company but only an old "partnership" it is evident even without further evidence, that the debts of the old partnership were included in this statement. The Company was formed on the 17th April and Ranger's undertaking was "outstanding bills up to the 1st May, 1900," so Ranger's memorandum no doubt covers all debts of the old partnership which were assumed by the Company on 17th April, 1900, and the debts of the new Company up to the 1st May. Mr. E. B. Clarke, the Inspector, reported that the shares were paid for by "cash or credit." Neither the report of the Secretary nor the Inspector nor the resolution of the meeting of the 7th June, 1900, relieved Mr. Ranger of his responsibility; he has only relieved himself to the extent of the debts he has actually paid; and any debts belonging to the old partnership, or owing by the Company as on the 30th April, 1900, and still outstanding, must be included under the heading of debts "assumed" by him for which he is still legally and morally responsible.

7. The question will arise as to what was the amount of outstanding on the 30th April, 1900. So far as could be ascertained at the time the amount of the debts aggregated something like yen 30,000, and the understanding among the parties was that these debts should be settled and the balance of about yen 5000 should be turned into the Company to furnish it with floating capital. This was the *raison d'être* of the issue of yen 35,000 worth of preference shares. So far as can be ascertained, Mr. Ranger has already settled yen 24,000 either in cash or by shares, leaving an apparent balance of about yen 11,000 still outstanding which he has not accounted for under the plea that he never contracted to render an account. This misunderstanding between the parties is a very serious matter for the Maples Hotel Co. as it leaves the Company open, after deducting the yen 5,000 estimated as a surplus to be carried to working capital, of about yen 6,000 which it may be called upon to pay in course of time, notwithstanding the fact that the Company has already issued preference shares in payment. Of course Mr. Ranger may probably have some explanation to offer should the matter be brought into Court, but meanwhile it looks somewhat as if he had shirked a portion of his responsibility in the premises, and his absence in Shanghai makes it impossible to adjust matters with him with that

facility with which they could perhaps be adjusted were he in this country. In order, however, to clear up the matter and to protect the interests of the shareholders I think the Company should bring a civil action against Mr. Ranger demanding the due fulfilment of the obligations he contracted for, deducting of course the debts he has already settled up.

8. The question arises as to whether then the Company is liable for the debts of the old partnership, or whether they have been relieved by Ranger's undertaking. My answer to that is that liabilities cannot be assigned under a contract, and that third parties cannot be compelled to accept performance of the contract from one who was not originally a party to it. Of course there are exceptions to this rule, for a liability may be assigned with the consent of the party entitled; but this is in effect a rescission, by agreement, of one contract and the substitution of a new one in which the same acts are to be performed by different parties. In other words, persons who did not definitely consent to the Company being substituted as debtors in place of the original proprietors of the Maples have a right of action against the four members of the old partnership to the extent of their claims, or they can elect to sue the Company at their option, but those members again have recourse against the Company which assumed their obligations. Persons who did not definitely consent to Ranger being substituted as debtor in place of the Company have a right of action against the Company or Ranger at their option, but the Company can sue Ranger to the extent that he assumed its obligations.

So far as I can see, some of the persons whose claims have not been paid have already selected Mr. Ranger as the debtor, and in these cases it seems that they have waived their right of action either against the Company or the original proprietors, all other things being equal. It all comes down to a question of consent on the part of the creditor as to who is or is not liable. In addition, there is also a question of certain articles which have been sold, which belonged to the Company, and which have not been accounted for, but there seems to be some dispute with regard to the ownership of these goods, and if they are included in an action brought against the vendor, I suppose that the amount might be recovered, but there appears to be some doubt about it, and I should not like to say for certain how we could come out, if they were included in case of an action being brought, although I believe that the amounts might be recovered. There are several items, but the trouble is that, according to the statement made by one of the parties interested, the sale of those articles was arranged for before they were actually transferred to the Company. This, however, is a matter for the decision of a Court of Law.

In reply to Dr. MUNRO, Mr. DE BECKER said if Ranger's shares had been assigned to a third party for consideration and registered by the company they could not be cancelled.

Mr. C. D. Moss, being then asked to speak, said that having been requested to see what chance he had of selling the property he had to take the reports he heard as correct. He got a probable buyer at a price nearly his own idea of the value, but on going into the matter more closely he came upon liability after liability of which he had known nothing. That virtually closed negotiations. Then his anxiety became to do what he should have done first—find out what he had to sell. He asked the Directors to furnish him with accounts and wrote to Mr. Stuart, and after a time he got the accounts, but that entailed much labour and in the meantime his buyers—he had only one in mind—declined to have anything to do with the matter until he, Mr. Moss, could tell him exactly what he had to sell. At the present moment that was a very difficult question to answer. The property might be beset by legal difficulties. He thought the best plan was to liquidate by private arrangement and if they appointed a liquidator he thought it would be wise to act as under the English law—appoint a committee from among the creditors to assist him. It would, he thought, be the quickest, cheapest and best way of liquidation. Bankruptcy would take longer and be more expensive. The committee should include an accountant, the principal creditor and a representative of the second mortgage. The liquidator would represent the company and the creditors themselves.

Dr. MUNRO said the hotel had been working under very unfavourable circumstances. They had had as managers gentlemen who had had no training. The question that presented itself to his mind was this. The place was eminently suit-

ed for a hotel, but had been hampered by want of capital. Their income was at present just covering their expenditure and his point was whether it would not be better to reduce their working capital and get in sufficient money to complete alterations which would enable them to charge larger prices than they had been doing. He did not insist on this, but he deprecated rushing into liquidation if it seemed probable that by reducing the capital and engaging a properly qualified man they could carry on the hotel.

Mr. OLSEN spoke strongly in favour of liquidation, and after some discussion made a motion on behalf of Mr. Boyes that the company should liquidate.

Mr. GLAHN seconded and the proposal was adopted by 225 to 5 shares.

Mr. DE BECKER said under Japanese law the directors were liquidators also unless they should appoint some one to liquidate for them.

Mr. GLAHN proposed and Mr. Olsen seconded that Mr. Moss should be appointed to liquidate in place of the directors, the latter explaining that he did so because he thought the directors had quite enough to do.

Mr. DE BECKER proposed as an amendment that the directors be left liquidators as contemplated under Article 226 of the Commercial Code.

Dr. MUNRO seconded.

There voted for the amendment 245 against 88. The amendment was therefore declared carried.

Mr. GLAHN intimated his resignation from the Board of Directors.

This closed the business.

FIRES.

Fire broke out in a doll shop at Kajicho, Kanda, early on the morning of the 15th instant. Four houses were burned.

A post office at Oimura, Saitama Prefecture, was burnt on the evening of the 16th inst.

The storehouse of the Kanegafuchi Spinning Co., Kobe branch, caught fire on the 16th inst. One building was destroyed.

Fire broke out in a storehouse, at Yonimura, Ashigara Kamigori, Kanagawa Prefecture, on the 15th inst. Three houses were destroyed.

Another fire occurred at Kamomachi, Minami Kanbaragori, Niigata Prefecture, early on the morning of the 16th inst. Thirty houses were destroyed.

Fire broke out in a kerosene oil godown belonging to the Japan Kerosene Oil Joint Stock Company, at Minami Senju, Tokyo, on the morning of the 17th inst. Three buildings, containing about 10,000 boxes of kerosene oil, were burnt. One man was injured. The building was insured to the extent of yen 10,000.

LAW CASES.

THE MAPLES LABEL CASE.

Judgment was given on Friday in the Yokohama Chihō Saibansho with regard to the charge brought against Mr. P. B. Clarke, manager of the Maples Hotel, of slandering Mr. J. H. Ranger. On the bench were Judge Kano, and Associate Judges Mabuchi and Shimamura. Procurator Honda was also present and the accused and his counsel, Mr. Sato Hakuj, were in attendance.

The judgment delivered by the Court, which was interpreted by Mr. J. de Becker, found the accused not guilty. Proceeding the Court said the case was brought up on the information of the Public Procurator that the defendant in this case on the 24th of June in the present year at a meeting of the Maples Hotel Co., Ltd., at No. 85, Bluff, made use, with reference to J. H. Ranger, (a shareholder and formerly a director of the company), of words to the effect "down-right swindler" and further went on to say that the company had been swindled right and left, that it was cleverly done, that nobody knew how it was done, and that it was impossible to get hold of

the man that did it. The Procurator argued that these statements constituted the crime of slander and asked the Court to award punishment accordingly.

The Court found that the defendant did use the words "down-right swindler" and that he went on to use the other words quoted, but that "down-right swindler" were simply words of abuse. In order to constitute the crime of libel or slander it was necessary to pick out certain acts of a man and say that he did such-and-such a thing—to say what was done. In this case such statements were not made. On reviewing the evidence the Court thought that the proofs were not sufficient and therefore in accordance with the provisions of the Code of Criminal Procedure they adjudged the accused not guilty and dismissed the case.

The Public Procurator has appealed.

Judge Kano resumed in the Yokohama Chiho Saibansho on Friday the trial of the Frenchman Luyat, who is charged with obtaining goods under false pretences. Defendant, in answer to the Court, said:—Of the seven articles mentioned by the prosecution I do not remember having received the *habutaye* set down as No. 5. As to the prices of the articles, as mentioned by the prosecution, there may be some difference. I stayed at Clausen's Hotel prior to my departure from Yokohama. I don't remember at what time I went to No. 164 on July 8th. The object of my leaving Yokohama was to go to Kobe, as I had business with the French mail steamer which was then at Kobe. My journey would have taken 15 or 16 days. I think I told my Portuguese employe of my intended departure for Kobe. The goods I brought with me were all my personal effects. My intention to visit Kobe was formed two or three days prior to my departure. I did not pay Tanabe Yoshimatsu because I did not know how much I owed him. I did not pay the Chinaman for clothes because he left the bill at the hotel. I did not buy 10 cases of champagne from Boyes & Co. at yen 480. I arranged with the firm to buy champagne at a discount of 10 or 15 per cent. from that price. I paid yen 250 to Boyes & Co. I paid the money to a Japanese banto. It may have been my mistake. I was not called upon for payment several times. Only once was I called to pay and at that time I think I paid yen 250.

In the Yokohama Chiho Saibansho on Saturday Messrs. Boyes & Co., Yamashita-cho, Yokohama, raised an action against the Frenchman Luyat (who is now being prosecuted on a charge of obtaining goods under false pretences). Plaintiffs claimed yen 480 (with 6 per cent. interest per annum from 28th June until the fulfilment of the judgment in this suit) in respect of a quantity of champagne supplied to the defendant. The latter asserted that he paid yen 250 to the plaintiffs' banto, and denied further liability. Judgment will be given on August 20th at 10 a.m.

In the Yokohama Chiho Saibansho on Tuesday sentence of guilty was passed by Judge Kano upon the Frenchman Luyat, who was prosecuted on a charge of obtaining articles from various quarters under false pretences. The accused was sentenced to one year's major confinement, six months' police surveillance, and a yen 20 fine. In the same Court before Judge Kano on Tuesday judgment was given for plaintiffs in a suit brought by Messrs. Boyes & Co. against Luyat. Defendant was ordered to pay the sum of yen 480 with 6 per cent. interest per annum from June 29th until the fulfilment of this judgment. He was ordered in both cases to bear the costs of Court.

Two American blue-jackets belonging to the cruiser *New York* have been handed over to the U. S. Naval Authorities at Kobe the other day on a charge of having absconded with yen 110 Government money. The men were picked up at Tadotsu.

It is reported that Dr. A. G. Smith, No. 66, Yamashita-cho, Yokohama, through his counsel, Mr. R. Masujima, has instituted in the local Courts a divorce suit against his wife, Mrs. Ida

May Smith, who is now living in California, U.S.A. The hearing of the case will take place at an early date.

Two American sailors named W. L. Matchus and Joseph H. Vincent, belonging to the U.S. cruiser *New Orleans*, who had failed to return to their ship were arrested on Wednesday in the Yokohama Public Gardens and transferred to the Saibansho the following morning.

A young man named Suzuki Vonezo, living at Imairi-cho, Shiba, Tokyo, was arrested by the police on the 17th inst. on a charge of stealing 19 yen from a tobacco shop at Kanda. The Local Court sentenced him to 9 months' imprisonment and 6 months' police surveillance.

NEWS OF THE WEEK.

Two Italian men-of-war arrived at Nagasaki on the 19th inst. from Taku.

The Japanese standing squadron was to arrive at Fusan on the 20th inst.

Lady Francis Hope (May Yohe) was shopping in Yokohama on Monday.

The French cruiser *Gauche* arrived at Nagasaki on the 19th inst. from Kobe.

The thermometer registered 99° in the shade at Shanghai on August 16.

The sale of No. 65 of the *Dokuritu Shinbun* was suspended by the Home Minister on the 17th inst.

Major-General Nakanura, chief of the General Staff, left Taku for Japan by the *Kokura Maru* on the 16th inst.

The Shanghai Amateur Circus is spoken of in enthusiastic terms by recent visitors to the Model Settlement.

The Emperor and Empress have presented yen 700 to the sufferers by the storm in Formosa on the 2nd inst.

Several houses were blown down by a whirlwind at Karatsu, Hizen Province, on the afternoon of the 20th inst.

The Nippon Yusen Kaisha steamer *Teshio Maru* will be launched from the Kawasaki shipyard on the 28th inst.

The Japanese war-vessel *Chihaya* left Yokosuka for Shimizu on a trial trip on the 15th inst. She will also engage in torpedo practice.

At Bangkok the subscriptions for a statue of Queen Victoria, chiefly from Chinese and Indian British subjects, amount to about 812,000.

The Nippon Yusen Kaisha steamer *Tokachi Maru*, which was built at the Kawasaki Shipyard, had her trial trip in Kobe harbour on the 21st inst. She is pronounced a success.

A game of baseball was played on the Yokohama Cricket ground on Saturday afternoon between teams captained by Messrs. Swan and Thorn respectively. Mr. Swan's team won by 16 runs to one.

Kusakabe Gijuro, editor of the *Ryomo Jitsugyo Shimpō*, and Horikoshi Kajuro, Manager of the same paper, were arrested by the Tochigi Court on the 17th inst. charged with blackmailing a watch-dealer.

A *sendo* named Suzuki Chokichi, living at Honden-mura, Minami Katsushika-gori, Tokyo, was arrested by the police on the 14th inst. at Shizuoka, charged with stealing 500 yen belonging to another man on the 11th ult.

Okuda Kinnosuke, a native of Aichi, was arrested by the Isezaki-cho police on the 21st inst. charged with having stolen several articles belonging to two guests of an hotel at Hanazaki-cho Nichome, Yokohama.

The *Leeds Mercury* has been sold to the Harmsworth brothers. "So passes into the hands of strangers and the vanguard of the

new journalism" (says the *Yorkshire Post*) "the glory and moral dignity of what was for the best part of the last century the most powerful journal in the North of England."

The steamer *Okinawa Maru* left Nagasaki for Yaweyama (Ryukyu) on the 20th inst. to repair the cable between Formosa and Nagasaki, which was interrupted on the 2nd inst.

The building of a library for the House of Representatives has been entrusted to Messrs. Okura and Company as the result of public competition. The work is to be completed by November next.

Harajima Yozo, employed by Tanokura Tsunekichi, at Hachojimachi Minami Tamagori, Tokyo, is accused of stealing yen 1,000 belonging to the proprietor on the morning of the 20th inst. The man is at large.

The trustee of Mr. Terah Hooley's estate announces through the London papers that he will pay a second dividend of 1s. 9d. in the pound, making a total of 3s. 9d. in the pound after more than three years of bankruptcy.

In consequence of the trouble caused by stowaways on the American liners, the Water Police now inspect all ships before they leave their berths. The *Tosa Maru*, which left on Wednesday, was the first to come under the new arrangement.

The wreck of the P. & O. *Sobraon* on Tung-ying Island was entirely broken up in the recent typhoon; but it is understood that the speculators who bought the wreck made a good profit out of her before the stormy weather came on.

The body of a coolie, drowned by a recent inundation, was found in the Iwazaki Coal Mine at Fukuoka on the 20th inst. The man belonged to the company of sixty-nine who were drowned in July; the rest have not yet been found.

Two dredgers have been at work for some time round the *Tsuri Maru*, which is aground in the Yangtze, near Christmas Island. Several feet of mud have been cut away all round her and it is hoped that by this means she may be refloated.

Under "Latest News," on Aug. 14th the *Echo de Chine* said that there had been violent manifestations at Malta in consequence of new taxation. A number of English soldiers had been killed, and English flags torn to pieces by the mob.

Kojura Chu (13) living at Iriyamachi, Shitaya, Tokyo, was arrested by the Honjo Police on the 17th inst. charged with stealing several ducks from a house at Senzoku-mura, and other places on the 13th and 14th inst. She sold the stolen ducks to a poulterer.

There have been two large fires in Sydney, involving the loss of five lives. The insurance companies have been badly hit. It is stated that all the present year's premiums from forty-two insurance offices operating in Sydney will be absorbed in meeting claims.

The Governor of Chiba, reporting to the Home Department, states that a big fight occurred between fishermen of Koshihama and Katsura, on the beach of Katsura on the morning of the 16th inst. The cause was a quarrel over the cutting of *kujime* (sea weed). Several persons were injured.

Yuasa Kunakichi, living at Miyaki-machi, Miura, Kanagawa Prefecture, and three others started to clean out a well on the 16th instant. Yuasa went down first but making no signal the other two went down. Becoming alarmed at the silence the fourth man ventured in and found the three lying at the bottom. He and others at once brought them to the up. After medical treatment two men recovered, but Kunakichi died.

It was reported from Tientsin on Aug. 15th that Major-General Yamane, Commander-in-Chief of the Japanese troops, who was to have arrived there from Peking on that date, had postponed his departure. The allied troops had also decided to alter their programme of withdrawal and to abandon the evacuation of Peking for the time

being. The situation, it was added, was rapidly taking a serious turn.

The new line of the Bantan Railway will be opened on the 1st September.

A man was run over by a train near Sakuragicho, Yokohama, on the night of the 19th inst.

Two earthquake shocks were felt in Yokohama shortly after eleven o'clock on Tuesday night.

Traffic between Yamagata and Tateoka on the O-U West line will be opened on the 23rd inst.

A thunderstorm occurred at Azuma-mura, Gumma-gori, Gumma Prefecture, on the afternoon of the 18th inst. One man was killed and one woman injured.

A woman named Kobayashi Taki, living at Chitosecho, Yokohama, was arrested by the Koto-bukicho Police on the 19th inst., charged with selling lottery tickets.

A fight broke out between several *bettoes* attached to the Military Cadets School and some *bettoes* of the Officers School at Shinjuku, Tokyo, on the night of the 16th. One *betto* was badly injured and three were arrested.

Passage rates by most of the principal steamship lines connecting with Hongkong were raised 10 per cent. because of the enhanced price of coal. The price of coal has gone down, but the passage rates have not. Why, asks the *China Mail*?

The Japanese war vessel *Hatsuse* left Yokosuka for Sasebo on the 19th; the *Shiranui* left Kobe for Sasebo; the *Chitose* left Chefoo for Taku; the *Afayko* left Kitsuki for Hamada, and the *Akashi* left Nagasaki for Sasebo on the 20th instant.

The contest for the Elcho Challenge Shield at Risley (25 shots at 800, 900, and 1,000 yards), resulted as follows:—

England	1,609
Scotland	1,595
Ireland	1,585

Last year the scores were:—Ireland, 1,537; England, 1,518; Scotland, 1,505.

A man passing a police-post at Tokiwa-cho, Fukagawa, on the night of 20th inst. was suspected of robbery, and the police on searching him found a silver watch and a clock. He is named Yamamoto Matsugoro, lives at Rokenbori, and had feloniously entered a house on the night of his arrest.

Kuromiyo Kuninosuke, Hotta Matsujiro, and Arita Yeinosuke, of Aichi Prefecture, were arrested by the Tsujima Police on the 17th inst., charged on suspicion with stealing several articles and money belonging to Mr. Kato, formerly Minister of Foreign Affairs, who was journeying to Aichi. Hattori hanged himself in the police station the same night.

Two German assistant engineers belonging to the N.D.L. steamer *Princess Irene* were charged at the Singapore Police Court on the 31st ult. with taking photographs of one of the harbour fortifications. One of the men was sentenced to two months' rigorous imprisonment and the other was ordered to pay a fine of \$250, or in default to undergo two months' rigorous imprisonment.

Matsumoto Ichiro, living at Imagawakoji, Kanda, Tokyo, was arrested by the Isezakicho police on the 14th inst., on a charge of stealing several articles from a house occupied by Lieut.-Colonel Yoshida, at Kita Yamashitacho, Tokyo, on the afternoon of the 11th inst. He was arrested in Yokohama in December last, charged with robbery, and was still under police surveillance.

A telegram from Hankow of July 27th states that the barracks which were built outside of the Wusho gate, Wuchang, three years ago and which were used by 3,000 men under command of General Go Gen-gai, stood on ground which was under water during the recent flood and the

foundations were weakened. A storm swept over the town on the 27th July suddenly, and one whole row of the buildings collapsed. Scores of men were either killed or injured.

News was telephoned to the Oriental Hotel from the Yaami Hotel, Kioto, on Thursday, says the *Kobe Herald*, of the death of Captain H. J. Purvis, of the Third Bombay Cavalry. The unfortunate officer, who arrived in this country on leave a few weeks ago, was found dead in his bed at 4 o'clock in the morning. According to information received at the British Consulate death was due to heart failure.

The C.M. steamer *Hsinfung*, which left Chefoo for Shanghai on Aug. 2nd met next day with the typhoon and had to anchor. Dragging her anchors, she drifted on to the shoals, 90 li north of Shaweishan, where she remained aground for eight days. On the 11th the tide rose sufficiently high to float her and she was able to proceed on her voyage to Shanghai, where she arrived on Aug. 13th.

A serious accident occurred at a festival which was being held at Kitano, Kyoto, on the night of the 15th inst. The grounds of the Tenmangu shrine are thrown open to the public on the 15th of every month, and many proprietors of raree-shows and shops take advantage of the occasion to erect their stalls. At one of these ball throwing on a new system was taking place and many people thronged the stall. Suddenly a lamp went out and a man started to replenish the oil. The lamp exploded setting fire to the kerosene oil tin. Twelve guests were injured.

Shinogi Shigejiro, a native of Hyogo, employed in a shop occupied by Handa Koshichi, at Satsumabori, Osaka, was arrested by the Asakusa police on the 20th inst. on a charge of stealing *yen* 2,600 belonging to the proprietor. The theft occurred in April last. The man went to Kyoto, and then travelled through Shikoku, Kyushu, and Ise and when arrested he had in his pocket thirty *yen* notes and twenty-four of 5 *yen*.

Sugiyama Zenkichi, Suzuki Gonbei, Kitayama Totaro, and Masui Junpei, living in Tokyo, were arrested by the Police on the 19th inst. It was their habit to lounge about Ginza every day in wait for countrymen whom they "buncoed." The other day a rich man named Arita Yeizo and another, a native of Tochigi, passing through Ginza were accosted by Zenkichi and taken to his house. Here they were shown some counterfeit paper money which the confederates urged the countrymen to buy. The police getting wind of the affair, the men were arrested.

Messrs. Kimura Masaji, manager of the Yokohama Rice Exchange; Suzumura Inanosuke, formerly President of the Prefectural Assembly; Kurobe Yohachi, President of a Bank, and two others were gambling at Kimura's house, Hana-zakicho Rokuchome, Yokohama, on the night of the 16th inst., when the police came in and arrested them. The rest of the party escaped. Several prominent gentlemen were sent to the Saiban-sho by the Toke police the following day and will have to take their trial.

Friends of Capt. Williamson, of the Warrack steamer *Lennox*, chartered by Messrs. Dodwell & Co. to the U.S. Government as a cattle and freight transport, will read with interest that the vessel's shaft broke on July 25th within three feet of the propeller. The vessel was then off the coast of San Francisco, and a volunteer boat's crew from among the soldiers and sailors who were passengers on board left the ship and were picked up and brought into San Francisco. A powerful tug was sent in search of the *Lennox*, but the result was not known when the last steamer left.

For the provisioning of the German troops in the Far East, trials have been made of late with a sort of bread called Kuemmel Brot (bread with caraway seeds), which is made by the Imperial Bakery at Spandau. The bread is made of rye-flour, with much salt and caraway seeds, and other materials of great nourishing value; it can be eaten both dry and in soups. In the same

Imperial Bakery also egg biscuit is baked for the combatants in China. These biscuits are made of wheat-flour, a good percentage of egg, sugar and strong extract of beef. Large quantities of both sorts of bread have already been sent to China, and others are to follow.

A silversmith named Takita Kyutaro, living at Nakamura, Ishikawa, Yokohama, disappeared from his house a few days ago and left a letter to his wife. His household consisted of his wife Toyo (29), eldest son Yutaka (11), second son Masao (9), eldest daughter Shizu (6), second daughter Haru (3) and third daughter Tori (1). The poor man could not earn enough to buy food for his children and tramped the country in search of work. The wife eventually sold her few sticks of furniture and clothes and went up to Tokyo with her children. She made inquiries of the Honjo police but could not find her husband. Meantime her pocket money ran out and she went to the Kanda station. On the night of the 17th inst. the Kanda Police sent the four children to the benevolent hospital and the wife and her baby to a free boarding house at Kamiyoshicho, Asakusa.

Following are the figures of Japanese living in China and Korea at the end of July:—

	AMOI.			
	Houses.	Male.	Female.	Total.
Japanese	35	123	51	174
Formosan	96	534	20	554
Total	131	657	71	728

NINSEN.
Male 2,554 and female 2,014, total 4,568, 1,002 houses. 127 men and 8 house had increased on the previous month.

MOKUPO.
Male 544 and female 388, total 932, 228 houses. 36 men and 10 house were added since last month.

PHYONG-YANG.
Male 105 and female 68, total 173, 59 houses. One man less and one house less than in the previous month.

A Peking dispatch in the *N.-C. Daily News* of Aug. 15th stated that the notorious Boxer, Na Tung (Manchu) who was the other day appointed Special Ambassador to Japan to apologise for the murder of the Japanese Secretary, Mr. Sugiyama, in June 1900, was expected to leave Peking on 17th Aug. by rail for Tientsin and Tangku, taking ship there. Na Tung's staff is a small one and consists of the following:—Ku Chao-hsin, Chief Secretary; Ts'ai Yuan-shen, Second Secretary; Chao Tê-yi, and Tiao Ta-chun, 3rd class Secretaries; Tso Ying-yuan, Interpreter. The Mission is expected to be absent about two months. Apropos of Na Tung, it is alleged that his bitter animosity against foreigners made him a willing leader of the Boxers and an active lieutenant of his master, Kang Yi, last year in Peking, and that it was mainly through his (Na Tung's) instrumentality that the martyred patriots Hsi Ching-ch'eng and Yuan Ch'ang were done to death, he having loudly backed up Prince Tuan, Kang Yi, Yung Lu, and Li Ping-heng's declaration that Hsi and Yuan were "trying to sell their country to foreigners." It seems strange, adds our contemporary, that the Japanese should accept such a man as ambassador to their shores.

CRICKET IN ENGLAND.

Below we give the position of the leading English Counties in the Cricket Championship up to July 27:—

	Played.	Won.	Lost.	Drawn.	Points.	Per cent.
Yorkshire ...	21	16	1	4	15	88.23

Derbyshire...	12	0	7	5	—	100.00

THE SAN FRANCISCO STRIKE.

The strike in San Francisco, of which we had intelligence by telegraph, appears to have originated in a dispute between a firm in the city and their teamsters. The latter alleged that this firm, the Brothers Morton, did not act fairly—one professing to observe the terms agreed to with the teamsters' union and the other ignoring them. On Aug. 19th the Draymen's Association informed the workmen that they had determined to stand by the firm. Upon this the Brotherhood of Teamsters called out all its members and by the 22nd traffic in the city was pretty much at a standstill. The Merchants' League took sides with the employing draymen. In the course of the next few days other organizations followed the example of the striking teamsters, while in many trades employers discharged their union workmen. Finally, on the night of July 29th, the City Front Federation ordered a general strike on the docks of San Francisco, Oakland, Mission Rock, and Port Costa, and in the city of San Francisco, to go into effect the following day. The action of the Federation was promptly ratified amid great enthusiasm by those unions most directly interested, and sailors, longshoremen, firemen, porters and packers, shipping clerks and other men whose unions are affiliated with the organization which took the initiative did not report for work in the morning.

One of the papers remarked:—

The tie-up will be complete if the plans of the labour unions are successful. They hope to stop the loading and even to prevent the moving of ships that are now almost ready for departure. Unless the proprietors and managers are able to secure sufficient non-union help to load and man their vessels, the strike will practically mean the closing of the port and the suspension of business in the wholesale and manufacturing section of San Francisco and Oakland.

The ferryboats are not affected by the strike. Union men employed on them will not be called out, and local travel and freight transfer will not be disturbed.

The membership of the unions affected exceeds 16,000 men. Not that many are employed at all times but the total number that will be out of employment as the result of the action of the City Front Federation will not be far from 15,000.

The effect of this action was a complete stoppage of traffic except in cases where employers were able to carry on business in a spasmodic fashion by means of non-union workmen. Steamers lay idle in the harbour and meantime the unemployed who had at first been peaceful enough began to get turbulent, with the result that there were frequent disturbances unattended, however, by any loss of life. When the last steamer left efforts were in progress to effect an arrangement.

AMERICAN NOTES.

There were 600 girls in Armour Institute, Chicago, last year; there will be none next year. This is the decision which the trustees have reached after careful consideration, and which was officially announced when Dr. Frank Connelley resumed the presidency.

A New Jersey girl recently sued her employer for wages due, but when asked on the witness-stand to give her age she said she was 20, and thereupon the counsel for the defendant moved for a nonsuit on the ground that the plaintiff was a self-confessed infant and had no standing in court. Her attorney offered to prove that she was at least 23, but an intimation of a prosecution for perjury caused him to drop his offer: so the next time that young lady goes into court she will have sense enough to tell her age rightly.

According to the United States Geological Survey the total production of petroleum in the United States in 1900 was 63,362,704 gallons, valued at \$75,752,691. These figures have never been exceeded in the history of the oil industry. Of the total amount Ohio produced 22,362,730 barrels; West Virginia, 16,195,675 barrels; Pennsylvania, 13,258,202 barrels; Indiana, 4,874,382 barrels; California, 4,099,464 barrels; and New York, 1,300,905 barrels. The production of

Texas for 1900 was 836,039 barrels. The value of the crude oil produced at the wells is estimated at over \$75,000,000 for the year.

The commencement of the trouble with the Brooklyn Bridge is thus described in a New York telegram of July 24th:—About 6.20 o'clock a number of the vertical supports of the sockets of Brooklyn bridge pulled out of their places and are now dangling in the air. The accident happened at the north side of the New York end of the bridge, and this end sagged from four to six inches. It completely stopped all street car traffic over the structure, but after a temporary delay, pedestrians and wagons were allowed to proceed. What caused the pulling out of the vertical cables is not known. The accident caused great excitement and the police reserves were called out.

Mr. J. J. Hill, president of the Great Northern Railway, while in Seattle the other day spoke to reporters concerning the new 28,000 ton steamers which are being built for the Pacific route from Seattle and Victoria to the Orient. He said the two monster freighters will be completed in April of next year, and will be placed in commission two months later. Each of the new vessels, which will be of steel and twin screw steamers, are of 28,000 tons burden, and they will be much larger than any cargo steamer sailing on the Pacific, or any other sea, for that matter. The biggest carrier now on the Pacific is the *Albatross*, which has a capacity of 13,000 tons, and the new liners of the Great Northern are to carry over twice that amount of freight.

The seventh annual conference of religion, held in Buffalo, June 26-30, developed many addresses of high interest. The general subject was "New Century Problems of Religion," discussed in such special topics as "The Religious Care of the Adolescent," "The Social Effects of the Concentration of Wealth," and "Religion and Public Ownership." In discussing the latter topic, says *The Outlook*, Professor Parsons "made the interesting statement that in over four hundred cases of municipal ownership which he had investigated he had found no instance of corruption."

A recent chemical invention in the field of high explosives is known as cerberite. It is claimed to be a true chemical compound or affinity, unlike the admixtures of other explosives. The Cerberite Manufacturing Company, of Washington, D.C., which makes the compound, states that it remains unfrozen at 13° Fahrenheit, can not be exploded by shock or jar or by anything except a simultaneous combination of shock, heat, and flame, is unaffected by water, and is an ideal high-power explosive, its energy being second only to that of nitroglycerine. It is claimed by the manufacturer to be perfectly adapted to all kinds of mining work, from the softest coal to the hardest rock and for tunnel work it is an ideal blasting explosive, giving off neither smoke, suffocating fumes, nor noxious gases.—*Mining and Metallurgy*.

There are more firemen in the United States than there are soldiers in Uncle Sam's Army, says the *New York Sun*. In New York city, for fire purposes, the two boroughs of Manhattan and the Bronx with 1,400 firemen are joined. The two boroughs of Brooklyn and Queens, with 1,000 paid and 2,000 volunteer firemen, are joined, and Richmond, with 1,700 firemen, is separately organized. There are, therefore, in New York city 6,100 firemen, paid and unpaid. There are 1,200 firemen in Chicago, 800 in Philadelphia, 700 in Boston, 400 in Baltimore, 500 in Buffalo, 480 in Detroit, 500 in St. Louis, 500 in Pittsburgh, 430 in San Francisco, 300 in New Orleans and 250 in Washington. In the whole country there are 65,000 paid firemen, and the number of volunteer firemen varies from 100,000 to 150,000.

Dr. Ira C. Rensen, who succeeds Dr. Daniel C. Gilman in the presidency of Johns Hopkins University, has been associated with that institution since its foundation in 1876, and was the first member of the teaching corps to be selected

by President Gilman, of whom he has been the confidant and adviser for twenty-five years. The *Boston Transcript* says of him:—"The university will not adventure itself under a young man, no experiment is essayed by calling in some one who figures outside the realm of university and college life, but a specialist and scholar, who is also a man of tact and thoroughly identified with the Johns Hopkins atmosphere, is to lead the university. Dr. Rensen is in the maturity of life, being just past fifty-five years of age. . . . His textbooks on chemistry are standard in this country, and have been translated abroad to a remarkable extent."

A heavy increase in the resources of the trust companies of New York state during the first six months of the current year places them within sight of the thousand-million mark. According to the reports filed with the State Superintendent of Banking the aggregate resources of these companies amounted on July 1 to \$966,528,398. This represents an increase of \$168,544,886 since January 1, a gain of over 21 per cent. for the half year. The loans made on collaterals amounted to \$527,040,175, which represented an increase of over 35 per cent. for the period. A very striking showing is made by the figures exhibiting the profits and expenses of the companies during the six months. The total profits received were, it appears, \$22,159,857, while the interest paid and credited to depositors amounted to \$8,954,350, the expenses of the institutions aggregated \$2,709,521, and the taxes paid were only \$60,321. These statistics reflect a highly prosperous business among the trust companies, which are making rapid progress among the financial institutions of the empire state.

"That driest of all the American states, Arizona, has just come into possession of a seaport," observes the *Cincinnati Times-Star*. "A steamship line has been chartered to ply on the Colorado river from the Gulf of California to Yuma. This little city, situated in the midst of an arid desert, and parched by the eternal sun of the southwest, thus comes into direct communication by sea with the outside world. At the present time only the smaller class of vessels can navigate the lower waters of the Colorado. It is hoped, however, that the work of dredging the stream will be soon undertaken, and that in time the larger sea-going vessels will be enabled to advance to the wharves of Yuma. The opening of Arizona and southern California to direct communication with the sea cannot fail to be of immense advantage to this region. The country is extremely fertile. Only a little irrigation is required to make Arizona one of the most productive states in the Union. Irrigation schemes have formerly been hampered, however, by the lack of suitable facilities for the cheap transportation of the state's products to the seaboard. With the opening of a waterway to the sea Arizona should show a marvelous development. What has been done in California can be done again in Arizona. And when the change takes place the opening up of a waterway to Yuma will have played an all-important part in the development of Uncle Sam's great territory."

The U.S. battleship *Maine*, designed to be bigger, stronger and faster than her namesake, whose shapeless mass still lies in the harbour of Havana, was successfully launched from the yards of the Cramps Ship and Engine Building Company on July 27th. The *Maine* is a sister ship to the *Ohio* and the *Missouri*. She is to have a speed of eighteen knots. With a length on load water-line of 388 feet and a beam of 72 feet 2½ inches, she has a normal displacement of 12,500 tons and a draught of 23 feet 9 inches. Her bunkers are large enough to carry 2,000 tons of coal, and her complement of officers, seamen and marines will be about 600. The *Maine's* armament will consist of four 12-inch breech-loading rifles, sixteen 6-inch rapid-fire rifles, twenty 6-pounder and four 3-pounder guns and a few 1-pounders and machine guns. Besides the main and secondary batteries she has torpedo tubes under water.

CORRESPONDENCE.

SCHOOL OF THE MORNING STAR.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—As you already know we have for some time past entertained the intention of separating the Foreign Department of the School of the Morning Star from the Japanese Department and transferring the former to Yokohama, to comply with an oft-repeated wish of a goodly number of our patrons.

We have the pleasure to inform you that this project of ours is about to be realized.

We will therefore—save notice to the contrary—open a school to be known as "St. Joseph's Institute," at No. 43 Bluff, Yokohama, for foreign and Eurasian boys.

Classes will commence on Sept. 16th. Only a limited number of boarders can be received at the beginning, the present accommodation being insufficient for a greater number.

Those that cannot be admitted as boarders will be welcome as day-scholars or half-boarders, just as our patrons desire.

All further details will be given in the prospectus, which is to be published in the near future.

All the foreign and Eurasian boys who until July last attended the School of the Morning Star, as well as others, are invited to continue their studies at St. Joseph's Institute, Yokohama.

Our Tokyo school will continue under its former name, but as a Primary and Middle School for Japanese exclusively.

The teachers who cannot follow their former pupils to St. Joseph's Institute wish them brilliant success in the new school and will continue to be warmly interested in them.

Parties desiring particulars concerning St. Joseph's Institute will please apply to the Director, Louis Stoltz, who will, until September 1st, reside at Idamachi, 3-chome, 32, Tokyo, and after the above date at No. 43, Bluff, Yokohama.

Yours respectfully,

C. A. HEINRICH, S.M.

Tokyo, August 16th, 1901.

SOMETIMES HOMER NODS!

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In the extract from *The Globe* on "The Cornish Language" which you reproduce in your issue of the 8th inst there occurs a particularly flagrant instance of slipshod scholarship. The epithet of Doll Pentreath is stated to have contained the text "Honour thy father and thy mother: that thy days, etc." followed by the Cornish rendering "Gwra perithi de taz ha de mam; mal de dythionw betheuz hyr war an tyr neb an arlath de dew ryes dees." Now by mistake the wrong word (Dythionw, which means "Days," Welsh "Dyddiau") is here printed with a capital initial letter. The writer in *The Globe* concludes that this is the word for God, and sagely remarks "Dythio for God is clearly allied to the Greek Theos, the Latin Deus. The existence of Latin words in old Cornish. . . ."

The words for 'the Lord thy God' are 'Arlath de Dew,' (Welsh 'Arglwydd dy Dduw').

I am, Sir, Yours truly,

A. L. JONES.

Nagasaki, August 15th, 1901.

THE DOSHISHA.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In your yesterday's issue I notice your expression of regret that new trouble "has arisen in the Doshisha, manifested in the resignation of Principal Hirotsu."

While I have not seen any of the Japanese accounts to which you refer, I can say from full knowledge of the situation, that there is really no "trouble." Of course, the resignation of the principal always means a crisis for a school; but it means nothing more than this in this special case. There is entire harmony both in the Board of Directors and in the faculty of the institution, and we all expect the school to continue in its course of renewed prosperity, which it has pursued during the last two years. Mr. Hirotsu leaves the school with the esteem of the Board of Directors and of the faculty, all of whom appreciate the faithful, self-forgetful labours he has rendered.

Respectfully yours,

GEO. E. ALBRECHT.

August 21st, 1901.

THE MORMON CREED.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In your issue of Saturday last, you state, in an article entitled "The Mormon Mission," that Oda Nobunaga, "would never have wittingly sanctioned the admission of a sect which preached dei-

berate disobedience to the laws of the land, and polygamy is strictly forbidden by the Code of this country."

Permit me to assure you that we are not in Japan to preach polygamy. Our Church discontinued allowing men to take plural wives a number of years ago, and in no part of the world are our missionaries advocating the doctrine.

We are here to maintain and uphold the laws of this country, and recognize the fact that if we were to teach the doctrine of polygamy we would not only be preaching that which is contrary to the law of the land, but also of the Church of Jesus Christ of Latter-day Saints, which we represent. The twelfth article of our Faith reads as follows:—"We believe in being subject to kings, presidents, rulers, and magistrates, in obeying, honouring, and sustaining the law."

Yours respectfully,

HEBER J. GRANT.

Yokohama, August 22nd, 1901.

LATTER-DAY NOTES ON THE CHINESE QUESTION.

PRACTICAL CONCLUSIONS.

MOTTO: "Depend upon it, when we grope in the dark, as we must in the East, the best course is that which is just and right." GENERAL GORDON.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I have not kept my promise to write a full criticism of the present policy of the Powers in China, for two reasons.

First, because I understand the British authorities have taken umbrage at my writing and have formally complained to H.E. the Viceroy. I, of course, hold myself amenable to His Excellency's displeasure. I do not know whether the action of the British authorities is sanctioned by the British Government. But in view of it, I think it useful here to bring publicly to the notice of Lord Salisbury, a cipher telegram which I sent to his Lordship last summer.

During the most acute period of the crisis last year, while the Shanghai papers had telegrams saying that the Viceroy here was training his guns on the foreign settlement in Hankow, our yamen's telegrams from Shanghai were unanimous that Admiral Seymour had designs on the Yangtze. Sure enough, Admiral Seymour was bringing troops to Shanghai and an officer of the British Army was prowling round Wuchang. One foreign Consulate sent its agent to me repeatedly telling me to warn the Viceroy against British designs. I bluntly told the agent that his Consul was off his head and I showed him the Reuter's telegram in which the Hon. Mr. Brodrick said it would be madness to attempt to administer any portion of Chinese territory. Lastly came a telegram from H.E. Viceroy Liu, of Nanking, in which H.E. expressed his conviction that we were merely sitting and waiting for destruction—*座以待斃*. Thus the mutual scare was serious and was likely to produce a catastrophe. I was helpless and in despair because I could not convince our people of the baselessness of the reports of British designs: while on the other hand I did not know what mischievous report might have reached Lord Salisbury.

Just at this juncture a telegram came from Lord Salisbury offering to fight Prince Tuan for the Viceroy!! I at once saw a chance of relieving the tension of the situation. The Viceroy was in need of money. I boldly advised the Viceroy to ask for a loan from Lord Salisbury. That was my cipher telegram. My object was to tell Lord Salisbury to have confidence in us and not to send troops. I knew the Hongkong and Shanghai Bank would jump at the business under Lord Salisbury's guarantee. The loan, which was thus sure to succeed, would be the means of restoring mutual confidence, which I have reason to believe, it did. I was only sorry Lord Salisbury did not sufficiently understand my cipher to stop the landing of troops in Shanghai. I was still more sorry to learn semi-officially that Lord Salisbury was disappointed because the British Government did not get any substantive advantage for the loan. I should have thought peace on the Yangtze was worth half a million taels, not to say merely the loan of that amount.

I am really sorry to have to introduce this personal element here. But in view of the action of the British authorities to injure me with the Viceroy, I think it right Lord Salisbury and the British people should know what I have personally done for the preservation of peace on the Yangtze.

My other reason for not writing on the actual situation is this:—While I felt myself perfectly at liberty to expose my own person to any unpleasant consequences by my writing, I did not yet think it right from my subordinate position in the Government service, to embarrass the responsible high agents of the Imperial Government who were conducting the negotiations, by writing on the details of the negotiations, especially while the case was, so to speak, still *sub judice*.

But now I think the time has come when it is both opportune and necessary to examine into the present

policy of the Powers in China. I wish only to repeat here I am writing entirely on my own responsibility and I alone am responsible for my opinions.

SPIRIT AND ATTITUDE.

Now before any hope can be entertained for a satisfactory solution of the Chinese problem, it is first of all absolutely necessary for the Powers radically to change the spirit and attitude of their policy in dealing with the Chinese Government and Chinese officials. A writer in the *Japan Mail*, Mr. E. H. House, writing on the past policy of the western nations towards Japan, says, "Strangers to the country chose to set up a theory that the policy of Japan was a maze of dissimulation and fraud; and that any action which aliens could not comprehend at a glance or would not comprehend at all, must necessarily be part of a deep and all embracing scheme of deception. It was the absurdest of fallacies, yet it stood as the basis of European diplomacy for a score of years." This then, I have no hesitation in saying, is the *font et origo*, the fountain head of old disasters in the intercourse between the foreign Powers and China. It is this spirit of suspicion which, being as it were in the air, infects every foreign Minister and especially every British Minister and produces a kind of jaundice which makes him see everything yellow in China.

As I am here not writing as a mere partisan for the Chinese, but in the cause of truth, I will not deny that there is certainly a certain want of frankness and plain dealing among the Chinese generally in their intercourse with foreigners. But the reasons for this should be known. Count Cassini, the late Russian Minister, said recently, "The Chinese are a polite people and the English and Germans are—well,—as a rule, not very polite." The fact is, the average foreigner in China is often very unreasonable and hasty and the average Chinaman is polite and reserved. When you make an unreasonable request to a really educated Chinaman, it is impossible for him to say "no." His innate politeness will prompt him to use polite evasiveness by giving you a conditional "yes." The late Marquis Tseng Kuo-fun, in a letter to a friend in 1860 (洋務尺牘) says, "When you meet with foreigners who make insolent and insulting remarks to your face, the best course to take is to smile blandly and look stupid as if you did not understand them." Sir Robert Hart once said to Marquis Ito that the principle with the Chinese is: "It is better to bend than to break." Thus against foreign unreasonableness the educated Chinese are often prompted to use polite evasiveness and against foreign unreasonable violence the Chinese sometimes use a weapon which in Chinese is called *Chi mi* 壓氣, translated by Dr. Giles as "to halter" (translated by foreigners "to humbug"). In fact when you meet a violent mad bull, it is of no use to reason with him; the only thing you can do is to halter him!

But Sir Claude Macdonald shall explain what this Chinese *Chi mi*, "haltering" means. Sir Claude's despatch of the 20th Sept., 1900, to Lord Salisbury says:—

"With the object of procuring a postponement or relaxation of the attack, we allowed the Chinese to indulge the belief that there was a chance of our placing ourselves at their mercy by proceeding under Chinese escort to Tientsin. . . . What we did was neither to accept nor reject it in principle, but to gain time by asking for more details as a preliminary to our final decision."

It is curious to note here that Sir Claude Macdonald, while in the same breath denouncing Chinese bad faith and treachery, did not seem to realize that there was any moral delinquency in the actual *ruste* and really a kind of treachery which he himself was practising upon the Chinese. It will be said, perhaps, that it was the action of the Chinese which placed Sir Claude in a position forcing him to act as he did. But surely in almost every case, the same thing may be said with even greater force for the Chinese.

Now having made the above concessions as to certain reasonable grounds for foreign suspicion of Chinese ways and methods of action, I think it necessary to say emphatically here that as far as the Imperial Government in Peking is concerned in the present trouble,—from my knowledge of the telegrams and State papers to which my position in the Viceroy's Yamen gave me access—I say emphatically that there has not been the smallest iota of truth or ground for charging the Imperial Government with bad faith and treachery. Indeed, I think it pertinent here to quote again the words of Mr. House in what he said of the past foreign relations of Japan. Against the statement that large allowances should be made on account of the perplexity and not unnatural suspicion on the part of the foreign envoys, Mr. House asks: "Was any allowance ever made for the perplexities, the torturing anxieties and frequent deadly peril of the Japanese? * * * The officials at Yedo were as open and straightforward as the rulers of a nation could be. They were almost child-like in their frankness. Over and over again they laid

bare their troubles and threw themselves upon the mercy of their adversaries, only to be repulsed with contumely and subjected to fresh hardships and indignities.

Now by changing the words Chinese for Japanese and Peking for Yedo, one would think Mr. House was writing on the events of last summer in China, instead of on those in Japan forty years ago. Indeed, any unbiassed, impartial person who will carefully read the Imperial Edicts and other state papers (published now in book form by a Japanese Editor, 佐原篤介, and called 拳匪紀事), will see the appositeness of Mr. House's remarks.

Now to give just one instance of the perfect and absolute frankness of the Imperial Government. On the 3rd day of the 6th moon an edict was sent to the Chinese Ministers abroad instructing them to lay bare the difficulties of the Imperial Government. That edict said: "We are still at the present moment giving strict instructions to the commanders of our troops as before to protect the Legations as far as they see their power of doing so—惟力是幾." Thus the Imperial Government did not try to hide from the foreign Governments the danger of the Legations. The edict did not even simply say that "we have given instructions to protect the Legations," leaving it to be inferred that the protection was absolute and at all cost. The edict said with perfect and absolute frankness that the instructions were to protect as far as possible.*

VITAL ISSUE.

Having in the above spoken of the spirit and attitude of the foreign Powers towards China, I come now to the broad and vital issue of the Chinese Problem. The broad and vital issue is this. While the Powers require from China the responsibility of an independent sovereign state, they yet in their dealing with China, take no pains whatever to recognise and respect the rights and conditions by which alone the Imperial Government can fulfill its duties and carry out the responsibility of independent government.

Sir Robert Hart in his generous Irish way has proposed to abolish exterritoriality. In principle Sir Robert's contention—to any one capable of political thinking—is incontestable. But let it be frankly admitted here that to abolish exterritoriality under the present circumstances, is impracticable. Goethe says: "There are two peaceable Powers: justice and common sense (es giebt zwei friedliche gewalten: das Recht u. die schicklichkeit)." Sir Robert Hart's proposal is justice: it is not common sense.

But if the abolition of exterritoriality is impracticable it is evidently but just that every care should be taken to minimise its evil effects. Exterritoriality is an anomaly—injurious already in its moral effect to the cause of good government in China. But instead of minimising the evils of this anomaly, the Agents of the foreign Powers are allowed to introduce a still worse anomaly, namely in-territoriality. Not content that the Imperial Government in China should have no jurisdiction over foreigners, the foreign Powers have allowed their Agents to deny jurisdiction to the Chinese Government over Chinese subjects. The missionaries have been justly blamed for interfering with law suits, thus encroaching upon the jurisdiction of magistrates over Chinese subjects. But when the British Minister peremptorily demanded the dismissal of the Viceroy of Szechuan, he was also interfering with law suits, only on an infinitely larger scale. The encroachment in this case was not merely upon the jurisdiction of magistrates over Chinese subjects; the encroachment was upon the supreme prerogative of the Emperor, his authority over his public servants. A Viceroy, of course, is punishable for wrong done to foreigners, but he must be punished by the authority of the Emperor and in due accordance with the laws of the Empire.

This principle can be best illustrated from the recent punishment question. The U. S. Secretary of State was the only one who seemed to have had an idea of the principle involved in the punishment question. Now let me put the case entirely from the foreigners' point of view.

Last summer the Imperial troops in Peking without any justification attacked the Legations, thus outraging the laws of civilised nations. The Imperial Government instead of properly repudiating the action of its agents, declared war on the Allied Powers. In consequence of this a state of war existed *de facto* between China and the Allied Powers. Immediately after, however, China sued for peace. The Allied Powers were justified to refuse to make peace until satisfaction had been obtained for the wrong complained of. The wrong complained of was the attack on the Legations. The Allied Powers were right to demand as a condition for making peace that the Imperial Government should absolutely repudiate the acts of its Agents in the attack upon the Legations. But here now comes in the principle I speak of.

* It has been repeatedly asserted that the Imperial Government issued a Decree for the extermination of foreigners. Now there never was such a Decree. The Decree of 26th of the 6th moon was simply a declaration of war. It is useful to nail this lie here on the counter.

An act of war is to inflict punishment upon the nation, not upon individuals. But as in this case certain Agents of the Imperial Government were believed to have been guilty of acts outraging the laws of nations, the Allied Powers were justified, if they thought fit, to exercise what in modern usage of war, is called the right of reprisals, i.e., to seize and summarily punish the guilty Agents. Such a punishment, however, is an act of war: it is not a judicial punishment.

But the punishment of the guilty by the Imperial Government the Chinese looked upon as an act of bad faith and treachery. H. E. Viceroy Liu's feelings on the execution scheme were 哀念—pity and indignation.

So in the execution of the Provincial Treasurer of Paoing fu. But here the Powers gave no notice; therefore it is quite a different thing. The question for the Allied Powers to decide at the time was whether after such an outrage as the attack upon the Legations, they were willing still to recognise the existence of the Chinese Government. If the Powers decided not to recognise the existence of the Chinese Government then it was evidently the duty of the Powers to immediately take over the responsibility of Government in China. But if the Powers recognised the existence of the Chinese Government, as they evidently did, then the Powers were bound to respect the sole and absolute jurisdiction of the Imperial Government over all Chinese subjects.

Now as soon as a state of war is created, the right and wrong of the quarrel becomes at once one, not between individuals in the nation and the foreign Powers, but between the Chinese nation and the Allied Powers. As far as punishment is concerned vis-a-vis the Allied Powers, war with its consequences, is, in itself, a punishment. What then the Imperial Government really owed to the Allied Powers, was simply to absolutely repudiate the act of the attack on the Legations. But as soon as the Imperial Government repudiated the act of the attack on the Legations, all persons responsible for the attack were guilty of crime—not *vis à vis* the Allied Powers—but against the authority of the Sovereign and against the peace and security of the Empire: all such persons were liable to punishment. But the punishment of Chinese subjects from the highest state ministers to the meanest Chinese subject—as long as China is recognised as an independent sovereign state—can only be carried out by the sole authority of the sovereign and in accordance with the laws of the Empire.*

I have in the above purposely assumed the case entirely from the foreign point of view—namely that the Chinese were entirely in the wrong. But in reality the attack on the Legations was merely the result of a fracas between the Legation guards and the population of Peking joined in and aided by Chinese soldiery. The deplorable thing about the incident was that foreign ministers as well as inoffensive persons, helpless women and children, were involved in the danger resulting from the fracas. Indeed, to the last, that was the view taken by the Imperial Government. On the 14th July, the Chinese Ministers as soon as they could put themselves in communication, solemnly invited the foreign Ministers to "transfer themselves, their families and their staff to the Tsungli Yamen for safety,—without, however, taking a single armed foreign soldier." The object of the proposal, the Chinese Ministers said, was to preserve friendly relations intact from beginning to end. The fracas, in fact, had become too serious and the only feasible way to save the foreign Ministers and non-combatants, women and children, was to separate them from the actual participants in the fracas. Sir Claude Macdonald, however, could see in the proposal nothing but treachery and cynicism!

The fact is, the final verdict of a dispassionate and judicial mind on the events of last summer, it seems to me, would be:—The foreign Ministers first lost their common sense; then the Chinese lost their temper; finally the people and governments in Europe and America lost both their temper and their common sense.

The admirals have been blamed for taking the Taku forts. The blame is unjust. The attack on the Taku forts was no doubt deplorable—because after that, the Imperial Government to preserve its self-respect, had no alternative but to declare war. But the admirals were military men and they had to judge the situation given them by the diplomats, only from purely military considerations. In fact the admirals were committed to the situation by the acts of the Ministers. The real and

* As a matter of fact, H. I. M. the Empress Dowager actually entrusted the trial of the guilty persons to the highest recognised Tribunal in China for trying State Criminals. The Tribunal called 三法司 San Fatsi is composed of the Lord Chancellor (大理寺卿) representing the Sovereign as President, of the Presidents of the Censorate (equivalent to House of Commons), and of the Minister of the Department of State for Justice, acting as Law Adviser to the Crown. In the present case as three were Princes among the guilty, the President of the Department of the Imperial House was substituted for the Lord Chancellor.

initial blunder in the whole crisis, however, was the sending the Legation guards. The most ordinary dictates of common sense would say:—If you show and appeal to force, you must show and appeal to sufficient force. Now when the whole population not only of Peking, but of all North China, were seething with strong feelings,—it matters not rightly or wrongly—against foreigners, to send into the middle of that population a mere handful of strange-faced, strange-garbed, strange-speeched, swaggering soldiers, and that too not under one Commander, but in batches under different independent commands! Well, I think, loss of common sense is a very mild expression to use in characterising the action of the foreign Ministers.

Technically the protection for the foreign Ministers was their credentials, as the protection for a parlementaire in war is his white flag of truce. When the foreign Ministers brought Legation guards, the credentials technically lost their value or, as it might be argued that the Chinese Government consented, at least to the extent that the Imperial Government was relieved from the duty of protection, the Ministers having chosen to protect themselves instead of depending upon the Imperial Government for protection.

In fact the vital issue of the whole Chinese Question is here very forcibly illustrated. The Powers are indignant and horrified. Lord Salisbury spake of the outrageous conduct of the Chinese—because China is supposed to have violated the law of sanctitas legatorum. But nobody seemed to have been aware that the foreign Ministers first also outrageously violated an equally important law of nations—the integrity of the soil in China, by sending soldiers into the Capital of the Empire. Now after the experience of the disastrous results of such a policy, the Powers, while swearing to uphold the integrity of the Chinese Empire, build a fortress commanding the Emperor's Palace. As I have said, if you appeal to force you must appeal to sufficient force. If the Powers wish to drag on China, well and good; but they should at least maintain an effective dragooming; otherwise the Chinese Empire will fly to pieces.

Indeed, since the experience of last year, the Powers instead of reconsidering their past policy and recognising past mistakes, have determined, it seems, not only to persist in, but even to aggravate, the mistakes of their past policy. In the first place instead of immediately sending out new men with fresh minds to obtain new light on the situation and to seek a satisfactory solution, most of the Powers persisted in keeping the very men who had brought about the situation, whose nerves had been broken and whose feelings must have been embittered by their experience,—to conduct the negotiations for peace. The result, of course, was the 12 irrevocable articles.

1. The very objection which the foreign Ministers have made to the constitution of the Tsungli Yamen applies with greater force to the constitution of the concert of foreign Ministers. Without a recognised and responsible head, it was not possible to conduct the negotiations speedily and satisfactorily to a definite conclusion.

Note.—The Tsungli Yamen is properly a Committee of Council for Foreign Affairs like the Foreign Affairs Committee in the U. S. Senate. It is a deliberative and consultative body. Its great defect no doubt is the want of an Executive Head. But there is a reason for its present constitution. In the first place, all the State Departments in Peking are really deliberative and consultative rather than executive bodies. The only really executive body in Peking is the Chin Chi Chü or Cabinet (erroneously named the Grand Council). In the second place, as China is really a constitutional Government, i.e. a government which has to depend for support upon the public opinion of the educated classes, it was necessary to have in the Committee of Council for Foreign Affairs all the Great Notables in the Metropolitan Government to satisfy public opinion. But the foreign Ministers, instead of trying to understand the *raison d'être* of the Tsungli Yamen, object to its name, as if a rose by any other name would not smell as sweet!

2. The dictation of irrevocable terms is justifiable after a success in war, but such terms are generally confined to the immediate reparation of present and past wrong and to the state of military operations. In so far as guarantee for the future is concerned, the presentation of the irrevocable terms is a mistake in that for the foreign Ministers to assume that they know better than the Imperial Government what will prevent future popular outbreaks against foreigners, was the very policy which had brought on the present disaster. It could not do any harm, so far as guarantee for the future is concerned, to have asked the Imperial Government to state what measures it had to propose as guarantee for the future.

3. In fact most of the terms of the 12 articles are on the principle not of the robber's "money or your life," but of money and your life. For to carry them out

means the impossibility of good government in China. I have already spoken of the Punishment Question. The carrying out of that article is the most serious blow to the stability of the Empire. It was solely the personal influence of H.I.M. the Empress Dowager which had made it possible to carry out that sentence without causing the Chinese Empire to fly to pieces. Then there is the erection of a fortress in the heart of the Capital, of which I have also spoken. I will only here further mention the stopping of examinations. Apart from the question of justice, I would point out here that the holding of examinations in China is not so much a privilege for the people like the franchise in Europe; but it is rather a function, a very vital function, of government in China for carrying out the principle of the open door,—*carrière ouverte aux talents*. Now to demand from an engineer that he should keep his engine in order and at the same time to order him to stop up one of the most important tubes in the engine that, I think, would be considered egregiously unreasonable. Nevertheless that is what the Powers have asked of the Imperial Government in stopping the examinations.

Now I think I have said enough to show that the foreign Powers in China do not only exercise extra-territoriality, but also in-territoriality. At present it would seem further that Chinese officials appointed to important positions in China must first receive a semi-official *exequatur* from the foreign officials. As a consequence of this, I may mention here, this province of Hupeh has been deprived of a Civil Governor for the last 8 months and H. E. the Viceroy having to occupy himself with Imperial questions and protection of missionaries, the actual civil administration of the province, is in danger of going to the dogs! Another consequence of the interference of foreigners in the appointment of Chinese officials is that men of the most worthless character, reputation, education, and ability, merely by acts of subserviency, intrigue, if not actual corruption in order to curry favour with foreign officials and foreigners of influence, are enabled to push themselves forward in the public service. The latest example of this is the appointment of the new Chinese Minister* to Japan; to which I would venture to direct the attention of the Foreign Office in Japan in order that it may investigate whether Japanese officials in China had taken any part in connection with this appointment. Indeed it is the favour and countenance shown to such men in China by foreign officials and foreigners that makes it hopeless to reconcile some of the best elements of the Chinese nation to a friendly attitude towards foreigners and things foreign.

In addition to all the above, it is only necessary to mention the well known facts that Roman Catholic Missionaries are allowed openly to interfere in lawsuits between their converts and the non-Christian Chinese population. The Protestant missionaries not only interfere with lawsuits, but openly preach rebellion in the foreign newspapers and through the native press. Lastly there is an increasing number of foreigners whose sole business is to lend their names to every disreputable business carried on in all the Treaty ports.

In view of all the above, I think any one who will take the trouble to study the facts must see that it is really a heart-breaking business for the Imperial Government to maintain good government in China. China too in its government is a country without the machinery of police. Peace and order are maintained by the common sense and goodwill of the population. Now when the common sense of justice and propriety of the population is outraged, a riot breaks out which the local authorities has no means where-withal to quell and after the riot, the people have to pay—and that exorbitantly, as may be seen from the bills of the Roman Catholic missionaries, yes, of the Protestant missionaries too, lately sent in to the Provincial Governments.

But all those local and particular injuries are nothing to the sum of all injuries which is that by the exercise of in-territoriality by foreign officials, the people of China are deprived of the benefits of good Government. Lord Beaconsfield said:—"Unless the actual Government which exists in a country has absolute power to do what it thinks right, good Government in that country is an impossibility." Now the Powers in China will neither take the responsibility of Government in China nor will they allow the Imperial Government to do what it thinks right. What the Powers actually do, is to paralyse the Central Government. When the Central Government is paralysed, then the Provincial Governments and the officials of the Empire are demoralised. I will say here that there is at bottom a great deal of justice in the recent and present clamour for Reform. The actual administration of the country is getting worse and worse. It is not here the place to enter into the question of the present state of Government in China. I will do that in another series of papers. What I want to say here is

* An Ex-Taotai of Shanghai.

that reform is only possible when the Central Authority in the Imperial Government can do what it thinks right and the laws of the Empire have sole and absolute force over at least all Chinese subjects. In short, the only condition under which good government in China is possible is when every Viceroy and Governor as well as all high officials entrusted with an office is made to feel responsible with his head to Th. I. M. the Empress Dowager and the Emperor, not merely for the protection of foreigners, much less for gaining the favour of foreign governments, but for good government, i.e. for the character, conduct and competency of every subordinate official under them and for the well-being and good government of the people entrusted to them.

Now to sum up. The broad and vital issue of the Chinese Problem is this. The foreign Powers must distinctly and absolutely decide either to take over the responsibility of government in China or to leave that responsibility to the Imperial Government. If the Powers decide to take over the responsibility: well and good. But if the Powers, on the other hand, decide to demand responsibility of good government from the Imperial Government, then the Powers plain duty is to absolutely recognise and respect all the rights of the Imperial Government as an independent State—with the exception at present of jurisdiction over foreign subjects.

GOVERNMENT OF FOREIGNERS.

The exercise of extra-territoriality in China, however, renders the Powers responsible for the good government of their subjects. Anyone who will take the trouble to read the Blue-books and parliamentary papers of Great Britain of the early thirties of the last century will see clearly that what actually moved the British nation to send a Representative of the Crown to China was because at that time no one was responsible for the good government of British subjects and the state of no-government among British subjects at Canton had become too scandalous. The chief and original object of keeping a British Minister in China—is not to further trade but to look to the good government of British subjects.

People now talk a great deal about Imperialism. Imperialism means disinterested government—a government absolute in power without fear or favour to do what it thinks right for the good government of the nation. But it is now difficult for a British Minister to be disinterested. The British Minister is now made responsible not to his King for the honour of his country, but to the 600 odd petty kings who sit in the House of Commons. The British Parliament was originally a *wisdom*, a meeting of wise men: it is now a meeting of interested men.

I really wonder it never occurred to men of the English governing class, that it is, to say the least, rather mean to speak so much and so loud about British interests. The reason why the English gentleman despises the mere "professional" is because the latter is supposed to think of and care only for interests, *adulteret* money. At any rate the men who built up the British Empire did not speak of interests, but of duty. Sir Richard Macdonald, a soldier like Sir Claude, who was at one time Governor of the Straits Settlements, said to a deputation of his countrymen in Singapore, "I am sent here by the Queen to govern you, you potatoe planters." In the British Colonies, where Chinese settle, the British Government has had the common sense to appoint an official as Protector of Chinese. In the Treaty ports in China, the British Government might do well to appoint a similar official as in the Colonies, for the benefit of the poorer class of Chinese who cannot afford to engage lawyers as bullies to protect them from rowdy and unscrupulous British subjects. As for trade, instead of appointing a Commercial attaché to teach British merchants how to trade or to act as *louts* for them to influential progressive mandarins, a Commission composed of men like the above Sir Richard Macdonald might be advantageously appointed to enquire what is legitimate trade, i.e. trade which benefits the British nation as well as the Chinese; and what is illegitimate trade, i.e. trade which merely benefits British individuals to the injury of the above mentioned legitimate trade beneficial to the Chinese as well as the British nation. For, as the late Sir Thomas Wade said, what permanently injures the Chinese, must in the end also injure the foreigners, even in China.

But to sum up. The first and paramount duty of foreign Powers, while exercising extra-territoriality is to take strict, adequate, and effectual measures for the good government of each of their respective subjects. The problem of maintaining good government among foreign subjects is not, it must be admitted, easy, for extra-territoriality is an anomaly in the law of nations. But as if the above problem is not a sufficiently difficult one, the Powers have now tried to increase its difficulty, by senselessly claiming a separate concession each for itself, at every Treaty port. Thus each Treaty port now is become a Balkan Peninsula with miniature petty states each bristling with

materials for explosion. The one first reasonable cause it should be said here, for the European Powers to claim a separate concession, lies in the mistake of the British Government in investing the chief authority and power over the British settlements, not in the British Consul, but in the municipality composed of a majority in every case of British merchants. For a foreign Power to submit its subjects to the authority although municipal of a British official is bad enough, but it is too much to expect a foreign Power to submit its subjects to the authority of British merchants. In fact as the late Mr. A. J. Froude, in his "Ulysses' Bow" once pointed out, in a community of mixed population, it is impossible to carry out representative government: in such a place, you must have Imperial Government. A population with strong racial and national prejudices can never succeed in electing a truly representative government. In order to abolish the senseless separate concessions, which in the interests of good government of foreigners should be done, the constitution of the foreign settlements should be inquired into and modified.

THE REAL DIFFICULTY.

But the real and, I am afraid, almost insurmountable difficulty in the Chinese Problem, is—the Concert of the Powers: the Concert only in name, not in reality. Indeed the late events in North China showed clearly that, as during the terror of the French Revolution because the different political parties were afraid to quarrel, they allowed all kinds of atrocities to be perpetrated, so in China, because the Powers are afraid to go into war, they prefer to allow all kinds of atrocities to be done to the Chinese. But it is of no use for the Powers to shirk their duty: the duty which they owe not only to the people of China, but to the cause of civilisation. The Powers must peacefully agree to absolutely respect the integrity of China as a Sovereign State or they will have to fight. As to the other alternative of a peaceful partition, apart from the impossibility of such a solution, the Hon. Mr. Brodrick has said as far as Great Britain is concerned, it would be madness to attempt to administer any portion of Chinese territory.

There are three Powers with whom the solution of the Chinese Problem lies: Great Britain, Russia and Japan. Englishmen like Admiral Seymour are fond of calling the attention of the world to the fact that they opened China to the Western nations, but they never think of their responsibility for the consequences of the act. The fact is Great Britain is still the paramount Power in China to-day, for good as well as for evil. As by my recent writing I have even incurred the ill-will of many Englishmen, I shall not incur the suspicion of wishing to court their favour when I say here that among the elements of the foreign influence in China, the British element to-day is still the best. For instance, the British consular service is not merely the only one organised and regulated service, but it includes within it some of the best types of foreigners in China. But in saying that Great Britain is the paramount Power in China to-day, I have no hesitation on the other hand in saying that Great Britain is *mainly* to blame for the present state of things in China. The reason why things in China have got into such a mess, is because British statesmen have had no policy in China; even the wrong policy, "putting money on the wrong horse," is not consistently carried out. I can see British statesmen say to themselves: "We are willing to do right towards the Chinese, but you see other people won't; therefore the only thing we can do is to look after our own interests honestly if we can but—Now it is this "but" policy of Great Britain which has brought about the present pitiful, pitiable, tragic muddle. If, however, British statesmen lose their sense of duty, and think of only their interests, and that too with a "but" and an "if," then Great Britain will cease to be the paramount Power in China. The policy for Great Britain even for her own interests is given in the words of Gordon I have put as the motto to this article. Great Britain, however, must be ready to fight for maintaining that policy and, being willing to fight, may escape the necessity of fighting after all.

As far as Russia is concerned if she becomes the paramount power in China, it will not be of her inclination. The British newspapers and the uncontrollability of the British democracy alone will force Russia, against her will, to assert her power in the Far East and become the paramount Power in China.

The last Power in whom lies the solution of the Chinese Problem is Japan. In so far as the interest of the well-being of her people is concerned, Japan has a larger stake in the solution of the Chinese problem than any of the Powers in the present Concert. With her present armament alone, Japan can dictate a policy to the foreign Powers in dealing with China. But in order to do that Japan must not study the Chinese Question with foreign spectacles. As soon as Japan gets a right and clear view of the real issues in the Chinese question, Japan will perhaps be the Mark-graf (*Jōi shōgun*) of the Civilisation of the Far East.

A QUESTION OF CIVILISATION.

Foreigners say to me:—"All that you advance is very fine and true. But why doesn't China arouse herself and fight? The world now recognises no right, but force, physical force." To this objection, I will say that the "Boxers" ought to convince the world that the Chinese are not unwilling to fight. Sir Robert Hart's countrymen think that Sir Robert has lost his wits when he prophesied about the future of "Boxerdom" in China. But I will here give two facts from Chinese history which will show that Sir Robert Hart may not be very far wrong after all.

I. In the 12th century of the Christian era, the Chinese nation, having found out that civilisation, as Mr. Ruskin says, means the making of civil persons, had in consequence forgotten or lost the art of war. When therefore the Chinese then came face to face with the Mongol hordes from the North, they were helpless. In 1260 the Mongol chieftain, Kublai Khan, actually seated himself on the throne of China to *dragoon* the Chinese nation. In 1361, just one hundred years later, the Chinese had relearned the art of war and, under the first Emperor of the Ming dynasty, Chinese chivalry again arose and drove the Mongol hordes out of China back to their homes, at least such portion of the savage intruders as would not take to the Chinese civilisation and become civil persons.

II. When in 1850 the Taiping rebels raised the standard of rebellion in Canton, the "literati" governing class were helpless, but in about ten years the "literati," who took off their long gowns, had learned something of the art of war and in 1864 the rebellion was at an end.

But what I want to say here is that the question whether the Chinese nation will have to fight or not, is a very grave question for the cause of civilisation in the world. In a fair fight, I have no fear as to the issue for the Chinese. But the danger to civilisation is even this. Before the Chinese are ready to fight, the present policy of the foreign Powers may drive the Chinese nation to bolt and run "amok." What can be possibly done by human means to prevent such "an amok," should be done, if not for the sake of humanity at least for the sake of material interests. The people of Europe and America do not realise the present state of suffering of the Chinese population. Even the middle classes in China, not to say the lower classes, are now living just on the verge of starvation and the foreign diplomats fondly think the Chinese people will quietly starve themselves to death—to pay not only for the actual damage done, but also for the glory and fireworks of modern Colonial Politik. Moreover, if the Western nations wish to rob the Chinese people, then let them do it at least by open violence as lately in North China; but for the love of God and man, let them not hand the Chinese people to the tender mercies of modern European usurers, called financiers and capitalists. I will say here that the Chinese people can even now for the sake of peace afford to make the sacrifice of paying for a reasonable indemnity. But in order to do this the Central Government must have perfect freedom of action, e.g. absolute power to command every viceroy and governor to give a faithful account for every tael of public money or to answer it with his head.

I have said that the issue at bottom of the Chinese Problem is a grave question of Civilisation. In Europe after the Thirty Years War, the Congress of Westphalia was called to consider questions which, like the present questions in the Chinese affairs, concerned the interests of civilisation. I venture then to ask that, before the present final treaty of peace is ratified, it should be submitted to such a Congress as the Westphalia Congress, not only to revise, but, if necessary to completely change the whole treaty.

Mr. Montague Bernard, Chichele Professor of International Law and Diplomacy, speaking of the Peace of Westphalia says:—

"The work of the Westphalian Congress was a Treaty of Peace. A Treaty of Peace, if you dissect it, commonly divides itself into several distinct parts. First, there are what diplomatists have called the general articles—a declaration that peace is restored and a clause or clauses of *Amnesty*. Secondly, there are provisions judged necessary to remove the causes out of which the war arose, redress the grievances complained of and prevent the recurrence of them. This is the one essential thing which the negotiators have to do, and the pacification is hollow and imperfect if they fail to do it clearly and effectually. Thirdly, there is the Indemnity or satisfaction exacted by the stronger belligerent for the injury sustained, and for the cost of the war. Lastly, provision is made for the due execution of the foregoing stipulations."

In concluding this series of articles, I take the opportunity of publicly thanking you, Mr. Editor, for your great courtesy in opening the columns of your paper to me.

I am, &c., KU HUNG-MING, M.A.
Wuchang, 24th July, 1901.

CHINA'S TRADE LAST YEAR.

We have received from Shanghai the "Returns of Trade and Trade Reports for the year 1900," published by order of the Inspector-General of the Chinese Imperial Maritime Customs. As usual it is a bulky volume and packed with valuable reports and statistics. The general introduction, by Mr. F. E. Taylor, Statistical Secretary, is well worth reproducing in part:—

The great expansion of China's Foreign trade, shown by the statistics for 1899, was continued during the first half of 1900; but the disturbances in the North, which became serious in June, not only stopped for a time all trade at Newchwang and Tientsin, which had shown such improvement during the previous year, but naturally had a depressing effect throughout the ports. The idea that the Boxer movement against the Christian converts could be successfully employed in the deliverance of the country from Foreign dictation and interference was accepted by only a limited party in Peking and by certain officials in the northern provinces. Elsewhere it was fortunately received with a scepticism which proved sufficient to save China from a general war, and trade went on as usual, hampered only by a want of confidence engendered by the uncertainty of the political outlook. In the South a rebellion, which at one time looked serious, was promptly suppressed by the authorities, but caused some disturbance to trade in the districts affected. The Yangtze Valley was kept wonderfully tranquil, and one or two abortive attempts at insurrection were immediately quelled. The power of the officials to preserve order has never been more strikingly manifested. That trade was not more ruinously impeded, always excepting the actual area of hostilities, during a year which was so exceptionally trying to merchants and so full of unrest for the populace, shows its vitality and how quickly it will revive when peace is restored. We may hope that the Chinese Government, under the pressure of circumstances, will now awake to the necessity of developing the resources of the country, and we shall then see China becoming more wealthy under the stimulus of apparent misfortunes. The strength of the Chinese lies in their industry and commercial aptitudes and not in their capacity for war, and the cultivation of friendly relations with Foreign Powers will serve them better than the vain policy of exclusion and resistance to progress.

The close of the decade offers a convenient opportunity for a general review of the progress of trade. * * * It will be seen that, with some exceptions, the trade in Cotton Piece Goods has remained practically stationary, and in some items has even fallen off. The exceptions are American Drills, Jeans, and Sheetings, which show a strong advance, and Cotton Flannel (principally American) and Cotton Lastings, which are evidently increasing in favour. English Shirtings and T-Cloths, with English Drills, Jeans, and Sheetings, have made no headway. Japanese Cotton Goods seem likely to find an enlarged market. English Cotton Yarn has not progressed; while Indian and Japanese Yarns have advanced rapidly. The trades in Woollen Goods and Metals are not growing. Among Sundries, Candles, Cement, Clocks and Watches, Aniline Dyes, Window Glass, Paints, and Perfumery have gradually increased in demand; while Flour, Kerosene Oil, Matches, and Soap have been imported in much larger quantities every year.

The total Revenue for the year was *Hk. Tls.* 22,873,986, the best collection in silver, with the exception of 1899, since 1891. Compared with the previous year, the highest on record, Import Duties were less by *Hk. Tls.* 892,263; Export Duties, by *Hk. Tls.* 1,526,649; Coast Trade Duties, by *Hk. Tls.* 110,669; Opium Duty, by *Hk. Tls.* 394,972; Transit Dues, by *Hk. Tls.* 160,771; Opium Likin, by *Hk. Tls.* 786,821; while Tonnage Dues gained *Hk. Tls.* 84,669,—making a total deficit of *Hk. Tls.* 3,787,476.

One would naturally have expected a disastrous commercial panic with heavy failures; but the year has been, generally speaking, a fairly good though anxious one. Trade was so brisk during the first six months and revived strongly towards the close, that, contrary to all expectation, the value of the Foreign trade was well up to the average of late years, although naturally falling short of such an exceptional year as 1899. At Newchwang such astonishing progress was shown previous to the disturbances that a rapid recovery may be looked for. Tientsin may possibly be adversely affected for some little time, but it is just as likely that the profits of the military occupation and the wide distribution of hoarded wealth which has taken place will lead to an early increase of trade there. Personal experience is more persuasive than advice, and the Chinese Government probably will be more disposed to regard with favour the extension of railways since the arduous journey of

the Court to Hsi-an, to which place supplies came very slowly and suffered considerably in bulk on the road. Famine, too, has come under their immediate notice, and the people were perishing around them without hope of the relief which railways could have brought. Whatever changes may result from the events of 1900, whatever readjustments may take place in the share of the trade taken by each country, it may be confidently expected that the Foreign commerce of China, as a whole, will continue the expansion which was so marked in 1899.

Importers of Cotton Goods have passed through a very anxious crisis, but disaster was averted by another short Cotton crop in America. The goods which arrived in the spring were imported at enhanced prices, and although on the breaking out of the trouble in the North the spring purchases for the autumn market were stopped, there were large stocks which could not be placed and which would have shown a heavy loss had the price of Cotton fallen. The banks assisted importers, the short Cotton crop saved the situation, and the demand which arose late in the year, especially for the Yangtze ports, effected satisfactory clearances. With the exception of Jeans, all heavy goods felt the disturbance in their principal markets in the North, though Dutch and Indian Drills and Indian Sheetings showed small improvement. English Cotton Yarn fell away again, and the importation declined to 30,916 piculs—less than half what it was to years ago. Indian Yarn only amounted to 985,989 piculs, a great decrease on previous years, while Japanese Yarn was still imported almost as freely in 1898. The principal feature of the trade was the increased demand for Printed and Dyed goods. Cotton Prints rose to 968,828 pieces; Printed Twills, to 68,915 pieces; Cotton Lastings, to 1,210,460 pieces. Velvets and Velvetene were in greater demand. The total value of the Cotton Goods was *Hk. Tls.* 75,606,360, as against *Hk. Tls.* 103,465,048 in 1899 and *Hk. Tls.* 77,628,804 in 1898. But exchange was higher, and the year turned out well for importers.

IMPERIAL MINT REPORT.

We acknowledge receipt from Mr. Hasegawa Tameharu, Director of the Imperial Japanese Mint, of a copy of his report to the Minister of Finance for the year ending March 31st, 1901—which it may be noted is the twenty-seventh report of the present director and the thirty-first report of the Imperial Mint. We extract the following:—

The total coinage of this financial year, consisting of gold, silver, and nickel in five denominations amounted to *yen* 13,800,667 against *yen* 22,368,460 of the preceding year, showing a decrease of *yen* 8,567,393.

Of the bullion deposited for coinage, there was an increase in gold and a decrease in silver, while the deposits for certification of fineness show a decrease in gold and a marked increase in silver, of which Chinese silver constituted a large portion.

In the Assay Laboratory the number of silver assays was considerably diminished, but the number of assays of minerals was nearly twice as much as in the last year. The Refinery was also fully occupied, for in addition to the usual amount of parting work there was a large amount of Chinese silver cast into Mint bars.

The melting up of old copper and bronze coins during this year amounted to *yen* 200,000 in nominal value, consisting of 2-*sen* and 1-*rin* copper, and 2-*rin* and Bunkyu bronze.

The number of medals struck during this year, consisting chiefly of the medals of the Red Cross Society and of the Chōkon-kwai, amounted to 209,988, or nearly double the number of the preceding year. A large number of punches for the marking of weights and measures was also manufactured for the Department of Agriculture and Commerce and for the Provincial Government of Formosa.

The work of the Machine Shop was by no means light, as the staff was occupied in the construction of a steam engine, a lift pump, an edge compressor, etc., in addition to ordinary repairs and renewals.

The total amounts of bullion deposited or purchased for coinage during this financial year were: Gold, 3,223,830.74 *monme* (900 fine); Silver, 7,048,311.11 *monme* (800 fine); and Nickel, 7,504,893.92 *monme* (250 nickel).

The total amounts of bullion deposited in or purchased by the Mint from its commencement (December, 1870) up to the end of this financial year were:—Gold, 63,179,122.85 *monme* (900 fine); Silver, 1,667,876,117.26 *monme* (900 and 800 fine); Nickel, 216,551,147.68 *monme* (250 nickel); Copper, 2,716,287,809.81 *monme*; and Bronze, 33,765,894.75 *monme* (950 copper).

The total amounts of bullion deposited for refining and certification of fineness at the Mint were: Gold,

1,421,029.82 *monme* (fine weight); Silver, 9,973,019.84 *monme* (fine weight.)

The total coinage of gold, silver and nickel during this financial year amounted to 13,254,394 pieces, of the real or nominal value of 13,800,677 *yen*.

The coinage of this year compared with that of the last year shows a decrease of 4,000,000 *yen* in gold, of 4,502,783 *yen* in silver, and of 65,010 *yen* in bronze, making a net decrease of 8,567,793 *yen*.

The total amount of coins paid out against bullion deposited during the financial year was 13,915,548.989 *yen*.

The number of different medals made at the Mint during this financial year was as follows:—

Gold	1
Silver	178,687
Nickel	12,180
Copper	10,120

Total 200,988

Besides the above, the Mint made 6,200 punches for stamping of weights and measures required by the Department of Agriculture and Commerce, also 140 punches for the same purpose for the Provincial Government of Formosa as well as 42 steel stamps for the public.

The total receipts and expenditures of the Mint for this financial year, and from its commencement up to the end of the last financial year, were as follows:—

RECEIPTS.	Yen.
For this financial year	1,240,387.993
From the commencement of the Mint up to the end of the last financial year	71,356,239.159

Total 72,596,627.152

EXPENDITURES.	Yen.
For this financial year	987,404.724
From the commencement of the Mint up to the end of the last financial year	52,615,262.954

Total 53,602,667.678

The following table shows the account of yearly receipts and expenditures of the Mint from its commencement up to this financial year:—

Year.	Receipts.	Expenditures.
From commence-ment (Dec., 1890)	Yen.	Yen.
to March, 1897...	36,773,105.676	24,701,599.874
1897-1898	10,796,241.258	8,777,574.518
1898-1899	17,907,852.275	14,290,049.217
1899-1900	5,879,039.950	4,846,039.345
1900-1901	1,240,387.993	987,404.724

Total 72,596,627.152

Net Profit and Loss.

Year.	Profit.	Loss.
From commence-ment (Dec., 1890)	Yen.	Yen.
to March, 1897...	12,152,444.494	—
1897-1898	2,035,860.821	—
1898-1899	3,616,100.089	—
1899-1900	1,029,357.794	—
1900-1901	260,135.277	—

Total 19,093,898.475

The balance of receipts and expenditures does not agree with the sum of net profits since 1891-92, owing to certain alteration in the financial system.

The number of officials and workmen engaged in the Mint on the 31st March, 1901, was as follows:—

Officials and sub-officials, 76 (9 in the Tokyo Branch included.)	
Workmen and servants ...140 (6	" "
Total.....216 (15	" "

Certain experiments were conducted during the year upon the melting and coining of metallic nickel. It has been found that metallic nickel, when melted, hammered, rolled and annealed with proper precautions, gives perfectly good blanks which can be struck with coinage dies with satisfactory results.

In the Rolling Room, brittleness of the gold bars produced chiefly from foreign ingots necessitated the annealing of these bars, which had not been hitherto practised in the Mint. Experiments having proved satisfactory, all gold bars have been annealed since October last, thereby considerably reducing the proportion of rejected work.

In the same room an arrangement for adjusting the length of fillets was added to the shearing machine, two medium rolls were made idle, four fillet receivers for the same rolls and a toothed wheel of the finishing roll were renewed.

The wooden floor of the Weighing Room has been replaced by granite pavement.

A machine for impressing the edge of blanks with concave figures has been constructed in the Mint.

A new lifting pump of the Worthington type has

been constructed in the Mint to replace the old special pump of the Pump Room near the river.

The chimney of the Gas Room was taken away and the flue has been connected with the chimney of the Machine Shop.

The production of refined gold and silver during this year was less by 1,337,772.33 *monme* in gold and greater by 293,425.43 *monme* in silver than in the last year.

The amounts of gold and silver reclaimed from sweeps in the Amalgamation Room were in fine weights: gold, 151.01 *monme*; silver, 5,842.67 *monme*, showing a decrease of 80.31 *monme* in gold and of 6,069.80 *monme* in silver compared with the last year.

During this year the deposit of bullion for refining and certification of fineness amounted to 5,093,094.94 *monme*, of which 398,820.20 *monme* were silver, and 4,694,274.74 *monme* bullion for refining; these were made into 817 ingots consisting of 56 of silver and 761 of bullion for refining.

Out of the deposited bullion, 398,070.20 *monme* of silver were cast into 56 Mint bars; and 210.40 *monme* of gold and 29,639.50 *monme* of silver were returned to depositors at their request.

The enlargement of the public roads of the City of Tokyo necessitated the removal of the Tokyo Branch Office. The new office has been built in the north western yard of the Department of Finance, the last four months of the financial year having been occupied in the construction.

GENERAL VOYRON IN KOBE.

Mr. Tsubono, Mayor of Kobe, Mr. Urushibata, Assistant Mayor, and several officials and prominent men of Kobe went on board the M.M. steamer *Ocean* on Friday to present an address to Lieutenant-General Voyron. The party assembled in the saloon, the Japanese officials on one side and the General, his Staff, and Mr. de Lucy Fossarieu, French Consul, on the other side. Mr. Tsubono read the address of welcome in Japanese and Mr. Murakoshi, of the French Consulate, translated it into French as given below:

"Votre nom ne nous est pas étranger, et la glorieuse réputation qui s'y attache était déjà parvenue jusqu'à nous.

Dans le courant de l'année dernière, alors que la Chine se trouvait devenue le théâtre d'un drame qui avait coûté tant de vies humaines et tant de richesses, et qui en mettait tant d'autres en péril, et que les Puissances envoyaient de toutes parts des armées de secours, c'est à vous que la France avait confié le commandement de ses troupes, lesquelles, par leur valeur et par leur discipline, et sous votre habile direction, ont si grandement contribué à la victoire finale et au rétablissement de l'ordre et de la paix qui ont couronné les efforts des alliés.

"Aujourd'hui que, couvert des lauriers rapportés de cette brillante campagne, vous retournez en France, c'est pour nous, citoyens de Kobé, un grand honneur et une rare bonne fortune, d'être admis à venir vous saluer à votre passage dans notre ville.

"Non seulement les relations diplomatiques que et commerciales entre votre pays et le nôtre remontent à de longues années déjà, mais, en matière de science, d'art, d'industrie, et plus encore au point de vue du développement de notre puissance militaire actuelle, le Japon doit beaucoup à la France.

"En ce qui concerne plus spécialement Kobé, nous constatons avec satisfaction une recrudescence du mouvement commercial résultant de l'heureuse terminaison des affaires de Chine, et dont nous devons remercier les succès des armées alliées.

"Pour tous ces motifs, nous ne pouvions pas vous laisser passer à Kobé sans vous témoigner nos sentiments d'estime et de gratitude, ainsi que notre espoir de voir les relations entre nos deux pays se développer de plus en plus désormais et devenir de plus en plus intimes, pour l'avantage réciproque de l'un ou de l'autre.

"Le voyage que vous entreprenez est bien long, et les grandes chaleurs que vous rencontrez ici vous suivront au loin sur mer.

"Nos vœux de bonne santé et d'heureuse traversée vous accompagneront du moins, et nous vous prions de vouloir bien en agréer l'hommage."

The General stated in reply that he was greatly pleased with the treatment accorded him since his arrival in this country. As for the French being the first instructors of the Imperial Japanese army he had been reminded of that by the numerous thanks of the officers in Tokyo while he was there. Some of them, the General stated, remembered the names of their French instructors. The French nation had been enjoying friendly relations with this nation for long and the recent disturbance in North China had tended to draw the two nations even closer. The French troops had fought in North China with the Imperial Japanese troops shoulder to shoulder and some of them were sleeping the eternal sleep in the same district. Such a relation was sure to draw the two nations closer from a diplomatic point of view. The General concluded by wishing well to the prosperity

of trade in Kobe and called for a Banzaï to Kobe and the Imperial Japanese Army.—*Kobe Herald*.

TELEGRAMS.

(REUTER'S SERVICE TO THE "JAPAN MAIL.")

COUNT WALDERSEE CRITICIZED.

Shanghai, August 16.

Many German newspapers are condemning the boastfulness and aggressiveness of Field-Marshal Count von Waldersee's speeches. They especially deprecate the assertion that, while the names of other nations have sunk, Germany's has risen.

KING EDWARD'S TITLES.

The Royal Titles Bill has been read in the House of Commons a third time.

[NOTE.—When Lord Salisbury introduced in the House of Lords a bill authorizing King Edward to assume by proclamation within six months after the adoption of the bill, such title as he may think fitly recognizes his dominion beyond the seas, the Premier added that the title would probably be as follows:—"Edward the Seventh by the Grace of God, of the United Kingdom of Great Britain and Ireland, and of the British Dominions beyond the Sea, King, Defender of the Faith, and Emperor of India."—Ed. J.M.]

NAVAL AND MILITARY WORKS.

The Naval and Military Works Bill has been read a second time.

HONGKONG DOCKYARD.

Captain E. G. Pretymann, M.P., Civil Lord of the Admiralty, when introducing the Bill relating to the naval extension works, said that the dockyard at Hongkong would be enlarged to 34½ acres, leaving space for the construction of an additional large dock if required, and that storage would be provided for 100,000 tons of coal.

GREAT BRITAIN AND THE BOERS.

Mr. Chamberlain, speaking in the House of Commons, declared that the American policy in the Philippines will be followed if the South African conflict degenerated into a war of banditti. The British will either bring the war to a conclusion by proclamation or else rid the colony of the irreconcilables who, if they remain, will be a continuous source of danger.

CHAMBERLAIN'S SPEECH.

Shanghai, Aug. 17.

The American policy referred to by Mr. Chamberlain in his recent speech, consisted of the fixing of a date after which the killing of soldiers was regarded as murder. Mr. Chamberlain denied that any kind of peace negotiations were proceeding.

BRITISH PARLIAMENT.

The prorogation of Parliament is expected to take place on Saturday.

SOUTH AFRICA.

Shanghai, August 18.

Commandant Erasmus has been captured unharmed.

A company of French's scouts have been ambushed. Two were killed and five wounded.

[This telegram may be read to mean that Erasmus was ambushed by a company of French's scouts, and that two of his party were killed and five wounded before he surrendered. Indeed that seems to us the more reasonable rendering.—Ed. J.M.]

BRITISH PARLIAMENT.

The Naval and Military Works Bill has been read a third time.

Parliament has been prorogued.

SOUTH AFRICA.

Shanghai, August 19.

General Gorrington had driven Kritzinger, who had only one hundred men with him, and many of them afoot, across the Orange River.

BIG FIRE IN LONDON.

The Mazawatee tea premises on Tower Hill, London, have been gutted by fire.

INTERNATIONAL COURTESIES.

The Kaiser and the Mikado have exchanged cordial telegrams with reference to Count von Waldersee's reception in Japan.

A GERMAN COLONIAL ARMY.

Shanghai, August 20.

The *Standard* says that Germany has decided to form a Colonial army.

THE BIG LONDON FIRE.

The big fire reported from London yesterday destroyed the premises of Messrs. Walker and Co., and Messrs. Thomas Denham and Sons, tea-dealers, and not the Mazawatee tea warehouses.

SHIPPING FATALITY.

The Canadian Pacific steamer *Islander*, from the Yukon, struck an iceberg and sank in twenty minutes. Sixty-five persons were drowned and 111 saved.

THE CZAR VISITS FRANCE.

The Czar attends the French Army manoeuvres at Rheims.

FRANCE AND THE CZAR.

Shanghai, Aug. 21.

The French press regard the visit of the Czar as a fresh pledge of Russia's friendship for France.

The Czarina will accompany the Czar.

Before landing at Dunkirk the Czar will accompany President Loubet to review the Northern Squadron.

His Majesty will meet the Kaiser at Dantzig en route for Dunkirk.

THE CORNWALLS AT CAPE TOWN.

A later telegram says that the enthusiastic reception of the Duke and Duchess of Cornwall at Capetown has dispelled the misgivings as to the prudence of the visit. The press regard this as a hopeful sign.

(RECEIVED AT THE LEGATION OF FRANCE.)

THE GERMAN GARRISON AT SHANGHAI.

Saigon, August 16.

It is telegraphed from Shanghai that the English Colony there is greatly dissatisfied because the German garrison is larger than the British.

THE CLOSING OF PARLIAMENT.

Saigon, August 19.

The session of the British Parliament has closed. The speech from the Throne affirms that constant progress is made by the English troops in the conquest of the South African Republics, but that the difficulties of the country prolong the duration of the military operations. The agricultural and industrial situation in India has improved.

THE CZAR'S VISIT.

Saigon, Aug. 21.

In response to an invitation from the President of the Republic, the Emperor of Russia will arrive at Dunkerque on the 17th of September. He will review the French Squadron, and will then proceed direct to Compiegne where the Empress will join him. The Sovereigns will be present at a review of the troops near Reims, and will leave France on the 20th of September. Considerable diplomatic significance is attached to this visit.

COLONEL MARCHAND.

Saigon, Aug. 22.

Colonel Marchand is nominated chief of the staff of the China Brigade.

FRANCE THREATENS THE SULTAN.

The Sultan having gone back on his promise to arrange the affairs in question, the

French Ambassador has warned him that he will break off relations with Turkey.

(RECEIVED IN TOKYO.)

THE CHINESE COURT.

The Hsian Court has issued an edict announcing its intention of starting for Peking on the 6th of September. The postponement has no special significance, being merely on account of the heat. It is nevertheless probable that the conservatives induced the Court to wait until all the foreign troops had been withdrawn from the capital.

THE PEACE PROTOCOL.

The Peace Protocol was handed to the Chinese Plenipotentiaries on the 16th inst., but the date of the withdrawal of the troops has not yet been definitely fixed as it can not take place until after the Chinese have signed the Protocol. Inasmuch, however, as the Plenipotentiaries will probably attach their signatures on the 22nd or 23rd, the date of the military withdrawal will then be doubtless fixed.

THE HAWAIIAN QUARANTINE SCANDAL.

According to information received from Hawaii, the statement with reference to improper conduct on the part of sanitary officials when examining Japanese female passengers who arrived by the steamship *America Maru*, is correct. The medical officers have apologised and explained that they adopted a special system of examination because Asiatics are more liable to plague than Europeans or Americans. Probably as the outcome of this affair, female doctors will be appointed to perform the duties of examining females hereafter.

(FROM THE "N.C. DAILY NEWS.")

PLAGUE IN THE MALAY STATES.

Singapore, August 10.

The plague has appeared again at Kuala Lumpur, and there have been two deaths.

NAVAL MOVEMENTS.

Hongkong, August 12.

H.M. flagship *Gloria*, with Vice-Admiral Sir Cyprian A. G. Bridge, K.C.B., left Hongkong on Saturday, and H.M. storeship *Humber* on Sunday, both for Weihaiwei.

HONGKONG COTTON SPINNING, WEAVING, AND DYEING CO., LD.

Mr. Justice Wise on Saturday granted the application for the reduction of the capital of the Hongkong Cotton Spinning, etc., Co., by cancelling the 3,000 unissued shares and the \$810,000 of capital lost.

Mr. J. J. Francis, K.C., stated that the company is indebted to the extent of over one million dollars to the General Managers, Messrs. Jardine, Matheson & Co., for money advanced.

SYMPATHY OF HONGKONG.

Hongkong, August 14.

The Hongkong Legislative Council passed on Tuesday a resolution of sympathy with King Edward and the German Emperor in their bereavement.

GRADUAL WITHDRAWAL OF BRITISH CONTINGENT.

The remainder of the Siege Train left Hongkong yesterday with a Pompano Company from the north.

THE MEMORIAL TO QUEEN VICTORIA IN LONDON.

Hongkong, August 15.

A public meeting was held in the Council Chamber, Hongkong, on Wednesday, at which the Governor presided, to consider the steps to be taken by the colony towards contributing to the monument to be erected in London in memory of the late Queen.

Sir Thomas Jackson moved and Mr. Bell-Irving seconded a resolution to raise subscriptions towards the monument, and a representative Committee was appointed.

The Governor expressed his hopes that the Committee would expedite their labours, so that the contributions may be sent home quickly.

DAMAGE BY RAIN.

Tientsin, August 15.

There have been heavy rains throughout the north, and the railways in Manchuria are flooded for miles. The Shanhaikuan-Newchwang line is much interrupted, and the bridges are not to be trusted.

DENIAL OF RUSSIAN REVERSES.

The reported Russian reverses are discredited at Newchwang.

TIENTSIN WANTS DRAINAGE.

The lack of drainage at Tientsin is felt badly.

PEKING RELAPSING.

Affairs at Peking under Chinese control are already relapsing into the old groove.

THE REOPENING OF THE PEIHO.

16th August.

The German steamer *Kniesberg* has arrived at the Tientsin Bund, after a fairly satisfactory trip up river, though the channel is still narrow. If her passage down is successful, the attempt will be repeated.

The weather here has improved.

FALL OF HOUSES AND FATAL FIRE.

Hongkong, August 15.

The houses 32 and 34, Cochrane Street, collapsed at a quarter to eleven last night and a fire started. It is supposed that there were 75 people in the houses and over a score on the street at the time. So far 17 dead have been discovered and 23 wounded; four have been found unharmed, but many more are supposed to be killed. The houses were old and the walls weak, and the rain caused them to collapse.

PIRACY.

A junk was pirated outside Hongkong last night, two of the crew being murdered and one wounded. The pirates escaped, taking \$30, worth of clothing. It is reported that they overlooked \$1,400 which was hidden in the junk.

RESIGNATION OF THE CHIEF JUSTICE OF HONGKONG.

August 16.

Sir J. W. Carrington, C.M.G., sent in his resignation as soon as he arrived in Japan, his medical adviser having told him that he is suffering seriously from overwork.

(FROM THE "OSTASIATISCHES LLOYD.")
NEWS FROM EUROPE.

Berlin, August 13.

The funeral ceremonies at Potsdam to-day were very impressive; both the King and Queen of England took part in them.

King Edward conferred on Count Waldersee the Order of the Bath.

The Japanese have demanded from Korea a concession in Masampho. It is considered here as probable that Korea, which up to the present refuses to grant Japan's request, will eventually yield to the demands of Japan, as she is determined to press the matter.

The small harbour of Farsund, on Listerland Peninsula, south coast of Norway, has been completely destroyed by fire, and 1,300 people are homeless.

The well-known Arctic explorer, Nils Adolf Erik Nordenskjöld, has died at the age of 69 years.

HONOURS FOR THE CHINA EXPEDITION-ARY FORCE.

The London *Gazette* contains the following honours in connection with the expedition to China:—

Sir Claude MacDonald, Colonel Reid, Colonel Barrow, Colonel Dorward, Sir Pertab Singh, to be Knights Commanders of the Bath.

Sir Norman Stewart, Colonel Cummins, Colonel Lorne Campbell, Colonel Bookey, Colonel Gartside-Tipping, Major Bond, Major Ramsay, to be Companions of the Bath.

General Gascoigne, to be Knight Commander of St. Michael and St. George.

Commander Connor of the N. S. W. Contingent, Commander Tickell of the Victoria Contingent, to be Companions of St. Michael and St. George.

Ten officers received the Distinguished Service Order.

Sir Alfred Gaselee is promoted Major-General. The Maharajah Sindhia is promoted Aide-de-camp to the King.

Promotions in the Order of the Indian Empire:—

Sir Alfred Gaselee to be Grand Commander.

The Rajah of Bikanir to be Knight Commander.

KEROSENE.

The market has still a strong tendency.

American	\$2.79
Russian	2.50
Langkat	2.45

SUGAR.

A fair business has been done at quotations in Hongkong refined, but otherwise the market is quiet.

	PER PIECE.
Brown Takao	Y. 5.20 to 6.25
Brown Manila	5.90 to 7.20
Brown Datong	4.80 to 5.00
Brown Canton	5.00 to 7.10
White Java and Penang	7.20 to 8.60
White Refined	9.30 to 10.60

EXPORTS.

RAW SILK.

Prices have been further forced up by a speculative movement which is not maintained by prices in consuming markets. Whether buyers here can drag consumers up to their ideas or not remains to be seen.

QUOTATIONS.

Filatures—Extra, Fine	Y. 960 to 970
Filatures—Extra, Coarse	960 to 970
Filatures—No. 1, Fine	940 to 950

YOKOHAMA: SATURDAY, AUGUST 31ST, 1901.

BIRTH.

At No. 9-B, Tsukiji, Tokyo, on August 23rd, the wife of JOHN TRUMBULL SWIFT, M.A., of a daughter.

SUMMARY OF NEWS.

LIEUT.-COLONEL NOZU arrived at Fusan on the 27th inst.

YOKOHAMA is once more enjoying a full water service from the mains.

MR. ISODA WAZO, M.P. for Nara Prefecture, died at his home on the 23rd inst.

THE well-known poet Yakakuan Kakusai (73) died at his residence in Tokyo on the 24th inst.

THE dead body of a man was found under Surugabashi, Yokohama, on the morning of the 22nd inst.

THE War Department will despatch a number of carpenters shortly to build barracks at Tientsin.

PRINCE KONOE will arrive in Japan from Korea in a few days and will stay for some time at his villa in Kyoto.

ITO KITARO, a native of Miye, was arrested by the Fukagawa police on the night of the 21st

inst. on a charge of threatening his eldest brother Ito Tatsujiro with a knife. He wanted to borrow money.

PRINCE SHIMAZU, who has made a long stay at Kagoshima, arrived in the capital on the morning of the 25th inst.

NETS to the value of \$5,000 (gold) have been cut on the Fraser river this season. Most of them belonged to Japanese.

SEVENTY-EIGHT labourers gathered by the emigrant companies left Yokohama for Hawaii on the 27th inst. by the *Doric*.

FOLLOWING are the number of Japanese in Tientsin at the end of July:—Males 882; females 175, occupying 203 houses.

A HAIL storm and heavy wind visited the neighbourhood of Sakai-mura, Yenga-gori Fukuoka Prefecture, on the 24th inst.

THE Russian Government is reported to have built three torpedo-boats at Port Arthur the materials of which were sent from Europe.

MR. YADA KINJIRO, editor of the *Yokosuka Shinbun*, was arrested by the Yokohama Local Court on the 19th inst. charged with forgery.

DUST fell at Yamase-mura and Heiin-mura, Takai-gori, Nagano Prefecture, on the 23rd inst. It is believed to have resulted from an eruption of Asamayama.

THE chartered steamer *Sakura Maru* arrived at Ujina on the 24th inst. and landed a number of 21 c.m. guns and some machinery captured at the Taku forts.

THE Exchange Telegraph Company says that Mr. Andrew Carnegie has been invited to become lord rector of Aberdeen University in succession to Lord Strathcona.

A COLLISION occurred between a passenger car and a goods van at Waki station on the Sanyo Railway on the afternoon of the 26th inst. Three passengers and one porter were injured.

A YOUNG man dressed like a student committed suicide by throwing himself before a train near Oiso on the morning of the 21st inst. He had in his pocket 50 *sen* and some poetry.

FOUR Japanese attempted to smuggle out of the country by the Nippon Yusen Kaisha steamer *Tosa Maru* on the 21st inst. They were found by the harbour police and arrested at once.

A BLACKSMITH named Kato Shinkichi, living at Atsugimachi, Kanagawa Prefecture, while fishing on the Sagami-gawa on the morning of the 23rd inst., had an epileptic fit and was drowned.

THE steamer *Kotsu Maru* (1,550 tons), belonging to Mr. Oya Shichihei, which has been built at Uraga, in the branch shipyard of the Ishikawajima Company was launched on the 28th inst.

AN embankment at Kusunowa-gawa at Aritomura, Abegori, Shizuoka Prefecture, was destroyed by flooding on the afternoon of the 23rd inst. Several hundred *cho* of rice fields were washed away.

A QUARTER-MASTER of the *Tosa Maru* has been arrested by the Water Police. It is alleged that he accepted *yen* 13 from a would-be stow-away, who, however, was discovered and brought ashore.

A LONG distance swimming race participated in by over 70 students belonging to the Dai Nippon Butokukai, took place on the 21st inst. They started at 8.20 in the morning to swim between Fushimi and Osaka (over 13 *ri*) and arrived at

Mr. Fujita Denzaburo's residence in Osaka at 7 o'clock in the evening. The students' ages ranged from 13 to 20.

A LAMP explosion in the house of Mr. Kano Sadajiro, an official of the Imperial Household Department, caused slight injuries to Mr. Kano's wife and seriously hurt her sister, who is not expected to recover.

AN old woman named Ito Nobu, living at Motomachi Ichome, Yokohama, attempted to commit suicide at Mayetabashi early on the morning of the 25th inst. She threw herself into the Creek but waded out again.

THE Emperor and Empress have presented *yen* 5,000 towards the funeral expenses of Marquis Shotai, formerly King of Riukiu. The coffin left Tokyo for Kobe by train at 10 o'clock on the morning of the 23rd.

THE *Morning Post* special correspondent at Tangiers says that the Moorish Envoy to London and Berlin has been arrested at Mazighan (Morocco) for granting unauthorised concessions to England and spending two millions sterling.

NATIVE papers have an extraordinary story about a battle between *geisha* at Yanagawa, Chikugo Province. The trouble arose out of jealousy existing between rival *geisha* houses. Some of the male employees who assisted were injured.

OKITA TOKUJI, living at Kakigara-cho, Tokyo, and four others were arrested by the Fukagawa police on the night of the 25th inst. It appears that they conducted a rich man of Ibaraki to a house of ill-fame at Suzuki and then stole *yen* 800 from him.

A LANDSLIP caused by heavy rain occurred at Hisase-mura, Kaji-gori, Gifu Prefecture, on the 21st inst. One house was washed away and four were levelled to the ground. A landslip is also reported from Adachi-mura, Fukuoka, one building being ruined.

THE Minister of Communications ordered Mr. Aoki Dzizaburo, Chief of the Yokohama Post-Telegraph Office on the 24th inst. to proceed to Europe and America. He will leave Japan in a few days. During his absence his duties will be discharged by Mr. K. Hagiwara.

THREE men named Usami Shoichi, Fujii Kotaro, and Hara Susumu, employed in a printing office, at Nishikicho, Kanda, Tokyo, were arrested by the Kanda police on the 24th inst., charged with stealing 60 *kamme* of lead belonging to the office, which they sold to a man at Yayegakicho, Hongo, Tokyo.

A ROBBER named Koshizuka Masakichi was arrested by the Kanagawa Police on the night of the 23rd inst. on a charge of stealing several articles from a house at Koyasu-mura, the same night. He was sentenced in his absence about November last to nine years' imprisonment for highway robbery.

A LANDSLIP occurred at Inohana, Shirakawa-mura, Chichibu-gori, Saitama Prefecture at midnight on the 23rd inst. in consequence of the heavy rain. Seven men were buried. Several landslips took place between Omiya and Honjo on the morning of the following day.

A MACHINIST named Hayashi Ikuzo, belonging to the Japanese cruiser *Yakumo*, committed suicide by drowning at Yokosuka on the night of the 16th inst. He got on board a boat and rowed himself out into the bay six or seven *cho*, after which he took off his uniform and tied it up in a parcel. He then threw himself into the water. His body was found on the 21st inst.

CHINESE AFFAIRS.

Saturday, Aug. 24.

Mr. Na Tung's departure from Shanghai has been postponed until the 31st of August. It is alleged that he will have to remain some two weeks in Tokyo before being granted audience by the Emperor, and that he will then visit the grave of Mr. Sugiyama and the residence of his family. Thereafter he and his suite will devote about a fortnight to various administrative investigations which are expected to furnish useful material for the organization of the remodelled Chinese Government, if there is such a thing. Many people will be disposed to think that if remodelling of the Chinese Government be attempted while the Empress Dowager and her Manchu advisers remain at the head of affairs, China will fare like the old bottles into which the new wine was poured. As to Na Tung himself, the most contradictory rumours are circulated. Some persons call him a notorious Boxer, and the *North-China Daily News*, a journal not proverbial for its sympathetic views of Chinese men and things, declares that the deaths of the martyred patriots Hsü and Yuan were brought about mainly through the instrumentality of Na. The Japanese, however, pronounce Na to be a man of most progressive ideas and thoroughly friendly to foreign intercourse. And indeed it suggests itself to us that if Na were anything like the picture drawn of him by our Shanghai contemporary, Japanese officials, who know something about China and the Chinese, would not have consented to receive him as ambassador of apology. But there is one criticism that will readily present itself to many minds. Is it wise to allow Na's mission to be employed for any purpose except the unique object of offering apologies and condolences? If he is to devote a large part of his sojourn in Japan to making administrative investigations, visiting scientific, commercial, and educational institutions, and turning his visit to general account, will not the gravity and solemnity of his embassy be correspondingly impaired, and will not the Chinese nation be persuaded that to make an apology to Japan was merely a collateral purpose of his journey? It may be conceded that the task of getting the Chinese mind to view foreign events in their true perspective is scarcely worth essaying seriously, so long as means of circulating true intelligence are in their present defective condition. But this mission of Na Tung's might at least be segregated from everything that plainly tends to obscure its real character.

In truth the Peace Protocol has done about its share of business as a basis of rumours. Still its capacities in that line are not exhausted. To-day, its fate is again invested with an element of interest by intelligence that the Chinese Plenipotentiaries have been instructed not to sign unless the Powers abandon their intention of building a parapet round the Legation quarter, and unless they take some step which the telegram fails to explain with regard to the various railway stations. Of course there is no manner of doubt that the Chinese must sign. They are held in a vise and have no option. But possibly they see their account in making difficulties. Whatever the Powers agree to or refuse, it may be taken for granted that the restoration of peace and the withdrawal of the foreign forces will not be many months old before the Chinese nation will be fully persuaded that the former was an act of graceful benevolence on the part

of their rulers and the latter an affair of stern necessity on the part of the Powers.

Major-General Fukushima has reached Shanghai on that restful holiday to which he alluded, not without a touch of irony, when interviewed on the eve of his departure from Japan. Immediately on reaching the "model settlement" he turned his back on it and took passage up the Yangtze for the purpose of visiting Viceroy Chang. No one is likely to believe that these movements of the gallant officer are dictated by pure pleasure-seeking aims, but they may be for all that.

Tuesday, Aug. 27.

The delay in signing the Protocol is now explained by a theory or rumour that the Chinese Government wants a modification of its terms. No intelligence suggesting a difficulty seems to have reached official quarters. But it does appear that there is a slight difference of opinion with regard to the provision for dredging the Whampoo River. A telegram from Shanghai says that the British Consul-General at that place has made a statement to Viceroy Liu Kun-yi, suggesting that the Chinese Government should grant a sum of 4 million taels for the purposes of the work, the money to be paid by installments in 20 years. If that be done, the foreign merchants of Shanghai will give their assistance to procure funds at once, and will organise a committee to undertake the work, as well as a conservancy board. Viceroy Liu is said to have approved the project, and to have telegraphed it to the Plenipotentiaries in Peking, by whom it is likely to be adopted. This question is naturally causing a little delay, so that, whereas the signing of the protocol was confidently expected last week, it will probably be deferred a few days longer.

There is also some renewed talk of the injustice done to Japan in paying her a smaller sum than the very modest amount she has claimed to cover her expenditures. Her demand represents a minimum figure and was based on the assumption of a cash payment. Rumour now points to the possibility of such a reduction of private claims as may leave a surplus in the fund allotted to that purpose. If so, there may be a chance of Japan's getting her rights without any special difficulty.

Wednesday, Aug. 28.

Dr. Morrison's telegram to *The Times*, in which he couples the delay in signing the Protocol with reported activity in Chinese arsenals, has doubtless created some alarm. It is now supplemented by a rumour that the officers commanding the foreign troops in Chili are about to hold a secret council. Probably there is little ground for these alarming stories. It is true that China may at any moment be visited with a fit of obstinacy. Supposing her vision to be limited to the immediate horizon, she may say to herself that if she declines to sign the Protocol, the Foreign Powers will have to make an almost deterrently great and costly effort in order to bring effective pressure to bear on the new situation. They were able to reach Peking without any unbearable strain on their resources, but to reach Hsian, in the first place, and subsequently to pursue a nomadic Court throughout the length and breadth of a vast territory, would be another and a very different matter. Such an estimate of the situation is just possible from the Chinese point of view. But is it in the remotest degree probable? Is there the least likelihood that the Chinese Court will deliberately expose

the greater part of the empire to the horrors by which the inhabitants of Chili were visited, or that, with greatly diminished resources, it will renew a struggle which was hopeless from the outset? The public will be wise if it accepts with implicit confidence the officially offered explanation of the delay in signing the Protocol. Hsian may not unreasonably expect a few days' grace for the purpose of conciliating any opposition that may have been developed in conservative quarters. Li Hung-chang's illness, which is known to be very real and very disquieting, may well retard his discharge of business, and a difference of opinion between Viceroy Liu and the Peking Plenipotentiaries on the subject of the conservation of the water-way to Shanghai may not unnaturally be responsible for a little delay. In official circles, however, there does not seem to be any apprehension whatever about the ultimate signature of the Protocol, and rumours to the contrary must be received with the greatest reservation.

It is reported that the Chinese Plenipotentiaries having approached the Russian Representative in Peking on the subject of Manchuria, received the reply that M. de Giers had nothing to say to that question, and that if they desired to open it, they must place themselves in direct communication with the Foreign Office in St. Petersburg. That is a reversal of the order of affairs hitherto supposed to have been pursued. Up to the present the public have been told that Russia was importuning China to re-open the Manchurian problem with the object of concluding an agreement approximately on the lines of the recently rejected convention, and there has been a pretty general conjecture that the aim of the St. Petersburg statesmen in taking such a step was to provide some back door of escape from the somewhat embarrassing pledges they had given to the world. But if Russia is "sitting tight" and China getting restless, all these fine theories go by the board.

Mr. Komura's departure from Peking to assume the direction of the Foreign Office in Tokyo is expected to follow immediately on the signature of the Peace Protocol. With regard to his successor at the Legation in Peking, Mr. Kurino, Japanese Minister in Paris, has hitherto been universally spoken of. But it is now alleged that Mr. Kurino, being Mr. Komura's senior, is somewhat unwilling to succeed him in Peking, and that he will probably remain for a time without a post, Viscount Okabe being sent to Paris as his successor. In that event Mr. Uchida, now Under Secretary of State for Foreign Affairs, is expected to go to Peking. The latter appointment would doubtless be excellent, for Mr. Uchida has given many proofs of exceptional ability.

A telegram from London to the *Jiji Shimpō* alleges that Russia has collected two hundred thousand troops in East Asia, including her railway guards and thirty thousand Cossacks. The telegram adds that two-thirds of these troops, or over 130,000 men, are already in Manchuria. If Russia has accomplished this, it is a very remarkable feat, but in recording the statement we venture to remind our readers that for the past fifteen years the massing of large Russian forces in Eastern Asia has been perpetually announced by newsmongers. The cry of "wolf" may become real one of these days, but we doubt whether the moment has yet arrived.

Friday, August 30.

As the time approaches for the return of the Court to Peking, rumours of all kinds thicken. In the sequel of more than one postponement it was understood that the 15th of September would be the latest date for the departure of their Majesties from Hsian. But news now comes that there has been another postponement and that the middle of October is named. Concerning this change of programme—which may be a false rumour for all that we know to the contrary—various explanations are offered. One story is that a game of cross-purposes has been commenced which threatens not to have any more finality than the rocks forming the basis of the globe according to the negro's theory. The Court proposes to return after the foreign troops have withdrawn; the foreign troops propose to withdraw after the Court's return. Hence any symptom of delay on one side produces corresponding delay on the other, and an interminable state of affairs is inaugurated. According to this story, the foreign troops are acting in accordance with the programme contemplated from the outset. But according to another version it is England that has inspired the latest phase of hesitation. England thinks that great circumspection is needed in this matter. Her conviction is that if the foreign troops vacate the city unconditionally, leaving the Chinese to enter and do as they please, the impression inevitably produced will be that the retirement was forced and that, after all, the Powers had to draw back. That estimate of the situation is said to have been confirmed by the conduct and attitude of the General in command of Governor Yuan's advance force, which is encamped a few miles outside Peking. The British commanding officer, when he approached Yuan's General for the purpose of making arrangements for the replacement of the British troops by the Chinese, encountered much hauteur and incivility, and moreover found that the Chinese were not by any means preserving good order within the district occupied by their men. There thus was no possibility of mistaking either the construction that would be put upon the unconditional withdrawal of the foreign troops, or the state of affairs that would be inaugurated in Peking after its garrisoning by the Chinese. England, therefore, came to the conclusion that the foreign troops must not be withdrawn until after certain formalities had been complied with in connexion with the entry of the Chinese, and until after practical assurance had been obtained that good order and peace would be preserved in the city. We need scarcely point out that if this latter version be correct, there are still complications of a very troublesome nature to be overcome before the Court's return. And we hope that it is correct, for we have always thought and said that a false and injurious impression would inevitably be produced on the mind of the Chinese nation if the foreign troops withdrew unconditionally. Of course every one remembers that their immediate withdrawal after the relief of the city was vigorously advocated by some publicists. Have those students of the time changed their opinion now or do they see in the present complications a confirmation of the views they then expressed? However that may be, it seems tolerably certain that the return of the Court to Peking and the withdrawal of the foreign troops will not be effected without some difficulty, and, for our own part, we can only repeat our frequent asser-

tion that until Their Majesties are fairly re-installed in their old capital, we are unable to credit the sincerity of their intention to return at all.

There is another rumour to the effect that the Court will not go back to Peking until Russia withdraws from Manchuria. If the Court has proposed to itself any such programme it displays a degree of acumen not usually credited to it. But everything would depend on the manner of giving effect to the programme.

Mr. Yuan Tsz-chwang, head of the Eastern Section of the Russo-Chinese Bank, who has just returned to Yokohama after a long tour in China, tells a representative of the *Nichi Nichi Shinbun* that he does not anticipate any revival of the China trade until the Court has returned to Peking and the foreign troops have been withdrawn. Apparently his chief reason for making that statement is that order can not be restored by the foreign troops. There are, he alleges, some thirty thousand Boxers disguised as ordinary citizens in the regions bordering the Peiho between Taku and Peking. These men constitute a perpetual obstruction to safe traffic and to the maintenance of peace and good order. But it is impossible for foreigners to search them out or distinguish them from the Chinese merchants and farmers among whom they reside. Even the Japanese can not undertake that task with any hope of success. It must be accomplished by the Chinese Authorities, and therefore until the latter are replaced in charge of the district, there will be no security for life and property, nor any genuine revival of trade. Mr. Yuan mentions incidentally that among the Chinese inhabitants of Chili the Japanese troops enjoy the highest reputation of all the allied contingents for good conduct and merciful treatment of peaceful folks; that the Americans stand second, and that the Germans are regarded as the cruellest of all.

It is affirmed that although the intended despatch of Na Tung to Japan on a mission of apology for the murder of Mr. Sugiyama has long been publicly known, the Chinese Government has not yet made any official announcement of the fact to Japan, and the latter has consequently taken no steps for the reception of the envoy or with regard to the routine which should be followed on his arrival. The idea is that Na carries his own credentials and will transmit them after he gets here. So, at any rate, writes the *Tokyo Asahi*. We trust that whatever the arrangements may be, care will be taken that the envoy's visit does not present itself to the Chinese public in the light of an ordinary expedition in search of novelties or to collect useful information.

The Chinese continue to send orders for bank paper to Japan. The late Mr. Chiosone was among the designers and executors of notes for China at the time of the first commission. Last year, Viceroy Chang Chih-tung asked the Government Printing Bureau to strike off for the Hupeh Bank a million one-*yen* notes and an equal number of 1000-cash notes, and now another request in a similar sense has come from Governor Yuan in connexion with the Shantung Bank.

A porcelain artist named Hirokawa Daijiro, living at Tobe, Yokohama, attempted to commit suicide early on the morning of the 28th inst. He threw himself into a disused well at Hiranuma, Nishi Tobe, but a police-constable who was passing rescued him.

KOREA.

Saturday, Aug. 24.

In spite of the efforts of Mr. McLeavy Brown the Korean Government seems to be in a chronic state of impecuniosity. It wants to borrow from the First National Bank a sum of four hundred thousand *yen*—which is truly a stupendous amount for a national loan—and it proposes to pay eight per cent. interest. But the Bank wants 10 per cent., a demand not all surprising, seeing that even on gilt-edged securities money can not be now obtained at 8 per cent. from Japanese banks which are paying 7 per cent. to their depositors.

In consequence of the decision that treaty provisions do not authorize the Korean Government to veto the export of grain in general but only of rice, a brisk trade in other cereals is reported from Fusan.

There is also a report that some mischievous folks have been tearing up the survey pegs of the Sôul-Fusan Railway, and that whereas the act was at first attributed to Koreans, its perpetrators are found to be Russians. We do not believe it.

Monday, Aug. 26.

The question of the veto on the export of grain from Korea appears to have been settled. The Sôul Government has agreed that the treaty limits its power of imposing a veto on the export of any grain except rice. It further agrees that there shall be no embargo on local transactions, and that Japanese fishing boats shall be at liberty to purchase 5 *koku* of rice each for purposes of food. These concessions are considered satisfactory. Japanese fishermen would have been subjected to very great inconvenience had they been prevented from obtaining supplies of rice, and with regard to local transactions, it has been already explained in these columns that since, under the old system, inter-provincial sales of grain were included in the embargo upon exports, the local officials found their account in encouraging the Government to issue such embargoes inasmuch as they themselves could always elude them and were thus able to reap large profits. It follows that Japan's insistence in this matter has injured to the benefit of the Korean people.

It has already been noted in some Japanese circles that Russia gets the credit of having been actively engaged in promoting this veto upon grain export. Of course it would not matter a row of pins to Russia if Korea's foreign trade were altogether suspended. She is in the happy position of the *vacuus viator*, and her diplomacy is not hampered by the impotency of Chambers of Commerce or the memorials of merchants. But we sometimes wonder whether her political agents are really imbued with the feverish energy for which they get credit. Nothing unpleasant from a Japanese standpoint happens in Korea without M. Pablov's finger being traced. The removal of Mr. McLeavy Brown, the appointment of M. Alexieff, the French syndicate's loan, the Sôul-Wiju Railway project, the embargo upon grain export—everything is laid at Russia's door. Some Japanese journals, analysing these facts and fancies, declare that their country's foreign policy does not keep pace with the growth of its material interests, and that Russian diplomacy, fighting without forces, wins victories in fields where Japan ought to be paramount. The question is, however, what dimensions does

Japan take in the vista of Russian imagination. We suspect that were her estimate of Japan's activity in the peninsula ascertainable, Japanese vanity would be flattered.

Tuesday, Aug. 27.

Rumour says that work is to be immediately commenced on the first section of the Soul-Wiju Railway, namely, the line from Soul to Kaisong, and that materials have been procured from France. But materials are not money, and where the latter commodity is to be obtained is not stated. Korea certainly has no funds for any undertaking of the kind, and nothing could be less likely than that French capitalists would supply money for such an exceedingly doubtful enterprise as a railway from Soul to Wiju, which has neither commercial nor direct political value for France.

Mr. McLeavy Brown is reported to have again weathered the storm. Fortified by the fact that the term of his agreement has not yet expired and supported by the British Representative, he has been able to frustrate his enemies. But all these onsets must weaken his position. If they do not overthrow him eventually it will be fortunate.

The Korean Government, in deference to the views of the Japanese Representative, has issued an instruction to the effect that the veto upon transactions in grain refers solely to exports to foreign countries and does not apply to the transport of grain from port to port of the empire, or to inter-provincial transactions. This instruction will be unwelcome to Korean local officials, who are understood to have been in the habit of interpreting the veto so as to enrich themselves; namely, applying it to interport provincial dealings by private individuals but not to the transactions of officialdom. There is now a confident expectation that when harvest time comes, the veto will be removed altogether.

The French Representative in Soul is reported to have presented to the Korean Government a series of demands in connexion with the recent riots in Quelpart. He asks that a sum of 4,160 yen be paid as compensation for the losses suffered by Christians in the riot; that a further sum of 1,000 yen be paid to the family of a missionary's Korean employé who was killed, and that punishment should be meted out to fifty persons of whose names the Minister forwards a list. This last condition seems regrettable. It is certainly in accordance with the precedent set by the Foreign Powers in their recent dealings with China, but it is a bad method for all that. The guilty parties ought to be determined by fair investigation, and should have an opportunity of defending themselves before their condemnation is decided upon. It is contrary to the most elementary principles of justice that one of the parties in a quarrel should be allowed to exercise the right of drawing up a list of the guilty persons on the other side without any judicial trial and solely on the strength of *ex parte* evidence. Were such a proposal made by an Oriental Government with regard to Occidentals it would be received with derision and indignation.

Wednesday, Aug. 28.

The obviously perplexing features of the Soul-Wiju Railway project are telegraphically discussed by the *Asahi's* Korean correspondent. It was reported that the project had definitely matured, that materials and engineers were to be obtained from France, and that the work of construction on the

Soul-Kaisong section would be inaugurated on the 24th of next month. But this account, however, circumstantial in some respects, said not one word about the provenance of the necessary money. It is about this last problem that the *Asahi's* correspondent now telegraphs. He puts the cost of the line at three million yen, and says that there are various rumours as to the source of supply, some alleging that France will furnish the required amount, others that it is to come out of the five million yen about which so much negotiation was recently carried on by the Yunnan Syndicate. Doubtless the truth is that no arrangement whatever has yet been effected. We may explain that Kaisong is on the direct route from Soul to Pyong-yang, and lies at about one-third of the distance between the two towns. Very likely the Soul-Pyong-yang section of the road would pay, but its prolongation beyond the latter town would necessarily be regarded as a political enterprise.

It is alleged that preliminaries are being arranged for revising the treaty between Japan and Korea. The treaty has not undergone any change since the date of its signature, February 26th, 1876, and it is obvious that its provisions can scarcely be suited to the greatly altered conditions of the present time. The recent trouble about the export of grain illustrated the deficiencies of the document.

Thursday, Aug. 29.

The latest about Mr. McLeavy Brown, who probably finds himself much more *en evidence* than he cares to be, is that he is suffering from senility and that the British Representative in Soul is earnestly seeking for a suitable successor. It is by the *Jiji Shimpō's* Soul correspondent that the rumour is circulated, but we should like to know the source from which it emanated.

There is a story that the French Government proposed to send a man-of-war from Chinampo in connexion with the survey of the Soul-Wiju Railway but that the Koreans objected. What part, we wonder, could a man-of-war take in surveying the route for a railway. The Soul-Wiju road seems to be getting higher and higher into the clouds.

Another sin is laid on the shoulders of M. Pablov. He is supposed to have instigated the Korean Government to address to the Japanese company engaged on the Soul-Fusan Railway an injunction in favour of adopting the narrow gauge. Our readers may be puzzled to trace any connexion between such an incident and Russian interests. The explanation is that the Soul-Wiju Railway is to be on the medium-gauge system, and Russia is supposed to be anxious to prevent any possibility of a junction between that line and the Japanese road. Rumour adds that the Japanese Company has declined to make any such change of plan, the medium-gauge having been its programme throughout.

THE PRO-BOER GERMANS.

The mood of the Pro-Boer journalists of Germany is becoming quite a curious psychological study. Their latest criticism is that there is no humanity in the strategy which spends large sums of money to shelter and feed the non-combatant Boers, especially their women and children, instead of allowing famine and pestilence to play their natural part in subduing the combatants. Even the alleged shooting of British wounded at Vlakfontein furnished to these emi-

nently honest and fair-minded critics food for vilipending England. For the most part they discredit the story. Perfectly ready to believe any accusation brought against the British by the Boers, although the latter, from President Kruger downwards, have fed their nationals on lies throughout this war, they are resolved not to attach credit to anything recounted by the British to the detriment of the Boers. Some of them, however, go a great deal farther. They say that if this shooting of wounded really occurred, it is only in the nature of retaliation; that England is reaping what she has sown; that such things can not be wondered at after the methods adopted by British Generals, and that the shooting of wounded men is a natural result of the exasperation produced by farm-burning, by the concentration camps, and by the laying waste of the country. The trade of slander has always flourished and will probably continue to flourish so long as the world lasts. But the wonder in this case is that these journalists should find a public so blinded by prejudice and so wanting in intelligence as to accept their slanders unquestioningly and unceasingly. It is impossible to believe that the German nation is deceived by or approves of such malevolence. But the German nation must bear the discredit. We should be sorry to think, and indeed we do not for an instant think, that any respectable English journals could act as these German journals act, or that they would be tolerated by English public opinion if they did.

YOKOHAMA ROADS.

The correspondent of this journal who, in his letter of the 27th instant, says that "the road-mending authorities of Yokohama have ever been scandalously unmindful of their obligations to the public," seems to us to be decidedly ungrateful. Has he ever compared the Yokohama roads with the roads of other prefectures in this region of Japan? Has he compared them with the Tokyo roads, for example? For our own part we never drive through Yokohama without admiring the trouble and expense incurred by the Authorities in making and repairing the roads. Any approach to such care would be most welcome in Tokyo. Besides, what is the particular road which evokes our correspondent's stricture? It is "the high road from Jackson's hill across the Honmoku paddy fields" to Honmoku. At best we should say that this is a *kendo* or prefectural road. Indeed the probabilities are that it is a *rido*, or district road. Perhaps our readers may not be aware that the roads of Japan are divided into four classes, namely, *kokudo*, *kendo*, *rido* and *shido*, or "national," "prefectural," "district" and "private." If the Honmoku road be a *rido*, the duty of repairing it falls on the villagers. If it is a *kendo* that duty devolves on the prefectural authorities. At any rate it is probably a road which owes almost its entire importance to its use by foreign residents for purposes of pleasure. The Authorities can not reasonably be expected to expend much money on the repair of such a road. Besides, it is well to remember that the proceeds of the house-tax are an important source of revenue for road-making and road-repairing purposes, and that complaints emanating from foreign residents about municipal management should be made with bated breath so long as they refuse to pay the house-tax.

AMERICA'S BALANCE OF TRADE.

That illusory blessing, a favourable balance of trade, is well illustrated in the case of the United States. During the year ended June 30th, the exports of the States totalled \$1,487,656,544, and the imports, \$822,756,533, the "balance in favour" thus being no less than \$664,900,011. Estimating from these figures, one expects to learn that gold poured into the States in enormous quantities, but as a matter of fact the net import of the yellow metal was only a little over eleven million dollars. The *Baltimore Sun* refers to the matter thus:—"The explanation is that we are in debt to Europe and the excess of exports goes to meet our obligations. The amount of our indebtedness to foreign countries was recently estimated at \$3,300,000,000, most of which is debt to England. Germany, France, and Holland are also said to be our creditors for large amounts. American bonds and shares have recently been returned to us, it is believed, in large volume, but we still pay yearly on a great amount of foreign capital invested in our securities. Another and perhaps larger item of outgo represents the profits of Europeans from industries owned here by foreigners. Thousands of factories have been built among us by foreign manufacturers to get within our tariff wall, and the whole net receipts go to Europe. To be added are the large expenditures of American tourists, the profit of foreign shipping from our carrying trade, and life and fire insurance liabilities. To a certain extent, also, statistics of exports and imports are fallacious, since they do not represent the true values. Putting all items of outgo together, they seem practically to about balance the apparent excess of our exports over imports. It is optimistically asserted, it is true, that we are letting the large sums due us remain abroad at interest, since interest rates have often been higher in Europe recently than in New York. The return of our securities and the purchase of foreign loans no doubt help to redress the balance. It is to be feared, however, that we are not piling up a treasure abroad to the extent imagined, but are little more than meeting our obligations. It is cause enough of rejoicing to know that we are certainly not as badly off as we were five years ago."

HOME DEPARTMENT AND THE MORMONS.

An official of the Department of Home Affairs has been interviewed for the purpose of ascertaining officialdom's views as to the propriety of allowing the propagandism of Mormon doctrines in this country. The answer elicited was circumspect. Its gist was that the Mormon missionaries had not yet taken the steps prescribed by law for persons desiring to establish a place of worship or expound a creed, and that if they attempted to do either the one thing or the other without satisfying the requirements of the regulations, it would of course be necessary for the authorities to interfere. On the other hand, when they make application, steps will be taken to ascertain whether their doctrines are likely to prove inimical to the preservation of good order and public morality. If they can satisfy the authorities on those points, they will have a constitutional right to preach their creed. The interviewed official added that according to what he knew, the Mormons no longer preached polygamy but that they still practised it. That appears to be the fact

Mr. Grant, in a letter addressed to this journal a few days ago, explained that he and his fellow-workers do not teach the doctrine of polygamy and that they pay full respect to the laws of the country where they find themselves. Probably they will thus escape prohibition. But it is a subtle distinction. What is preaching and what is teaching? If a man, highly educated, eloquent and gifted with the power of stating his convictions in an attractive and imposing form, tells us that he does not preach polygamy as a doctrine of his creed, since the law has forbidden him to do so, but that he nevertheless approves of it and practises it, and if he further adduces many practical evidences of the successful working of the system, and as the same time insists that it has never been proved to be contrary to the Christian creed but is, on the contrary, sanctioned by the practice of the Christian patriarchs, is not that man teaching polygamy? Is he not endeavouring to win others to his own way of thinking, and is not his example calculated to lend weight to his words? We fail to see that there is any room for equivocation in this matter. The Mormon apostles come to this country as avowed believers in polygamy and as illustrating the practice in their own lives. If they are not propagandists of polygamy, what are they?

THE RICE MARKET.

Practically all the principal rice markets in Japan are now closed. A wave of keen but scarcely explicable excitement seems to have swept over the country, and sober business-men bid against each other until this principal staple of food reached a figure at which the authorities deemed it necessary to interfere. Vernacular newspapers are singularly reticent on the subject. Apparently it perplexes them. Crop prospects are excellent, and there is nothing in the outlook to suggest a scarcity of grain, but somehow the immediately available supplies are short, and the shortage was magnified by speculators or their dupes until prices were attained out of all proportion to the facts. It is expected that things will presently return to their normal condition, and probably the Japanese custom of compromise will save anyone from being very heavily hit.

Nobody seems to understand clearly the cause of the recent excitement in the rice market, when quotations for the unhulled grain rose suddenly to 15 *yen* per *koku*. At first it was alleged that the appreciation was due to scarcity of visible stocks, combined with difficulty of making arrangements for future deliveries, as agreed. But when people observed that the upward movement was confined to the Tokaido and Sanyodo districts, and did not extend at all to the northern region, it became plain that scarcity of supplies could not be regarded as a reason. Obviously, too, harvest prospects were not responsible, for from every part of the empire come favourable predictions. Apparently the whole business was factitious. Talk was started and credited about scarcity of supplies; then the Korean grain veto came to re-inforce the uneasiness; then defective crops in Siam were mentioned, and finally the shadowy Manchurian problem was utilized. The thing seems to have been a baseless boom, and the public evidently think that the Government acted wisely when it ordered that transactions should be suspended in the Kuwana Exchange.

DOCUMENTARY DIFFICULTIES.

We observe that the *Japan Gazette* and the *Kobe Chronicle* write strongly against the ideograph as an obstacle to the introduction of foreign capital. They argue that documents written with ideographs are unintelligible to the average foreigner; that really accurate translations are exceedingly difficult to obtain; that the foreigner is therefore obliged to put his name to a paper whose exact contents are unknown to him, and that, even supposing these difficulties overcome, there remains the question of privacy which can not be secured so long as documents have to pass through the hands of translators. We are entirely at one with our contemporaries in desiring to see the ideograph abolished, but we think that they slightly exaggerate its influence in this particular matter. There is no necessity to have ideographic originals of important contracts between Japanese and foreigners. It can be agreed between the parties that in case of dispute the English version shall be regarded as the original, though for purposes of registration a Japanese version might be essential. The question of privacy, too, need not enter largely into the matter, since there are legal firms which undertake the task of translation or of drafting in a foreign language, and which can be trusted to observe reticence. The *Japan Gazette's* plea for the unification of the written and spoken languages is another matter, and must be heartily endorsed by all thinking persons.

Another point made by the *Japan Gazette* is that the number of Japanese who can speak a foreign language with fluency and accuracy is curiously small. That is undoubtedly true. Our contemporary is disposed to lay the blame on the system of teaching, and to suggest that instead of learning in an intelligent practical manner, youths with only the veriest smattering of English, for example, are set to read Spencer's "Sociology" or Darwin's "Origin of Species." That also seems true. But probably a more comprehensive explanation is that the Japanese student of foreign languages is generally taught by a Japanese teacher who is himself a scholar of the most mediocre attainments. Japan is one of the very few countries in the world where instruction in foreign languages is given, for the most part, by natives. In England, for example, if a Frenchman can not be procured to teach French, then French is not taught. We shall not attempt to discuss here the reasons of this difference, or to consider whether even a small fraction of the loaf is better than no bread at all in Japan's case. The fact alone must suffice for the moment.

THE STEERABLE BALLOON.

It really does seem as though M. Santos Dumont had almost succeeded in solving the problem of a dirigible balloon. His immediate object is to gain the Henry Deutsch prize of a hundred thousand francs, which is promised to the first constructor of a steerable balloon, ut of course the general question has long exercised his attention. His own account of the trial trip made by him on the 12th of July is as follows:—"For the last two days I have been waiting for the right moment. Last night a storm made us fear that the trial trip would have again to be adjourned, but towards 1 o'clock this morning the sky was perfectly clear, without a cloud, without a breath of wind. We ran the balloon out of the shed and at 3 o'clock all was ready.

I took my place in the car and ascended. The screw being in the rear gives the balloon a tendency to tip backwards, which greatly facilitates a start. . . I went five or six times round the Longchamps racecourse and all went well. Then I extended the field of my evolutions, making the complete tour of the Bois de Boulogne and returning without difficulty to my point of departure. This I thought enough for the moment, but my men, who were filled with enthusiasm by the result, cried to me, 'To the Eiffel Tower'; so off I went to the Eiffel Tower. I had gone only a short distance when I heard behind me the sound of flapping canvas. I looked round and perceived that my rudder was dangling, one of the ropes having broken. Fortunately, it was the left-hand one that was broken, or it would have been all up with me. My balloon was making straight for the Eiffel Tower. I steered to the left towards the Trocadéro, making curves, and came down in order to effect the necessary repairs. The people were very polite there, bringing me a ladder to enable me to reach my rudder. When the repairs were done I went up again, and this time doubled the Eiffel Tower and returned to my starting point."

CONTROVERSIAL METHODS.

The letter of remonstrance that appeared on Tuesday last from F. Staniland and the reply it has elicited from the *Japan Herald* illustrate the methods of the offending journal. It appears to be a moral impossibility for the *Japan Herald* to discuss any subject civilly and courteously. From the moment that it steps into the controversial arena mud throwing takes the place of all other weapons. This particular difference of opinion arose in connexion with the coming of a Mormon mission to Japan, and it must be confessed that the Mormons were most unfortunate when they found a champion in the *Japan Herald*. Their cause immediately became associated with journalistic methods fatal to popularity among moderate folks. The original assault of the *Japan Herald* upon Mr. Staniland was based on an absolutely inoffensive paragraph in the *Japan Mail* which said:—"We are given to understand that the Mormon elders who recently arrived in Japan, are not staying at Beverly House, No. 2 Bluff." That simple announcement evoked from the *Japan Herald* a vehement attack upon Mr. F. Staniland, whom it described as a "lodging-house keeper"—"the Yokohama lodging-house keeper of correct opinions"—and whom it accused of "a spirit of fanaticism." Mr. Staniland justly took strong exception to such a criticism, and now the *Japan Herald*, with charming innocence, pretends to think that there was nothing offensive in its writing, and repeats its charges of fanaticism and unhospitality. Mr. Staniland can not properly be described as a "lodging-house keeper." He is an import merchant, custom-house broker and shipping agent, and when the *Japan Herald* called him a "lodging-house keeper" it intended to be offensive, and succeeded in its intention. As for the accusation of fanaticism and the *Japan Herald's* foolish attempt to demonstrate that if a man refuses to give accommodation to a Mormon mission, he ought to show similar exclusiveness towards every one differing from his own particular form of religious belief, the whole argument is so flagrantly illogical as to be absolutely dishonest. Whatever may be said for the industry and sincerity of the Mormons, there

is no gainsaying the fact that many of them practise polygamy and are consequently leading a life which shocks the moral susceptibilities of 999 Christians out of every thousand. No man who controls a hotel or a lodging house would be acting properly towards his ordinary guests if he gave accommodation to Mormons, and a newspaper editor who attributes such a man's refusal to fanaticism must choose between the epithets "knave" and "fool."

THE FORMOSA LOTTERY.

Japanese public opinion seems to be gradually consolidating in favour of a lottery in Formosa. Even journals like the *Nichi Nichi Shimbun* and the *Fiji Shimpō* support the project. They argue that lotteries are not in themselves demoralizing, their abuse alone being dangerous, and that the speculative spirit being natural to all men, its prudent control is wiser than futile attempts to suppress it. In England, where ordinary lotteries are strictly forbidden, they are allowed without difficulty so long as their purpose is useful or charitable, and the proposed lottery in Formosa falls into the latter category, since its object is to obtain funds for purposes of sanitation and general improvements. The Chinese in Formosa used to spend immense sums in the Manila Lottery, and they now do so in the Macao Lottery, the money being totally and irrevocably lost to Formosa. It would be much wiser to induce them to spend the money at home, where it would be utilized for their own benefit. Such is the line of argument adopted by our contemporaries. They even blame the Government's hesitation and point out that since Formosa has not been brought within the purview of the Criminal Code, no specially enabling legislation would be necessary. We may add that Mr. Hirata, Minister of State for Agriculture and Commerce, has denied, in an interview with a representative of the *Osaka Asahi*, that the lottery scheme is opposed by him in the Cabinet, as rumour alleges.

PANUCO COPPER MINE & MR. W. KESWICK.

Judgement was delivered in the Chancery Division of the High Court of Justice on the 12th of July in the case of Crackett v. Keswick. The facts of the case were simple. In deference to the request of Mr. Carlton, representing the firm of Saunders, Fielding, and Carlton, promoters of the Panuco Copper Mine, Mr. W. Keswick, representing Messrs. Matheson & Company, agreed to underwrite 10,000 shares in the mining concern and to allow his own name to go on the prospectus as chairman, the consideration being the receipt of 12,000 vendor's shares. This agreement was not disclosed in the prospectus, and Mr. J. T. Crackett, an architect of Newcastle-on-Tyne, purchased £500 worth of shares. Subsequently the Mining Company went into liquidation and it then transpired that the name of Matheson and Company had been lent under the above conditions. Thereupon Mr. Crackett sued Mr. Keswick, his ground being that whereas one of his principal reasons for purchasing shares was the fact of Messrs. Matheson and Company's name appearing as agents, and Mr. Keswick's as chairman, he would not have been favourably influenced by that fact had he possessed cognizance of the conditions under which those names were given. Mr. Justice Farwell gave judgment in favour of the plaintiff. He took much pains to ex-

plain that he did not find any grounds whatever for imputing to any of the defendants any fraudulent intention of, or any scheme for, concealing the contract, his conviction, derived from the evidence, being that the omission of the contract from the prospectus was due to an unfortunate misunderstanding between counsel and solicitor. As to the effect of that omission his lordship's opinion was this:—

"The existence of such a contract is, in my opinion, material for the consideration of an intending investor. He subscribes on the faith of Matheson's name and on the well-founded assumption that they have looked into the matter and are so well satisfied with the venture as to take it under their protection. How can it be said that it cannot affect his judgment to know that Matheson do not take the matter up simply on its merits, but because they have been paid to do so by the vendor, and that such payment, being in shares of the company, was necessarily dependent on the successful flotation of the company, and that such payment was made by the vendor out of his vendor's shares, so that the burden was in effect borne by the company itself? I cannot bring myself to doubt that 'the careful man, disposed to invest in an undertaking,' spoken of by Chief Justice Cockburn in *'Twyeross v. Grant'* (2 C.P.D., at p. 528), would think the difference very material between the support of Matheson to a company on the ground of the merits of the company alone and such support on the ground of payment dependent on the existence of merits sufficient to induce the public to subscribe. If I employ an agent to advise me on the value of an estate that I think of purchasing, I should certainly consider it material to know that he was to be paid by the vendor for inspecting the estate a fee dependent on my purchasing.

Vicarious interest was lent to the case by the fact that it was understood to be a test, and that in the event of Mr. Crackett's success, other shareholders would proceed against Messrs. Matheson and Company for the difference between the price they paid for their shares and the real value of the stock.

MAJOR-GENERAL CORBIN ON THE PHILIPPINES.

The Adjutant-General of the United States Army, who is now passing through Japan on his return from a tour of inspection in the Philippines, has been interviewed by a representative of the *Fiji Shimpō*. The gist of the distinguished officer's remarks is that the subjugation of the islands has been at length effected, after a heavy expenditure of blood and treasure, and that civil government has replaced military in all parts with one small exception. The Adjutant-General and his party—among whom is Mr. Secondorf, one of the editors of the *New York Tribune*—were able to travel everywhere without recourse to arms. But the resources of the Philippines are in a very undeveloped condition, and the people now inhabiting the islands do not seem competent to develop them. Their methods are defective and they show no progressive impulses. The population numbers only ten millions, whereas the islands would easily support four times that number. Immigration appears to be the most promising remedy, especially Japanese immigration. The Chinaman is not a desirable colonist. He thinks only of what he can take away from the country of his temporary adoption. That is not the case with the Japanese, who, moreover, seem eminently fitted to colonise the Philippines, as they have evidently a strong racial affinity with the inhabitants and might therefore be expected to get on well with them. In the next session of Congress a bill will doubtless be introduced providing for the administration of the Philippines, and the probability is that it will embody privileges for immigrants. The Major-General added that one of the

great difficulties in unifying the islands is the variety of languages spoken there. Among a population of ten millions there are over 80 different dialects. The American Government sees the importance of remedying such a state of affairs, and is establishing schools everywhere to teach the English language.

THE GAMBLING AFFAIR.

It appears that Tokyo journals were mistaken in reporting the dismissal of the case brought by the police against three Japanese gentlemen who were apprehended when in the act of gambling at the villa of Mr. Tanaka in the suburbs of Yokohama. The case, on the contrary, has been sent forward for trial. It is creating some interest, as it raises a question much discussed at one time, namely, the power of the police to enter private houses and arrest persons engaged in a game of chance. This used to be one of the terrible forecasts made by the opponents of treaty revision. They predicted that all such games as whist, poker, and so on would become impossible after foreigners had been placed under Japanese jurisdiction, inasmuch as the police would have the *entrée* to everyone's domicile, and a party of men engaging in a gentle struggle over the green cloth might find themselves suddenly haled off to prison. Perhaps, therefore, it may be well to repeat that the police have no power to enter a private dwelling without a warrant except in the active pursuit of a fugitive from justice or in the event of a flagrant offence. More than two years have passed since the abolition of Consular jurisdiction, and the experiences of foreign residents during that time should suffice to convince them how chimerical their old fears were. But this gambling incident has renewed the feeling of apprehension in one respect, and therefore we would point out that unless money is actually staked, and unless the police can procure evidence that it was staked, games of cards in private houses may be played with just as much immunity in Japan as anywhere else. As a matter of fact, the police are very careful not to interfere at all in such matters unless they have clear proof that gambling has become habitual in some residence, and the consequence is that arrests are very few and far between. The betto and coolie class, however, are subjected to tolerably strict supervision in this matter, for the consequences of gambling among such people are often disastrous.

JAPANESE SHIPBUILDING.

The *Iyo Maru* was launched from the Mitsu Bishi Ship-building Yard at Nagasaki on the 24th instant, in the presence of Viscount Yoshikawa, Minister of State for Communications, and a number of distinguished persons. The *Iyo Maru* is the fourth of the large steamers—six thousand tons—built for the Nippon Yusen Kaisha by the Mitsu Bishi Yard. Mr. Shōda, Director of the Yard, in his speech on the 24th instant, said that the first of the four vessels—the *Hitachi Maru*—constructed at the Yard in 1896, resulted in a loss to the builders. The second, the *Ouru Maru*, also entailed some loss. The third, the *Kaga Maru*, showed neither loss nor profit, and the fourth, the *Iyo Maru*, left a profit. Steamers can not yet be built at Nagasaki as cheaply as in Europe, whence the materials have to be obtained. It is only by means of concessions in the matter of duties

and by including the cost of bringing out a vessel from the Occident, that the cost of construction in Japan can be placed on the European level. But as soon as materials are produced by the new Government Iron Foundry at Wakamatsu, the conditions will be altered, and Japanese yards will be able to construct ships at a price less than the cost of English-built vessels laid down in Japan.

There was launched on Wednesday, August 28th, from the branch shipyard at Uraga of the Ishikawajima Shipbuilding and Engineering Co., Ltd., Tokyo, a fine steamer constructed to the order of Mr. Shichihei Oiye. A large concourse of spectators witnessed the ceremony which, owing to the admirable arrangements of the staff, was entirely successful. For the accommodation of those invited launches were in waiting at the Shirahama Wharf, Yokosuka, and in addition to the dozen foreigners who were present and the general body of Japanese a considerable company of officers from Yokosuka attended. The new ship was of course decked with flags; so also was the *Tsurugisan Maru*, now in one of the docks of the company, and it seemed as if all Uraga had taken holiday to view the ceremony. This had been fixed to take place at 3 p.m. and punctually at that hour, the various preliminary operations having been directed by whistle, Baroness Shibusawa who, attended by the chief officials was accommodated on a stage at the bow of the ship, cut the cord which released the last shore and dashed a bottle of wine against the stem of the *Kōtsu Maru*. A covering which had concealed the name was also removed, and the new ship at first moving slowly, but gathering speed as she passed down the ways, entered the water most gracefully. Owing to the width of Uraga harbour at this point it was unnecessary to use land moorings for the purpose of bringing her up and the *Kōtsu Maru* rode easily in her new element until taken in tow and conducted to her berth.

After the launch luncheon was served in a double marquee erected within the ship-yard where congratulatory speeches were delivered by Baron Shibusawa, Admiral Inouye and Admiral Tsunoda, the latter of whom proposed the health of the Emperor which was loyally honoured, afterwards calling for a "Banzai" on behalf of the Ishikawajima Shipbuilding Company which was most heartily given.

The *Kōtsu Maru* is a very handsome vessel of 2,800 tons displacement with a gross tonnage of 1,550. Built under the superintendence of Mr. T. Shin, D.E., M.I. Mech. E. (London), Mr. B. Fukuchi, M.E., and Mr. T. Uchida, M.E., she fulfils the highest requirements of the Japanese Shipbuilding Encouragement Act, and will class 100 A-1 at Lloyd's. Her length over all is 251 feet, her breadth moulded 34 feet, depth 22 feet, and draught 17 feet. Her engines are triple expansion, of 1,150 indicated horsepower; speed is generated in two single-ended boilers at a pressure of 200 lbs. per square inch and her mean speed is expected to be 12 knots.

GERMAN NOTES.

A slight cloud seems to have arisen between the Kaiser and Count von Bülow in consequence of the latter's speech at the unveiling of the Bismarck monument. The Emperor is said to favour the view that Prince Bismarck was only a great servant, a mere instrument in the hands of William I. Germans in general take a very different view of the great Chancellor's career, and Count von Bülow expressed that view on the occasion of the monument's unveiling, thereby gaining the applause of the majority of his countrymen, who though thoroughly monarchic, admire and like statesmen with independent views and courage to give expression to them.

The Kaufmann incident remains unsettled. His appointment to be a burgomaster of

Berlin still lacks the Emperor's sanction, the only reason being that, 20 years ago, his politics were displeasing to the statesmen then in power. People now say that the Prussian Minister of the Interior, in presenting Herr Kaufmann's name, recommended his confirmation and that Count von Bülow had approved the recommendation. The Emperor's reluctance is therefore causing some murmurs. Men regard it as an undue obtrusion of militarism into municipal affairs, for Kaufmann's fault 20 years ago—if fault it can be called—was merely a lack of discipline in that, as a Lieutenant of Landwehr, he opposed Prince Bismarck's tobacco-monopoly scheme.

Depression continues to mark the iron-trade in the Rhenish Westphalian district. The great foundries are weighted with vast quantities of goods produced when better prices prevailed, and no orders come from Saxony owing to the failure of the Leipziger and other banks. But the ship-building industry is reported to be in a most prosperous condition, the yards having so many contracts to fill that they find difficulty in building the new passenger steamers for the Pacific Ocean service.

Much of the depression is attributed by good authorities to the pessimistic mood created among German financiers by the recent failures. Accommodation which used to be exceptionally easy to obtain in Germany has suddenly become almost unprocurable, and at the same time there has been a veritable slump in the stock and share market. The *National-Zeitung* fears that if capitalists remain as timid as they are now, very much worse times are in store. Meanwhile it is to be noted that not Germany alone is suffering. England and France also are feeling the cold wave.

Herr Dodel, president of the board of inspection of the Leipziger Bank, has been liberated on bail, the amount being £12,500.

It has been decided to continue the business of the Treber-Trocknung Company, which is doubtless the wisest step that could be taken.

The new Tariff Bill, which is to be laid before the Reichstag next session, seems to have been framed in accordance with the wishes of the Agrarians. It imposes duties of 60 marks on barley, 65 marks on wheat and 60 marks on oats, but it provides that these figures may be reduced, within certain limits, for the purpose of concluding commercial treaties with other Powers. At present the duties, as fixed by the treaties, are 20 marks on barley, 35 marks on wheat and 28 marks on oats. Thus the new Tariff may be roughly said to double the rates.

Our readers remember the figures recently published showing what a large number of foreign students attend German universities. It appears that the German students are now organizing a movement to advocate restricting the privileges enjoyed by these foreign students, since they overcrowd the lecture rooms, and have not, in many cases, received preliminary training such as fits them to profit by the instruction given at the universities.

The Emperor of Germany has given another example of the keen practical interest he takes in promoting German enterprise. The Hamburg-American steamer *Deutschland* having accomplished the journey from New York to Plymouth at an average speed of 23.51 knots, thus beating the record of 23.38

knots, His Majesty telegraphed to the Directors of the line from Norway, where he is taking a holiday:—"Bravo Deutschland! An excellent performance hitherto accomplished by no ship in the world. Honour to the builders of the oft-proved Vulcan Yard! Honour to the crew! May they both carry their glory worthily over the seas! I rejoice that the ship is called Deutschland." Probably such an enthusiastic outburst was never elicited from a great monarch about such a trifle as thirteen-hundredths of a knot. But that is characteristic of the keen competition of the age. The Kaiser is undoubtedly a powerful factor in the development of his country.

Everybody remembers the remarkable case of Lieutenant R ger who, last January, walked into the room of Captain Adams, and shot him dead, pleading afterwards in excuse that he committed the deed because his brother had been insulted by Captain Adams and would be obliged to fight with him a duel which would probably end fatally for the insulted man. Lieutenant R ger was tried by a military court and sentenced to six years' penal servitude, which sentence the Emperor has now endorsed. It is a strange case, and while all will admit the necessity of punishing Lieutenant R ger, few will withhold their sympathy from him.

Duelling has been reduced to a farce in France and will probably die soon, killed by the laughter it excites. But it is a very stern reality in Germany where men shoot and slash each other in grim earnest. Many Germans seem to be proud that the duel still exists in their country. It seems to them a fine thing that their social soil should still be rank enough to nurture this medi val weed. The feeling is easily understood but certainly is not worthy of a people so eminently sensible as the Germans. There are now signs that German public opinion will not tolerate the barbarous custom much longer. On the invitation of Prince L wenstein 104 representatives of the nobility have signed a declaration against duelling. They denounce the practice as contrary to reason, to conscience, to the demands of civilization, to the law, and to the welfare of society and the state. Further, they describe as an empty and unjust prejudice the view that a man who declines to fight a duel is guilty of cowardice. On the contrary, they consider that any one refusing a challenge from conscientious motives is worthy of all respect. Unfortunately it does not appear that they have the full courage of their opinions, for they add that out of deference to the existing state of things they reserve the right of demanding satisfaction in the ordinary way in cases where their honour is concerned. In other words, they denounce duelling but are not prepared to give it up. However, in spite of that conflict between theory and practice, their declaration is a wholesome sign and can not fail to be influential.

VISCOUNT WATANABE AND ARABI PASHA.

Arabi Pasha, visited by Viscount Watanabe in his Kandy retreat, compared the people of the Occident to snakes or leeches. A snake is a soft thing, said the old insurgent, and not altogether disagreeable to the touch, but only let it get within range of you and you will soon feel its poison. As for the leech, you never know when and where it will fasten itself upon you, and if it does, it will suck out your life-blood. After that agreeable comparison the Pasha went

on to declare that Occidentals had shown themselves in their true character during the recent Chinese complication, selfish, grasping, masterful and unscrupulous persons.

This account of Arabi's remarks is sent to the *Asahi Shimbun* by a correspondent who gathered the details from Viscount Watanabe. He adds that being interrogated as to the future of Egypt, Arabi declined to say anything except that he had grown too old to take interest in politics, and that, on his return to Egypt, he looked forward merely to reunion with his friends and relations and to leading a quiet life. His health appears to be indifferent, for he dared not drink a cup of coffee when he paid a return visit to Viscount Watanabe, his explanation being that he is limited to one meal daily, and that everything taken between times disagreed with him. The *Asahi's* correspondent compares him to a fierce tiger confined in an iron cage—a tiger with an impaired digestion.

SHANGHAI'S TRAMWAY SCHEME.

The subject of laying down a tramway service in Shanghai has been upon the *tapis* for many years, but up to the present has not emerged from the stage of discussion. The latest scheme laid before the land-renters has not received endorsement in public meeting and so the perennial question remains for the future to resolve. The project just mentioned was brought forward by Mr. Hans Ziegler, a commercial traveller representing several important business concerns in Europe, among them, we believe, the Anglo-Swiss Milk Company. Mr. Ziegler while in Yokohama, by-the-by, distinguished himself by writing under the signature of "Teuton" a series of newspaper letters remarkable for their anti-English bias, wild statements and even wilder deductions. In Shanghai he poses as a public benefactor, and asks the Landrenters to give him permission to construct an experimental section of a tramway system:—

"The work to be commenced not later than the 1st of April, 1902, and not before a sum total of not less than £25,000 (Pounds Sterling) or its equivalent has been placed to his credit with a Shanghai Bank. Such sum to be applied solely to the construction of said experimental section; and also not before a further sum of Shanghai Tls. 10,000 (ten thousand) has been deposited with the Municipal Council as a guarantee that the permanent way will be taken up if at the end of the year it be decided that it shall be taken up. On the other hand, should the gradual construction of the projected system of Tramways be approved and a concession be granted under conditions mutually agreed upon between the Municipal Council and the Constructor of the experimental section this sum of Tls. 10,000 shall be devoted towards the improvement of thoroughfares through which the Tramway is to pass."

That was the resolution brought before Shanghai land-renters on August 19th. Mr. Ziegler introduced his project in a speech which the *North China Daily Press* characterizes as "very good" and "one very much to the point."

He said that he believed there were very few people in Shanghai who did not want tramways, more than ninety per cent. being in favour of them of those who had returned his postcards in answer to his appeal. The objection often made was the narrowness of the streets, but in many Western cities tramways were successfully run in streets still narrower than ours. He was anxious that Shanghai should not merely, as it had done before, affirm the principle of tramways, but that it should translate affirmation into action. There was no reason to fear that the value of land in the original Settlements would decrease if tramways were introduced; everywhere as a city grew larger, the value of its heart increased. The experiment was to be made with no risk to the community or the municipality; he was not asking for a concession, but merely for permission to place the settle-

ments in the way of gaining experience, and if his scheme succeeded, he would not consider the community bound either legally or morally to give him the concession for further extensions.

Mr. Dudgeon, who opposed the scheme, said that there was no comparison between Shanghai and home towns, the latter had no Chinese population, nor did they have the competition of jinrikisha and wheel-barrows. Mr. J. G. Morrison supported the resolution. Then Mr. Walter Sch rff proposed and Mr. Dudgeon seconded an amendment to the effect that Mr. Ziegler must deposit his £25,000 before the 1st of November next. Mr. Morrison suggested a compromise, as the amendment seemed to him an attempt to get rid of the resolution by a side wind, and after some conversation Mr. Ziegler accepted an amendment that he should deposit the £25,000 by the 1st of January next. In the course of further discussion Mr. Watt wanted to know what motive power was to be used, and Mr. Fearon wanted to hear who was to select the system to be adopted. Mr. Ziegler, who appeared, according to our contemporary, not be very clear as to the purport of these questions, explained that five systems would be tried, on which Mr. Berner pointed out the danger to telegraphs, telephones, and other things involved in the adoption of an electric system of traction. In reply to Mr. Nelson, Mr. Ziegler said that his experimental line would be ready within three months after its construction was begun; and Mr. Shorrocks then threw grave doubts on Mr. Ziegler's competence as an engineer. Mr. Hewett finally moved an amendment which stated that the meeting wanted tramways and would leave the matter in the hands of the Council to report at the next annual meeting. Mr. Prentice seconded. A show of hands was taken on the amendment, and the majority appearing to be in favour of the amendment, a poll was taken, the result being that the amendment was lost, amid much cheering. The chairman then said that as it was evident there would have to be a poll on the original resolution, it would be better to adjourn.

This was done and next day the adjourned meeting was held with the following result (we quote from our senior Shanghai contemporary):—

Mr. Ziegler's resolution with the two amendments incorporated in it was submitted to a show of hands, the numbers being 92 for and 57 against, a majority in favour of Mr. Ziegler's scheme of 35, or about sixty per cent. There were several calls for a poll, though it has not hitherto been usual at ratepayers' meetings to call for a poll after such a very decided expression of opinion. The poll was taken, however, resulting in a reversal of the decision by show of hands, the numbers being 187 and 210 against, a majority against Mr. Ziegler's scheme of 32 or under twenty per cent. It is enough to point out that three men cast 76 votes against the resolution. These three men voted, of course, according to their conviction, but to presume that the whole of the other 73 voters whom they represented are opposed to tramways in Shanghai is absurd. This is a distinct abuse of the power of proxy voting conferred by the Land Regulations, and only hastens the time when a reform of the Regulations will be insisted on by an irresistible force. It is an abuse therefore, that is greatly to be regretted. That Mr. Ziegler's, which is not an ideal scheme, should be supported by such a large majority of the resident ratepayers, shows that there is a strong popular demand for tramways, and it will not long be put off by the votes of absentee ratepayers. Even with the big proxy-holders on the other side, the minority was not a very small one, and it could easily be turned into a majority by the time of the next annual meeting, when we hope that another attempt will be made to pass a satisfactory tramway scheme.

A-UM PARA-PA.

Several Tokyo journals are now extending the hospitality of their columns to the exponents of a new Buddhist sect founded by Mr. Nishida Kakyō, who calls himself A-um Para-pa and has his headquarters in the Meguro suburb of Tokyo. Mr. Nishida's qualification to pose as a later day saint is somewhat beclouded by his record, which contains an entry of a fraudulent transaction connected with a sale of railway sleepers. He has nevertheless contrived to associate with himself certain men of repute, among them Mr. Tatsumi Kaijirō, said to be a graduate of Cambridge. The programme of the new sect has the simplicity of genius. The basic idea is that as heaven requires to be importuned and as busy folks have not time themselves to do the importuning, their plan is to entrust the task to some one else, for a due consideration, of course. The only vital point is that the person thus undertaking to say prayers by proxy must have qualifications for successful intercession with heaven, which is eminently true in A-um Para-pa's case since he has direct access to the ear of all beings competent to decide men's fates. Indeed, suppliants coming to bespeak his services often have to wait until his interviews with Sakya Muni, Kobo Daishi, or Niyorin Kwannon are brought to a close. Naturally this new creed finds disciples. A-um Para-pa is said to be living in magnificent fashion and laying by ample sums from the sale of his divine intercessions. He has evidently taken his name from the theory that when man first opens his lips in life the sound that emanates from them is *Ah*, and that when he closes them on bidding a final farewell to the world, they frame the sound *Um*—the *Om* and the *Hum*, in short, of the Indian vocabulary, familiar to readers of the "Light of Asia" in connexion with the dew-drops phrase, "Om-mani Padme Hum," as it "slips into the silent sea," and familiar in English nurseries under the form of "Omny Pimminy." Mr. Nishida knows his public and is making a success. The *Nichi Nichi Shinbun* apparently had him in its mind when it recently penned an article urging the necessity of stricter official supervision of religions.

THE TALK OF A SALE OF BONDS.

Among the various rumours recently circulated about a sale of Government bonds to the extent of fifty millions of *yen*, one was that Baron Shibusawa had undertaken to arrange the affair and had practically succeeded in doing so. Baron Shibusawa, however, denies the truth of the story *in toto*. His explanation illustrates the materials out of which rumours are manufactured. It appears that the International Oriental Company of Belgium, an association including the names of several substantial capitalists, recently took steps to bring Japan within the scope of its purview, not by actually commencing business here or by lending money, but merely by establishing relations with prominent Japanese merchants and banks. Its agents succeeded in inducing Baron Iwasaki, Baron Mitsui, Baron Shibusawa, Mr. Sumitomo and Mr. Okura to become shareholders. Recently a representative of the Company visited Shanghai and took the opportunity of coming on to Japan, where, as a matter of course, he called on Baron Shibusawa and was subsequently entertained at dinner by the Japanese shareholders. That, doubtless, gave rise

to the rumour that a foreign loan was being introduced through Baron Shibusawa and the Belgian Company. But nothing of the kind is on the *tapis* so far as they are concerned. The Belgian Company has made an exceedingly shrewd move in getting these prominent Japanese business-men to join it, and the strong probability is that it will see its way by-and-by to do some substantial work in Japan, but that day does not appear to have yet arrived.

A number of extraordinary and more or less contradictory rumours have been published about the sale of Japanese public bonds in China, and at present the public probably labours under the idea that the Cabinet has failed in its attempts to find a purchaser for the bonds and is about to be driven to some unwelcome alternative. The *Nichi Nichi Shinbun* emphatically denies all these stories. It says, further, that none of the statesmen outside the Government has been engaged in the endeavour to sell bonds, nor has there been any failure. The Treasury pursued its own path from the outset, and has not encountered any serious obstacle. In fact the negotiations may now be said to have been carried beyond the crucial stage and to be dependent only on some arrangement of details. The money is required, not to meet any previous deficiencies, but to supply funds for continuing works already determined as part of the *post bellum* programme—works which would have been carried out by means of domestic loans had the home market been favourable.

THE SOBU RAILWAY.

Quite an excitement seems to have been created by the project of the Sobu Railway Company to change its over-head railway into an ordinary line with level crossings. This subject was alluded to in one of our recent issues. The Sobu Railway already runs from Honjo to Chiba, and the Company, two years ago, obtained a charter to connect its Honjo terminus with Ryogoku by means of an overhead line. The interval between Honjo and Ryogoku is one of the most thickly populated parts of Tokyo. After setting about the work the Company found its capital insufficient, and it accordingly applied for permission to substitute an ordinary railway. The question came before the Tokyo City Council on the 28th instant, and by way of aiding the deliberations of the Council two deputations from Honjo and Shitaya, one consisting of 17 men and the other of 2, repaired to the assembly hall and submitted documents showing that the proposed change would be entirely opposed to the wish of the citizens, as indeed it well might be. Baron Kaneko took a leading part in the discussion of the question by the Council, and a resolution, introduced in his name, condemning the Company's proposal unreservedly, was adopted by 8 votes to 4. When the decision was announced to the deputations waiting in an adjacent chamber, they received it with acclaim.

FRENCH NOTES.

The Fête of the 14th of July was not as brilliant as usual this year, partly because it was an anti-climax to last year's exhibition, and partly because the weather was dull. But the President's letter to General André, Minister of War, gave no evidence of an apathetic spirit. His Excellency wrote:—

"The review which we have just witnessed is a striking demonstration of the progress made every day in the training of the army. This progress is due to the enlightened solicitude of the chiefs, to the necessary confidence of the soldiers, and to the common worship of the fatherland which unites and animates them. We are certain that this admirable army constitutes by its strength and its discipline the surest guarantee for the defence of our honour and our interests. Every year the population of Paris acclaims the regiments we have just reviewed at the hour when in all the garrisons of France our flags and our soldiers are saluted with the same confidence and burning enthusiasm. In China our national colours are being borne with dignity and honour. And if our troops have earned the unanimous respect of foreigners it is owing to the moral energy, prudence, and patriotism of those who represent the French Republic in the Far East. I feel a profound joy in observing that the army enjoys the confidence and affection of the country. This union of the army and the nation communicates to the army an irresistible power for the defence of the fatherland and the Republic. I beg you to transmit to the Military Governor of Paris and to the army my sincere congratulations from myself and from the Government."

We have already had occasion to comment on the inflated style of self-gratulation that has become characteristic of French official utterances, and to express surprise that the artistic spirit of this highly refined people does not rebel against the solecism. But, after all, it is the *fin-de-siècle* fashion. What country is free from it? Occidental civilization presents no uglier feature.

A very interesting article has been published by M. Jean Hess in the *Magasin Colonial et du Voyage* on the subject of France's relations with Morocco. M. Hess endeavours to prove—successfully it would seem—that his country's deliberate policy ever since 1845, when a treaty between France and Morocco was negotiated, has been to refrain from delimiting the boundaries between Algeria and Morocco, in spite of frequent attempts and applications on the part of the Moorish Government to have a frontier clearly defined. M. Waddington succinctly summed up the motive of this policy, in a letter where he writes:—"The absence of official boundaries between two states is always to the detriment of the weaker." M. Hess contends that what France has persistently sought to compass and is still seeking to compass is the absorption of the whole of Morocco into her dominions.

The lives of rulers would be difficult to insure if every applicant to whom they refused money or office made them a target for revolver shooting. Countess Olsyenski, who, leading by the hand her twelve-year-old son, fired at M. Baudin, Minister of Public Works, mistaking him for M. Delcassé, had a story to tell which showed that she and her husband believed themselves to have been very badly used, but neither her husband nor she succeeded in making clear the nature of their grievance. Their tale was confused and incoherent, and really the shooting at the wrong man appeared to cap it very appropriately. The telegraph has not informed us of her fate, but we presume that she is in a lunatic asylum by this time.

It is a pity that the spirit animating French tribunals of justice can not be imported into Japan, where French jurisprudence is so much admired. No self-respecting man appeals to Japanese tribunals for protection against libel, as he knows that he will have his trouble for his pains, and the result is that several villainous journals simply batten on slander. But when the *Libre Parole* published a disgracefully abusive article against M. Périellier, a court of law awarded to the latter damages amounting to ten thousand

frances, and fined the writer and publisher a thousand francs each. If only one or two such sentences were pronounced in Japan, the tone of gutter journalism would soon become more wholesome.

NOTES ON CURRENT EVENTS.

The treaty of friendship and commerce between Japan and the Argentine Republic, which passed the Privy Council last month, and was forwarded to the Japanese Representative in Washington, is expected to be carried to its final stage within the course of the next few days.

Telephonic connexion has now been established between Tokyo and Yokohama on one side and Yumoto (Hakone) on the other. Communication can be made between Yumoto and Miyanojima for 30 *sen*, and between Tokyo and Yumoto or Yokohama and Yumoto for 40 *sen*.

Iba Sotaro is to be publicly tried for the murder of Mr. Hoshi Toru in the Tokyo Local Court on the 2nd proximo. It has now been definitely ascertained that he had no accomplices and that he acted without taking any persons into his confidence. The Court will probably be crowded.

Prince Konoye was given a most hospitable welcome at Port Arthur by the Russian authorities and met with a degree of courtesy which is noted with some surprise by vernacular journals. But it is nothing new to find the Russians courteous and hospitable. They have been remarkable for those qualities from a very ancient date.

It is still alleged by Japanese journals that the project of establishing a Belgian bank in Japan has not been abandoned but is steadily maturing. Twenty-six prominent Belgian capitalists are said to be associated with the enterprise, and Count Kawamura appears to be interesting himself in it. The dimensions of the affair are represented as having been somewhat contracted, the present programme being a capital of only 40 or 50 million *yen*.

Recently some alarm was caused in Tokyo by the announcement that an epidemic of typhoid fever had broken out within the compound of the Tokyo Tram Company, and that the number of patients had mounted to 14 in the course of a few days. Following on the heels of that event comes news that four light cases of cholera have just occurred in the same compound. It looks as though the premises of the Tram Company were in need of a visit from the sanitary officials.

A Tokyo contemporary says that work is proceeding briskly at the scene of the Waseda fire last spring. The new building is to be of wood, partly in Japanese and partly in foreign style. It is expected to cost something like a hundred thousand *yen*. The South-China reform party, represented by Mr. Lung Kei-chung, are said to have expressed their desire that the Count should have one room in Chinese style and that he should permit them to build it for him. That would be a very interesting addition.

Details of the welcome given to Prince Konoye at Port Arthur are published by vernacular newspapers. The Russians appear to have treated him with extreme courtesy and hospitality. They sent him everywhere in carriages specially provided and brilliantly escorted, and finally gave him a man-of-war to take him to Victoria Bay

and to Chefoo. An officer of a certain nationality recently travelling in Russian Central Asia, expressed the warmest admiration of the civility shown to him, but observed that he would have seen a great deal more of what he wanted to see had he not been surrounded by a wall of courtesy. Did Prince Konoye have a similar experience?

It is quite amusing to read the Tokyo papers' conflicting statements about the rumoured sale of Japanese loan-bonds abroad. Some maintain that a meeting which took place on the 20th instant at Oiso, between Marquis Ito, Viscount Katsura and Count Inouye, was for the purpose of making final arrangements about the sale; other allege that the meeting was in consequence of the Treasury's failure to accomplish the sale, and one goes so far as to assert that a bargain has been concluded to dispose of fifty million *yen* worth of six-per-cent. bonds at 93. Evidently these journals record only their own conjectures.

All the leading Tokyo journals publish a statement that the project of a China-Japan Bank has been vigorously revived, and that its prospectus is now being prepared and embodied in a bill for presentation to the Diet next session. The Specie Bank has been planning to establish a branch in Peking, which, as well as the Bank's agencies in China, would enjoy the privilege now possessed by the Hongkong and Shanghai Bank, namely the issue of sight-bills, in other words, bank-notes. The projected China-Japan Bank would, of course, have the same privilege. There is, indeed, some idea that if the scheme matures for starting the latter institution, the Specie Bank's Peking branch will become the head office of the new concern.

Some time ago it was confidently announced that the Yokohama Water Works authorities had not only obtained the permission of the Finance Department to obtain by means of a foreign loan the construction fund of eight hundred thousand *yen* which could not be raised in the domestic market, but also that foreign capitalists willing to advance the money had been found. The statement is now contradicted. Tokyo journals explain that the Finance Department found some fault with the particulars supplied by the Yokohama people as the basis of a loan, and that the matter rests there. Their experience in the case of the Kobe loan is said to have rendered the Authorities doubly careful. Undoubtedly the Kobe case injured Japan's reputation considerably, but, after all, the whole question at issue was whether the Kobe Municipality had or had not undertaken to redeem its bonds in gold. Nothing is less likely than that there will be any misunderstanding hereafter on such a subject.

The *Itsukushima* and the *Hashidate* have just returned from a trip extending over ten thousand miles. They visited all the principal ports in southern waters, including Manila, Singapore and Hongkong, and they proceeded thence to Korea and Vladivostok. These two vessels were in Japan's first fighting line during the war with China. They were then her largest cruisers (4,278 tons). They are now training ships, and each carried 52 naval cadets on their recent voyage. It appears to have struck the peoples they visited as very remarkable that fine steel cruisers of such dimensions and carrying such heavy armaments, which, six years ago, were regarded as the country's most formidable

fighters, should now be relegated to the rank of training ships, and inferences very favourable to Japan's naval strength were drawn. Only the wily Koreans remained imperturbable. They concluded that the Japanese had borrowed the vessels to make a splurge, and if they admired anything, it was the craftiness of the manoeuvre.

The following interesting note about the Siberian Railway appears in *The Times* from the pen of its Odessa correspondent:—

With the completion of the line of railway between Nikolsk, in the Ussuri district of the Far East, and the fortress town of Port Arthur it is intended to open through traffic between Moscow and Port Arthur in the near future. It will surprise most people who have followed with interest the progress of the gigantic railway across the continent of Asia to learn that, according to the latest calculations, the journey from Moscow to Port Arthur will take 28 days even in favourable circumstances. Indeed, according to the *Odessa Abend*, during practically half the year the railway administration refuses to guarantee arrival in Port Arthur from Moscow under a month and a half. People here are asking what has become of the promise of a seven days' trip from Moscow to the Asiatic termini of the Siberian Railway in saloons rivaling in comfort and luxury even the *trains de luxe* of the Continent. The average speed of the Siberian passenger train was to be about 35 miles an hour at least. As a matter of fact, average inclusive speed of from seven to nine an hour is the most the administration of the railway is prepared to guarantee. The difference between 35 miles an hour and nine is one which is puzzling Russians immensely, even when every allowance is made for difficulties during a portion of the year owing to storms on Lake Baikal and the vagaries of the ice on the Shilka and Amur. The opinion is general here that the railway—commercial, military, or otherwise—of the gigantic undertaking sponsored by the Russian Government and paid for with borrowed money will scarcely prove commensurate with its colossal proportions.

A very vague account is given by the *Chino Shimbun* of the course said to be pursued by the Government with reference to the hackneyed question of administrative reform. Evidently little if anything is known as to the exact nature of the projected reforms, the only particulars mentioned with any show of confidence being a change in the system of collegiate courts, so as to reduce the number of judges required for trying a case, and an increase of official salaries. Everything else is still in the air, but inasmuch as the Cabinet has pledged itself to the House of Peers to undertake some extensive measure of reform, there appears to be a general belief that the next session of the Diet will see the pledge fulfilled. If so, this will probably be the question about which political controversy will rage and the Cabinet will be assailed. No measure of administrative reform, by whomsoever introduced, will be found satisfactory by all sides. To have any chance of passing the Diet, a bill embodying any such scheme must be introduced by a party commanding an overwhelming majority and content to obey its leaders. The present Cabinet is not equipped with the necessary parliamentary following. Whatever praise may be accorded to its successful and quiet management of State affairs since it came into office, the fact that it lacks the support of any influential party can not be gainsaid.

THE BANK OF JAPAN.

The 28th annual general meeting of shareholders of the Bank of Japan was held on Aug. 17th. Among the principal shareholders present were Mr. Hasegawa, Chief of the Financial Section of the Imperial Treasury, who acted as representative of the Director of the Treasury, Mr. Yamana, Mr. Iba, and over twenty others. The Finance Department was represented by Mr. Sakatani, Chief of Bureau, and Mr. Matsuo, Government Inspector of the Bank of Japan.

After reporting the settled accounts of the

Bank steps were taken to carry out the election of Directors, when Messrs. Yanaguchi and Mitsui Morinosuke were nominated by an overwhelming majority. It was decided that one of the two so named should be reported to the Minister of Finance for confirmation. Messrs. Hirose and Mita who hold the post of *Kanji* at present were re-elected. As to the distribution of profits the rate of dividend was fixed at 12 per cent. per annum. Below are details:—

Gross amount of profits for the present term 2,799,179
Regular amount of distribution (6 per cent.) against the gross capital paid up 900,000

Balance 1,899,839
To reserves 400,000
To rewards for officials and entertainment fund 139,000
Balance 1,351,839

Second amount of distribution at the rate of 6 per cent. per annum against the gross capital paid up 900,000
Final balance, carried over to next amount. 451,839

The results of the working of the Bank of Japan for the 1st half of this year are as follows:—

PROFIT AND LOSS ACCOUNT.—The receipts for the term under review amounted to 5,906,676 *yen* against 3,115,837 *yen* of expenditures, leaving a balance profit of 2,790,839 *yen*, as detailed below:—

	Receipts. Yen.	Expenditures. Yen.	Balance, profit. Yen.
Head Office.....	4,690,867	3,911,674	1,779,192
Osaka Branch.....	591,399	86,602	504,797
Western Branch.....	242,151	23,608	218,543
Hakkaido Branch....	17,010	15,711	1,299
Nagoya Branch.....	132,300	28,689	103,611
Sapporo Sub-Office....	2,386	12,893	*10,507
Kyoto Sub-Office....	182,286	22,038	160,247
Otaru Sub-Office....	26,506	8,342	18,164
Fukushima Sub-Office	21,768	6,277	15,490
Total	5,906,676	3,115,837	2,790,839

CONVERTIBLE NOTES.—The amount of convertible notes brought over from the previous account reached 228,570,032 *yen*, and this, added to 244,912,968 *yen* issued during the 1st half of this year, constituted a total of 473,483,000 *yen*, of which amount the sum of 276,483,271 was returned and a balance remained of 196,999,729.

GOVERNMENT DEPOSIT ACCOUNT.—Government deposits carried over from the previous term amounted to 24,822,296 *yen*, whereas the amount received during the period under review reached 49,161,582 *yen*, making a total of 73,983,879 *yen*. The sum of 66,046,161 *yen* being repaid, the balance stands at 7,937,717 *yen*.

DEPOSITS CONNECTED WITH NATIONAL LOANS.—The amount carried over from the previous term being 6,206,022 *yen*, and that received during the present term, 37,047,704 *yen*, the total comes to 43,253,800 *yen*. Of this amount, 37,661,162 *yen* being withdrawn, there remains a balance of 5,592,638 *yen*.

FIXED DEPOSITS.—The sums brought over from the previous account aggregated 5,000 *yen*. As no fresh deposit was received and no repayments made during the present term, the balance remains the same.

CURRENT DEPOSITS.—The amount carried over from the previous term was 2,060,924 *yen*, while that received during the 1st half of this year reached 809,108,558 *yen*, making a total of 811,205,482 *yen*. Of this 809,445,484 *yen* was withdrawn, and the balance stands at 1,759,998 *yen*.

CHEQUES.—The amount carried over from the previous account was 15,310 *yen* while that received during the 1st half of this year reached 1,753,702.36 *yen* making a total of 1,769,012.36 *yen*. Of this 1,656,804.36 *yen* was repaid and the balance stands at 112,208 *yen*.

BILLS OF EXCHANGE PAYABLE.—The amount carried over from the previous account was 150,276.5 *yen*, while that received during the 1st half of this year reached 59,600,136.48 *yen*, making a total of 59,750,512.53 *yen*. Of this, 59,569,984.42 *yen* was repaid and the balance stands at 180,528.10 *yen*.

LOANS TO GOVERNMENT.—The amount brought

over from the previous account was 34,000,000 *yen*, while loans during the first half of this year reached 20,500,000 *yen*, making a total of 54,500,000 *yen*. Of this, 21,000,000 *yen* was repaid and the balance stands at 33,500,000 *yen*.

LOANS FOR A FIXED PERIOD.—The amount carried over from the previous term being 7,683,180 *yen* and that loaned during the 1st half of this year 4,540,350 *yen*, the total comes to 12,223,530 *yen*. Of this amount, 8,782,730 *yen* was repaid, and the balance stands at 3,440,800 *yen*.

DOMESTIC DISCOUNT BILLS.—The amount carried over from the previous term was 80,195,213.93 *yen* and that discounted during this period reached 233,595,588.34 *yen*, making a total of 313,790,802.27. Of this, 263,505,728.65 *yen* was collected, and the balance stands at 50,284,073.62 *yen*.

FOREIGN DISCOUNT BILLS.—The amount brought over from the previous account was 17,363,001.65 *yen* and that discounted in the 1st half of this year 49,836,001.09 *yen*, so that the total comes to 67,199,002.74 *yen*. Of this, 15,849,190.01 was collected, and the balance stands at 51,349,812.73 *yen*.

GOVERNMENT BONDS.—The amount carried over from the previous account was 51,371,608.90 *yen*, and additional bonds were acquired in the 1st half of this year amounting to 3,196,460.60 *yen*, making a total of 54,568,069.50 *yen*. Of this amount, 881,417.86 *yen* was disposed of, and the balance stands at 53,686,681.64 *yen*.

BULLION ACCOUNT.—The amount brought over from the previous term was 32,507,380.49 *yen*, and purchases in the 1st half of this year reached 4,627,621.59 *yen*, the total being 37,135,002.8 *yen*. The amount now on hand stands at 53,686,681.64 *yen*.

* Loss.

BANKING ACCOUNT.

On Saturday, Aug., 24th:—

Dr.	Yen.
Share capital fully paid up	30,000,000
Reserve fund and other liabilities to shareholders	17,176,347
Amount of convertible notes issued	198,538,683
Government deposits	13,732,143
General deposits	5,700,061
Exchange liability	61,558
Total	264,208,794

Government deposits	513,728	—
General deposits	—	515,903

A leading gambler named Mayeda Kinzo, living at Kameicho, Nihonbashi, Tokyo, along with two men and three women, was arrested by the police on the 25th inst., charged with selling lottery tickets. The man hung up a sign-board soliciting subscriptions from coolies. This gave the police a clue to his occupation.

THE BRITISH FOREIGN OFFICE AND ITS CRITICS.

Reuter cabled to the Far East a brief summary of Lord Lansdowne's reply to a recent question addressed to him in the House of Lords with regard to the procedure of the British Foreign Office and its methods of obtaining information on Far Eastern affairs. The summary hardly did his Lordship justice. Viscount Templeton, it seems, asked the Foreign Secretary whether any of the officials employed in the Far Eastern Department of the Foreign Office, and, if so, which, had at any time served in China, Japan, or His Majesty's colonies in the Far East, and what was the nature of those services. Only the opening sentence of the Foreign Secretary's reply was cabled out here, we therefore give his answer in full:—

The Marquess of Lansdowne replied that none of the officials employed in the Far Eastern Department of the Foreign Office had served in China, Japan, or His Majesty's colonies in the Far East. His noble friend's question was apparently intended to suggest that if that were so there must be something very imperfect in the organisation of the Foreign Office. The idea suggested was an attractive one, but it would be very difficult to give effect to it in practice. He was afraid Ambassadors or Ministers would not be very grateful if when troublesome questions arose the Foreign Office took away their right-hand men in order that they might serve in the Foreign Office. His noble friend might think the object could be achieved in another way, by arranging in each department of the Foreign Office to have officials who had passed a certain part of their career in service in that part of the world with which the department was specially concerned. That would not be at all an easy arrangement to carry out; it would lead to a continual repatriation of our diplomatists, followed by a corresponding expatriation of our Foreign Office clerks, which would probably be very inconvenient to all concerned. He was very far from underrating the necessity of having recourse to the advice of persons possessing locally-acquired knowledge. The adviser to whom the Secretary of State naturally looked for local experience was in the first place the Ambassador or Minister. Particularly in these days, when the Foreign Office was in constant communication over the telegraph wires with its representatives abroad, he should be very sorry to admit that, when difficulties arose, they should go behind the backs of their representatives and rely rather on experts called in. But they made it their invariable rule as far as possible to call into their councils any persons possessing local experience who might be available at the time. At this moment, when they had extremely difficult negotiations in China, they had the advantage of calling into their councils several gentlemen eminently qualified to give them advice. They had, for example, in this country Sir Claude Macdonald, than whom they could have no better qualified adviser, and Mr. Cockburn, who had been for some time Chinese Secretary at Peking, and who came home to recruit his health. Among others who had been in this country within the last few months were Mr. Hrenan, Consul-General at Shanghai; Mr. Hopkins, Consul at Chefoo; and Mr. Jordan, our Minister in Korea, who was for a long time employed at the Peking Legation. Besides these official persons they were constantly in the habit of communicating with mercantile and financial associations interested in the Far East, and they had thus been in touch with the Hongkong and Shanghai Bank and with the China Association, whose representatives had always been ready to impart to them the valuable knowledge they possessed. He hoped he had said enough to show that they did not differ from his noble friend in principle, although they were not able to agree with his suggestion.

GRAND MASTER OF ENGLISH FREEMASONS.

An "Especial" Grand Lodge of the English Freemasons was held at the Albert Hall, London, on July 17, for the purpose of installing the Duke of Connaught as Grand Master. About 9,000 Masons were present, and Earl Amherst, Pro Grand Master, presided, and invested the Duke with the apron and collar of Grand Master, saying he did not doubt that his conduct in the chair would amply justify the choice of the craft. The trumpeters sounded a fanfare, and proclamation was made that the Duke of Connaught was installed as Grand Master, concluding with the

words, "Whom may the great Architect of the Universe long preserve," and the customary salute of a Grand Master was then given. The Grand Masters of Scotland and Ireland were also the subjects of a similar salute, and each acknowledged the compliment.

Earl Amherst then addressed the Grand Master, and said that when the late Grand Master was installed he took as the text of his reply to the address then made to him the watchwords of the craft, "Loyalty and Charity." How charity had been followed by the craft during the 26 years which had since elapsed was shown by the fact that nearly £750,000 had been contributed by the craft to the three principal Masonic institutions, and since the Duke of Connaught's nomination for the Grand Mastership £75,000 had been subscribed by the craft to the same charities which to the outside world were the Freemasons' "raison d'être." As to the second watchword "Loyalty," Freemasonry in England kept itself clear of political intrigue. He congratulated His Royal Highness on being the chosen head of the Order, as had some of his ancestors, and he wished him a long and prosperous reign.

The Duke of Connaught, in his reply, said he was proud to fill the position of Grand Master, an office that had been filled by some of his ancestors, and he narrated how his grandfather and several of his granduncles had been initiated in the craft. He and two of his brothers and his nephew, the Duke of Clarence, were Masons. With regard to the charity of Masonry, nearly two millions had been contributed during the late Grand Mastership, and £20,000 outside Masonry. With religion, loyalty, and charity as their guide, it was a pride to occupy the position of Grand Master.

In commemoration of the occasion he made various promotions of Grand officers and appointments to "Past Grand" rank, including, in the first connection, Lord Kitchener of Khartoum, G.C.B., G.C.M.G., to be Past District Grand Master of Egypt and the Soudan; and the Right Hon. Walter H. Long, M.P., the right Hon. Frank Green (Lord Mayor of London), and Col. Alfred Mordaunt Egerton, G.V.O., C.B., to be Past Grand Junior Wardens.

It was in April, 1875, that the Duke of Connaught became entitled to wear the distinguishing badge of a Master Mason. His Royal Highness was initiated in the Prince of Wales's Lodge, No. 259, the last of the "red apron" Lodges, and dating back to 1787. The Duke of Connaught soon became a Master of a Lodge, and in 1877 he was made Senior Grand Warden in Grand Lodge of England, his brother, the Duke of Albany, being appointed at the same time Junior Grand Warden. Other honours followed, and in 1886 he became Provincial Grand Master of Sussex.

FIRES.

A fire occurred in a powder magazine belonging to the Military Department, at Akabane-mura, Kita Toshima-gori, Tokyo, shortly before noon of the 22nd inst. One building was destroyed. In the building was stocked about 40,000 pounds of powder but it did not explode.

An explosion of fire-damp occurred in the Arate mine, Nagatsu-mura, Yenga-gori, Fukuoka Prefecture, on the 24th inst. Four men were badly injured. The explosion arose from the use of a hand-lamp.

An explosion of fire-damp occurred in the Komatsu Colliery, Yugeda-mura, Fukuoka Prefecture, on Aug. 23rd. Five miners were killed and four sustained injuries. Fire broke out the same day in a neighbouring coal mine of the Mitsui Colliery. No loss of life occurred. The work of extinguishing the fire will extend over several days.

Fire broke out at Hachimanzuka, Rokugo-mura, Yebara-gori, Tokyo, early on the morning of the 27th inst. Three houses were destroyed.

YACHTING.

The only yacht race set down for Saturday by the Committee of the Yokohama Yacht Club was for the 39-raters and the cruising class, being a cruising race to Uraga. The course was that usually adopted for these popular events—out through the harbour entrance, past the Lightship, leaving that on starboard hand, and thence to Uraga. The weather did not promise well on Friday, but the dirty weather seemed to have blown over during the night and fine weather and a good breeze were promised for Saturday. When a start was made at 1.15, however, the wind was very moderate. *Kingfisher* and *Surprise* were across first, 10 seconds after the gun, *Mary* next at 1.15.18, with *Dainyo* 2 seconds later, *Spray* and *Svanhild* thirty seconds after. *Mary* was first to pass the Lightship with *Kingfisher* second, and the wind fell very light as they set their course for Kannonsaki. *Mary* arrived first at Uraga, *Kingfisher* second, and *Svanhild* third.

Following were the actual and corrected times of arrival at Uraga:—

	Finish.	Corrected.
	h.m.s.	h.m.s.
<i>Mary</i>	7.06.00	7.06.00
<i>Kingfisher</i>	7.19.00	7.12.30
<i>Spray</i>	7.52.00	7.39.00
<i>Dainyo</i>	7.49.00	7.22.30
<i>Svanhild</i>	7.42.00	7.15.00

Mary thus wins the first prize and *Kingfisher* the second.

BASEBALL.

The baseball game on Saturday afternoon between teams representing the Yokohama C. and A. C. and the U.S. cruiser *Yorktown* respectively aroused some interest and despite the oppressive damp heat was witnessed by a considerable number of people. The visitors took the start at the outset, making three runs in the first innings. Later Yokohama caught up, but the game resulted in favour of the strangers by 11 to 7. The *Yorktown* team consisted of Nolan l.f.; Davis, 2nd b.; Severn s.s.; Weiss, 3rd base; Nicholson, 1st b.; Gashin, r.f.; Moss, c.f.; Riley, pitcher; Torney, c. The names of the Y. C. & A. C. team have already been published. Swan was pitcher and Thorn catcher for Yokohama. Messrs. Williams and Tellson were scorer and umpire respectively.

NAVIGATING THE YANGTZE RAPIDS.

Mr. W. Hancock, Acting Commissioner of Customs at Chungking, in his annual report to the Inspector-General, gives a graphic description of the enormous strength of the Yangtze rapids, and the difficulty of navigating them. He says:—

Arrived at Ichang on the evening of the 19th Aug., we left in the *Pioneer* for Chungking the following morning, with a machine gun and company of blue-jackets, arriving before noon on 26th, or, actual steaming time, 60½ hours (junk time, 30 to 40 days). The two most formidable rapids encountered at this particular time were the Yeh-t'an and the Niu-kou-t'an. The first was entered at 2.30 p.m. on the 20th, and after struggling in it for an hour at full speed, the steamer had to fall back and anchor for the night. Next morning at 9.30 we again steamed into the rapid firing a line ashore by rocket; this, however, was not successfully accomplished till four had carried away, the steamer meantime going full speed and not gaining one inch, with engines of 1,000 horse-power making 44 revolutions. At last a line was caught, and by the aid of a couple of hawsers (90 fathoms 9-inch Manila and 200 fathom 2½-inch steel wire coupled together), and made fast to a point above, after two hours we were over. In the grand gorges we met several boats full of missionary refugees, but, of course, with the rocks, currents, and whirlpools, we could not stop. The close of the year was marked by the tragic and total wreck of the new German steamer *Sinkiang* on the journey between Ichang and Chungking—a startling comment on all that had been written re the practical navigability of the Upper Yangtze. This vessel had been specially built for the trade, and was larger and more powerful than the *Pioneer*, and this was her first trip. She started from Ichang at 7 o'clock on the morning of the 27th December, with 34 foreigners on board, including the officers of the ship and 21 missionaries returning to Chungking, and a large number of Chinese. At 11 a.m. she had arrived at the K'ung-ling rapid, and

as there was a difference of opinion among the native pilots, the captain anchored and sent them with the chief officer to examine the rapid, which is very dangerous at this time of the year. Some of the pilots declared there was not sufficient water for so large a steamer. On the return of the boat it was clear the captain was not satisfied with the report, and the chief officer was again sent back for further examination. On his return the anchors were hauled up and the steamer proceeded, and about five minutes later ran full speed on a sunken rock. The engines were reversed, and after a few minutes she backed off and began to drift down the rapid, evidently sinking. Efforts were made to beach her, but without avail, and the anchors were let go, but without effect. It was now evident that the bottom of the ship forward was torn open, as the bow gradually began to sink and the stern to rise correspondingly till the rudder was out of the water, and then, of course, steering was impossible. Meantime, most fortunately, life-belts had previously been distributed, though, as it proved, there were not enough. The native crew then took possession of the steamer's two boats and lowered them into the water. The first was upset by the wash from the paddle, and the 10 or 12 natives all drowned; the other drifted down the rapid. Meantime the red life-boats from the river side began to come and take off the passengers, otherwise there would have been a terrible loss of life; but this rescue work occupied time, as several trips backwards and forwards had to be made. The captain shouted to some to jump into the water, which they did, and, having on cork jackets, were subsequently saved. He himself next jumped, but, not having a life-belt, was swept away and drowned. Just as the boat left the side the steamer suddenly "stood up on end," and then dived down perpendicularly, with human beings dropping from her decks, the most of them never seen again, the boilers exploding with a noise like thunder and blowing up the after decks and cabins as she disappeared with a hiss and the waters closed over her.

Mr. F. W. Maze, Acting Commissioner of Customs, writing from Ichang, says:—

That steam traffic to Chungking will ever be commercially profitable still seems uncertain. The navigation for steamers between Ichang and Chungking is beset with many difficulties and dangers—even the handy Native boats, admirably designed for the work and handled with consummate skill and dexterity by watermen whose local knowledge is the natural outcome of generations of experience, frequently come to grief; and it is estimated that during the summer months some 10 per cent. of them are lost. Nor are the dangers of this extraordinary part of the river confined to one season alone. During the winter a few of the rapids are at their worst and many rocks are uncovered while in the high-water season, when the current is strong, the whirlpools, eddies, and rapids combine to render all traffic both uncertain and perilous. With the stream at times running over 12 knots through winding, and in some places narrow, channels and a steamer going say, 10 knots, it will be readily understood that the slightest error may mean an accident, and that, under these circumstances, an accident may possibly entail very serious consequences. Apart from the risks, however, it would appear doubtful if the freights secured would be sufficiently remunerative to leave much room for profit after the necessarily high expenses connected with the working of powerful steamers of small carrying capacity have been paid. A system of towage by means of steam-tugs and lighters of shallow draught, with special arrangements for crossing the rapids, would probably be a more practicable and less precarious method of solving the question.

ENGLISH CRICKET.

The following is the record in the English county cricket championship down to 4th August:—

	Played.	Won.	Lost.	Drawn.	Points.	Per cent.
Yorkshire ...	22	17	1	4	16	88.88
Lancashire ...	21	10	5	6	5	33.33
Middlesex ...	9	4	2	3	2	33.33
Surrey ...	19	7	4	8	3	27.27
Warwick ...	13	5	3	5	2	25.00
Sussex ...	16	6	4	6	2	20.00
Hants ...	12	4	3	5	1	14.28
Essex ...	15	3	3	9	—	—
Kent ...	14	4	6	4	—2	—20.00
Notts ...	15	3	5	7	—2	—25.00

Leicester ...	15	3	9	6	—6	—50.05
Derbyshire ...	13	0	8	5	—8	—100.00

NEW JAPANESE FISHES.

There are few more ardent workers in the cause of science than Dr. Starr Jordan, Principal of the Leland Stanford Junior University, who was recently led to make a visit to Japan for the purpose of studying the fishes of these waters. Dr. Jordan lectured before the faculty and students in the Imperial University on his former teacher "Agassiz," and he made a very large collection of specimens, visiting to this end Hokkaido as well as the Loochoos. He had already developed a deep interest in the fishes of Japan, and in No. XV. of "Contributions to Biology" in the Hopkins Seaside Laboratory of the Leland Stanford Junior University, described a new fish, type of a distinct family of lamnoid sharks. To this remarkable specimen, which was purchased from a fisherman by Mr. Allan Owston and by him, through Professor K. Mitsuikuri, presented to the Imperial University, Dr. Jordan gave the name of *Mitsukurina owstoni*, remarking that the genus is apparently unique among living shark forms.

We have now in Part II., Vol. XV., of the *Journal of the College of Science*, Imperial University of Tokyo, a paper by Dr. Jordan and Professor J. O. Snyder, A.M., Instructor in Zoology at Stanford University, descriptive of nine new species of fishes contained in Japanese museums of which no duplicates are obtainable, and illustrated by a number of plates prepared by Dr. Mitsuikuri. Of these No. 1 is a sturgeon, represented by a mounted specimen some six feet in length in the museum of the Imperial University; its locality is given as Misaki, Sagami Bay, and it is distinguished from most other sturgeons by the very long dorsal fin. This has been named *Acipenser kikuchi* in honour of Dr. D. Kikuchi, Minister of Education. *Lepidopus aomori*, also a new species, is described from a dried specimen 8 feet long in the Museum of Aomori and is a sword-fish from the bay of that name. No. 3 (wrongly printed as No. 4) is a spear-fish, described from a specimen 6 feet long without spear examined in a fish-well at Misaki. The species, though new, is generally common in Japan and received the name of *Tetrapturus mitsukurii* in honour of Dr. Mitsuikuri. Also set down as a new species is *Tetrapturus masara*, the black spear-fish, (*Masara*, or *Kurokajiki*) described from the single specimen seen, 10 feet long without spear, taken off Misaki. For No. 5 the name of the goddess Benten is drawn upon and so this new genus and new species of the *Pteraclidae* is named *Bentenia asticola*. The *aburabosu* or *aburainagi*, "fat-priest" or "fat-bass" is taken as a new genus and new species, and given the name of *Ebisu sagamius*, the allusion being to the god Ebisu. We are told that it is occasionally caught in the Kuroshio, is not rare, and reaches a weight of 200 lbs. No. 7, which is allied to the Greenland halibut, and is classified as a new species, has its locality off Sagami and is named *Reinhardtius matsura* after Mr. K. Matsura, curator of fishes in the Imperial Museum at Tokyo. The remaining species are *Trachypterus ishikawa* and *Trachypterus ijima*, both new, the former named for Dr. C. Ishikawa, curator of the Imperial Museum, and the latter for Dr. I. Ijima, Professor of Zoology in the Imperial University. The habitat of both is in the waters adjacent to the entrance of Tokyo Bay.

WHERE TWO EMPIRES MEET.

Mr. Fred W. Carey, reporting to the Inspector-General of the Imperial Chinese Maritime Customs upon the trade of 1900, throws some interesting light about the conditions prevailing in that far-away corner of the Middle Kingdom. He says:—

The disturbed condition of the Sip Song Panna, now generally known as the Chinese Shan States, remains always a menace to the peace and prosperity of this part of Yunnan. The petty traders of the British Shan States, who formerly frequented the Szemao market, are now afraid to venture into Chinese territory, as, even if they escape the extortions of the Kenghung chieftain, *Hsian-wei*, they are likely to fall into the hands of the Chinese dacoits, who make the Sip Song Panna their winter haunt.

The Kenghung chieftain is a most violent character. During June his emissaries went to a village not far from Szemao and murdered the young Tu-sü of Pu-t'eng, a boy still in his teens. Encouraged by the indifference of the Chinese officials, he next created a disturbance in the State of Cheng-tung, and is now said to be waiting a favourable opportunity to attack the Meng-ché Tu-sü, who successfully rebelled against his suzerainty in 1897. As a contrast to all this disorder and misrule, it is a pleasure to note that the Shan State of Kengtung is slowly but surely moving, under British rule and guidance, into the paths of progress and civilization. Good roads are being made—towards the Salween in one direction, and north to the Yunnan frontier in the other. Dacoity is a thing of the past, and thieves and cattle-stealing no longer profitable. I understand that the first section of a new railway striking east from Mandalay, or a point just south, will be commenced shortly. It may eventually be brought on to the Salween and Kengtung, in which case there is no reason why Szemao should not again resume its former proud position as one of the principal trade marts of Yunnan.

Our busy season for Exports is the last quarter of the year. About that time the Mohammedan traders, who convey the bulk of the articles exported, leave their homes at Ta-li, Yün-nan-fu, and elsewhere, and commence their annual peregrinations, returning regularly at the beginning of the rainy season. To prevent any clashing of interests, they work in a systematic manner, dividing into numerous caravans, but deciding beforehand which route each party is to take. Some of them follow the course of the Yangtze; others work through Kwangsi, and trade down the West River to Canton and Hongkong; some enter Burma *via* Tengyueh and Rhamo; and it is therefore only a few of the many Mohammedan traders in this province who pass down through Szemao.

During the winter of 1899-1900 the Burma-Yunnan Boundary Commission again commenced their labours, and, starting from the Kunlun Ferry, endeavoured to determine that section of the frontier running south through the country of the wild "Wa" tribes. On 9th February, whilst the party were at the Shan town of Meng-ko, a most regrettable incident occurred, resulting in the loss of two valuable lives. The British Consul, Mr. Litton, accompanied by Major Kiddle, of the R.A.M.C., and Mr. Sutherland, an official of the British Shan States, visited the neighbouring market of Meng-tung. There they were unexpectedly attacked by a number of Was, armed with guns and swords. Mr. Litton was knocked senseless, but was eventually saved by the bravery and presence of mind of a Chinese soldier; his two companions were killed, and their heads borne in triumph to the village of a Wa chief. Reprisals followed, the escorts of the British and Chinese Commissioners acting in concert, and about 60 Wa villages were destroyed. Shortly after this the work of delimitation came to a standstill, as the Chinese were unable to accept the British conception of the proper frontier; and in April the party broke up, after having decided to refer the disputed points to Peking.

BOER AMENITIES.

The following letter appears in *The Times*:—

Sir,—It may possibly open the eyes of some persons in England as to the treatment of our wounded by a portion at least of those, who, under the general name of "Boers," are bearing arms against us in South Africa if you will allow me to quote a few words from a letter just received by me from my son, who went out in February last in the reinforcement draft of Paget's Horse.

He was "dangerously wounded" at Braklaagte on June 4 in a rearguard action on the top of a hill. I quote his own words:—

An officer dashed up with the order, "Retire at all costs, and leave the wounded," and we were left lying where we were. No sooner had our men left the hill than about 20 Boers dashed up, and a more heterogeneous collection of scoundrels I have never seen. They came up to us and proceeded to strip us of everything we had.

They even tried to drag off the ring from the finger of his wounded arm. He continues:—

They then went round the other sides of the hill to windward and lit a veldt fire, with the double object of covering their own retreat and burning us out, and we lay and watched the fire approaching us with a roar, with the cheering prospect in our minds of being roasted alive in a few minutes time; however, just at the right moment, when the fire had got within 40 yards of us a troop of our men dashed though it, and carried us to a place of safety beyond.

Sir, comment on such conduct is unnecessary; the facts speak for themselves.

I am yours faithfully, ERNEST R. CICESTR.
The Palace, Chichester, July 17.

THE RUSSELL TRIAL.

London papers to hand by the last mail contain full reports of the trial of Earl Russell in the House of Lords for bigamy. The event was, of course, replete with interest, and the proceedings appear to have been conducted with all the ceremony worthy of such an historic occasion. As one journal remarked, "The trial of Earl Russell was perfect in its dignified pageantry and the highest Court of the land was fitly surrounded with all those brilliant and picturesque accessories to the administration of justice which we have set up on a small scale in other Courts, though they are but a feeble copy of the antique ceremonial of the House of Peers. Nothing marred the impressiveness of the splendid scene: nothing grotesque or undignified intruded, nothing raised a smile by reason of any incongruity; this is one of the dangers of unwonted ceremonies in our prosaic age."

Previous to the trial the peers assembled in the House of Lords under the presidency of the Lord Chancellor, who then received from Norroy King-at-Arms and the Usher of the Black Rod the white wand which was the emblem of his office as Lord High Steward. Black Rod next called the names of the Peers present beginning with the lowest order of the Peerage—the Barons—and as each name was called the answer given was "Here." The names of the bishops were next called over—only two were present, namely, the Bishops of Winchester and Ripon, who were attired in their usual Parliamentary robes with lawn sleeves; then came the Viscounts, Earls, Marquesses, the Archbishop of York—who was present—and last of all the Dukes. Among the last-named who were present were the Dukes of Wellington, Marlborough, Portland, and Northumberland. This proceeding occupied about ten minutes, and at its conclusion the Lord Chancellor asked those who wished to take part in the trial of Lord Russell to hand in their names to the clerk. This having been done, Lord Halsbury then moved that "This House do now adjourn to the Royal Gallery," whereupon Norroy King of Arms began to marshal the Peers in their due order by requesting that "Gentlemen will now rise in their places and join in the procession, the junior Judges leading." The learned Judges having marched out of the Chamber, Norroy King of Arms asked the Barons to "rise in their places" and proceed "two and two according to their rank in the order in which their names have been called, the junior Barons leading." The same quaint ceremony was observed in regard to the other branches of the peerage, and as the noble lords rose in their places, and marched with "slow and solemn steps" out of the Gilded Chamber to the Royal Gallery, the effect was a most striking one. The rear of the procession was composed of the Mace and Purse Bearers, then came Norroy King of Arms, and the Gentleman Usher of the Black Rod, and, finally, the Lord Chancellor, with his train bearer.

The Peers wore their Parliamentary robes; and it may be pointed out that a Duke's Parliamentary robes are of fine scarlet cloth, lined with taffeta, doubled with four guards of ermine at equal distances, with gold lace above each guard, and tied up to the left shoulder by a white riband. The robes of a Marquess are similar; the distinction between the degrees of rank are shown by the bars of ermine, Dukes having four on either side, Marquesses four on the right side and three on the left; Earls three, and Viscounts and Barons two rows of plain white fur only. Each peer wore or carried a black cocked hat.

We read that the Long Chamber had been converted into an ornate Court, that portion of the gallery, the walls of which hold the two big Maclise frescoes, "The Death of Nelson," and the "Meeting of Wellington and Blücher," being given up to those whose solemn duty it was to try John Francis Stanley, Earl Russell, and the rest to the peeresses and eldest sons of peers, to the members of the House of Commons fortunate enough to secure a place, and to those equally fortunate "strangers," who by a pleasing, and for

them convenient fiction, are held to represent the outside public.

Within the crimson cloth covered barriers, dividing the court from the merely interested on-lookers and the Press representatives, there were arranged, on each side, five rows of scarlet seats, collected evidently from every available Committee-room. These were reserved for the Peers who had announced their intention of taking part in the proceedings. At the end nearest the Upper Chamber itself, was set up a Throne, necessitated by the fact that when Parliament is in session a State trial is held to take place before the King in Parliament. Just behind the Throne, on looking through the Princes' Chamber, which constitutes the ante-room or lobby to the House proper, there was seen the brilliant white statue of Queen Victoria in her early years as Sovereign, and immediately in front of the Throne was the chair reserved for the Earl of Halsbury in his capacity of Lord High Steward. On either side of the Throne were places for Peers, and in front of the platform, whereon was placed the Lord High Steward's seat, was an oblong woolsack for His Majesty's Judges; next, two tables for officials; then, on the left, the witness-box, a bench for counsel, and close behind a stool and table for the accused.

It should be said that the stool of the accused was an ordinary and comfortable chair, and that the table in front of him held writing materials and a water bottle. Behind him was a bench for solicitors, and then came the barrier, immediately outside which were the desks for the labouring Press men. This was the aspect which the Long Gallery presented when the peers entered.

The Court was then constituted, and the picture presented is described as a memorable one. "Before the Throne sat Lord Halsbury, in his Earl's robes, and a full-bottomed wig; in front of him were the judges in scarlet and ermine; at his side Norroy King-at-Arms, in his resplendent tunic, and to the right and left the peers. The high windows decorated with the arms of British kings let in light upon this scene of legal pomp and titled magnificence."

The Commission of the Lord High Steward was now read, and the accused, having entered and taken his place while the indictment was being read, was required to plead guilty or not guilty to the charge that "you as a peer of the United Kingdom are indicted for feloniously marrying one known as Molly Cooke, otherwise known as Molly Somerville, on 15th April, 1900, at the Riverside Hotel, in Nevada, in the United States of America, your wife, Countess Russell, being then alive."

But before he could answer "Yea" or "Nay" his Counsel, Mr. Robson, rose and addressed the Lord High Steward contending that the words of the Act of Parliament only applied to bigamy within the United Kingdom; that with regard to bigamy outside His Majesty's dominions they were subject to the ordinary rules of common law, and that under these rules they were relegated to the jurisdiction within which the offence was committed. The crime was local, and belonged exclusively to the jurisdiction of the place and country where the offence was committed. That was the only form in which the Legislature had ever sought to deal with the offence outside the limits of the King's dominions.

Mr. Robson was followed by Mr. Avory, who supported him, but a somewhat dramatic turn was given to the proceedings after this gentleman's address by the Lord High Steward, who said:—"We have, the advantage of the presence of His Majesty's Judges. I have all along held that the matter is too plain for argument; but," added his Lordship, "I have thought it right to ask them whether there is anything in the arguments suggested which would call for reply by Mr. Attorney-General, and they are unanimously of opinion there is not."

The accused was asked to plead, and offered a plea of guilty. The Court was then addressed by Mr. Robson in a speech with which we will not trouble our readers but we reproduce the following report of Lord Russell's address in his own defence:—

Lord Russell said he had pleaded guilty to the indictment, on the advice of his counsel, but he did not wish it to be supposed that he was casting any reflection on his counsel, for no one could have paid more devoted interest to his case than Mr. Robson. He (Lord Russell) was told that he was mistaken in supposing that he had a defence to the charge, but he thought he had acquired a proper and sufficient domicile in Nevada for the goodness of that decree and the righteousness of his marriage. He spent in Nevada something like eight months for the purpose of obtaining that decree, and of getting the necessary residence, which gave one a domicile according to American law. He was, however, told that he was mistaken, and when he came back to this country proceedings for divorce were instituted by Countess Russell. He was anxious to defend those proceedings, and took the advice of counsel upon the matter. He was, however, told that he could not with any prospect of success defend those proceedings, for he could not establish to the satisfaction of an English court the change of domicile which would justify him in setting up that plea; and for that reason he did not defend those proceedings. When he came back to this country he did not suppose that he had broken the criminal law. Ninety-nine people out of every hundred would not have known that a second marriage in a foreign state would be punishable as bigamy in this country; still less, that a second marriage which was valid in the state of Nevada, could be made the subject of a prosecution here. He was now only waiting until the dissolution of his former marriage became legal according to the English law to again marry the lady with whom he went through the ceremony of marriage in Nevada. He would then have satisfied the laws of his own country. He was not alone in his misapprehension as to the possibility of the criminal effect of marriage under these circumstances. Even so great an authority as Sir W. Anson stated that murder was the only offence which could be committed outside the jurisdiction of this country which could be punished within it. There was much that he could wish to have explained to their lordships, but he was not justified in doing so, as he had pleaded guilty. He referred to his unfortunate marriage with Countess Russell when he was 23 years of age, and when he had no experience, and then stated that he had mistaken the law as to the validity of his divorce, and had thus made himself amenable to the criminal law of this country. In conclusion, he said he left his case to the judgment of their lordships, and asked for what indulgence they saw fit to give him.

Immediately on the conclusion of Earl Russell's address, the tone and temper of which created a considerable impression, the Lord Steward said: "We will retire to our own Chamber." Thereupon all rose and moved slowly from the Royal Gallery, obviously not to deliberate on the question of guilt or innocence, the matter having been removed from their consideration by the plea of the accused. They were not absent more than ten minutes, and on their return silence was again called for "under pain of imprisonment." "Bring in the prisoner at the bar," said the Lord High Steward, and Black Rod at once went out and returned with Earl Russell to the crowded and heated court.

The accused bowed as he took his place and remained standing while the Lord High Steward addressed him somewhat as follows:—

John Francis Stanley, you have been convicted on your own confession of felony. I need not say that all of us regret to see your great historic name associated in this matter. Their Lordships feel that, while on the one hand it would be impossible to pass over the offence to which you have pleaded guilty, because it might encourage other offenders to do the like even without the provocation you have received; on the other hand, it is possible that the extreme torture which you have suffered during a long period of your life, and of which the judicial records of this House bear witness, may have provoked you to do that which otherwise you would not have done. The result is that in their lordships' judgment we may so far consider the circumstances of your case, that while not entirely passing it over, and showing that anyone who commits that offence is open to be punished by the criminal law, on the other hand no one deserves you should suffer the extreme sentence. Accordingly their lordships have unanimously arrived at a decision that justice will be satisfied in this case by your being imprisoned in Holloway for three calendar months as a criminal in the first division.

Thereupon the accused was removed from the court, and as he left his uncle, the Hon. Lyolph Stanley, who has so often stood by his side during the protracted legal proceedings of the past few years, shook him warmly by the hand, while the

lady of his last marriage followed him into the ante-room.

A proclamation dissolving the commission of Lord High Steward, was then read, and his lordship taking his white staff of office, a wand ten or twelve feet in length, broke it across his knee, saying, "My Lords, I declare the Commission dissolved;" and in a few minutes the court was empty of all but the attendants.

THE RECENT FATALITY IN HONGKONG.

The *China Mail* thus describes the fatal fall of houses in Hongkong which occurred on August 14:—

The houses affected by the accident are six or seven in number. They were built, or rather thrown together, in 1878, and a glance at them now is sufficient to make one marvel as to how they stood the climatic conditions and bore the weight they had to carry so long. The walls are of brick and alleged mortar, and only little more than a foot thick. They are four-storeyed houses, divided into dwelling houses for the poorer classes of Chinese, and, as is common with all such houses, the verandahs were loaded with all sorts of odds and ends which the Chinese seem to delight in exposing to the public gaze. Houses Nos. 32 and 34, comprising a Chinese seamen's boarding house and family dwelling houses, calculated to have at least 20 persons on each floor, collapsed entirely. The front wall fell across the street, striking against the opposite houses and carrying away the verandahs, and, doubtless, many unfortunate people who were either sleeping or enjoying an evening airing on the verandahs. Many people who were walking by, or who were resting on the pavement below, as is Chinese custom, were buried in the fallen ruins. The scene was positively too awful to describe. The locality is densely populated and hundreds of people rushed to the spot. Simultaneously with the crash, fire broke out among the debris. The shrieks and cries of the imprisoned people were heartrending. Some of the bodies removed were horribly mutilated and charred beyond recognition. Most of the rescued persons, who number 24, were found in the front part of the buildings and on the street. As evidence of the callous nature of the Chinese, a party of coolies were gambling on the first verandah of No. 36, during the operations. Part of this house and half of the verandah on which they were playing had fallen with the other building. As there was a risk of the whole building falling, the police ordered the gamblers to quit. The work of rescue continued all night long. Ten badly injured people were sent to Hospital, while other fourteen, whose injuries were slight, were treated at the Central Police Station. Up till fifteen next day seventeen bodies of men, women and children were taken from the ruins to the mortuary.

LAW CASES.

A coolie was arrested by the Bluff Police on Monday, on a charge of having stolen on August 24th, a coat belonging to the second engineer of the German steamer *Fianbria* while employed on board that vessel.

The two elder daughters of Dr. Tripler, No. 16, Yamashitacho, through their Counsel, Mr. Tsuruda, have filed a petition in the Yokohama Chihō Saibansho praying for the attachment of the property of their father, on the ground that he is given to dissipation and is neglecting to provide for his children.

The civil suit by Mr. J. H. Ranger against Mr. P. B. Clarke, Manager of the Maples Hotel, will, it is understood, come on shortly for trial. The plaintiff claims *ven* 50,000 as damage caused to him by the alleged slanderous speech of the defendant at a meeting of the Maples Hotel Company, and also 6 per cent. interest between the date of filing the petition and the execution.

NEWS OF THE WEEK.

The German cruiser *Gaier* arrived at Fusan on the 27th inst.

A new section of the Bantan Railway will be opened on the 29th inst.

Traffic on the Ujina section of the Sanyo Railway will be suspended after 1st September.

The Japanese standing squadron arrived at Sasebo on the morning of the 22nd inst. from Fusan.

The U.S. flagship *New York*, with Rear-Admiral Rodgers, left Kobe for Manila, on the 23rd inst.

The telegraph line between Yaweyama and Keelung was re-opened on the morning of the 28th inst.

A rather severe earthquake shock was felt in Yokohama shortly before seven o'clock on Thursday evening.

Dysentery is spreading at Shonai, Akita Prefecture, and over 300 persons are now under medical treatment.

Prince Konoye and party arrived at Nagasaki, on the afternoon of the 28th inst. from Fusan by the *Genkai Maru*.

Some interruption of traffic was caused by the derauling of a goods train between Honjo and Fukaya on the 28th inst.

The Japanese standing squadron (*Asahi*, *Shikishima*, *Isuno* and *Asama*) left Sasebo for Hokkaido on the 28th inst.

The Emperor and Crown Prince sent representatives to the training cruiser *Chiyoda*, now at Yokosuka, on the 26th inst.

Rice to the quantity of 6,000 piculs arrived at Nagasaki on the 28th from Korea. It had been laden before the export veto was issued.

Mr. Kato, Vice-President of the Nippon Yusen Kaisha, arrived at Shimonoseki on the night of the 28th, and will leave for China on the 30th inst.

Mr. Tanaka Kendo, M.P., died on the morning of the 28th inst. at his residence in Tokyo. He was a well-known member of the *Seiyu-kai* and *Jiyu-to*.

Two coolies (one a headman) were attacked and severely injured by five men, one of whom was a trade rival, at Yokosuka, on the evening of Aug. 27th.

Kanamori Ichitaro, living at Morishitacho, Fukagawa, has been arrested by the Shiba police. He broke out of prison and escaped on the morning of the 28th inst.

Mr. Schuffe, who is cycling round the world, arrived at Okayama on the afternoon of August 25th, but being attacked by intestinal catarrh, is now under medical treatment there.

Five boys and girls of Sukurai Inosake living at Kita Ashigara-gori, Kanagawa Prefecture, have been attacked with dysentery since the 21st inst. All are under medical treatment in hospital.

A coolie named Shimizu Fugitaro, living at Kokawachi-mura, Nichi Tama-gori, Tokyo, committed suicide early on the morning of the 25th inst. He blew out his stomach with dynamite.

News has been received in Yokohama of the death at Hayama on August 22nd of Mr. A. C. Young, an old Yokohama resident, for some time in the employment of the Nippon Yusen Kaisha.

Five workmen in a barber's shop at Surugacho, Nihonbashi, Tokyo, were arrested by the police on the night of the 24th inst., charged with assaulting their employer because he refused to let them have money.

A soldier named Hirazawa Veisuke, belonging to the Imperial Body-guard, attempted to commit suicide by shooting himself in the throat with a Murata rifle early on the morning of the 28th inst. He was sent to hospital.

A boy named Fusataro (4) son of Ito Chuzo, living at Otowa-machi, Koishikawa, Tokyo, was run over by a prison-van on the morning of the 27th inst. He died at once. The officers of the Kajibashi Jail have subscribed 20 yen as a present to his father.

On the 27th inst. a maid servant named Misaki Tome, employed in a hardware shop at Muramachi, Tokyo, while crossing the tram-lines at Okawara-cho, fell between two tram cars. She

broke her legs. The girl was sent to hospital but is not expected to recover.

Okubo Tadatoshi, a secretary of the Ushigome District Office, attempted to commit suicide by taking morphine in a house of ill-fame at Shinagawa, Tokyo, early on the morning of the 26th inst. He was revived by a woman and handed over to the Shinagawa police.

Mr. Saito, Secretary of the Finance Department, and two clerks attended the Chiba Shogyo and Noko Banks and examined their books a day or so ago. Mr. Chiba Yataro, President of the Noko Bank, and Mr. Toji Ryohei were arrested a few days ago charged with forgery.

The Nippon Yusen Kaisha steamer *Hidaka Maru*, 735 tons, voyaging between Otaru and Amijiri, struck a sunken rock near Nemuro two or three days ago. Passengers and cargo were saved. The vessel was launched at the Kawasaki shipyard on June 30th in the present year.

A jinrikisha man named Hokari Wakichi, living at Chiyozakicho, Kitagata, Yokohama, while drawing a foreigner from Nishi hatoba toward the Public Garden early on the morning of the 26th inst. died suddenly of *kakke*. His fare at once reported the matter to the Kagacho police.

The body of a man aged about 50 years was found by the harbour police near the Yotobashi, Yokohama, on Thursday morning. The corpse was injured on the head and hands, and a brick was contained in one of his sleeves. The harbour police suppose the man committed suicide about a week ago.

The death of Prince Henri of Orleans, which occurred at Saigon on August 9th, was due to intestinal hemorrhage following upon dysentery. At half-past one in the morning, the prince showed signs of sinking. He was perfectly sensible, and was able to speak in a whisper, and just before his death embraced his friend and *compagnon de voyage* M. Luigi.

Hayashi Kichigoro, living at Nigiwaicho, Yokohama, was arrested by the Honjo police, at Mitsume, Honjo, Tokyo, on the 28th inst. He is charged with stealing over 200 piculs of charcoal from several firewood shops during June. The stolen charcoal was sold to a rice shop at Kayabacho, Nihonbashi, the proprietor of which was arrested the following day.

The *Northern Nigeria Official Gazette* of 30th March, 1901, records the appointment on 6th March of Mr. Charles Laseelles Anderson to the Treasury Department of that Protectorate. Mr. C. L. Anderson, spent about 15 years in Hongkong, Japan, and Tientsin in the employ of the Hongkong and Shanghai Banking Corporation, and left the East on resigning his position three years ago.

A maid servant named Tamara Fuyu, employed in a house at Nishi-Tobemachi, Yokohama, was attacked by cholera on the night of the 26th inst. She received medical treatment from her employers and was a little better about midnight. The following morning her body was found in a tub of water. It is supposed that she went out to drink water but fell into the tub and was drowned.

Inoue Jutaro, a native of Shizuoka, was arrested by the Yokosuka police on the roof of a restaurant, at Wakamatsucho, Yokosuka, early on the morning of the 26th inst. He came out of Yokohama Jail on the 6th inst. and was still under police surveillance in a house at Tohe, but escaped on the 20th and entered a house of ill-fame at Oiso the same night. There he stole a silver watch valued at 20 yen belonging to a guest and 4 yen from another guest.

A would-be thief had an unpleasant reception on attempting to enter a house at Hiranuma Nichome, Yokohama, early on Saturday morning. The noise of his operations awakened the master of the house who, armed with a revolver, lay in wait for him, and when the unsuspecting burglar entered, fired the pistol in his face. The bullet

entered above the right eye but, turning, found an exit by the mouth. The intruder was easily captured and is now in hospital.

A letter has been published in the *Kobe Herald* which was addressed to the British Consul at Newchwang on Aug. 12th and is descriptive of gross treatment which was undergone at the hands of Cossacks by Mr. Arthur McGlew, son of Mr. A. J. McGlew of Kobe. Mr. McGlew, with a Mr. D. Wallace and a Japanese who acted as carrier, was out shooting on the 11th in the neighbourhood of Newchwang, when Cossacks interfered and Mr. McGlew narrowly escaped being bayoneted.

A woman named Murakami Yuki (18) employed in a restaurant kept by Osawa Juiro, at Makabe-machi, Makabe-gori, Ibaraki Prefecture, went to Tokyo by train accompanied by the proprietor, on the 19th inst. Between Omiya and Urawa she is alleged to have put her head out of the window, owing to the heat of the carriage, but overbalancing herself fell on to the track. She injured her head and legs. After her rescue and when under examination by the police she declared that a quarrel had occurred between herself and her employer, and he threw her from the window.

A jinrikisha man named Suzuki Shinnojo, employed by Prof. Matsuzaki Kuranosuke, at Nakano-cho, Ushigome, Tokyo, committed suicide on the morning of the 22nd inst. Prof. Matsuzaki is travelling in China and Korea in the suite of Prince Konoye, and his family are staying at Kamakura. The only persons left in the Tokyo house were a young maid servant and the deceased. As the maid was cleaning the verandah in the morning she heard a strange noise in the jinrikisha man's room. She went down and found Shinnojo had cut his throat and stomach with a sword. The girl at once reported the matter to the police. The man left a letter for his master in which he stated that he had been ill since March and did not expect to recover.

Eight shipwrecked Japanese seamen were rescued and taken to Hongkong by the British ship *Chingtu*, which entered the harbour on Aug. 13th from Taku. The seamen were taking a barge of about 150 tons from Osaka to Keelung in Formosa when they encountered a typhoon on the 1st inst. At this time they were off the coast of Okinawa Island, the largest of the Loochoo group. The barge drifted about helplessly in the open sea for eight days. The storm stripped her of sails, mast, and everything movable on deck, and the food and water were nearly exhausted. On the morning of the 8th August, they were picked up by the *Chingtu* in 32° 15' N., 123° 55' E., about 100 miles from Shanghai. They spoke in high terms of their treatment on the *Chingtu*.

The Rt. Rev. Wm. Awdry, D.D., Bishop of South Tokyo, writing to the *Japan Gazette* says:—The Trustees of Christ Church expressed to me their unanimous feeling in favour of the Rev. A. L. Sharpe for the Incumbency of the Church; but as it appeared that he would not be able even to give an answer under several months, they felt that it would not do to wait so long for an uncertainty. They therefore entrusted me with the duty of finding an Incumbent. I at once made the offer to Mr. Sharpe, if he could see his way definitely to accept it, but as he could not, I have offered the post to an Englishman now in Canada whose qualifications I know well, and at the same time have written to England to make enquiries in the event of his refusal.

The International Congress of the Paris Exposition of 1900 appointed a permanent committee to take the necessary steps to secure a general unification, on the metric system, in the numbering of threads. We understand that it was decided by this Committee to bring the matter before the various Governments concerned with a view to the opening of a Conference of such Governments, in Paris, to discuss and decide upon the details of the scheme. In connection with the above we are desired by Mr. Imaishi, Sub-Director of the Yokohama Silk Conditioning

House, on behalf of the Paris Committee, to state that a volume containing full particulars of the work of the International Congress of 1900 for the unification of the numbering of threads on the metric system, can be obtained from Mons. Paul Fleury, 9 Rue d'Uzes, Paris, price, postage paid, fcs. 4.50.

Two armed burglars entered an hotel occupied by Kozaka Seizaburo, at Kami Kirita-mura, Minami Tama-gori, near Hachioji, early on the morning of the 25th inst. Seizaburo has three sons and the first and second were living next door, while the second son and the maid servants stayed at the hotel. The thieves entered the second son's bed room and drew their swords demanding money. In the meantime a maid servant went out at the back door and summoned aid. At her call the eldest son came armed with a sword and the third son with a Murata rifle. He fired once before entering the house and the thieves ran out and escaped. The brothers followed after them and the younger taking aim shot one of the men in the back. The other robber escaped to Takasasan. The wounded man gave his name as Haramura Totaro, Tsukui-gori, Soshu, and then died. He was dressed in women's clothes.

We are indebted to Messrs. C. and J. Favre Brandt for some information respecting the international revolver match at Lucerne on July 8th. For the second time it appears the Swiss were successful. Their score was as follows:—

Hess..... 439 Roederer.... 427 Richardet... 435
Probst..... 426 Stahel..... 414=Total2,141

The highest possible was 500.

The scores of the respective teams were:—

Switzerland, 2,141 Italy 1,888 France... 2,064
Holland ... 1,832 Belgium, 1,331

One Belgian was prevented by indisposition from participating. The highest possible was 2500.

The best individual score for France was 428 (by Capt. Py), for Holland 419, for Italy 418, and for Belgium 375.

CHINA NOTES.

A private letter, dated Chefoo the 10th inst., says that the famine at Hsianfu is reported as very severe, human flesh selling at 180 cash a catty. The distress in the south of Shansi is also very great.

The *North China Daily News* learns from Moukden under date the 5th inst. that the banditti who were harrying the south-east of Manchuria have surrendered to, or been dispersed among the mountains by, the Russian force that was sent against them from Moukden.

The wrecked *Sobraon* was unable to withstand the fury of the late storm. It is reported that she broke in half and sank in the deep water outside the ledge of rock on which she rested. Great as the disappointment must be to the syndicate interested, it is satisfactory to know that the value of the sundries salvaged is larger than the expenditure for cost and expenses incurred.

An authoritative communication from Peking under date the 12th inst., says that it was then practically decided that the tariff of five per cent. *ad valorem* on articles now on the free list (with a few exceptions to be indicated) will go into effect two months after the signing of the final protocol. Cargo shipped as late as ten days after the said signing will be excepted.

The venerable Dr. J. G. Kerr, who has worked for so many years at the Canton Hospital, and in his time has treated probably half-a-million patients, besides training students and preparing medical text-books, died at Canton on the 10th inst. after a short illness, and was buried on the 11th. He was a landmark in Canton, having come to China originally in 1854.

The *N. C. Daily News* states that a sad fatality occurred on board the L.C.S. *Loksang* lately, when the steamer was at Muroran taking on a cargo of coal for Shanghai. A shot was heard, the sound of which indicated that it had

been fired in the second-engineer's cabin. On entering the cabin, the body of the second-engineer was seen huddled up on the floor, with a revolver, still smoking, in the hand. Although the shot had entered the forehead and gone right through the head, the man was still living when the cabin was entered, but was unable to speak and expired in less than a minute. From the position of the body, it was thought that it was either a case of suicide, or that the revolver had gone off accidentally.

We have to thank that the Statistical Department of the Chinese Imperial Maritime Customs for a copy of the *Customs Gazette* for the second quarter of the present year. The reports of dues and duties collected shows a recovery, as appears by the following comparative table:—

	1900. Hk. Tls.	1899. Hk. Tls.
China treaty ports	6,440,160	6,385,596
Kowloon and Lappa	186,020	174,515
Lungchow, Mengtse, and Szemao	50,718	47,079

Total.....6,676,898 6,607,190

The total revenue collected in Shanghai in the quarter was Hk. Tls. 2,046,209 against Tls. 1,902,992 in the same quarter last year.

The *North China Daily News* announces with deep regret the death in England of Mr. Charles James Holliday at the age of 54. "Charlie Holliday was one of those genial, straightforward men, whom it is the fashion of the day to call 'magnetic,' who make friends of all who come in contact with them; and he was a staunch friend too. Withal he was a keen man of business, and he made his mark in Shanghai as a citizen, able and hardworking—but this is an attribute of the Hollidays. He entirely reorganised the police force, the modern system being his creation. He took a keen interest in the stage and was justly known as the Augustus Harris of the Far East. Like his brothers he was a mainstay of the volunteer force here, and a first-class commander. In fact, he was a good fellow all round, having been in his time champion of the amateur middle-weights. Shanghai owes a great deal to men of the stamp of Charlie Holliday. Those who saw him here on his last visit were shocked at the change in him, while they could not but admire the pluck and good humour with which he bore his infirmity."

Writing with regard to Na Tung, the *N. C. Daily News* of Aug. 22nd says:—

Na Tung, the Manchu ex-Chief, and special Ambassador to Japan to apologise for the murder of the late Mr. Sugiyama in June, 1900, arrived here on Tuesday by the *Haeon* from Tangku. Na Tung was received by the local mandarins at Kinleeyuen, where the usual arch or temporary "gate" decorated with red bunting and covered lanterns had been erected in honour of the new arrival. This notorious Conservative disdained to drive in the brougham and pair which had been prepared for him to take him to the quarters prepared for himself and his staff, but rode in a four-wheeled sedan-chair. Quarters had been prepared for the Mission, both at the Bureau of Foreign Affairs on the Bubbling Well Road, as well as at Ambassadors' Hall in the rear of the Temple of the Queen of Heaven at the foot of the North Honan Road Bridge, Hongkew, so that the special Ambassador might take his choice of where to reside while in Shanghai. As a matter of fact the former named house, furnished in the modern styles of East and West represents Reform or the New Régime, whilst the usual old-time furniture and appointments at Ambassadors' Hall represent Conservatism; what more natural for Na Tung than that his choice should fall on Ambassadors' Hall? We are further informed Na Tung's suite is a "very small one"—only twenty-six, all told. The mission will leave by the Japanese mail steamer *Sukio Maru* for Yokohama to-morrow. We understand that Na Tung, who had never been on a steamer in his life, was very much alarmed when he found he would have to travel to Tokyo by water, but he was reassured by Li Hung-chang, who told him that in the *Haeon*, Capt. Wallace, he would find one of the best steamers and best commanders in the China Merchants' Company's service.

A quotation from a private letter printed in a Shanghai contemporary gives some details of the recent disastrous floods:—

I have myself in many places looked down into the

water of what may be called flood lakes where the mud has been deposited and been able to see under my boat houses and trees at a considerable depth. At a place called Kaoukan where the flood has fallen enormously, first at the rate of 2 feet per day, and now at 9 inches, I was tied up to a bank which was higher than my house-boat. On top of this bank were tall trees, and stuck in their branches (lower ones) I observed reeds, rice stalks, and other debris carried down by the falling flood's current and detained by these branches. That was a big enough flood at any time, but in this very place there was so much water left that a 25-foot bamboo pole could not get bottom. At other times of flood I was told that it was just possible to navigate a small row boat or sampan up to this village in the hill country.

"I do not know if you have heard of the bursting of the embankment at Machiawatz, 30 li (large li) from Nanking. I thank my stars I was not there, but have heard the same pitiable account from all the Chinese questioned, bar officials, which former account says that 17 villages were swept away in one day, 80 soldiers drowned, while about 3,000 natives disappeared in the same way. The officials say that it was merely nothing, though they agree that 1 1/2 li of embankment was broken, and that the 80 soldiers were drowned; but as for the people, they say they have no reason to believe it was as bad as reports say—a few lives may have been lost. It is curious how they make no attempt to find out."

Here is another account:—It is already known that very great distress has been caused by the recent floods in the Yangtze Valley. The hills round Wuhu are crowded with fugitives from the flooded districts, numbers are already dying, and widespread famine and pestilence are expected.

AMERICAN TOPICS.

The great steel strike is still the most prominent subject in America. Capital and Labour are both disinclined to concede a point and the struggle seems likely to be very protracted.

An unconfirmed dispatch from Vienna states that Count Hippolyte Pallavicini has been betrothed to Meta, daughter of Bertram Richards of Philadelphia. It is said that the bride's dowry will be \$30,000,000. The Count is comparatively poor.

The two emissaries of the American syndicate that is trying to get control of both the German transatlantic lines, says the Hamburg correspondent of the *Daily Mail*, are still there. Ostensibly they are buying odd parcels of shares. It is believed that German patriotic sentiment is too strong, however, to permit the sale of the lines.

Rear-Admiral Walker, president of the Isthmian Canal Commission, is quoted as saying that the only practicable routes for the interoceanic canal are by the Isthmus of Panama or through Nicaragua. The Darien routes, he says are not worth considering. He thinks the canal will cost \$150,000,000 and \$200,000,000, according to the route selected.

Mr. Oscar L. Triggs, the University of Chicago professor who compared Rockefeller with Shakespeare and characterized church hymns as doggerel, told his class in English literature in August that the poetry of Longfellow is trivial and unworthy of consideration. Professor Triggs made similar expressions with reference to the poetry of Oliver Wendell Holmes.

For the first time since the outbreak of the Spanish war President McKinley has approved the death sentence in the case of an enlisted man. The case is that of Private Phineas Foutz, Company K, Nineteenth Infantry. This soldier was convicted by general Court-martial at Cebu, Philippine islands, of the murder of Genevieve Torres, a native Filipino girl, by stabbing her to death with a sword-cane in her home at Eandae, Cebu, November 15, 1900. The court sentenced the accused to be hanged.

A telegram was received at the State Department from the United States Consul at Colon on Aug. 2nd stating that if the present revolutionary troubles in that section become more aggravated, the traffic across the Isthmus will surely be interrupted. The United States Government is bound by treaty to keep this traffic open to the world.

No request for a warship to be sent to the scene of trouble has been made.

We learn from Canadian papers that the committee entrusted with the duty of making arrangements for the reception of the Duke and Duchess of Cornwall at Montreal have wrestled with the knotty problem as to whether the bouquet to be presented to the Duchess should be of red or white roses. As they were unable to come to a decision, the matter was referred to the Governor-General's Secretary at Ottawa.

It was reported from San Francisco on August 3rd that the transport *Lennox* had been towed into San Francisco harbour by the steamer *Inqua*, a coasting vessel, which picked the *Lennox* up. The tugboat *Slocum*, which started out on a search for the *Lennox* on July 30th, had not yet been reported, and was doubtless still searching for the transport.

According to the State Treasurer's report Pennsylvania had a surplus in its general fund on the 31st of July of \$8,652,913.97. This is \$6,412,775.24 more than the surplus of two years ago. The treasury, furthermore, carries bonds and cash enough in the sinking fund to cover the State's total debt obligations, which amounted on December 31, 1900, to \$6,815,913.97. The State has on deposit in certain favoured banks the extraordinary sum of \$10,980,566.09 in cash.

The Mongolian pheasant, which is a handsome and valuable game bird, has been successfully introduced in New York State. The bird was first introduced into Oregon, and the valleys of the Willamette, Umpqua and Rogue rivers are now well stocked. It is reported also to have crossed the Siskiyou and entered California. Its slaughter is temporarily prohibited by law in Oregon, and indefinitely prohibited in California under the game law passed by the last Legislature.

The following table shows the growth of American journalism during the past fifty years. It is taken from a book compiled by a Mr. McKenzie, to be published by the Librarian of Congress:

	1900.	1890.	1880.	1870.	1860.	1850.

The United States Consul-General at Berlin, Mr. Mason, has found it necessary to forward to the State Department a correction of the very generally published statements to the effect that new electric trains have been running at the rate of 125 miles an hour between Berlin and Hamburg. Mr. Mason says that a series of high speed trials are to be made on 18 miles of line between Berlin and Zossen, aided by the German Government, in August and September which will attract the electricians of the world. The greatest electrical house in Germany has built a special motor car which is to run in competition with one made by one of the leading United States concerns for this special test.

ENGLISH NOTES.

Torpedo-boat No. 81, the loss of which has been reported, was sunk in Portsmouth harbour after running on an old breakwater. Her crew, guns and stores were saved.

It is reported in West Hartlepool that Sir Christopher Furness, the well known ship-builder and owner, has secured a contract to build nine steamers for the Hamburg-America line.

The German punitive expedition sent to avenge the massacre of Dr. Mencken and other members of the first German South Sea expedition on the cannibal island of St. Mathias, landed from the

German cruiser *Cormoran* near the scene of the massacre, killed eighty natives and captured seventeen.

The steamer *Deutschland* arrived at New York on the morning of August 1st, with more laurels for her collection. This time she made the greatest daily run from noon of July 29th, to noon of the 30th, a distance of 601 knots. She also increased the average hourly speed westward to 23.07 knots. This run was made over a distance of 3,141 miles.

A mixed force of British and Indian troops about 500 strong left Aden on August 15th for a point about 70 miles inland to destroy a fort built by Turks in the territory of the Haushadi, who are under British protection. The Porte has disowned the act, but as the Haushadi are unable to obtain possession of the fort the Government of India has sanctioned the expedition.

The gender of "automobile" is vexing French grammarians. Many writers make it feminine. Emile Faguet is among them. But the *Auto-Velo* reproached him for defying the academy, which is said to have voted for the masculine. Faguet rejoined. He wanted to know why the Academy made "automobile" masculine, at the same time that it made "locomobile" feminine. "Why," was the reply, "an automobile is clearly too ugly to be feminine."

Referring to the Boer invasion of Portuguese territory, already reported, the Lorenzo Marques correspondent of the *Daily Mail*, wiring on Aug. 2nd, said they numbered 500. They crossed the line near Nanet Zei and were going northward toward Komatipoort. A Swiss farmer reported that his farm building had been burned and his stock carried off and that his wife and servants were missing. Although the Portuguese authorities were preparing to make vigorous resistance, only 144 men under Capt. Alameda were pursuing the Boers.

Sir Edwin Arnold's new epic poem, "The Voyage of Ithobal," is mainly written in the metre of his "The Light of Asia," and "The Light of the World." It describes the circumnavigation of Africa by the Phoenicians six hundred years before Christ. Ithobal, a sea captain of Tyre, takes service with Neko, King of Egypt, to explore the unknown waters beyond the Red Sea. The voyage is minutely described, and under numerous and exciting adventures, which bring out most of the features of African life and scenery, Ithobal returns with two out of his three ships.

The death is announced of the Right Hon. William Bramston Beach, Conservative Member for Andover and Father of the House of Commons. He was thrown from his cab on the night of August 2nd. The Right Hon. William Wither Bramston Beach was born in 1826, was educated at Eton, and at Christ Church, Oxford, where he graduated B.A., 1849, and M.A. subsequently. He was appointed Captain in the Hants Yeomanry, 1858. He has sat for Hants since April, 1857, and was in favour of the reduction of local taxation. Mr. Beach was a leader among English Freemasons.

Statistics have recently been collected of the height of 10,000 English boys and men. At the age of 17 (says the *Family Doctor*) these averaged 5 feet 8 inches; at the age of twenty-two, 5 feet 9 inches. At seventeen, they weighed 10 stone 2 pounds; at twenty-two, 10 stone 13 pounds. No nation is increasing in height and weight so rapidly as the British. In fifty years the average has gone up for the whole nation from 5 feet 7½ inches to 5 feet 8½ inches. The average height of the British upper classes at thirty years of age is 5 feet 8½ inches, of the farm labourer 5 feet 7¾ inches. The criminal class brings down the average, as their height is but 5 feet 5¼ inches.

From the returns compiled by *Lloyd's Register of Shipping* it appears that, excluding warships, there were 441 vessels of 1,300,179 tons gross under construction in the United Kingdom at the close of the quarter ended June 30th, as compared with 499 vessels of 1,265,313 tons gross at the

corresponding period last year. There are two steamers with a gross tonnage of 4,350 now under construction in the United Kingdom for Japan, whilst from the latest returns received there were four steamers aggregating a gross tonnage of 3,000 being built at Shanghai, five of 4,320 tons gross at Kobe and Osaka, five with a gross tonnage of 15,000 at Nagasaki, and one of 1,500 tons at Yokohama.

A Berlin newspaper has recently published some curious details respecting the letter-bags of the principal European sovereigns. It is the Pope who breaks the record, as he receives every day from 22,000 to 23,000 letters and newspapers. King Edward VII. comes next with 3,000 newspapers and 1,000 letters. The Czar and the German Emperor receive each from 600 to 700 letters, appeals, &c.; the King of Italy, 500; Queen Wilhelmina, from 100 to 150. The Pope, says the same authority, employs no fewer than thirty-five secretaries. The Emperor William writes a great deal himself, and since Queen Victoria's death he has used blackbordered paper. In ordinary times he uses large sheets of light-blue or dark-grey paper.

The trial of Walter G. Pattison and Robert P. Pattison, directors of Pattisons, Limited, whiskey blenders, &c., at Leith, on charges of fraud in connection with that company concluded on the 17th July at Edinburgh. The jury occupied an hour and a half in considering their verdict. By a majority they found Robert Pattison guilty, of all the four charges and Walter Pattison of two, relating to the false statements in the prospectus issued on the formation of the company and the false balance-sheet which led to the declaration of a larger dividend than had been earned. Robert Pattison then declared that his brother was innocent of these charges. The Lord Justice General sentenced Robert to 18 months' and Walter to nine months' imprisonment.

The question what is the breed of horse best fitted for Army remount purposes is receiving a good deal of attention in England, and it is undoubtedly one both of interest and importance. But the humble 'bus horse deserves a word of appreciation. When, some time ago, it was announced that he was going to the front he was greeted with a great deal of ironical applause. Minor poets inclined to humour wrote facetious although kindly rhymes, and many were the jokes flying round his patient, homely person. In South Africa, too, the 'bus horse was laughed at before he arrived; but the laugh soon changed to cheers, for of all the animals sent out the 'bus horses seem to have been the best. Officers who have come back speak of them almost in terms of affection. They were put on board in good condition and they went ashore so fit that they could be used at once, and away they jogged—too often, we fear, to their doom.

Soldiers often develop into priests, and the close connexion between the two professions is a favourite theme of Mr. Herbert Spencer; but a sailor less frequently quits the quarter-deck for the pulpit. An exception to the rule was the Rev. A. J. Van Straubensee, whose sudden death has been an irreparable loss to the yachting world. In early life Mr. Van Straubensee was a lieutenant in the Navy, and served through the Chinese war as naval aide-de-camp to his uncle, Sir Charles Van Straubensee. At the close of the war he abandoned a career of brilliant promise, took Holy Orders, and laboured with self-sacrificing devotion among the iron-workers of the Black Country. In his last years Mr. Van Straubensee returned to his first love, and did yeoman's service as "officer of the day," timekeeper, and handicapper for the Royal South-Western Yacht Club.

A Paris journal, *Le Figaro*, published on August 3rd a long interview with Mr. Kruger. After denying the cruelties charged against the Boers in Lord Kitchener's report, Mr. Kruger declared that the atrocities of the concentration camps were twenty times worse than had been stated by Miss Hobhouse in Great Britain, and when fully known they would cause the world to shudder with horror and move the nations to intervene. "We

are defending our liberty," continues Mr. Kruger. "and when it is granted, we will lay down our arms. Great Britain knows our conditions. It is not for me to repeat them. We will never renounce our flag and we cannot accept any protectorate. I am convinced that the hour will come when Great Britain will grant what is our rights. Moreover, I am confident that God is with us and will not abandon us." Mr. Fischer, who was present at the interview, said nothing had yet been decided regarding Mr. Kruger's visit to America.

In view of the Coronation of the King next June, the Improvements Committee of the London County Council consider it desirable to hasten the scheme for widening Piccadilly between Hyde Park Corner and Walsingham House, in order that the thoroughfare may be in good order for next year's Royal functions. His Majesty's consent having been obtained to the addition to the public way of a strip of the Green Park, plans have been prepared for carrying out immediately this improvement. The work is estimated to cost nearly £30,000. The width of this portion of Piccadilly, which at present varies from 68ft. to about 100ft., will be increased to from 100ft. to 170ft. The committee state that they have made every effort to retain, where possible, any of the existing trees; but it has been found impossible to keep those which will be actually in the new carriage-way opposite Park-lane. They have, however, arranged that new trees shall be planted wherever necessary in order to secure that shade shall be afforded along the edge of the new footway throughout its length.

The *Rouskii Invalid* states that the Russian manoeuvres will be on a larger scale this summer than in any previous year, 739 battalions, 485 squadrons, and 391 batteries taking part in them, or 60 per cent. of the infantry, 71 per cent. of the cavalry, and 73 per cent. of the artillery. The most considerable operations will take place in the Warsaw district. To the Western Army, which will be the stronger of the two, will be entrusted the duty of covering an investment of Warsaw, and it will occupy the line from Seidlitz to Lukoff, which the Eastern Army will endeavour to penetrate. This operation will take place from the 7th to the 12th of September. There were important manoeuvres also in the St. Petersburg district from the 14th to the 26th August. Cavalry manoeuvres will take place at Wilna, from the 19th to the 28th September, in which 48 squadrons and 24 horse artillery guns will be engaged. In the same district the troops at Grodno, Orany, Wilna, and Skobeleff, will assist in manoeuvres to last for five days. Less important operations will take place in other districts.

The English Civil List has lately been under discussion. Mr. Lucy, in the *Strand*, throws some side-lights on the subject. He tells, for instance, that her late Majesty's annual visits to the Continent ran to a considerable sum. In 1899 it was £4,383, exclusive of nearly £1,300 expenses incurred on the same account by the Master of the Horse. In the same year her Majesty's autumn visit to Almorat cost £10,590, her stay at Osborne considerably exceeding £1,200. Another charge that fell heavy on the Royal purse was occasioned by the visits of foreign Sovereigns. The King of Siam's call in 1897 cost the Queen £944. The visit of the German Emperor in 1891 accounted for £1,766. This is in addition to considerable incidental expenses borne by the State.

Dismal is the prospect for all liberal spirits that is laid bare by Mr. Edmond Sincerus in "Les Juifs en Roumanie" (Macmillan & Co.). They appear to be all Drumonts, according to this writer, in the government and the official world of Roumania. His book reveals a system of oppression and legal restriction directed against the Jews which is truly amazing. What makes this organized persecution the more insidious is that it is all carried out in the name of the law. Special laws are passed by which the Roumanian Jews are tied and weighted with absurd and purely artificial disabilities. The evidence M. Sincerus

gives shows that the Jews are persecuted in every conceivable capacity—in the schools, in commerce, in the military and other professions. Of course the usual reasons are alleged. The Jews exploit the peasant; they will not assimilate with the Roumanians; they are too numerous; they are but foreigners recently arrived in the country. M. Sincerus disposes of the last-cited reason by appealing to history. With regard to the number of the Jews he declares that the officials deliberately misrepresented the facts to keep up the anti-Semitic feeling in Parliament when the Government proposed to revise the articles of the Constitution in the interests of the anti-Semitic Party. As to assimilation, the subject reminds him of the old fable of the wolf and the lamb: the Jews are harried from pillar to post, and their children forbidden the use of the State schools. Altogether this study of the Jewish question in Roumania is a curious picture of these enlightened times.

CORRESPONDENCE.

BULL-FIGHTING IN ECHIGO.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The bull-fighting to which you lately referred as taking place in Echigo is commonly to be seen along the course of the Shinano-gawa in that province, where I witnessed a struggle some three years ago. Bull-fighting, or bull-wrestling, as the Japanese form of the sport may be more appropriately termed, is also a favourite pastime with the natives of Hachioi—one of the "Seven Isles of Izu"; and on Hahajima, the largest of the islands belonging to what are known as the "Bailey or Coffin Group" of the Bonin Islands. There also men take no part in the actual fighting. The bulls are led into a sort of arena until their heads come close together, and the ensuing contest is simply one of "brute strength." Victory is declared, as in ordinary wrestling, by the weaker being pushed outside the ring, or a throw may sometimes even occur by their horns getting locked together. Little injury is allowed to be inflicted as the animals are, fortunately, too valuable for the islanders to sacrifice for the sake of "sport." It seemed to me that the spectators who crowd around the scene stand in most danger from the difficulty of holding in the beasts when they become infuriated with the fray.

Yours truly,

W. B. M.

Tokyo, 22nd August, 1901.

MR. STANILAND AND THE MORMONS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—My attention has been directed to some adverse criticisms in the local press concerning my action in having declined to receive the Mormon missionaries as guests in my house. The offensive terms the editor of one journal has deemed it expedient to use, in reference to this matter, may be passed by as beneath contempt. I have no wish to justify myself before a man who writes like a blackguard and argues like a fool; but it has been intimated that my having excluded the Mormon missionaries was accompanied by want of courtesy, and this was certainly incorrect. Of course to decline to receive, under such circumstances, must necessarily be mutually unpleasant; but Mr. Grant approached me in a very gentlemanly manner, and was in every way quite courteous, and I do not think any complaint could be made concerning my attitude toward him and his colleagues. There was no occasion for any want of courtesy, nor was any shown. I simply declined to receive them, and solely on the ground of their Mormonism, and when asked if I cared to hear the other side replied, "No; I do not care to discuss the subject."

I am, Sir, yours truly,

F. STANILAND.

HONMOKU HIGHROAD.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The highroad from Jackson's Hill across the Honmoku paddy-fields affords an excellent example of "how not to do it." Some intelligent road-contractor a few weeks ago broke up the surface with the intention, I presume, of subsequently relaying it, but when that portion of his task will be attended to goodness only knows: next Christmas, perhaps. Meantime residents who drive or walk out to Honmoku for their evening's swim have to travel over what is virtually a ploughed field—a pleasant occupation this hot weather. The road-mending authorities of Yokohama have ever been scandalously unmindful of their obligations to the public, but

this instance is the worst I have noticed. Surely Governor Sufu has a Surveyor of Highways among his numerous staff of subordinate officials who could prevent this kind of scandal from continuing so long?

Yours,

A WEARY PEDESTRIAN.

Yokohama, August 27.

JAPAN AND KOREA.

The following St. Petersburg telegram of Aug. 4th is published by American papers:—"Mention has already been made of the advice of the *Novoe Vremya* recently to Japan—to forget Korea and solace herself with Chinese territory opposite Formosa, and various islands of the Pacific, including the Philippines and the Hawaiian islands. Russia would help Japan to secure these possessions, with diplomatic advice and other support.

"The *Bourse Gazette*, which claims to represent the commercial interests of Russia, subscribes to all of this. This journal observes: As a matter of fact, Russia expects nothing from Japan except renunciation of her designs on Korea. After Russia has employed colossal means in her civilizing mission in East Asia, she is in duty bound to guard the independence of the peninsula which lies in the path between Port Arthur and Vladivostok. But, in addition to Korea, there are large territories in Southern China, and numerous island groups south of Formosa, and in Russia nobody has ever denied the justification of Japan's ambition for a territorial expansion."

INTERNATIONAL RIFLE SHOOTING.

The international rifle match at Lucerne on July 10th appears to have resulted, as did the pistol contest, in victory for the Swiss. We learn from information forwarded to us by Messrs C. and J. Favre Brandt that the targets were one metre (39 inches) in diameter, the bull's eye 60 centimetres (23 inches) in diameter, divided in ten rings scoring from one up to ten, and the distance 300 metres (328 yards). The match began at 7 a.m. on July 10th; five men fired in each team, each 120 shots, 40 standing, 40 kneeling and 40 lying, the highest possible for the individual score being thus 1,200, or 6,000 per team.

The team scores were as follows:—

Switzerland.....	4,557	Austria.....	4,202
Holland.....	4,408	Germany.....	4,094
France.....	4,388	Belgium.....	3,534
Italy.....	4,211		

HONGKONG AND SHANGHAI BANKING CORPORATION.

The ordinary half-yearly meeting of the shareholders of the Hongkong and Shanghai Banking Corporation was held in the City Hall, Hongkong on Aug. 17th. Mr. R. Shewan, Chairman, presided.

The notice convening the meeting having been read by the Chief Manager,

The Chairman read the seventy-second report of the Court of Directors, already published, after which he said—Gentlemen, the Report just read represents a very prosperous state of affairs of the Bank. It is matter for congratulation that recent unfortunate events in the North of China have interfered so little with the ordinary profitable course of our business. It shows the great vitality of the China trade that we are able to present to you such a favourable report as the present one. Now that business in the North is gradually assuming normal conditions, we can look forward to the future with much less anxiety than we have recently experienced. Taking advantage of the large figures we had to deal with, we propose, with your permission, to add \$750,000 to the Silver Reserve Fund. We hope and think that our so doing will meet with the unanimous approval of our friends. It is to be hoped and expected that the foreign trade of China will be a steadily progressing one. True we may also expect powerful rivals to compete with us, indeed the competition in the future promises to be extremely keen. The best way to meet such a state of affairs is to be in a strong financial position, and that we have steadily aimed at with, as I hope you will admit, gratifying success. Turning to the figures of the Report, "Notes in Circulation" are almost exactly the same as they were on the 31st December last, while "Fixed Deposits and Current Accounts," in both gold and silver, show a moderate increase. "Bills Payable" show a decrease of over

five and a half millions of dollars. At the same time, "Bills Receivable" show an increase of over six millions of dollars. The falling off in the amount of "Bills Payable" is accounted for by the increasing amount of drawings being done by Telegraphic Transfer. "Cash" and "Bullion in hand and in transit" aggregate \$48,985,762, about the same as on the 31st of December last. Our holdings were largely in excess of our requirements at both dates owing to exceptional circumstances. These securities representing our Sterling Reserve of one million pounds are almost exactly as stated in the previous Report. Much as gilt-edged securities have fallen, they still show a handsome margin on the lowest quotations recently touched. You will observe that, for the sake of uniformity, the £250,000 worth of 2½ per cent. Consols, lodged with the Bank of England as a special London Reserve, are now entered at the same price as the rest of the 2½ per cent. Consols and the National War Loan, namely 90 instead of 95 as in previous accounts. The securities we hold under the heading of "Consols Colonial" and other securities were, where necessary, written down to the prices ruling on the 30th June. The aggregate amount is about £100,000 less than our holdings on the 31st December last, and almost the same as on the 30th of June 1900. "Bills Discounted Loan and Credits" show an increase of over \$4,000,000 on the amount shown in the previous report. "Bank Premises," the increase in this item has been caused mainly by the purchase of the Freehold Property adjoining our Shanghai Office which it was desirable to secure in view of future probable extensions which would have been impossible without securing the property alluded to. We are erecting new premises at our Kobe branch. I think I have touched on all the items in the Report. I have pleasure in stating that the present half-year has had an extremely good start and promises well, but I cannot too strongly dwell on the duty of all Directors of institutions like ours of building up our Reserves and husbanding our resources for that proverbial rainy day which seems inevitable with all Companies. We have had bad times, and seem now to be enjoying the seven years of plenty, but we must not shut our eyes to the fact that these may be followed by less prosperous years for which we should therefore always stand prepared. Our field being mainly China, I may add a few remarks on the present situation in this country. There is no doubt the heavy indemnity the Chinese will have to pay will try their finances severely, still I think that, given a settled Government, they will be equal to any engagements they may undertake. Fortunately for them they have remained upon a silver basis without resorting to any fictitious currency expedients, so that exchange will act automatically. With a low level, it would be difficult to set bounds to the proportions the export trade of China might assume. One thing is certain, they will only be able to fulfil their engagements and pay the large balances against them by a steady excess of exports over imports. It was with extreme regret we recently heard of the death of Mr. George Edward Noble, who joined the Bank at its start in Shanghai in the year 1866 and had been connected with us up to the time of his death, latterly as a member of the London Committee. Mr. Noble was a man whom to know was to love and esteem, and no higher encomium could be paid to any man.—(Applause).

There were no questions, and the Chairman proposed the adoption of the Report and Accounts as read.

Mr. G. C. C. Master in seconding said:—Mr. Chairman, Sir Thomas Jackson and gentlemen, I have much pleasure in seconding the adoption of the Director's Report and Accounts. I do not think that anyone can but consider his report as being very satisfactory indeed. I think the wisdom of the Directors in building up a very strong reserve fund is certainly a very wise policy, and the best policy to adopt to check competition. The Chairman referred in his speech to the possibility of there being keen competition in banking in the future. I think that the Hongkong Bank, with the strong reserve fund they already have, in pursuing this policy must be able to drive all competitors from the field. (Applause). Anyhow, if they can't do that they can afford to cut rates to such an extent that competitors will have to retire before the Hongkong and Shanghai Bank. I think it is unnecessary to point out to you that the policy of building up an exceedingly strong reserve fund must be commended. I don't know whether I am in order, but the comments of the Chairman suggested to me that we might be able to make to Mr. Noble's widow some expression of sympathy. Mr. Noble was connected with the Bank here for many years, and if such a suggestion were possible, I would beg to propose it. I have much pleasure in seconding adoption of the Report and Accounts.

The motion was unanimously carried.

Mr. C. Palmer proposed the confirmation of the appointment to the Court of Directors of the Hon. J. J. Bell Irving, Mr. H. E. Tomkins and Mr. H. Schubart.

Mr. S. Hancock seconded. Carried.
The Chairman—That is all the business gentlemen; thank you for your attendance. Divided warrants will be ready early on Monday.

Mr. A. G. Wood—I beg leave to propose a vote of thanks to the Directors and the Chief Manager for the satisfactory Report they have put before us to-day. Carried with acclamation.

BRETT AND COMPANY, LIMITED.

The following is the report and statement of accounts to be presented to the shareholders at the Ninth Annual General Meeting, to be held at No. 60, Main Street, Yokohama, on Friday, 30th August, 1901:—

The statement of Assets and Liabilities, also Profit and Loss Account for year ended June 30th, 1901, accompany this report. I regret to say that business has not proved quite as satisfactory as last year, but owing to the general depression for some months past we have in common with others had to bear our share. I may point out, however, that we have had to pay the passage home of our late assistant and out for that of his successor. A bonus was also proposed at last meeting of yen 250 to Mr. Curtis; whilst our taxes this year exceeded those of last by some yen 216.00.

Our credit balance at Profit and Loss account being yen 1,779.13 I recommend a dividend at the rate of 5 per cent free of income tax to be paid for the year and the balance be carried forward.

G. BLUNDELL, Managing Director.

JOINT MEETING OF CHAMBERS OF COMMERCE.

Mention was made in a previous issue of the points to be submitted for consideration to a joint meeting of Chambers of Commerce, which have been adopted by the committee of the Tokyo Chamber of Commerce. Of these items, those relating to financial adjustment as also to the policy of Japanese trade with China, are as follows:—

1. That trade has been inactive for several years is an undeniable fact, in consequence of which it was in the first place decided at a joint meeting of Chambers of Commerce that domestic loans should be refunded, and foreign capital introduced for the state purchase of private railways, and that the monetary system should be reformed. Subsequently the Chambers of Commerce petitioned the Imperial Diet, and made suggestions to the Government on the subject. But, to their great regret, no attention was paid to them by the Government. Turning to the state of commercial circles, we find that the money market has since been somewhat eased, but an investigation into the actual state of industry shows that some enterprises will find it difficult to exist owing to the lack of floating capital. It is greatly to be hoped that in spite of this apparent improvement of the markets, the Government should take proper measures to adjust the financial affairs of the country without further delay.

2. Now that the North China affair is at an end, and peace at last begins to reign, there are not a few points with regard to the Japan-China trade that deserve the careful study of Japanese engaged in commerce and industry. What is now most necessary for the Government to do, however, is to endeavour to obtain the free exercise of their rights for Japanese navigators, railway promoters, bankers, etc. Although as a matter of course these must map out their plans themselves, it will be impossible for any individual effort to secure anything approaching success in the lines of business alluded to above. It is therefore to be hoped that the Government will establish rules for the encouragement of such enterprises, and if there happen to be Japanese who desire to start any business of that description, give them every possible assistance.

TELEGRAMS.

(REUTER'S SERVICE TO THE "JAPAN MAIL.")

FRENCH COMMAND IN CHINA.

Shanghai, Aug. 22.

Colonel Marchand, of Fashoda notoriety, has been appointed to the command of the French troops in China.

THE CZAR AND FRANCE.

The view on the Continent is that the Czar's visit to France means a rebuff to the French reactionaries.

SOUTH AFRICA.

A despatch from Lord Kitchener, reviewing recent operations, estimates that there are now 13,500 Boers in the field. He describes their resistance as insensate and unpatriotic.

FRANCE AND TURKEY.

The French Ambassador at Constantinople has broken off relations with the Porte and leaves within 48 hours, giving Turkey 72 hours in which to consider the consequences of the Sultan's breaking his promise relative to the purchase of quants and the settlement of French monetary claims.

The Turkish Ambassador in Paris receives his passports.

[This telegram is somewhat obscure. The original runs thus:—"leaves within 48 72 hours consequence Sultans breaking promise relative purchase grants settlement French monetary claims." The telegraph authorities inform us that "grants" should be "quants," but that correction does not help us materially.—Ed. J.M.]

THE FRENCH TROUBLE WITH TURKEY.

Shanghai, Aug. 23.

The French press is surprised at the rupture with Turkey and still hopes for an amicable settlement.

TEA IN TRANS-CAUCASIA.

Austrian official reports say that the attempt to grow tea in Trans-Caucasian territory has been successful. The plantations in the neighbourhood of Batoum are flourishing.

PRINCE CHUN'S MISSION.

Prince Chun's mission will stay at the Orangery in Potsdam, arriving on the 26th inst. The Emperor will receive them on the 27th in Berlin, thus compelling Prince Chun to pass in procession, escorted by cavalry, through the main thoroughfares of the capital.

THE SOUTH AMERICAN DISPUTE.

Shanghai, August 24.

One thousand regular Venezuelan troops have sailed aboard warships to invade Columbia in order to support the revolutionists there.

TREASON AT THE CAPE.

A Cape Colonist named Upton was captured while endeavouring to pass the British lines and has been shot at Pretoria as a spy.

A late telegram says that three rebels have been shot at Graafrinet while ten were sentenced to penal servitude for life in the Bermudas.

THE ROYAL TOUR.

The *Ophir* has sailed from the Cape for Canada.

BOER CONVOY CAPTURED.

The British have captured a Boer convoy of 86 waggon, much stock, and 18 prisoners near Klerksdorp.

TURKEY YIELDING.

Shanghai, August 25.

The Sultan, yielding to the demands of M. Constans, has issued an Irade confirming the concessional rights of the quays company. A settlement of the other claims is considered imminent.

SOUTH AFRICA.

Shanghai, August 26.

Delarey has issued a proclamation warning all the Boers against Lord Kitchener's last proclamation. He states that he will continue the struggle.

The Boers are pressing southward in the Cape Colony and in the midland districts.

Scheepers' commando is threatening Omdtshoorn. The Boers are active in the Dordrecht district.

THE PEKING ASTRONOMICAL INSTRUMENTS.

Shanghai, August 27.

There is agitation in Germany against the removal of the astronomical instruments from Peking. The press urge their restoration.

PRINCE CHUN.

Prince Chun is delayed at Basle by indisposition.

THE FRENCH SUGAR BOUNTIES.

The French sugar bounties are causing a

deficit of 14 million francs, and the Finance Minister has ordered them to be reduced by 55 per cent.

BRITISH FORCE CAPTURED.

A later telegram from South Africa says that a superior Boer force surrounded and captured three officers and 65 men on the north of Ladybrand. One was killed and four wounded. The prisoners were afterwards released. Kitchener is holding a court of enquiry.

BOER LEADERS STUBBORN.

Kitchener has received letters from Steyn and De Wet containing an argumentative statement of the Boer case and saying that they will continue the fight. He has also had a letter from Botha to the same effect.

MR. KRUGER ON THE SITUATION.

Shanghai, August 28.

Mr. Kruger, interviewed by a representative of the *Daily Telegraph*, has indignantly denied that the Boer method of warfare is irregular. He further said that Lord Kitchener's proclamation will only intensify the resistance and that the only basis of peace is the independence of the two Republics and the pardon of the Colonial Afrianders.

FRANCE AND TURKEY.

M. Constans, French Ambassador, has left Constantinople. It is officially stated that this implies the rupture of relations with France, who is not satisfied with the *Irade* regarding the quays question alone. She also insists on the settlement of the claims of French citizens.

FIGHTING IN SOUTH AFRICA.

The Yeomanry escorting a convoy were attacked by the Boers: 9 were killed and 23 wounded. The attack was repulsed.

LORD MILNER'S RETURN.

Lord Milner has had a splendid reception at Cape Town.

Mr. Merriman, the Afriander leader in the Cape Parliament, is under arrest on his own farm.

FRANCE AND TURKEY.

Shanghai, August 29.

France has requested the Ottoman Ambassador in Paris, who is on leave, not to return.

PRINCE CHUN.

The German press is sceptical regarding Prince Chun's indisposition. It believes that he objects to the arrangements for his reception in Berlin.

SOUTH AFRICA.

The Hon. St. J. Brodrick, replying to Lord Kitchener with regard to the shooting of the wounded at Vlakfontein, says that Lord Kitchener should proclaim that all captured Boers convicted of being present at such outrages will be held guilty, that the leader of the commando should be sentenced to death, and that the others should suffer death or otherwise according to the degree of their complicity.

(RECEIVED AT THE LEGATION OF FRANCE.)

FRANCE AND TURKEY.

Saigon, Aug. 23.

English, Russian and Austrian journals approve France's attitude towards Turkey, and advise her to show energy.

THE CZAR AND M. LOUBET.

Saigon, August 24.

The Czar has adjourned the inauguration of the bridge over the Neva, of which M. Faure placed the first stone, in order that M. Loubet may be present.

FRANCE AND THE SULTAN.

Saigon, August 25.

The Sultan has accepted the reclamations of the French Government and the incident is closed.

FRANCE AND RUSSIA.

Saigon, August 29.

M. Loubet, receiving the Municipality of Montlemar, said that the visit of the Czar proved that France and Russia considered their alliance as a pledge of sincerity and peace, and that it further showed that the Republic followed the traditional policy of France.

(RECEIVED IN TOKYO.)

THE PROTOCOL.

With regard to the signature of the Protocol, there is a slight difference of opinion between the Viceroy Liu and the Plenipotentiaries in Peking on the subject of the Whang-poo river. It is further thought that some few days are required to obtain the consent of the Hsian Court. Finally, the Viceroy Li is ill. It is presumed that another week will elapse ere the signing of the protocol.

THE PROTOCOL.

The Chinese Plenipotentiaries in Peking are said to have received instructions from Hsian to sign the Peace Protocol. It is therefore probable that it will be signed in 3 or 4 days.

THE RETURN OF THE COURT.

No official news has been received of any postponement of the Chinese Court's return to Peking. The rumour of postponement is probably a mistake. It is expected that the Court will set out on the 6th of October.

(FROM THE "NORTH-CHINA DAILY NEWS.")

A NAVAL NOTE.

Hongkong, August 19.

H. M. S. *Brisk* arrived on Sunday from Weihaiwei.

THE FATALITIES IN COCHRANE STREET.

There was a further collapse of walls in Cochrane Street on Sunday morning. The total number of dead found up to Sunday afternoon is twenty-six.

THE GOVERNOR-GENERAL OF INDO-CHINA.

Singapore, August 19.

M. Doumer arrived at Singapore by the M. M. S. *Indus*, and was met at the Borneo Wharf by the Deputy Governor and the French Consul.

THE BRITISH FLAG IN THE FAR WEST.

Chungking, August 19.

H.M.S. *Woodcock* has left Chungking for Suifu and beyond.

THE COCHRANE STREET COLLAPSE.

Hongkong, August 20.

In clearing away the debris from the fall of houses in Cochrane Street yesterday evening one man was found still alive. The total recovered are 62, including 34 dead.

TESTIMONIAL TO MR. GILLIES.

At a private meeting of shareholders in the Hongkong and Whampoa Dock Co., Ltd., the shareholders decided by a large majority to authorise the directors to present Mr. David Gillies, the retiring manager, with a handsome piece of plate, the value not to exceed one thousand pounds sterling.

ARRIVAL OF THE RAMBLER.

Hongkong, August 21.

H.M. surveying vessel *Rambler* arrived from Singapore on Tuesday.

THE COCHRANE STREET DISASTER.

Fourteen dead bodies were exhumed from the ruins on Monday and Tuesday, making the total number of dead forty-three.

ANOTHER COLLAPSE IN HONGKONG.

Hongkong, August 22.

A house in Lascar Road collapsed yesterday, and one life was lost.

(FROM THE "OSTASIATISCHE LLOYD.")

NEWS FROM EUROPE.

Berlin, August 19.

In Wilhelmshaven to-day a large first-class battle-

ship of the *Wittelsbach* type was launched and christened by the King of Württemberg *Schwaben*. The King delivered a speech in which he laid stress on the great interest which is taken now by the whole inland of Germany in naval matters.

In the North Atlantic the steamer *Junco* (?), which runs to Iceland, has been lost. She had 220 passengers and crew on board, of whom 65, including the captain, have perished, whilst 105 were saved.*

The Czar has conferred upon Count von Waldersee the Order of St. Andreas.

The composer Charles Camille Saint-Saëns has died at Paris. He was born there in 1835, and was since 1881 a member of the French Academy.

* This doubtless refers to the loss of the Yukon liner *Islander*.—Ed., N. C. Daily News.

Brown Canton.	5.00 to 7.10
White Java and Penang.	7.20 to 8.60
White Refined.	9.30 to 10.60

EXPORTS.

RAW SILK.

The speculative movement in Raw Silk has continued and prices are nominally 10 yen above our present quotations. But recent advices from Lyons report a dull prospect there with quotations at least 50 yen below asking prices here. Our market therefore is more or less in a state of suspense and should naturally decline in order to meet the conditions prevalent on the other side.

QUOTATIONS.

Filatures—Extra, Fine.	Y. 960 to 970

Kakadas—No. 2.	840 to 845
Kakadas—No. 2½.	790 to 840

WASTE SILK.

Business is discouraged by the very high prices which holders ask—prices which are not at all warranted by the state of the consuming markets. We look for a decline in rates here when holders come to their senses. Meantime all quotations may be considered nominal.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. What is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, SEPTEMBER 7TH, 1901.

BIRTH.

On Aug. 30, at Okayama, the wife of EDWARD GAUNTLETT, of a Daughter.

MARRIAGE.

At Christ Church, Yokohama, on Wednesday, September 4th, 1901, by the Rt. Rev. Bishop Awdry, D.D., assisted by the Rev. W. T. Austen, HOWARD GREENE BARRIE, M.D., of Shanghai, to WINNIFRED JULIA, daughter of John Macdonald, Esq., of Toronto. No cards.

DEATH.

At Florence on the evening of 31st August, aged 74, THOMAS WALSH, late of Messrs. Walsh, Hall & Co., Kobe and Yokohama.

SUMMARY OF NEWS.

HONGKONG was officially declared free from plague on August 22.

A SHARK over five feet long is reported to have been caught off Honmoku the other day.

THE famous dramatic singer Takemoto Aya-o (69) died at his residence, in Tokyo, on the 1st inst.

THE Japanese war-vessels *Hoate*, with Rear-Admiral Ito, and *Kasagi* left Sasebo for Korea on the 1st inst.

A MAID servant named Yezashi Shin (16), employed in a house at Sumiyoshicho, Nichome, Yokohama, was arrested by the Isezakicho police on the 31st Aug. on a charge of having stolen a

purse containing 100 yen notes belonging to her employer, on the evening of the previous day.

MR. IKEBE KOMAO, of the One Hundred National Bank, died on the morning of the 27th ultimo at Suma Hospital.

THE Tochigi Police arrested a man on Sept. 2nd on a charge of having purchased goods by means of a forged 5-yen bank note.

A FIGHT occurred between coolies and gamblers at Ida-mura, Shiisagatagori, Nagano Prefecture, on the 29th ult. Two were killed.

FIRE broke out on a train on the Nippon Railway near Hasuda station on the morning of the 2nd inst. Six piculs of charcoal were destroyed.

A LANDSLIP occasioned by the rain occurred at Tomitaka-mura, Usukigori, Miyazaki Prefecture. One man was killed and eleven women wounded.

A BELGIAN pigeon which won a great race from Burgos, in Spain, to Brussels, did the 700 miles in fourteen hours—that is, at the rate of fifty miles an hour.

A RAILWAY coolie was run over near Uyeno early on the morning of the 31st ult. He was crossing the line and fell across the rail just as a train came up.

OVER one hundred and fifty students of the Naval College will go on board the training cruisers *Kongo* and *Hiei* shortly and will leave Japan for a long voyage in December next.

A BEACHCOMBER named Patrick Cunningham has been sentenced to imprisonment for life for causing the death of a constable in Manila. He shoved the constable into the Pasig.

THE Commander-in-Chief of the Italian Asiatic Squadron, who arrived at Yokohama on Sunday in the flagship *Vittor Pisani* from Kobe, left for Tokyo on the following afternoon.

NEMOTO SHINZO, living at Yamato-mura, Namekatagori, Ibaraki Prefecture, murdered his grandmother, Hatsu, with a short sword on the 2nd inst. The murderer was arrested at once.

HEAVY rain fell on the night of August 31st at Miyazaki, in consequence of which 100 houses were flooded, one dwelling was demolished, and 4 were damaged, one person being crushed to death.

A GLASSMAKER named Kabayashi Ushizo, living at Nishi Tobemachi, Yokohama, kidnapped a boy from a blacksmith in the same street on the 29th ult. He is supposed to have fled to Hokkaido.

A FIERCE campaign is being conducted against Malvar, one of the irreconcilable insurgent leaders in the Philippines. It is said that American deserters and renegades are in command of his troops.

THE morganatic wife of the Archduke Francis Ferdinand of Este, nephew of the Emperor Joseph of Austria, and Heir Presumptive to the throne of that country, has given birth to a daughter.

THE Kaiser Wilhelm Canal, which connects the North Sea with the Baltic, and is 61 miles in length, is reported to be silting up. The canal was opened on June 19, 1895, and took eight years in construction. The cost was estimated at £7,800,000.

A FARMER named Yoshiyama Kyushichi, living at Zama-mura, Koza-gori, Kanagawa Prefecture, attempted to murder a woman named Riyo, wife of a Buddhist priest named Yoshimura Seichi, living at the temple Kyugenji in the same village on the night of the 30th ult. He afterwards

attempted suicide. Neither he nor the woman is expected to live.

CAPTAIN HOWARD BLACKBURN has made another trip across the Atlantic in his small craft of four tons burden. Leaving the port of Gloucester, in Massachusetts, he reached Lisbon, the capital of Portugal, in 38½ days.

MR. P. F. VOELKERS, second officer of the German ship *Renee Rickmers*,—who was landed at Kobe about a fortnight ago suffering from severe injuries received through falling into the hold, succumbed at 8.30 on Sept. 2nd in the International Hospital.

EIGHT Chinese were drowned in Hongkong harbour on the night of the 18th August through a collision between a steam launch and the cutter of the hospital ship *Meance*. The launch struck the cutter amidships, causing her to sink in a few moments.

THE funeral ceremony of Marquis Shotai ex-chief of the Loochoos took place at Kinjo, Okinawa Prefecture, on the morning of the 28th ultimo. The Emperor sent a representative (Mr. Narabara, Governor of Okinawa Ken) with a present. There were 350 priests officiating and over 10,000 persons were present.

A WOMAN named Torii Naka, wife of Miyagawa Jusuke, living at Kita Shinagawa, Tokyo, committed suicide by hanging herself in a godown on the morning of the 1st inst. She attempted to commit suicide by drowning in July last but was rescued. The cause was a quarrel between her husband and herself.

A FISHERMAN named Murata Sataro living at Shinmachi, Kanagawa, ordered his young brother Chuzo (22) to go out fishing on the morning of the 29th ultimo. The lad did not return, and eventually an empty boat with his clothes on board drifted ashore. The body was found the following morning.

A CONFECTIONER'S assistant named Hattori Kinjiro, living at Shizuoka, came to Tokyo by train on the night of the 30th. When near Koza another man began to speak to him and offered him a cake. This he accepted and afterwards fell asleep. When the train arrived at Shimbashi he found he had lost a purse containing 3 yen.

A CONTRACTOR named Shimizu Toyokichi, living at Nishi Torikoye, Asakusa, Tokyo, was engaged to repaint the big bridge known as Mumayashashi. On the morning of the 1st instant he went to superintend the work and with this purpose in view stepped on to a raft supporting four workmen. The raft suddenly tipped up and the contractor and his men fell into the water. The four men were saved by swimming, but Shimizu was drowned. His body was recovered in the afternoon.

THE body of a woman was found in a rice field at Shimura, Kita Toshimagori, Tokyo, on the morning of the 30th Aug. There were various marks and wounds upon it, besides a parcel containing 30 articles including letters and post cards. The police found from these that the woman was named Morita Kita, wife of Morita Shichijiro, living at Funagura Mayemachi, Fukagawa, Tokyo, who left the capital for Yechigo in the beginning of August. After further enquiries the police discovered that some one on the evening of the 29th saw the woman in the company of a man named Mizumura Heitaro, walking near the Kumano shrine. This man was arrested, when he confessed to strangling the woman with a towel.

PRINCE KONOYE'S OBSERVATIONS IN CHINA.

Prince Konoye has garnered some interesting experience on his Chinese tour. His observations in the district occupied by foreign troops in China led him to conclude that the main object of French solicitude was outward appearance: they devoted themselves to road-making and bridge-repairing. The Germans took trouble mainly about hygienic measures. The British and the Americans adopted the *laissez-aller* policy and the Japanese interested themselves in police affairs. So successful were the Japanese in restoring and preserving order that the Chinese would have been glad to see them remain, but had to be content with receiving instructions from them. This last arrangement led to some misunderstanding, for the Chinese, who do not distinguish between constables and soldiers, applied to the Japanese policemen a term which created the erroneous impression that measures were being adopted by the Japanese to drill Chinese troops.

The Prince says that there are many Japanese subjects in North China, but they do not seem to have any idea of permanent trade or industry, their horizon being limited to immediate gains. Hence the articles they import are of the cheapest and worst description. At Talien there are some five hundred Japanese under the leadership of Mr. Yoshida Mankichi of Nagasaki, who is said to have obtained permanent admission to the good graces of the authorities by purveying females for the chief officials. He certainly enjoys a large measure of Russian favour, and it is under his aegis that Japanese subjects have gained access to Port Arthur. About fifty of his countrymen assembled at the latter place to welcome Prince Konoye. Some of them were frock-coated gentlemen, but generally had their garments been stripped off they would have been found with tattooed shoulders. These are probably the men whose doings bring Japanese commerce into ill-repute.

Speaking of Korea, the Prince said that at Masampho, Mokpho and Chemulpho the Japanese are so numerous as to suggest that these places are peopled by them entirely, but in the interior not the shadow of a Japanese is to be found. In the interior, so far as the Prince saw, the French are most *en evidence*. They seem to be devoting themselves to enterprises with a permanent outlook. He observed that pawnbroking appeared to be a favourite business of the Japanese, and it had occurred to him that were Hiranuma Senzo, the notorious money-lender, to proceed to Korea with a capital of a few hundred thousand *yen*, the whole peninsula would soon become a veritable sphere of Japanese influence.

As for the Buddhist missionaries in the Japanese settlements, their sole function seemed to be the saying of masses for the dead and the conducting of funerals. They had no influence on the morals of their countrymen, whose lives were less reputable than even those of the Chinese or the Koreans.

The Prince's conclusion was that the Chinese and the Koreans look up to the Japanese and are disposed to rely on them in all matters. He therefore urges that instead of wasting their time in petty political or parochial disputes at home, the Japanese should cross to the continent and undertake something big. The assistance of the National Union should be given freely, the Prince promised, to persons engaging in such enterprises.

Some time ago Mr. Kuga, editor of the *Nippon*, was represented as saying that his observations of China had convinced him of the hopelessness of attempting to maintain that country's integrity. Mr. Kuga accompanied Prince Konoye on the latter's trip to China, and it was therefore inferred that the Prince also had changed his views, which would have been an event of considerable interest. The Prince, however, who arrived at Kobe by the *Genkai Maru* on the 30th ultimo, asserts that his visit has confirmed all his previous ideas. Thus, either Mr. Kuga was wrongly reported, or the impression produced upon him by what he saw in China differed radically from the impression produced upon Prince Konoye. The latter's change of views would have been an important event, as it must have led to the dissolution of the Kokumin Domei-kai, of which he is leader.

Prince Konoye mentioned, among other things, that the Japanese troops in Peking are now giving protection to 300 eunuchs and court ladies. The fact may seem trivial, but the Prince thinks that after the return of the Court to Peking, the sentiments inspired among these eunuchs and ladies by their association with the Japanese will have a marked effect on the relations between China and Japan.

NA TUNG.

Monday, Sept. 2.

Na Tung, the Chinese Envoy of Apology, reached Nagasaki by the *Kobe Maru*. His suite consists of some twenty persons, but does not include any names with which the public have previous acquaintance. It will be interesting to see what arrangements are made in Tokyo for the reception of Mr. Na. Evidently the German Sovereign's ideas of the methods that should be followed by an Envoy coming on a mission of apology do not agree with the ideas of Prince Chun, and a somewhat embarrassing delay is occurring—embarrassing because the case resembles that of the horse at the well. It is comparatively easy to get an envoy to come to a certain capital, but to compel him to follow a certain programme after his arrival there is a very different business. The Kaiser has the sympathy of the world in this matter. Every one wants to see Prince Chun's mission discharge the functions assigned to it in an unequivocal manner so that its true character may not afterwards be obscured by some clever fiction. But if Chun won't do as he is bid, what is the remedy? With regard to Na also there appears to be some uncertainty. Tokyo papers suggest that his first introduction to the Japanese Government will be made by himself. He has doubtless been instructed by his own Government as to the steps he should take on reaching Tokyo, but unless those steps have already received Japan's approval, his mission may reach an *impasse*, as Chun's appears to have done.

Wednesday, Sept. 4.

The difficulty reported by telegraph from Basle is of an almost incredible character. When news first came that some complication had occurred with reference to the embassy of apology, it was generally assumed that since this mission of Prince Chun's is one of the conditions prescribed by the Peace Protocol, the Emperor of Germany hesitated to receive the Envoy until the Protocol had been signed. That would have been a very intelligible attitude on His Majesty's part. But it would seem that the dilemma is of a totally different nature. The

Emperor wants Prince Chun to follow the rules of Chinese etiquette in presenting himself at the German Court; that is to say, to kneel before the Throne, strike his head three times on the ground and remain kneeling throughout the interview. Obviously the Emperor's apprehension is that if Prince Chun be permitted to dispense with any of the forms prescribed by Chinese usage, the Chinese, on their side, may conclude that the necessary respect was abbreviated, the significance of the mission being proportionately diminished in their eyes. Such a fear might be comprehensible were Prince Chun the first Chinese ambassador received at the Court in Berlin. But he is not the first. He has had many predecessors, and all of them have been allowed to comply with German rules of ceremony, dispensing with the "Kow-tow" of their own country. Unless it be maintained that these various envoys were received in an unbecoming manner, and that the obeisance made by them was insufficient and therefore insulting, a new form of procedure can not now be prescribed with any show of consistency. Moreover, it has always been peremptorily insisted by foreign Ministers and Ambassadors when received in audience by the Emperor of China that the "Kow-tow" is extravagant, and that to demand its observance would be to humiliate and insult the representative of a Western Sovereign. Is it reasonable or even rational that a Chinese envoy coming to Berlin should be compelled to observe a routine which the German Representative in Peking repudiates as derogatory to the dignity of his Sovereign?

Thursday, Sept. 5.

Mr. Na Tung and his suite arrived at Bakan (Shimonoseki) by the *Kobe Maru* on the 3rd instant and left the same day for Kobe whence the party will proceed to Tokyo by the night train on the 4th instant. It is understood that Mr. Na's coming has not been officially announced to the Japanese Government. The announcement will be made by himself, and with regard to the routine followed in visiting the Court and presenting his apology to the Emperor, he will be guided strictly by the directions of the Minister of State for Foreign Affairs. Reports forwarded from Bakan by Japanese who spoke with Mr. Na indicate that he intends to pass some three weeks in Japan and that he will devote his spare time to financial investigations, finance being his specialty.

It is not likely that the question of "Kow-towing" will arise in Japan, for doubtless the Emperor will be satisfied that the etiquette of his own Court should be complied with. Probably the Emperor of Germany takes the view that Prince Chung's mission being of an exceptional character, the ordinary form of obeisance is insufficient, and some method must be adopted which shall emphatically indicate the apologetic nature of the embassy. That is a matter of opinion. Many people will be disposed to think that the more dignified course would have been to follow the etiquette of the German Court, which presumably evinces sufficient respect for the Sovereign. But others may argue that the Chinese must be humiliated. Prince Chung and his suite, however, may justly contend that the posture of kneeling carries with it in Europe a wholly different significance from that attaching to it in China, and that if they adopted such a posture in the presence of an European Sovereign, they would be, in effect, performing an act of worship. The whole affair is most unfortunate. The

Western world will be much more appreciative of the ludicrous side than of the serious, and we venture to predict that public opinion will condemn the Kaiser for insisting that his Court should be disfigured by a form of obeisance which in Christian countries is employed before the Throne of Heaven only.

Friday, September 6.

A telegram received in Shanghai by the German journal at that port and thence transmitted to the *Asahi* in Tokyo, denies *in toto* that the Kaiser required the Chinese Envoy and his suite to "Kow-tow." The story is alleged to be wholly baseless. That is what we should ourselves have been inclined to think. But the news forwarded by Reuter is so circumstantial that it is difficult to decipher the truth. Evidently people in Europe believe that the "Kow-tow" was asked for. It will probably turn out that the Emperor did not suggest the "Kow-tow" as a proper form of obeisance, but that there arose with regard to the general question of greeting and reception some matter which the public erroneously connected with the "Kow-tow."

Mr. Na Tung arrived yesterday afternoon in Tokyo. As no official intimation of his coming had been received by the Japanese Government, he was not met at the station by any representative of the Foreign Office, nor were any special arrangements made for his accommodation. He therefore proceeded direct to the Imperial Hotel. All this was of course foreseen by the Chinese Authorities. They prefer that Na should announce his own coming and there is no apparent reason why they should not have made that selection.

NEW CALEDONIA.

Very distressing accounts are published of the sufferings endured by Japanese emigrants working at the nickel mines of New Caledonia, which are owned by a French company. Between July 1900 and March 1901, the number of Japanese that proceeded to New Caledonia was a thousand. It was agreed that they should receive daily a certain quantity of rice and meat, but the allowance actually given to them was less than one-third of the stipulated amount. As for the buildings assigned for habitations, they were inferior to cow-sheds or horse-stables. No proper arrangements existed for medical aid, and even water was not supplied in sufficient quantities. Repeated complaints having produced no effect, the Japanese at last went on strike, with the result that they were driven from their dwellings by French soldiers and had to take refuge in the hills where they eked out a precarious existence. By and by they received a message from the Japanese Consul in Sydney advising that they should continue at work until he visited the place, but when they attempted to return to their huts, they found the doors nailed up and the buildings in a wholly uninhabitable state. The Consul's coming seems to have produced an improved state of affairs, but this part of the story is vague.

People who are very dainty are sometimes said to have only the appetite of a canary bird. But a scientific sceptic recently resolved to find out just what the appetite of a canary bird is. He weighed a canary, and found it weighed 247 grains, or something over half an ounce. He also weighed all the food, and found that the bird eats 32 times his weight every month, or actually more than his weight every day, showing (says *Science*) that the proverbial pig is a light eater as compared with the canary.

THE LATE MR. T. W. WALSH.

The telegraph conveys news that will cause sincere sorrow among the old residents of Japan. Mr. Walsh, who died in Italy—at his residence in Florence—on the evening of the 31st August, in his seventy-fourth year, was one of the ablest merchants and political economists that ever devoted themselves to business in this country. He commenced his commercial connexion with the Far East by serving in Shanghai, and subsequently coming to Japan in the very early days, he founded the great house of Walsh, Hall and Company in Yokohama and Kobe, remaining its principal partner and most active manager until the year 1890, when he retired from direct association with business, and, joining his daughters in Italy, purchased the villa of Monte Fonte in Florence, where, however, he did not abandon himself to a life of leisure but continuing to take a keen interest in all financial and commercial matters, corresponded with many of the leading publicists in both those lines, and occasionally addressed to the newspapers letters which were read with attention and admiration by all men of affairs. Mr. Walsh was an ardent advocate of bimetalism, and his luminous grasp of that difficult subject, combined with a literary style of great clearness and grace, enabled him to discuss the most abstruse problems of political economy in a manner that rendered them easy and attractive to the least earnest reader. His name was well known to all the eminent political economists of Europe, and several of them enjoyed the pleasure of his acquaintance; a pleasure very truly appreciated, for Mr. Walsh possessed the rare gift of marshalling his ideas scarcely less intelligibly and forcibly in speech than in writing, and he possessed also a personality of the most attractive kind. The late Sir Harry Parkes used to say that for guidance in the commercial, or the political, or the financial branch of Far-Eastern affairs, he always felt safe when he adopted a course indicated or approved by Mr. T. W. Walsh or Mr. Frank Johnson, and no one that had been so fortunate as to associate with either of those gentlemen could doubt the justice of Sir Harry's encomium. Yet Mr. Walsh was not, on the whole, a successful merchant. His spirit of enterprise exceeded his opportunities and betrayed him into speculations of which he had not time to reap the mature fruits. A noteworthy case was the reclamation of Yoshida Shinden. In the end that work fully justified Mr. Walsh's most sanguine estimates, but its profits went to enrich others while the loss fell on its clever projector. It is inexpressibly sad to reflect that within a comparatively brief space we have been called on to record the deaths of Mr. J. G. Walsh, Mr. A. O. Gay and Mr. T. W. Walsh, men representing the very highest type of Anglo-Saxon merchant; men that built up the name and fame of *Ame-ichi*, a firm of which all English-speaking people may be proud. Mr. T. W. Walsh re-visited Japan at the close of 1898, in consequence of the sudden death of his brother, Mr. J. G. Walsh. He remained until the spring of 1899, and at the time of his departure he appeared to be in such robust health that his return in some future year was confidently and hopefully predicted by his many friends. It would indeed have been his own wish to spend the close of his life in Japan, a country which he loved, of whose future he invariably spoke

in the most sanguine terms, whose best interests he promoted by his writings, and of whose affairs he possessed an exceptionally intimate knowledge. Family ties, however, held him in Europe, and we have now the profound pain of knowing that we shall see his face no more, and that a career of fine talent, undeviating integrity and noble generosity is closed all too early. No particulars are known as to the cause of Mr. Walsh's death. The telegraph announces the bare fact. Last July he was in the enjoyment of excellent health, and it is therefore evident that whatever malady carried him off must have been sudden and quick in its action. Such would have been his own desire.

RUSSIA AND JAPAN.

Telegrams to the Amur Association (*Kokuryo-kai*) in Tokyo say that the talk of a Russo-Japanese alliance has gained vogue in Blagovestchensk, and is producing a marked improvement in the relations of the Japanese and Russians in that quarter. The same telegram denies the truth of the story that the General responsible for the massacres last year has committed suicide. That tale appears to have been a pure invention. It would seem that the Amur region has been suffering from the heat elsewhere felt so severely this summer, for the river is reported to be unprecedentedly low and the cost of water transport has consequently increased five-fold.

The *Yomiuri Shinbun*, commenting on the above, thinks that there is a real intention on Russia's part to cultivate Japanese friendship, and that the just inference is that St. Petersburg statesmen recognise the difficulty of carrying out their Far-Eastern policy in despite of Japan. But these overtures are calculated to create some uneasiness in Japan's mind. If she allows herself to become the object of Russia's coquetry, she may wake up one morning to find that a new Manchurian agreement, or some other equally dangerous document, has been concluded while her attention was diverted elsewhere.

RUSSIA'S FORCES IN EASTERN ASIA.

The *Tokyo Asahi* undertakes to give its readers a numerical statement of Russia's forces in Eastern Asia at the present. This is a subject of perennial speculation. From time to time estimates professing accuracy but varying within large limits are published. The *Asahi* prudently refrains from vouching for the absolute correctness of its figures, but it alleges that they may be taken as a very close approximation though of course the source of information is not indicated. The figures are:—

	Men of all arms.
Amur Region.....	40,000
Siberia.....	45,000
Manchuria.....	45,000
Manchurian Railway guards and garrison troops.....	10,000
North China.....	2,900
Total.....	142,900

The Amur army was larger until the beginning of this summer, when its strength was reduced by several thousands. Our readers may remember that an estimate recently published in an independent quarter put the total of the above troops at 200,000. The fact is that the man in the street knows very little about these matters.

THE CODE OF CRIMINAL PROCEDURE.

It is confidently asserted that the draft of the revised Code of Criminal Procedure will be submitted to the Diet next session. This body of law may be said to have been under revision in a more or less fitful manner for the past ten years, and no one doubts that some of its provisions are out of date, especially those which direct that preliminary examinations shall be in secret, and that the accused shall not have the benefit of counsel. We do not know how these parts of the Code have been treated by the revisers, but it may be assumed that they have been radically altered, since it was with reference to that point that public opinion expressed itself strongly two years ago.

The Yokohama Association of Barristers has replied to the queries addressed to it by the Department of Justice with reference to proposed amendments of the Criminal Code and the Code of Criminal Procedure. It appears that the Minister of Justice has taken the wise precaution of submitting the amendments to all the barristers associations in the empire, and that the Yokohama Association is the first to answer. The Association condemns any radical change of the Criminal Code such as the Committee of Revision proposes. It approves of amendments and alterations of various provisions but it does not think that the time has come for a wholesale metamorphosis. As for the Code of Criminal Procedure, the Association approves of most of the Committee's recommendations, but suggests some further changes. It strongly advocates a substantial increase of judicial salaries and an improvement of the official status of judges. It recommends that police inspectors be deprived of a considerable part of their functions relating to the examination of prisoners, as the discharge of such functions by the police is apt to lead to serious abuses. It advises that the decision of a public procurator should not be final as to instituting a prosecution. According to the present system the public procurator may be said to combine in his own person the duties of grand jury and attorney-general, for in the first place he rules whether the evidence is sufficient to warrant the institution of proceedings before a law court, and in the second he subsequently undertakes the business of prosecution. The Yokohama Association thinks that in the event of a public procurator's refusing to sanction the prosecution of a charge, duly submitted, the barrister by whom the charge is submitted should be entitled to appeal to a law court. Concerning the vital problem of allowing counsel in examinations by a *juge d'instruction*, the proposed amendments make that concession, but do not, in the opinion of the Association, establish the practical competence of counsel, and it would probably be found that the privilege, in the proposed form, had little real value inasmuch as the *juge d'instruction* might refuse to grant to a barrister such access to documents and such other rights as would be essential to the full exercise of his functions. Finally the Association suggests two changes with reference to the latitude enjoyed by barristers. The first is that it should be competent for a prisoner's counsel to appeal from the decision of a lower tribunal—always with the prisoner's consent—, whereas it is at present necessary that the prisoner himself should take the initiative; and secondly that greater liberty should be accorded to the counsel for the defence in the matter of cross-examination.

KOREA BRANCH OF THE ROYAL ASIATIC SOCIETY.

A branch of the Royal Asiatic Society has been established in Seoul under the presidency of Mr. J. H. Gubbins. The branch opens with 34 ordinary members and 3 honorary, the latter being Mr. W. G. Aston, the Rev. Dr. Griffiths and the Rev. John Ross. The opening of this branch will be welcomed by the public, for Korea is virtually a *terra incognita* and we may reasonably expect that papers of great interest will be contributed to the proceedings, especially as the list of members includes many names of gentlemen already known to the world as exponents of Korean manners, customs and politics. The first volume of the Proceedings is now before us, and we find that its *pieces de resistance* are two essays devoted to the important question of China's influence on Korean civilization. That is a problem of very great interest to students of Japanese history also, for it has always been difficult to determine how much of the learning, the arts, the sciences and the philosophies of China reached Japan *via* Korea and how much came direct from China. The Rev. J. S. Gale, a charming writer, whose contributions to our knowledge of Korea have been numerous, prepared the opening essay on this subject, and the gist of his conclusions may be inferred from the first sentence of his paper:—"For three thousand years the Great Empire (*Ta-guk*, i.e. China) has forced its history and teachings upon the little Eastern Kingdom (*Tong-guk*, i.e. Korea,) with evident desire to annex the same, not so much by force of arms as by appropriating the thoughts and minds of men." He then proceeds to describe how Ki-ja, Viscount of Keui, "a man great in the history of China," becoming a fugitive from his own country, made his way to Korea, established his capital in Pyöng-yang and became "the father" of the country. This Viscount had 5,000 followers and his arrival in Korea happened in 1122 B.C. Nearly a thousand years later, another "Chinese General," Wi-man, drove out the descendant of Ki-ju, who fled south, carrying with him Chinese civilization to another part of the peninsula. At the same time another band of Chinese fugitives crossed the Yellow Sea and established themselves in yet another region of the peninsula, so that "at the beginning of the second century B.C. we find a Chinaman ruling at Pyöng-yang, the descendant of another Chinaman at Ik-san, and fugitives from the Chin Kingdom of China in authority at Kyöng-ju." Mr. Gale pursues his researches on these lines and shows that from age to age China's hand and her influence were felt in Korea, the conclusion finally arrived at being that scarcely any region of Korean thought, learning or customs is unmarked by China's touch. But Mr. H. B. Hulbert, whose essay stands second in the volume, takes a very different view. Under the heading "Korean Survivals" he collects a number of historical allusions and everyday evidences which, in his opinion, suffice to prove that Korea has not been affected by contact with China in a greater degree than England has been affected by continental Europe. It seems strange that there should be such a radical difference of opinion on such a subject between two men who have studied it closely and have enjoyed good opportunities for forming a judgment. We must say that Mr. Gale's view is more consistent with Japanese ideas on the question than Mr. Hulbert's, but as the controversy

is still pending, opinion may be prudently reserved. The Rev. G. H. Jones contributes an interesting and attractive paper on "Korea's Colossal Image of Buddha," a stone idol 55½ ft. high and 30 ft. in circumference. It will be seen that this opening volume of the Society's Proceedings gives earnest of a successful career, and our readers will join us in wishing every prosperity to the new organization.

JINKO KO-U.

This term, novel probably to most of our readers, means artificially produced rain. If there were any solid grounds for accepting the assertion that rain can be made to fall by means of artificially produced electrical discharges, the fact would be of great importance in a country like Japan, where a shower of rain at the psychological moment may signify a great difference in the rice harvest for the year. Mr. Nobuhara Masatake has been occupying himself with that idea for some time. He is Manager of the *Shözen-kai*, a society formed in Osaka with the object of encouraging virtuous deeds, and he doubtless thinks that to devise an effective process for producing rain would be an achievement worthy of the manager of such an association. A short time ago he applied to have his process patented, but the authorities of the Patents Bureau did not think that calling down rain from the skies was among the industries coming within their purview. Mr. Nobuhara has just had an opportunity of demonstrating the utility of his method. He was invited to Tokushima Prefecture, where the present somewhat too persistent drought had caused uneasiness to the farmers. Tokyo newspapers contain accounts of his proceedings, the gist of the story being that after one discharge of electricity the sky, which had hitherto been perfectly clear, became overcast, and after a second discharge the clouds, which had shown a disposition to disappear without performing their function, dropped a refreshing shower which was repeated at intervals during the next 36 hours. It appears that the desired result was not obtained until the day after the electric discharges, and the tale has one over-enthusiastic item, namely, that the clouds collected over the experimenter and declined to follow the direction of the wind.

PSYCHOLOGICAL METHOD OF TEACHING LANGUAGES.

Mr. C. M. Cady has published, under the above heading, two books for the use of Japanese teachers of English. They are Parts I. and II. of "The Series Form of Aesop's Fables." Space does not permit us to enter into a full explanation of Mr. Cady's method—or perhaps we ought to call it M. Gouin's methods, that well-known French educator being its inventor—but it appears to us to be an excellent method, and apart from its intrinsic merits, it has the great value of supplying a system, which is indeed no small desideratum in the case of teachers. Mr. Cady seems to be devoting his attention mainly to the assistance of teachers. His "Summer School" in Kyoto this year is reported to have had a numerous attendance, and he is said to be about to publish the series of lectures delivered by him during the course. He certainly has adopted a most useful line when he applies himself to improving the equipment of Japanese teachers of English. There is ample room for improvement.

THE MORMON CONTROVERSY.

Wednesday, Sept. 4.

Mr. Heber T. Grant, who heads the Mormon Mission that lately arrived in Japan, has addressed to this journal a long letter in which he protests with some warmth against our comments on the lodging-house incident; accuses us of "throwing mud at his people," and alleges that when we "intimate that it is dangerous for a Mormon to be admitted into the house of the most respectable person on earth, we are guilty of showing our ignorance of the Mormons and the record for honesty and virtue which they have made."

It is of course easy to understand that Mr. Grant and his fellow-workers, being, as we believe them to be, men of thorough sincerity and—with one notable exception—conspicuous virtue and industry, should be greatly offended and even exasperated when they read such a statement as that made in our columns, namely, that "no man who controls a hotel or a lodging-house would be acting properly towards his ordinary guests if he gave accommodation to Mormons." That is a very unpleasant thing to have said of oneself and one's fellow-believers, and had Mr. Grant shown even more heat than he does in traversing the statement, we should have made no complaint. Nevertheless we can not withdraw one word of the statement, and what we have to point out now to Mr. Grant is that his letter, though eminently calculated to raise the Mormons in public estimation, wholly avoids the question at issue, and avoids it so carefully that we can not regard the omission as unintentional. The unique and clearly explained ground forming the basis of our conclusion was polygamy, and about polygamy Mr. Grant says not one single word in a letter filling three-quarters of a column. Our language was:—"Whatever may be said for the industry and sincerity of the Mormons, there is no gainsaying the fact that many of them practise polygamy and are consequently leading a life which shocks the moral susceptibilities of 999 Christians out of every thousand." Thus, while admitting that the Mormons represent in their manner of life many high qualities, we carefully and explicitly restricted our condemnation to polygamy and polygamy only. Yet Mr. Grant in replying makes not the faintest allusion to polygamy. He devotes himself to asserting, and he adduces various appreciations by other persons in support of his assertion, "that the Mormons are honest and virtuous, conspicuously free from drunkenness, licentiousness, debauchery and vice of every kind." As to all that we have nothing to say. Nor have we ever had anything to say. The Mormons may be everything that Mr. Grant claims for them, and indeed we go so far as to admit that whatever we have read or heard of them justifies Mr. Grant's encomium. It was for that very reason that we expressly referred to "the industry and sincerity of the Mormons" by way of preface to the question of polygamy. Is it conceivable that Mr. Grant can be in any doubt about the count upon which he is really arraigned? It would be strange if he were, for the language used in arraigning him was too clear to admit of any misunderstanding. Of what use then is it that he should meet an explicit arraignment by pleading a series of side issues, and that, when the sole subject of discussion is whether the life of polygamy led by many of the Mor-

mons shocks the moral susceptibilities of Christians, he should compose a long letter for the purpose of proving that the Mormons do not drink, do not gamble, do not idle and do not show any outward signs of licentiousness? He might as well have addressed himself to the demonstration of any other proposition, and it astonishes us that a man of his intelligence should so weakly attempt to shirk the real issue.

As to our having "gone out of our way to throw mud at the Mormons;" as to Mr. Grant's inability to understand our "reason for the stand we have taken on the Mormon question," and as to his allegation that we "libel" the Mormons when we say that "no one who controls a hotel or a lodging-house would be acting properly towards his ordinary guests if he gave accommodation to Mormons," we need not make any elaborate reply. Whether we have thrown mud or not, our readers can judge. Our reason for taking a stand against the Mormons is because we regard their practice of polygamy as a damnable vice, abominably cruel to women, destructive of all the beauties of home life, and calculated to pervert marriage into a mere instrument for gratifying man's licentiousness. As to the question of libel, we affirm that no Christian nor any man or woman of sound moral principles whatever be his or her creed, staying in a hotel or lodging-house should be exposed to the danger of finding under the same roof people who practise polygamy. The subject need not be elaborated. Its plain statement is sufficiently convincing. Mr. Grant may claim for his people all the other virtues in the calendar. We should be the last to dispute his claim and the first to welcome him and his comrades to these shores if they came to propagate any form of Christianity not disfigured by the hideous vice of polygamy. As practisers of that vice they should receive only the most unequivocal condemnation at our hands, nor is our disposition to oppose them diminished by their leader's strange attempt to divert public attention from the point really at issue.

In connexion with this subject we may refer to an article in the *Kobe Chronicle* which takes the position that an official veto upon Mormonism would be religious intolerance since "it is just the attitude taken up on such an extreme case as is represented by Mormonism that goes to prove how far a tolerant attitude towards belief is a matter of accident or is based on principle." This plea for "tolerance" is precisely what might have been expected from the *Kobe Chronicle*. That journal is uncompromisingly hostile to missionaries of all sects, and unless its writings must not be interpreted literally, it is edited by an agnostic, if not an atheist. That is not said by way of reproach. We concede every man's right to hold what opinions he pleases. But the fact that a writer is inveterately opposed to religion in every shape scarcely qualifies him to discuss whether this form or that form of religion may be preached without injury to public morals. The Japanese Constitution does not guarantee unlimited tolerance. It guarantees tolerance within the limits of law and order, and it is precisely because those limits are transgressed by the practice of the Mormons that we have advocated official condemnation of their propagandism. The *Kobe Chronicle* must be cognizant of that reservation, yet it writes as though any and every kind of ethical teaching must be permitted in deference to the principle of tolerance. To such writing a worthy addendum is our contemporary's contention

that because concubinage is widely prevalent in Japan, the Mormon practice of polygamy should be tolerated. It would be equally logical to claim that in a country where homicides happened to be frequent, a sect of Thugs should be welcomed as a harmless addition to the population. "For our own part," says the *Kobe Chronicle*, "we hold both concubinage and polygamy to be evil in themselves and injurious to the best interests of the State because they both involve the degradation of women; but it is absurd to hold that a plurality of wives is worse than concubinage, or that those who advocate the former can do harm in a country where the latter is a recognised social relation." It would follow, then, that because one evil practice prevails in a country another may be introduced with impunity? Besides, the *Kobe Chronicle* makes an egregious blunder when it affirms that concubinage is "a recognised social relation in Japan." No concubine is received in society in this country. They are social outcasts. That can not be gainsaid. Nor does the law recognise them. From the beginning to the end of the Civil Code the practice of monogamy alone is sanctioned. The concubine does not exist in the eyes of the law, except that a concubine's child may be adopted by its father just as he may adopt the offspring of any other extra-marital relation. Japanese legislators are doing what is in their power to exterminate this old-fashioned abuse. Japanese society is lending its aid. The best Japanese publicists omit no opportunity of denouncing the practice. And now we have a foreign journal contending that since concubinage is "a recognised social relation in Japan"—which it is not,—therefore it is absurd to object to polygamy also. When a nation is trying to cast out one devil, there is no reason why it should take unto itself seven others.

Friday, September 6.

It is strange that there should be so much beating about the bush with reference to the Mormon question. The *Japan Herald*, for example, enters into quite an elaborate argument to demonstrate the impossibility of making any scrutiny into a man's morals before allowing him to take up his quarters at a lodging-house or a hotel, and further contends that since the Mormons have abandoned the doctrine of polygamy, they are no longer open to criticism on that score. Such arguments are quite beside the mark. We have never thought of alleging, no sane man could think of alleging, that the proprietor of a public boarding-house or hotel has any right to inquire into a man's moral or religious views before giving him accommodation. The proprietor of a public boarding-house or a hotel must judge by the evidences presented to him. In the interests of his other guests he is perfectly warranted in refusing admission to a Mormon and his plural wives, just as he would be warranted in refusing admission to a man who should come accompanied by a concubine. But if the plural wives are not *en evidence* the complexion of the affair is totally changed. No keeper of a public lodging-house or of a hotel would be acting properly to the general body of his guests if he allowed a man accompanied by more than one wife to take his place among them. If the man is not so accompanied, nothing remains to be said so far as the keeper of the lodging-house or the hotel is concerned, unless the business of either establishment be conducted on some special lines which impose special considerations. It appears to us quite silly to imagine, or to suspect any in-

telligent person of imagining, that restrictions could properly be imposed at a place of public accommodation against persons whose conduct presents no ostensibly objectionable feature.

As to the other point, namely, that the legal right of polygamous marriages is no longer claimed by the Mormons, we have already pointed out very clearly and at some length that the practice of many of them is at variance with their theoretical abandonment of that right, and that, for purposes of example, practice is at least as powerful as precept. It is precisely because the Mormons have shown themselves to be possessed of many of the high qualities claimed for them by Mr. Grant that their example becomes dangerous. So long as they live in polygamy they must expect to be regarded as corruptors of public morality. Moreover, though, as Mr. Grant explains, the Mormons, after fighting the matter of plural marriages through the law courts, "finally surrendered," the question arises, have they given up the theory as well as the legal right. On the contrary, is it not a fact that they still maintain the justice of the theory, and that they regard the laws of the Occident as erroneous and their own doctrine as correct?

THE RICE CROP.

The Department of Agriculture and Commerce having collected the views of the various experimental stations throughout the country, has arrived at the conclusion that this year's rice crop will be from 5 to 10 per cent. above the average. By "the average" is meant 39,800,000 *koku*, that being the mean figure for the seven years from 1894 to 1900, excluding the worst and the best year. Only from the eight provinces of the Sanindo district—i.e. the western region—do the reports indicate a yield under the average. All the other regions foresee at least an average crop, and in the Kyoto district the average is expected to be exceeded by from 10 to 20 per cent. Yesterday was the *nihyaku-toka*—i.e. the 210th day from the 1st of the 1st month, reckoning by the old calendar—, which is regarded as a time of great importance by Japanese farmers. The 220th day is the other crucial time. Fine weather on both days is exceptional good fortune.

The *Chingai Shogyo* has obtained reports from nearly every district throughout the country—46 prefectures—with regard to the state of the rice crop on the 210th day (1st instant). The sum of these reports is that the yield will be $42\frac{1}{4}$ million *koku*, or nearly 2 per cent. above last year's result and 6 per cent. above the average. This, being in the nature of a forecast, may be modified by subsequent climatic conditions, but in that respect things seem favourable. The 210th day did not bring fine weather universally: throughout about one-half of the country the afternoon was wet. But what the farmers deem important is not the weather on that particular day so much as the weather prevailing at the time, and since not only did sunshine universally prevail up to the 1st but also the appearances at present are not ominous, climatic conditions may be regarded as favourable. A centre of depression declared itself, a few days ago, in the southern seas, and it may pass over Kiushiu. But it is not expected to do much damage under any circumstances.

ADMINISTRATIVE REFORM.

Tokyo journals publish a statement to the effect that a programme of administrative reform has been definitely elaborated by the Cabinet and will be embodied in a bill for submission to the Diet next session. The preamble of the scheme is, as usual, ornamented with fine declarations of purpose, but the details have more concern for the public. In the first place there is found a substantial increase of official salaries. Ministers of State will have 1,000 *yen* monthly and upwards; *Chokunin* officials will have 500 *yen*; *Sonin* officials, 300 *yen*; and all *Hannin* officials will receive at least an addition of 10 *yen* monthly. All other officials will have increased remuneration on a similar ratio. One result of such change would be that the minimum salary of judges, since all are of *Sonin* grade, would be 300 *yen* monthly, whereas at present there are judges of *Kusaibansho* who get only 50 *yen* per mensem.

The second measure is one of decentralization. Its object is to facilitate the discharge of local business, and for that purpose it delegates to Governors of prefectures functions hitherto discharged by the central Administration. The details of this proposal are not published. Its general aim only can be stated. But it is regarded as a step of great importance, and its effect upon the powers of Governors will be marked.

There will also be a large decrease of the official establishment. Here, too, details are wanting, but it appears that by amalgamating bureaux and abolishing needless posts, a total reduction of about one-third can be effected in the number of officials. The impression is that the office of parliamentary under-secretary (*Kambo-cho*) as well as that of *Chokunin* councillor (*Chokunin sanjikan*) will disappear.

TURBINE PASSENGER STEAMERS.

It really seems as though the turbine system of propulsion is on the eve of a great victory. The *King Edward*, which is the first passenger steamer driven by turbine motors, recently made her trial trip on the Clyde with remarkably successful results. The following account of the vessel is very interesting:—

"It is in the machinery that the chief interest of the boat lies. It consists of three turbines, all separate, and each driving one of the shafts. The high-pressure turbine is placed on the centre shaft and each of the low-pressure turbines drives one of the outer shafts. Inside the exhaust ends of each of the latter were placed the two astern turbines. In driving ahead in the ordinary way, the steam from the boilers is admitted to the high-pressure turbines, and after expanding it about five-fold, it is passed to the low-pressure turbines, where it is expanded about twenty-five-fold more and then passed on to the condensers. This gives a total expansion ratio of about 125-fold. At twenty knots speed—and this has already been obtained without any excessive driving—the speed of the centre shaft is 700 and that of the two outer shafts 1,000 revolutions per minute. When coming alongside a jetty or manoeuvring in a harbour, the outer shafts only are used, and steam is admitted by suitable valves directly into the low-pressure motors, or into the reversing motors independently on either side of the vessel. The high-pressure turbine under these circumstances revolves idly, its steam-admission valve being closed, and its connection with the low-pressure turbines being also closed by non-return valves. By this arrangement great manoeuvring power has been secured. Up to the time of writing there have been several trials of the vessel, and the engineers declare themselves as perfectly satisfied with her last test. She easily made twenty knots, and even at this speed there was a noticeable absence of vibration. The comparatively small space occupied by the engines leaves large accommodation for passengers—a consideration of much value in the trade in which she will be engaged."

TRIAL OF IBA SOTARO.

The trial of Iba Sotaro commenced on the 2nd instant at 9 a.m. The principal chamber of the Court of Cassation had been set aside for the purpose, a great crowd of spectators being expected, but only some four hundred were admitted, about a thousand being turned back from the doors. Iba was defended by four barristers, of whom the most distinguished were Mr. Miyoshi Taizo, formerly President of the Court of Cassation, and Mr. Hanai Takuzo. The prisoner, who was handsomely attired and perfectly calm, admitted the killing of Mr. Hoshi, but presented a long statement of reasons. From this it appears that his idea of a necessity for removing Mr. Hoshi had its origin in the bribery affair, and that it was confirmed when Mr. Hoshi attained the position of chairman of the Educational Council of Tokyo, a position which enabled him to exercise a baleful influence on the rising generation; and when, although suspicions of corruption were indelibly fixed on him, he merely resigned his Ministerial portfolio and escaped without any prosecution. Heaven bade him, the prisoner said, remove this corrupter of the time. Asked what he meant by saying that "heaven bade him," he explained that his conviction possessed the force of a revelation. In short it is evident that Iba Sotaro is a disciple of the Wang school of philosophy which obtained such wide vogue in Japan during the 18th century. He nevertheless admitted that although the resolve to kill Hoshi had long been present with him, he had not immediately sought any opportunity to carry it into effect, being hampered by the thought of his wife and children, one of whom was only six years of age. He therefore waited in the hope that Hoshi would repent. Finally, on the 2nd of June, he left his home determined to consummate the deed. He went first to the Kobo-no-yu—a species of bathing establishment—in Shibuya, in order to have the advantage of a quiet place for compiling his statement of reasons for the deed and his last testament, after which he proposed to pay farewell visits to his friends. When waiting at the Shinagawa station he obtained a copy of a newspaper containing an account of a speech delivered by Mr. Hoshi at a meeting of the Educational Society. In that speech Mr. Hoshi abused the Imperial University, attacked the doctrines of Confucius and Mencius, and criticised the text-books in use at the schools. His language was opposed to the spirit of the Imperial Manifesto, and since it appeared certain that if Marquis Ito returned to power, Hoshi would have a place in the Cabinet and would be able to work incalculable mischief, Iba Sotaro's determination to remove him became stronger than ever. On the 21st of June, having eaten his breakfast, he went by train to Shimbashi, and at Shibaguchi he purchased envelopes for the purpose of sending two letters to his family and one each to the *Mainichi*, the *Nippon* and *Aiyako* newspapers, in order that his motives might become known to the members of the two houses of the legislature. Before posting these letters he went to the Tokyo municipal building to see how affairs stood. It was then 3 p.m. He there saw that Hoshi's carriage was in waiting and learned that Hoshi was within holding a secret session with his colleagues. Iba now knew that "the rat was in the trap," and resolved that it should not escape. He went away to post his letters, and returning sought a meeting with

Mr. Hoshi, making all preparations for the event while the office servant was carrying in his request. Presently the servant came back saying that Mr. Hoshi could not see him that day. Thereupon he stole through the corridors until finally, reaching the council chamber, he saw that Hoshi was seated within reach and knew that the public malefactor was delivered into his hand. Nevertheless, deeming it cowardly not to give any notice of his intention, he cried out *gyakuzoku Hoshi! zoku Hoshi!* as he entered the room, and then, springing on his victim, delivered a number of thrusts in rapid succession. He believes that his second blow, given in the left breast according to a method with which he was familiar in his capacity of fencing expert, was the fatal stroke. All this story was told in the calmest and most collected manner. He further explained that he never entertained any intention of killing Hoshi in the latter's house, his uniform purpose being to strike him down in a public office in the presence of the men upon whom his evil influence was directly exerted, in order that they might see the blood of a scoundrel flow. He had to apologise for defiling a public office but it was done in the interests of the country. The Court rose at 3:05 p.m.

Iba Sotaro has shown a great want of artistic perception in his method of justification. Again and again he has asked to be allowed to supplement his statement of reasons for killing Mr. Hoshi Toru, and the impression inevitably produced on the public mind is that his excuses are manufactured rather than sincere, and that he now desires to strike an attitude before the public. He appears to have been a constant reader of the *Mainichi Shinbun*, for his pleading presents many points of resemblance to the attacks so inveterately made upon Mr. Hoshi by that journal. His public trial was resumed on the morning of the 4th, when he again asked leave to add another excuse for his act, namely, that Mr. Hoshi had been a leader in the Shizuoka election-affair, and that he had truckled to Marquis Ito, of whom Iba said some complimentary things. The public procurator, Mr. Kimori, then spoke. After premising that the offence of murder had been clearly proved against the prisoner, he addressed himself to the question of mitigation on the plea that Iba had been influenced by public motives or that he had been impelled by his victim's evil deeds. As to the former point, Mr. Kimori insisted that it had no application. If the absence of private motive were to be admitted in extenuation of the crime of bloodshed, then the leading of an insurrection or the slaying of a sovereign would have to be treated leniently as unselfish offences. The laws of Japan did not recognise such palliations. On the contrary they visited with special severity the crime of rebellion or of an attempt against the Imperial person. If, indeed, the law provided degrees of capital punishment, as burning, crucifixion and beheading, then, perhaps, the assassin actuated by public motives might be executed by the most lenient method. But the law provides no such distinctions. It contemplates death alone as the penalty for such malefactors, and it certainly could not be held that any consideration of motive should suffice to warrant the commutation of capital punishment into perpetual imprisonment in such case as that of Iba Sotaro. As to the contention that his victim had been a bad man, nothing had

ever been legally proved against Mr. Hoshi. The assaults upon his reputation were organized and directed solely by political newspapers. If such criticisms were to be counted a justification for murder, life would cease to be secure. Mr. Kimori dealt also with the question of the prisoner's mental derangement, insisting that no evidence whatever of such a condition was discernible.

Mr. Sakurai, one of the counsel for the defence, admitted fully that the crime was proved and that no symptom of mental derangement could be detected. Doubtless Iba himself desired to suffer the penalty of death, but those charged with the duty of administering justice had to consider whether the law warranted his execution. It was quite plain that he had not been influenced by private motives. Whatever Mr. Hoshi may have really been, Iba Sotaro undoubtedly believed him to be a public malefactor whose continued existence would be injurious to the nation. For that reason and for that reason alone he had killed him, and it certainly seemed just that the law should take cognizance of such exceptional circumstances.

Mr. Hanai Takuzo, another of Iba's counsel, contended that the crime could not be regarded as wilful murder but must be classed as homicide. He entered into an elaborate and extraordinary argument to prove that whatever the length of time that elapsed in months and days between the conception of Iba's purpose and its execution, there had been no appreciable interval between the acts that excited his anger. His victim's supposed offences against public morality had followed each other in such quick succession that the exciting cause, so far as concerned Iba, must be regarded as virtually coincident with the delivery of the fatal stroke. The law had tears as well as frowns. It was not the merciless thing conceived by some persons. Iba's conceptions may have been mistaken, but they were genuine, and he had unquestionably obeyed a desire to promote the best interests of the State. He would doubtless object to any mitigation of the death penalty, but they were there to administer the law not to consult the wishes of the accused.

Mr. Miyoshi Taizo spoke on the same lines, but added a plea that the Japanese nation would like to preserve "a living memento" of the *samurai* spirit.

The court rose at 3:40 p.m., and judgment will be delivered on the 8th instant at 8 a.m.

The *Nippon* has the courage to plead for Iba Sotaro's life. Such at least seems to be the gist of its arguments. "While our colder reasons condemn," says the *Nippon*, "our warmer hearts approve." In short, the *Nippon* appeals from the throne of justice to that of sentiment, and would substitute emotion for intelligence. For the rest its contention seems to be that really society is in such a very rotten condition all round that people ought not to be surprised by events like the killing of Hoshi. The main current of events can not be effected by these solitary acts. The Tokugawa would have fallen even though Ii Kamon-no-kami had not been struck down. But it would not have fallen so quickly. Japanese society would have ultimately rebelled against the practices represented by Hoshi Toru, even though Iba's sword had not been employed. But the consequent changes would have been deferred. Baron Kaneko would not now be filling the post occupied by Hoshi.

SIR THOMAS SUTHERLAND ON THE SHIPPING QUESTION.

In the course of his examination before a Select Committee of the House of Commons Sir Thomas Sutherland, Chairman of the P. & O. Company, according to the printed reports of the proceedings, "utterly denied that the German vessels were better than the P. & O. boats either in point of speed or the food supplied." It appears to us that in making such an allegation Sir Thomas justified the criticism often directed against the self-assurance of British merchants; he preferred his own opinion to the opinion of his customers, the public. After all the voice of the public is the final arbiter in these matters, and the voice of the public pronounces in favour of the German vessels, so far as concerns the Japanese section of Far-Eastern waters. Doubtless the conditions change materially after a passenger transfers himself to one of the big steamers that sail under the P. & O. flag from China ports. But we in Japan can have no hesitation in admitting the superiority of the German boats that come here.

Sir Thomas was specially interesting when he descended to figures. He showed that whereas the Messageries Maritime receive a subsidy of 8/4 per mile, and the North German Lloyd a subsidy of 6/8, the P. & O. subsidy is 2/7. He also showed that, in return for this comparatively small subsidy, the P. & O. build passenger steamers such as would never be employed otherwise, vessels constructed for cargo purposes being far more profitable to their owners. Another important point made by him was that whereas the North German Lloyd's subsidy is granted for a period of 15 years certain, 7 years is the time in the case of the P. & O. Thus the former company, having a long clear future before it, is able to use a class of vessel too costly to be employed by a company which can not tell whether it may not lose Government support in a short time. Only 4 years remain of the P. & O.'s subsidy-period, and of course corresponding circumspection is necessary in constructing new mail steamers.

Sir Thomas made one very singular remark. "It was an interesting problem," he said, "how long the Japanese Government would continue to pay such an extravagant subsidy. He supposed it would be as long as they were able to borrow money from the British tax-payer." What on earth has the British tax-payer got to do with the question? Any other King Charles' head would have done better to drag into the memorial. The British investor and the British tax-payer are two very different individuals, as Sir Thomas well knows. But apparently even the most long-headed persons seem to attach value to an occasional bit of clap-trap.

The general effect of Sir Thomas' evidence is to restore confidence in the ability of British ship-owners to hold their own even against heavily subsidized lines. English statesmen are not likely to be betrayed into a war of subsidies, but even without anything of the kind there is not much to fear.

"The character of the Germans," Sir Thomas said, "is to take an infinity of trouble about everything." Concerning that there is a word to be said. Some years ago, when evidences were multiplying that Japanese charterers had begun to prefer German cargo-steamers to British, the writer of this note asked a prominent Japanese to explain the preference. The answer was in effect this:—"Because a German skipper will always do

what we ask him and a British skipper won't. The German will work on Sunday, or beyond time, or will depart to any extent from the regular routine if his charterers ask him to do so, but the Britisher, if he is asked to do anything outside his set programme, says, 'I'll see you d—d first.' Naturally we prefer the German." Naturally.

THE WEATHER.

The meteorological authorities now declare that all immediate danger of a typhoon is past, and that the weather has shaken off its symptoms of serious disturbance. If so we have purchased immunity from storm at the cost of terrible discomfort, for anything more oppressive than the steaming process to which we are now subjected could scarcely be conceived.

FRENCH NOTES.

We shall presently hear the result of Count de la Vaulx's scheme for crossing the Mediterranean in a balloon. The project was materializing at the end of July, and the President of the Republic had contributed 500 francs towards the expenses.

An interesting Frenchman is about to have a monument erected to his memory. He is M. Urbain Dubois. His title to fame rests, not on the fact that he was father of the well-known explorer, M. Felix Dubois, but on the fact that he served King William of Prussia in the capacity of chief cook up to 1871. When the war broke out, he resigned his post, and set himself to commit to writing his knowledge of the details of the culinary art. Six volumes were the result. They are the classics of the kitchen, and the *Débats* calls their author "one of the national glories of France."

There is a curious and interesting analogy between the position of the religious orders in France *vis-à-vis* the Associations Bill and the former position of the Christian educational institutions in Japan towards the Government. The educational institutions in this country used to be confronted by the embarrassing difficulty that if they did not banish all religious teaching from their curricula, they must remain without official recognition and therefore without certain privileges of cardinal importance to students. Thereupon it was advised by some persons that the Christians would be acting legitimately and in accordance with the Scriptural "wisdom of the serpent" if they drew up special curricula for the behoof of the Government and continued to teach on their old lines. Now, after careful examination of the Pope's Instructions to the religious orders in France, it has been discovered that whereas His Holiness was at first supposed to have counselled a spirit of resignation and compliance with the new law, what he really does is to advise the orders to keep unchanged their former rules and constitution as approved by the Holy See, and to draw up and submit to the French Government an independent set of rules which will serve to satisfy the requirements of law and will, at same time, be a mere make-believe. Another example of a similar ruse is the Pope's injunction as to the submission of the religious orders to the Bishops. The Bill requires full submission. The Pope recommends submission, but that it must be conformable to the character of each institution.

M. Monnat, one of the editors of *Figaro*, has just had his head broken by M. Dreyfus

Gonzales, the printer, whose mother had been insulted by an article from M. Monnat's pen. The Paris correspondent of *The Times*, commenting on this incident, says:—"Until France has a good libel law it is difficult not to sympathise with gentlemen who, when insulted, take the law into their own hands." With what truth we may say to Japan *de te fabula narratur*.

Damages to the extent of 200,000 francs have been awarded by the Dax Court to M. Dombrowski, a Russian engineer, whose wife was killed in the recent railway accident at Gèours de Morenne.

KOREAN AFFAIRS.

Saturday, Aug. 31.

It is now denied that there is any intention of revising the treaty of 1876 between Japan and Korea or that negotiations for that purpose have been opened. The mistake appears to have arisen in connexion with steps taken by Mr. Hayashi to procure a slight modification of the trade regulations so far as they relate to the export of bread-stuffs.

Monday, Sept. 2.

The First National Bank is now said to have definitely agreed to make a loan of five hundred thousand *yen* to Korea. The amount originally asked for was four hundred thousand, but the Söul Government subsequently concluded that it might as well borrow half a million while in the vein. Nothing is said about the rate of interest or the terms of re-payment, but considering the state of the money market in Japan it is not probable that Korea has obtained very favourable terms from a financial point of view.

Tuesday, Sept. 3.

Rumour persists in alleging that the French Minister in Söul is using all his influence to have the Emperor's Mistress, Om, raised to the rank of legitimate empress. This project is said to have originated with Li Yong-ik and the Russian Representative, but the duty of pushing it has been entrusted to the French Charge d'Affaires, whose activity is less likely to excite suspicion or provoke opposition. It is even alleged that the French Representative has promised to supply all the furniture and utensils required for the ceremony. There is no smoke without some fire, but the public may take it for granted in this instance that rumour is guilty of more than its usual exaggeration with regard to the activity of France and Russia in the Korean peninsula.

It is further alleged that the French Representative has applied for postal privileges in Korea equal to those enjoyed by Japan.

It goes without saying that all these rumours are beginning to excite Japanese public opinion. The *Asahi* strikes a note which will probably grow in volume of sound. It maintains that quite a long list of steps recently taken by France in Korea are one and all obviously designed to promote Russia's interests and to undermine Japan's influence. That is not to be endured tamely. The wisest plan for Japan is to assume the aggressive instead of standing always on the defensive. Let her present to the Korean Government a demand that in future no railway or mining concessions shall be granted by Korea to any foreigners without Japanese consent. Let her, in short, convert Korea openly into an effective sphere of Japanese influence. Of course a preliminary understanding with England and America would be essential. Russia and France will oppose, but there is no genuine remedy except a stalwart policy.

GERMAN NEWS.

The commercial policy contemplated by Germany at the instance of the Agrarians, appears to be causing much resentment in Austria-Hungary. It seems that, in the sequel of conferences held in June between the Ministers of the Federated States, under the presidency of Count von Bülow, a scheme of duties was elaborated with the intention of placating Russia at the expense of Austria-Hungary. According to the new schedule, the duty upon corn, which is drawn chiefly from Russia, will be only slightly increased, whereas the duties on agricultural products, which are largely supplied by Austria-Hungary, are raised to almost prohibitive figures. The *Pester Lloyd*, referring to this subject, asks what Germany can offer Austria-Hungary if the former's minimum tariff constitutes an absolute barrier against the latter's agricultural exports, while, at the same time, the superiority of German industry, together with the duty on manufactured articles, excludes the Dual Monarchy's industrial products. Alliances can not survive such treatment of each other by allies.

German public opinion, as might have been anticipated, is disposed to take the part of the Netherlands Railway Company against the British Government. The Transvaal Concessions Commission recently reported in favour of the British Government's taking over and maintaining the line, and decided that the Company forfeited the right to full compensation in consequence of the conduct of its officials during the Transvaal War. This recommendation is strongly traversed by Mr. Wilhelm Kaufmann, a lecturer on law in the University of Berlin, who, according to *The Times'* Berlin correspondent, represents the German view "very clearly and well." That learned jurist holds that a railway is more than a commercial or industrial enterprise, being, in fact, a public institution of the country in which it is situated. In the latter capacity it has not only the right but also the duty to assist the Government of that country in every possible legal way, especially in war time when railways are of paramount importance. Hence the officials of the Netherlands Railway Company did not in any way impair the possessory rights of the Company by assisting the Boers. It must be confessed that there is a great deal of justice in that view. The pity is that Dr. Kaufmann does not rest his case on its merits, but accompanies it with a remark that the members of the Transvaal Concessions Commission allowed themselves to be influenced by a false analogy of the customs regulating the rights and duties of belligerents and neutrals in naval conflicts, "England having had little experience of land warfare, the rules of which are very different from those of maritime war." That is quaintly silly. What will the Germans say next we wonder. England has had a swelled head in her time, but it never assumed such dimensions as Germany's has.

Germany certainly makes a great showing in Far Eastern waters. According to the German Consul in Hongkong, there are now 52 German steamers, with a registered tonnage of about 55,000 tons, engaged in the Far Eastern coasting trade, the corresponding figures in England's case being only 64 vessels and 74,000 tons. Of the German ships 13 belong to the North-German Lloyd and an equal number to the East Asia Handelsgesellschaft.

NOTES ON CURRENT EVENTS.

The *Yomiuri Shimbun* alleges that the Cabinet has decided in favour of the legality of pledging private railways to foreigners as securities for loans. Our contemporary regards this decision as of the highest importance, and predicts that it will provoke much discussion. But we do not appreciate that view of the case. All immovable property can be pledged to foreigners as security under the provisions of the Code. The only trouble is that in the event of the mortgage not being redeemed, the property may not pass into the possession of the foreign mortgagee but has to be sold in order to discharge the debt. It is true, however, that doubts have been entertained as to whether this principle applies to railways, and of course so long as such doubts existed, the foreign capitalist was inaccessible. It will be well, therefore, to have an official declaration on the subject. We do not think, however, nor does the *Fiji Shimpō*, that things have advanced quite so far as the *Yomiuri* alleges.

Captain Gunji does not seem to have made much progress with his scheme for the foundation of a volunteer fleet to ply between Chishima and Japan proper. He has not yet obtained sufficient money to build a steamer, and he is said to be about to make a tour throughout the country for the purpose of soliciting aid. The persons directly interested in the development of the Kuriles have organized a society called the *Hoko-kai*, (Association of Patriotic Effort) which has now a membership of a hundred and owns three schooners. Apparently the fishing industry at the islands is prospering, especially in the matter of cod, immense quantities of which are said to be captured. The Society is sending Mr. Kato Yo to the United States to study the method there employed for curing these fishes.

It is alleged by the *Chingai Shogyo Shimbun* that the authorities of the Department of Agriculture and Commerce have decided to organize a new class of official called *Shōkō-jinnkan* or "commercial and industrial business officer." There is at present, and there has always been, a *Shōkō-Kyoku* in the Department, but its operations have not been extended to the realm of foreign trade. In fact, the only Department of the Government having any intimate knowledge of foreign trade is the Department of Foreign Affairs. It is therefore proposed to despatch a *Shōkō-jinnkan* to all the important commercial centres of the world, including the South-Sea Islands and Australia. This official will be quite distinct from a Consul.

At midnight on the 31st ultimo fire broke out at the Aoyama English School in the neighbourhood of the kitchen and bath room. It was discovered by a maid-servant, and vigorous efforts were made to extinguish it, but the residence of the director, Mr. Honda Yoichi, was destroyed completely. Mrs. Honda seems to have behaved with great heroism. Ascending to the upper storey to save her children, a girl of eleven and a boy of five, she found her retreat cut off by the flames and had to lower the children from a window, herself subsequently descending by a water-pipe.

The 31st ultimo was the birth-day of the Prince Imperial. The usual ceremonies were observed at the Palace, and a party of distinguished personages proceeded to Nikko to congratulate His Imperial Highness, some by invitation. Among the latter was Mar-

quis Ito who, in company with Prince Arisugawa, proceeded to Nikko on the morning of the 30th.

A farewell banquet was given to Dr. Hatoyama in the Imperial Hotel on the 2nd instant by a large number of distinguished persons, among them being Their Excellencies Mr. Utsumi and Mr. Kioura, as well as the Governor of Tokyo, Viscounts Okabe and Soga, &c.

An anonymous legal expert explains very fully in the columns of the *Asahi Shimbun* the processes by which foreigners have acquired the right of holding mortgages on railway property in Japan. This gentleman confirms the view already stated in our columns, namely, that the right in question undoubtedly exists, and that there was no necessity to consult the Cabinet on the subject, as is said to have been done. However, if people entertained doubts, as they certainly seemed to do, there was obvious expediency in obtaining an authoritative opinion, and there will be equally obvious expediency in putting that opinion into such a form as shall remove all uncertainty. Foreigners are exceedingly sceptical about these matters. They will not take anything on trust. Nothing less than a plainly worded law or ordinance will satisfy them.

Two of our Tokyo contemporaries allege that arrangements have been almost completed with a Belgian Syndicate for the loan of a million and a half of yen to construct an electric railway between Kobe and Osaka. Apparently the Government has sanctioned such a line, which is somewhat remarkable. However, the question is, not what the Government has done, but what the Syndicate is prepared to do. It will put up, the story says, the same amount of money already subscribed by the Japanese shareholders, on condition that the work of construction is superintended by a Belgian engineer and that representatives of the Syndicate are included on the board of directors. Of course this account may be true, but it seems to us apocryphal. There has been of late a great deal of journalistic juggling with a Belgian Far-Eastern Bank and the Oriental Company of Belgium, the general impression produced upon the public mind being that both of these institutions have entered the field as suppliers of capital to Japan. But no such inference is consistent with the facts. Belgian capitalists are undoubtedly turning their attention to Japan as a possible field for profitable enterprise, but their proceedings hitherto have been entirely of a tentative and preliminary nature, nor have they by any means reached the point indicated in the above account.

According to a paragraph in the *Nichi Nichi Shimbun* a Minister of State, replying to the remonstrances of a business man, admitted that personally he saw no objection whatever to extending to foreigners the privileges of owning real estate in Japan, but that the privilege had been purposely withheld by the drafters of the revised treaties who considered it wise to hold something in reserve against the time when the full recovery of Japan's tariff autonomy came to be carried into practice. Surely that is a perversion of historical facts? Any one that can carry his memory back to 1893 must recall the agitation fomented by the Liberals of that time. They made it perfectly clear that they themselves, in common with a considerable section of the nation, were strongly opposed to the ownership of land by foreigners and that they would throw their

whole weight into the scale against any body of statesmen conceding such a privilege. In short, the Government's attitude of conservatism in this matter was assumed in deference to a very unequivocal demonstration of public opinion, and did not at all partake, we think, of the nature of a reservation deliberately made by way of keeping an item for future purposes of negotiation.

There has been a terrible affair in the suburbs of Taipeh. A large party of armed men broke into the house of Hiyoshi Suyejiro, a dealer in miscellaneous articles, and killed his wife and eldest son. A few of them afterwards entered the dwelling of the station-master, and were evidently disposed to slaughter the station-master and his wife, but these effected their escape by hiding in a bamboo grove. It is conjectured that the affair was not an ordinary burglary, and Suyejiro's circumstances were not of a nature to invite robbers. The idea is that his wife's treatment of the coolies employed in her husband's business had aroused a spirit of revenge among the latter. But it is not easy to reconcile that theory with the fact that the men carried rifles and seemed to know how to use them.

It is confidently alleged by the *Nichi Nichi Shimbun* that the Treasury's attempts to dispose of 50 million yen worth of loan bonds abroad may now be said to be on the verge of success. The progress of the negotiations has been very rapid of late, and telegrams just received announce the transaction as virtually completed. Our contemporary does not give any information as to the selling price of the bonds or the rate of interest, but concerning the latter point no statement is required, since the bonds are understood to be 5 per-cent. consols.

Count Otani's representative, who visited China during the campaign, received the Lama Scripture preserved in the Yong-ho-kung at Peking. "Received" is a euphemistic way of stating the fact. It is the expression used by Japanese papers in describing the manner of the Scripture's transfer. But the accounts originally transmitted were not of a character to suggest ordinary giving and taking. They spoke of the Japanese Buddhists as very anxious to remove this celebrated Scripture, and of General Yamaguchi as refusing to sanction the operation. Rumour then represented the volumes as sufficiently numerous and bulky to load twenty pack-horses; so by whatever process the Scripture was secured, its transmission to Japan was no small undertaking. In Japan it now is, however, together with two big lecterns used for reading the tomes. Each volume measures 3 ft. by 1 ft., and bears on its cover elaborate Buddhist illuminations. The binding is in rich brocade, and the printing was done in the Wan-li-ch era of the Ming Dynasty with wooden types which were subsequently destroyed by fire. There are said to be several thousands of volumes, and the total weight is estimated at from 14 to 15 tons. The larger of the two lecterns is 12 feet in length, 3 feet wide and 4 feet high. The smaller is 7 ft. square. Both are made entirely of *shitan* (red sandal wood) and are covered with elaborate carvings of dragons and floral scrolls.

Shioda Mototaro (64) living at Negishi-machi, Yokohama, committed suicide by drowning himself in a well on the morning of the 3rd instant. The man had been ill a long time.

MONTHLY SUMMARY OF THE RELIGIOUS PRESS.

A month or two ago Dr. Inoue Tetsujirō delivered an address on "Man's Nature" at a meeting of the Nagano-ken Education Society held at Nagano. This speech was most vigorously attacked in a Nagano newspaper by Mr. Yamaji Aizan, his articles extending to seven numbers of the paper. The Christian organs, the *Fukuiin Shimpō* and the *Tōkyō Maishū Shinshi* are of opinion that Dr. Inoue was very severely handled by his provincial antagonist, who had little difficulty in finding weak points in the philosopher's armour. Dr. Inoue's views on the immortality of the soul was one of the chief points of Mr. Yamaji's attack. The following statements on this subject we extract from the *Fukuiin Shimpō*:—"The immortality of the soul held by Dr. Inoue differs altogether from the doctrine that forms a part of Christian belief. The Doctor merely attributes immortality to the soul or spirit of society—a soul that exists from age to age. This is not in any way connected with the individual immortality preached by Christianity. Mr. Yamaji remarks that little comfort is to be obtained from this permanency of the ideas given to society by certain minds and that he prefers to believe in a future personal immortality, with the old women who repeat their prayers to Buddha before the *Hotoke*, rather than follow Dr. Inoue. There is nothing new in the controversy, but it seems to have caused a good deal of excitement in the ranks of Japanese Christendom."

As a result of seven years labour, Bishop Nicolai has published a new translation of the Bible, says the *Seikyō Shimpō*. The version of the scriptures mostly used in this country is to a considerable extent a translation of the English Bible, observes this organ, but Bishop Nicolai's version is translated from the original languages. The style adopted is Chinese with a mixture of classical Japanese. This Bible will henceforth be used as the authorized version among Greek Christians. The *Fukuiin Shimpō* says that the publication of this new work should be welcomed by Protestants and that steps should at once be taken to revise the Bible now in use among them.

Dr. Murakami, the well-known Buddhist scholar, has published a work called *Nihon Bukkyō Ikkwanron* (一貫論), which gives special prominence to doctrines that permeate all Buddhist Sects. Many books have been written to show the differences that exist between Buddhist sects, the object of Dr. Murakami's new work is to make clear the points on which they agree. The book is to be had for 30 sen at the Tetsugaku Shoin.

In Vols. II. and III. of Dr. Inoue Tetsujirō's *Tetsugaku Sōsho*, Mr. Noda Yoshio, B.A. writes at considerable length on "The Morality of a Transition Age." The articles constitute a thoughtful and discerning review of the present state of opinion on ethics in this country. We cannot pretend to do more than state the general conclusions which the writer has reached after a careful study of the situation:—"There are not a few that maintain that Japan is practically without moral guides; that her old landmarks are gone and that she is perplexed by the variety of the substitutes offered to her. This Mr. Noda thinks is to a certain extent true, but he is of opinion that there is more divergence in theory than in practice. In the latter people follow the standards to which they have been accustomed unconsciously. Though numerous new elements have been introduced in modern times, it is a mistake to think that there was anything like substantial agreement as to moral standards and the relative importance of duties and actions prior to the *Meiji* era. As to authoritative objective standards there has always been the greatest variety of opinion, but in the meantime men have appealed to their own consciences and have received from them sufficient guidance to answer all practical purposes. After all, the existence in all men of a moral consciousness is the surest guarantee of moral progress. Though perpetual controversy is carried on between Buddhists, Shintoists, Con-

fucianists and Christians as to ethical theories and standards, the moral lives of really earnest and well-instructed men are pretty much the same whether they belong to one sect or another. It is possible to interpret the ethical teaching of any sect so as to make it appear objectionable, but what we want to know is the sense in which this teaching is understood by its leading exponents. Take Utilitarianism as an example. Some represent it as selfish hedonism, as egoism of the lowest type, but it is quite plain that none of the great leading exponents of the Utilitarian theory have so understood it. The object it sets before it is the highest welfare, or well-being, of the greatest number. The pleasure and happiness which it seeks to obtain for mankind include mental and moral elements of the very highest type. Rightly explained there is nothing grovelling about this standard of conduct. After examining a number of different ethical theories and after examining the lives of those who profess them the conclusion is reached that undue importance has been too frequently attached to a man's ethical creed; that his daily life is regulated for the most part by his conscience and without any appeal whatever to external authority."

In the *Tetsugaku Zasshi*, Dr. Inoue Enryō is publishing a series of articles entitled *Waga itayuru Shūkyō* (What I call religion). The first of these, which appears in No. 173 of the magazine, covers no less than 22 pages. Though we cannot possibly do the essay justice in this Summary, Dr. Inoue's great influence in the country, his earnestness, sincerity, learning, and talents are such that his writings cannot be left unnoticed in these columns. The following is a *précis* of Article I. of the series:—"That the necessity of reforming religion is urgent is admitted on all sides. The antipathy to traditional Buddhism is growing apace, and this is a hopeful sign. There is a wide-spread demand for a new religion. Things are in a state of transition and it is unlikely that any of the present popular theories will be finally accepted, but, taking things as they are, there exist three distinct schools of thought in the moral and religious world. (1) There is the 自尊教 *jisonkyō* of the Mita Nyorai (Fukuzawa) (Self-respect teaching of the Mita divinity); (2) The 自利教 *jirikyō* of the Bancho Bosatsu (Egoism of the Bancho divinity (Dr. Katō, who lives in Bancho)); (3) and the religious views of Dr. Inoue Tetsujirō. Though, compared to the noise made by these three great men, my utterances may amount to no more than the buzzing of a mosquito, I am desirous of pointing out what I consider to be essential to a right understanding of this subject. The teaching of Dr. Katō and Mr. Fukuzawa not being strictly religious, though serving to a considerable extent as a substitute for religion I pass on at once to consider Dr. Inoue Tetsujirō's views. There are three points, connected with these views, which it is important to discuss. Dr. Inoue maintains (1) that the ethical element must be made the chief element in religion; (2) that what he calls a synthetic new religion (*shū teki shin-shūkyō*) is capable of being formed; (3) that the personal element should not be allowed to form a part of the new structure. I will now discuss the first of these opinions, which is, that the ethical element is to be considered the most important element of religion. Though all religions have contained ethical elements, to say that ethics is the chief end of religion is not true. Ethics is rather to be regarded as a means than an end. What then is the chief end of religion? It is no other than the full development of man's complex nature. Religion and learning, or knowledge, have different sources. The two things bear the relation of back and front to each other. Learning, or science, deals with the known, and the finite—with natural changes, life and death, the

production and destruction of things, phenomena, with the numerous combinations and divergences of the material world. Religion deals with the unknown, with infinity, with indestructibility and immortality, with the essence of things and their actual being as distinguished from their modes of manifestation, with the absolute, and with the equality of all men. Science cannot tell us whence man came nor whither he goes. Though as knowledge increases suffering is diminished, no sooner is one evil overcome than another makes its appearance and the more the world gets to know the more conscious does it become that on every side the progress of investigation is blocked by impassable barriers. The partiality and superficiality of all our knowledge are impressed upon us in every direction, and we turn away from the world of matter with a feeling of discomfort and dissatisfaction. But where man's intellect is baffled and he fails to find a path, religion steps in and opens up to his view a new world. In religion man finds the satisfaction which he looks for in vain elsewhere. When men are told that religion is something that the intellect cannot fathom, something that cannot be understood, they say then it is a mere fancy, an empty notion (*kusō*), lacking reality. I reply undoubtedly religion originated in a mere notion (*shūkyō wa mōto kusō nari*). All that we are unable to test by experience is no other than a notion or an idea. Religion is a mere thought, but, albeit, a noble thought, and one that will always abide in the heart of man. Instead of disbelieving it because of this, it is because it transcends all experience that I believe in it. There is an idea current that it is only the ignorant who can accept religion, but this is not the case. It is the fact that religion deals with a region beyond the ken of human eyes that recommends it to some of the most intellectual men. There are few Japanese who know anything about real religion either Buddhist or Christian. There are many who have studied doctrines, but they have failed to get hold of the inner essence of what is called religion. They are like men talking about the colour of sugar and its constituent properties without having had actual experience of its sweetness. Neither Dr. Katō nor Dr. Inoue Tetsujirō knows what real religion is, and hence all their criticism is confined to the surface of religion and does not explore its depths. Their writings remind me of the notions of the Akiyama villagers in reference to candles.* Dr. Katō's idea that religion is only necessary for the ignorant and Dr. Inoue's notion that its principal use is to furnish a basis for ethics are both entirely wide of the mark. . . . It is said that the religious sense is lacking in scholars, that for the most part religion is confined to the lower orders. Since scholars are men, I don't see how they can be without religious desires, but that what religion they have is not so apparent to the world as might be wished is an undoubted fact. I would suggest the following explanations of this. (1) When scholars speak of religion they do not refer to their own belief, but to such established creeds as Buddhism and Christianity, and they often refer to the shallowness and formality characterizing the profession of religion among the uneducated. (2) Scholars develop the intellect far more than the emotions and the will. Religion is concerned more with the feelings and the will than with the intellect. (3) Scholars test everything by reason and things that are not amenable to this test fail to attract their attention. (3) One of the results of the investigations carried on by learned men has been to make them sceptical as to the truth of established theories of all sorts. Hence for them to doubt is easier than to believe. (5) Scholars are acquainted with so many differ-

* Situated deep in the mountains of Mayeba, on the borders of Shinano and Echū, is a village called Akiyama whose inhabitants in very ancient times lived an isolated life and who had never seen many of the articles in daily use in other places. It happened once that one of the villagers bought some candles and brought them to the village. But nobody knew to what use to put them. One suggested that it planted they would grow; another that they were vegetables and should be boiled and eaten. Both plans were tried. The tale is now used to illustrate extreme ignorance of the nature and uses of things. —(WRITER OF SUMMARY.)

* It will be observed that Dr. Inoue, like so many other Japanese writers, uses the word *kyō* in a very loose sense. As Dr. Inoue admits, neither the Mita System of Ethics nor Dr. Katō's Utilitarianism can be strictly regarded as religion. "Teaching" is perhaps the best translation of *kyō* here. —(WRITER OF SUMMARY.)

ent lines of thought which all bear on each other and affect each other to a greater or less extent, that they cannot bring themselves to believe in religion in the unreserved manner of the man with only a few simple ideas in his head. (6) With most people the need of religion is most felt when they are in trouble. Hence it happens that in his prosperous days the scholar may not feel the need of it, but when overtaken by calamity he turns to it for comfort, feeling that life and death and man's lot here are controlled by some higher Power. This often proves the beginning of real religion with the scholar. In the above I have been only considering the intellectual side of religion. It is still more intimately connected with the feelings and the will. Religion is a branch of the philosophy of the absolute, and the principles of philosophy may be applied to it. It is not easy to make these things plain to ordinary scholars. Though sharp enough in things which concern reason, in matters of faith there is nobody more obtuse than the scholar. (*Dōri no hani ni arite gakusha hodo surudoki wa naki to tou ni, shinkō no omoi no hani wa, gakusha hodo gudan naru wa nashi.*) When I speak of religion then I speak of those inner thoughts respecting the absolute and the transcendental which enables him who possesses them to live in a world of wonder and delight, and to find comfort and peace. This is the essence of religion. He who has it will treat lightly all the supposed conflict between science and religion, neither will he trouble himself about the founding of new creeds.

As an exposition of the belief of one of the most devout and influential Buddhist scholars of the day the above utterances possess considerable interest. The subject will be continued in our next Summary.

* * *

Mr. Katō Genchi, in the *Tetsugaku Zasshi*, institutes a comparison between the early development of Christianity and Buddhism. The point he makes is this, that with Christianity faith preceded philosophy, but with Buddhism philosophy preceded faith. Christianity was founded on the religion of the Jews, which was a simple cult consisting of faith in God and his prophets. The intellectual development of Christianity was carried on by means of a free use of Greek philosophy. The subsequent success and wide influence of Christianity throughout Europe was largely owing to the fact that faith and knowledge were skilfully blended by its chief teachers in all ages. Christianity may be said to have begun with faith and to have appealed to the intellect as time went on. So that with it the philosophic element is subordinate to the religious or devotional element. But with Buddhism the opposite is the case. Shaka Muni was before all things a philosopher. Born in the home of the most ancient Oriental philosophy, philosophic questions were pressed on his attention from very early days. The devotional part of Buddhism was grafted on to the original stock in later years. It is this truth that induces some people to speak of Buddhism as a philosophy rather than a religion; and the success of Buddhism has been in some measure owing to the way in which Shaka's philosophical teaching has been applied to suit the varied needs of mankind. Christ laid himself out to explain to his fellow-countrymen the nature of God. But Shaka was quite silent on this subject. His teaching may be said to have been atheistic. It was in later days, when it was realised that objects of worship were necessary, that the cult originated which is now known to the world as Buddhism. Buddhism found that it could make no headway in certain quarters as a mere philosophy of self-abnegation (無我, *muga*). In order to appeal to the feelings and to assist the will, it had to have its rewards and punishments and its supernaturalism; and so it happened that subsequent to Shaka's death theological accretions gradually became an essential part of the system and Buddhism earned the title of a religion. It was long after Shaka's departure from this world that the Nirvana of which he discoursed was spoken of as 淨土 Jōdo (*Surhāvaty*, paradise) and Amida Butsu assumed the rank of a god. Thus by degrees it elaborated a system of

religious teaching that resembles Christianity in many important respects. The history of the two creeds is strangely opposite. Christianity originated in Judaism, which appealed only to the religious sense, which was not specially adapted to attract the intellect. By embodying Greek and Roman ideas Christianity supplied this defect, and throughout the whole of Europe wielded enormous power on this account. Buddhism started with a fully developed philosophy, with an exposition of the principles of nature that commended itself to the deepest thinkers of Shaka's time, and afterwards, in response to popular craving, elaborated for itself a system of theology that has been accepted gratefully by millions upon millions of the human race. It is certainly true to say that the greatest triumphs of Buddhism have not been won by its philosophy, but by its religious teaching. In the case of Christianity it has been the learning, the intellectual development, and the philosophy which have from ancient times been associated with it rather than its purely religious and spiritual principles that have attracted to it so many of the brightest minds of every age. This contrast pressed itself upon my attention some time ago when I was making the study of religion a speciality at the University and it seems to me to deserve the consideration of scholars.

* * *

In the fortnightly supplement published by the *Kokumin Shimbum* we find a review of Dr. Hozumi's "Ancestor Worship and Japanese Law," written by a Japanese Roman Catholic who signs himself "Muyen," the gist of which we give below:—That Dr. Hozumi's book on "Ancestor Worship" should have attracted a great deal of attention is not surprising. The question of how far the new Codes favour traditional ideas as to the homage due to ancestors is a very interesting one and Dr. Hozumi is certainly eminently qualified to answer that question. Dr. Hozumi maintains that the supreme power wielded by his Majesty the Emperor is dependent on royal lineage and that in the marriage, divorce and private property laws which form a part of the new Code Japanese customs and sentiments have been made the basis of the new enactments. Certain English journals in reviewing Dr. Hozumi's work have asserted that ancestor worship being contrary to the spirit of Western civilisation, it will have to be abandoned, and Dr. Hozumi himself says that the practice is neither sanctioned by Buddhism nor by Western civilisation. There seems to me to be considerable confusion in the use made of the two terms worship and civilisation. The term "worship" used by Dr. Hozumi is a translation of 崇敬 *sōkei* and the question arises, is *sōkei* worship as usually understood in English? If the term *sōkei* is to be understood as "reverencing" or even "adoring" certain objects, then there is nothing in the religious teaching of the West that militates against the Japanese practice. If the practice of showing reverence for their ancestors does not savour of what Christians know as the worship of God, then there is no antagonism whatever. We cannot but think it unfortunate that Dr. Hozumi did not define the term *sōkei* a little more accurately at the outset, and his apparent sanction of the translation "worship" is a cause for surprise. If the term *sōkei* be translated worship and it be decreed that the worship of ancestors is obligatory on all Japanese, as Dr. Hozumi argues, then what becomes of the conscience clause of the Constitution, which gives the right to all Japanese subjects to choose what religion they please? Now when Dr. Hozumi says that Western civilisation does not allow ancestor worship and that in adopting this civilisation and retaining ancestor worship Japan has sanctioned the presence in her modern life of two incongruous elements, what he seems to mean is this: (1) That Christianity, which is to a considerable extent the basis of Western civilisation, is strictly monotheistic and condemns polytheism of all kinds, ancestor-worship among the rest. (2) That taking the term civilisation in another sense as referring to material progress and the modern scientific spirit, which is the only part of civilisation that Japan has actually adopted, this too is quite in-

compatible with ancestor worship. (3) In the West the individual occupies the most important position in the constitution of nations. In Japan this place of honour is given to families. The two points of view are diametrically opposite. (4) The spirit of Western civilisation is undoubtedly progressive. It is, too, most decidedly prospective, and not retrospective, as is the Japanese ancestor worship; and hence the two states of mind represented by the two things are incompatible. According to the above argument Nos. 1, 2, ancestor worship is treated as a religion and would be designated 祖先教, *sosenkyō*, in our language. But why need such a meaning be attached to the term worship? Carlyle uses the term hero-worship in quite another sense. If in the case of ancestors the term only implies admiration or extreme reverence for progenitors, then all the incompatibility between the Japanese practice and Western civilisation on which Dr. Hozumi dwells becomes chimerical. Dr. Hozumi seems to admit that ancestor worship is no longer a religion in this country; as he writes:—"It was the primeval religion of the country and it is universally practised by the people at the present moment." The essential characteristic of the homage paid to ancestors is stated by Confucius in the words *matsuri wa imasu ga gotoshi*, "the worship (of ancestors) regards them as present," that is, they are not deified in any way, but simply remembered reverentially as they were known to their contemporaries. What is there in this respect for the dead that can be objected to by the strictest Christian? Is not this practice in some form or other in a greater or less degree common to all nations and all times? The custom is founded on a fundamental principle of human nature and hence is not likely to be affected in any way by our adoption of western civilisation. Admiration for the lives of ancestors is no hindrance to present progress. And as regards the connection of ancestor worship and the legal rank of individuals, families and clans, in our laws there have been various changes in reference to the authority possessed by certain members of the family and of the community, but the general principle of ancestor worship has not been affected thereby, and so even if it be true that the chief legal power is to rest with the individual, it will not in any way affect the prevailing custom. The common sense view of this matter to take is that properly understood there is nothing whatever in the ancestor worship practised in this country to interfere with the nation's progress; on the contrary, there is much in it that may act as a stimulus to greater effort, to self-sacrifice and to loyal devotion to the State.

* * *

The *Taiyō* has an article entitled *Nihon Kirisuto Kyōkai no jimbutsu* (Men of Character in the Japanese Church). The writer sets out by stating that in the case of the Greek Church, the Roman Catholics, the Protestant Episcopal Church, the Baptists and the German Fukuin Kyōkai, foreigners have figured more than Japanese in the work that has been accomplished, and hence he proposes to omit these churches from his review. The churches which have attained a certain amount of independence he then proceeds to take up in order and the following is the gist of what he has to say in reference to them. (1) The United Presbyterians: called formerly the Itchi Kyōkai and now the Nihon Kirisuto Kyōkai. To this church belong Messrs. Uemura Mahahisa, Kataoka Kenkichi (the President of the House of Representatives), Oshikawa Masayoshi, Shimada Saburō and Ibuka Kajinosuke. (2) The Nihon Methodist-ha is a branch of the Canadian Methodists. Mr. Ebara Soroku is the best known Japanese in this church. In the Methodist Episcopalian Church, founded by Messrs. Harris and Soper, Mr. Honda Yoichi is a most conspicuous figure. (3) The Kumiai Kyōkai, or United Congregationalists, in early days centred in the Dōshisha. To this church belong Messrs. Miyagawa Tsuneteru, Kozaki Hiromichi and Yokoi Tokio. Messrs. Ebina Danjō, Uchimura Kanzō and Ukita Kazutori may be called independents, as they do not profess to belong to any church. Speaking generally, the men who wield the most influence

in the Japanese Christian church at the present time were originally disciples of Dr. Brown, Dr. Verbeck, Mr. Nijima, or Captain James, of Kumamoto. No institution has done so much for Christianity as did the Dōshisha in days gone by. While Mr. Nijima was still living the school flourished, but since that time its power has steadily declined. Among the men trained there Mr. Kanamori Tsurin is specially worthy of mention. His attitude to foreign missionaries in the 21st year of Meiji brought him into prominence. Mr. Ebina has made a special study of Shintō, with a view of combining Christian and Shintō ethics. Mr. Yokoi Tokio has pursued a similar course in reference to Confucianism. Mr. Tokutomi Ichirō, who was one of Captain James' disciples, seems in recent years almost to have forgotten the existence of Christianity (*Kirisutokō no sonzai wa wasuretaru ga gotoshi*) and now figures principally as the Apostle of Imperialism. The severance of the Dōshisha from foreign control may be said to have its origin in two causes. One was what is known as the Nipponshugi, or spirit of nationalism, and the other free inquiry. Arranging prominent Christians according to their professions, the following results are shown:—

(1) *Politicians*.—The most prominent Christian among these is Mr. Shimada Saburō, who is a man of great integrity and full of benevolence, and who in many respects resembles an English puritan.* In zeal there is no Christian who surpasses him. Next to him come Messrs. Kataoka and Ebata, who are more intimately connected with the Christian Church than Mr. Shimada, but who are not so zealous as he. (2) *Scholars*.—Doctors Motora and Nakajima, though they originally received a Christian education, are now extremely indifferent to Christianity. Among Christian scholars Messrs. Uemura, Kozaki, Uchimura and Yokoi are the most prominent. Mr. Uemura is the editor of the *Nippon Hyōron*. Like Mr. Uchimura, he is a great denouncer of abuses and is a powerful controversialist. Mr. Kozaki, though for a very long time a mainstay to the Dōshisha and other Christian institutions, cannot be said to be very effective as a speaker or as a writer, not being blessed with the gift of ready utterance. Mr. Yokoi has made a very special study of ethics, being one of the greatest authorities in the country on this subject. He is a member of the American Society of Ethics (America Kinirigakkai) and a correspondent of other societies. He is an accomplished orator and both as a speaker and a writer wields great power. He has of late taken to secular life and his connection with the church is no longer what it was. (3) *Orators*.—Among these Miyakawa and Ebina have no equals. No such flow of language is to be heard in the Diet as proceeds from the mouths of these two speakers. Mr. Miyakawa's oratory may be compared to the rushing of water in a mighty river. It carries everything before it. In Mr. Ebina's speech a captivating harmony of words and ideas is the leading characteristic, and the effect is like that produced by the strains of a perfectly harmonious orchestra. The oratory of Messrs. Honda and Oshikawa is of an entirely different type to the above. Mr. Honda is always clear and persuasive and there is a certain aimability about his utterances that is very taking, and which makes him an effective preacher. Mr. Oshikawa is not so fluent as Mr. Honda and his speech is not so polished, but there is great force in what he utters and his earnestness is very telling.

The number of really powerful men in the ranks of the Christian church is far too small, concludes the *Tuiyō*. The history of the church shows that men rather than doctrines are the best guarantee of success.

* The writer has very little knowledge of the puritan standard of life if he thinks that any puritan would have played the rôle of Mr. Shimada in his attacks on Mr. Hoshi last year.—(WRITER OF SUMMARY.)

The Okinawa Kaiun Joint Stock Co.'s iron steamer *Ninju Maru*, 435 tons, ran ashore during a storm near Miyako-jima, on the 23rd inst. She broke her propeller but managed to fit another and arrived at Okinawa on the 31st.

NOTES FROM KARUIZAWA.

(FROM A CORRESPONDENT.)

On Friday, Aug. 23rd, a very successful Amateur Concert was given in the Union Church, Karuizawa. The building was prettily decorated for the occasion and the following programme was ably rendered: An Organ Trio, by Miss Guildford, the Rev. E. G. Tewksbury and the Rev. Chas. Tenny; Duet, by Mr. and Mrs. Topping of Tokyo; Solo by Miss Wynn, Quartette by Messrs. Pedley, Davey, Clark and Topping; reading, "Darius Green's attempt at flying" by the Rev. Otis Cary (of Kyoto); Organ Solo by Mr. Bain (of Formosa); mixed quartette by Messrs. Pedley, Clark, Topping, Davey and 4 others; a Solo by the Rev. H. Pedley of Mayebashi; two solos, one Italian the other German, by Mr. and Mrs. Tiel; Quartette by Messrs. Topping, Pedley, Clark and Davey; Organ Trio, by Miss Guildford, and Messrs. Tewksbury and Tenny.

On Aug. 24th at 2 p.m. a meeting of foreign residents in Karuizawa was summoned for the purpose of considering the present sanitary condition of the village, the subject of local taxes and the uses to which they are put. The meeting was attended by about 30 representatives of the foreign householders. The chair was taken by the Rev. E. S. Booth, of Yokohama. Various propositions relating to the subject were placed before the meeting by Dr. Learned, of Kyoto, which eventually led to the appointment of a Committee of seven to represent the foreign community and to take what measures are possible for the improvement of the sanitary condition of the village. Two distinct subjects were dealt with by the meeting. One was the subject of local taxation; the other the local sanitary regulations which it is desirable to see enforced. As regards local taxation it seems that the income of the owner of property, and not the value of the property owned, is made the basis of assessment. Dr. Learned and others argued that it was most unfair that foreigners who only spend a few weeks in the year in Karuizawa, and who are paying taxes elsewhere should be assessed at such a high rate. Some doubt was expressed as to the legal rights of the local authorities to make the income of the taxpayer a basis of assessment. Some gentlemen present argued in favour of the principle that foreign taxpayers should be represented in the local assembly and have some say as to how the money collected should be expended, but Mr. W. Denning pointed out that this principle of foreign representation in local assemblies had yet to be established in Japan. If the committee to be appointed in Karuizawa could overawe the local assembly and succeed in obtaining representation for foreigners, they would establish a useful precedent; but they must not be too sanguine on this point. What the Japanese had not conceded elsewhere, it was hardly likely they would concede in Karuizawa. As to the method of assessing taxes followed in Karuizawa it was the one adopted in Sendai and in other places. Dr. Learned pointed out that there were cities in Japan where the size of a house, or the value of land was the basis of assessment and that this practice seemed to him in every way more equitable than the income basis. The method of spending the money collected from taxpayers was a subject on which no one possessed any accurate information. A hospital had been opened in the village which had been paid for out of the taxes. A school was in the course of erection which also relied on the proceeds of local dues. But what road repairing or general improvements and repairs were carried on nobody seemed to know. Coming to the Sanitary condition of the village, Mr. Beart, of Yokohama, and others were of opinion that sufficient precautions were not taken to prevent the pollution of drinking water and stated that decayed matter of various kinds was allowed to accumulate in a manner injurious to health. Two cases of dysentery among Japanese had occurred this year, and in former years there had been cases among foreigners. Mr. Beart argued that the foreign community had responsibility in this matter and

that if the Japanese would not cleanse the place they, the foreigners, should do it for themselves. The committee appointed consists of Archdeacon Shaw, Rev. T. M. Macnair, Rev. J. L. Dearing, Dr. J. N. Seymour, Rev. C. Warren, Mr. J. Johnstone, E. H. Sharp, and Rev. M. Landis, and they are to report to the residents sometime in July next year. It was agreed that the co-operation of Baron Kawada, who is the owner of considerable property in the neighbourhood and who has always taken a lively interest in the welfare of the village, should be sought.

At 8 p.m. on the evening of the 24th instant, the Union Church, Karuizawa, was crowded to overflowing, despite the showery weather; the attraction being magic lantern views of Peking and its neighbourhood. Some sixty or seventy views had been exhibited and explained by Mr. Killie on a previous occasion. The Rev. E. G. Tewksbury now exhibited about 75 additional slides, giving clear and minute explanations bearing on the intricacies of the four cities of Peking. Mr. Tewksbury himself went through the siege, was several times under fire, and once or twice, he told the audience, ran away faster than he had ever run in his life. The various palaces, the chief temples of the city, the picturesque pagodas, the Imperial tablets, the great stone boat and a number of other interesting objects were shown. The impression conveyed by the lecturer was that everywhere there had been desecration and looting; and incongruity was carried to the extreme when a photograph was shown of two Americans sitting in easy fashion on the Empress Dowager's bed. The well-known Dr. Martin was photographed standing at the entrance of one of the cells of the Examination Hall. The cells were all destroyed during the siege. Here it was that the civil service examinations were carried on. The candidate was confined in a small cell for 3 days and 3 nights and not allowed to go out for any purpose whatever till his examination was over. The destruction of mission property everywhere had been something terrible, Mr. Tewksbury told the audience. The whole Presbyterian Mission as regards property, may be said to have been wiped out. Everything had to be begun afresh and even now it was very questionable whether it would be safe to erect buildings anywhere but within reach of the guns which henceforth are to defend the foreign legations and their environment. But the training of native converts both male and female was a work which could be undertaken at once, and in order to engage in her part of it, Miss Sheffield had already left Karuizawa for China and she would soon be followed by other members of the Presbyterian Mission.

THE ORPHAN INDUSTRIAL PRESS OF KYOTO.

Fully sympathising with the object set forth in the following circular, we have pleasure in giving it publicity:—

Dear Friend,—The Orphan Industrial Press of Kyoto is designed to help poor but worthy boys to gain an education while learning an honorable manual trade or industry.

It is established, primarily, to cooperate with the aims and work of The Okayama Orphan Asylum by providing graduates of that institution with a place in which they may support themselves wholly or in part while continuing their studies.

Finding that there were two boys from the Asylum studying in the Dōshisha but supported by funds from the Asylum, thus being an additional strain on its resources and at the same time being themselves in danger of lowering if not losing that spirit of self-help so carefully and wisely fostered by Mr. Ishii and his helpers, I conceived the plan of buying a Press and providing work for them.

In April two more boys were taken who had considerable experience in English printing. As these boys cannot be even partly supported by the Asylum while studying, they must support themselves entirely, so arrangements have been made with the Dōshisha whereby they can take one or two studies.

This is a great accommodation and proves the wisdom of locating the enterprise where the boys can have the privilege of taking partial courses in an established private school, a privilege they could not have in any public school.

At present English is the only language attempted

but as soon as practicable other languages, especially Japanese and German, will be added.

The next industry will be Book-binding, other Industries will be added as soon as funds and opportunities permit.

This beginning has been made from a conviction that Manual or Industrial Schools are sure to be a recognized need in the near future in the education and betterment of this country as they have become in America, England, Germany, and other European states. My hope is that this enterprise will grow into an Industrial School. It is started first as a business because that seemed to be both immediately practicable and ultimately a more promising method of procedure.

Having the most hearty sympathy with the work of the Okayama Orphan Asylum in its successful attempts, not only to save homeless children from possible lives of beggary and crime but also to turn these children into useful members of society and worthy citizens, the starter of this enterprise takes this way of helping to continue that work.

The connection with the Okayama Asylum is simply that of cooperation, offering an opportunity of work and study to its boys first, though other orphans from similar institutions may be taken if possible.

Though a preference shall be given to orphans other boys may be admitted in time.

The printing business and other industries are to be conducted upon upright business principles: for example, a fair market price will be charged for work taken, and boys are to be paid a fair market price for their work, the design being to cultivate in them a spirit of manly self-respect and independence, and to lead them to look upon labour as honorable.

Proceeds from work and money gifts shall be applied to meet the running expenses of the enterprise, the improvement of its scope. Contributions or gifts will be used according to the wishes of the givers.

As soon as possible cooperative principles will be applied to the income from industries so that the workers shall have some share in the profits.

Every boy must work at least two hours a day, except on National holidays and on Sunday which shall always be a rest day.

So far as possible it is expected that a boy shall take at least one study in connection with the Doshisha or some other organized school. Other instruction will be arranged for as required.

A Board of Advisors is now being organized. Rev. B. F. Buxton, whose sympathy and help have made a beginning possible, and Rev. J. D. Davis, D.D., have kindly consented to be members of this Board. Other gentlemen, both Japanese and foreign, will be added soon.

The first production of the Press was a book, The Series Form of Esop's Fables, Part I, to accompany "Foundation Exercises in English Conversation and Composition."

A good beginning has thus been made, and no pains will be spared to do with neatness and dispatch any work offered in general job and book printing.

Your sympathy, your good will, your order for work, and your help are respectfully solicited.

Yours truly, C. M. CADY.

Kyoto, May 1st., 1901.

N.B. Address simply to C. M. Cady, Kyoto.

YACHTING.

With a fine lower sail breeze from about north-east the 39-raters quickly finished the race set down in the programme on Saturday for two prizes presented by the Yokohama Yacht Club. They started fairly well together, *Maid Marion*, however, being a minute and *Golden Hind* a minute and ten seconds late. There was very little beating necessary but they all had to make a short hitch after passing the Widow Buoy, to clear the shoal as well as to lay a course for the Lightship. *Kingfisher*, which had been first at the mark, did the business to a nicety and just fetched the Lightship, with *Golden Hind* close in her wake, but the others appeared to have overstood. Just a minute separated these two at the Lightship and *Mary* was 3m. 25s. later than *Golden Hind*; *Haidee*, *Spray* and *Maid Marion* coming after in that order a considerable distance astern and well apart from one another. *Golden Hind* seemed to draw up a little on the leader after they bore up round the Lightship, but *Kingfisher* set a jibtopsail half way in, though indeed at that moment she was apparently quite holding her own. As they came up the harbour the big yawl set her spinnaker and by this means reduced her opponent's lead, but *Kingfisher* finished first all the same. As for the first prize, that fell to *Golden Hind*, her allowance of 3m. 40s. of course placing her easily in the premier position. All sailed with topmasts housed except *Haidee*. There was

a very heavy sea at the Widow Buoy. The times were:—

33 Raters.	Finish.	Corrected.
	h.m.s.	h.m.s.
<i>Mary</i>	3:33.00	3:33.00
<i>Kingfisher</i>	3:30.00	3:30.00
<i>Haidee</i>	3:38.30	3:38.30
<i>Maid Marion</i>	3:47.55	3:44.15
<i>Golden Hind</i>	3:30.20	3:26.40
<i>Spray</i>	3:43.20	3:38.50

Golden Hind therefore took the first prize and *Kingfisher* the second, the former getting two record points and the latter one.

The cruising class had quite an enjoyable struggle round the Tsurumi Mark, the Lightship, the Tsurumi Mark again, the Lightship again and home. On this course also it was nearly all running or reaching, except that they had to work up from the harbour entrance to the Tsurumi Mark. *Daimyo* and *Svanhild* deliberately made this task harder than necessary by standing out on the port tack: the others kept on the other tack and benefited by the policy, though *Mosquito* overdid it by standing so far in that she bumped on the bank. By way of a change they had been started according to their handicaps—that is to say, *Mosquito*, *Surprise*, and *Asagao* went off 22 minutes ahead of *Daimyo* and *Svanhild*. *Asagao* soon drew out in front and the big boats even in such weather utterly failed to catch up. As it was, however, *Mosquito* and *Svanhild* made a good match of it all round the course, while *Daimyo* chased *Svanhild* unavailingly, crossing the line at length only twenty seconds astern of her. It will be noted that *Asagao* finished just 13m. 50s. ahead of *Svanhild*, or 23 seconds less than her allowance under club time—14m. 13s. The times are:

	Finish.	Elapsed Time	Corrected.
	h.m.s.	h.m.s.	h.m.s.
<i>Daimyo</i>	4:33.20	1:56.20
<i>Svanhild</i>	4:33.00	1:56.00
<i>Mosquito</i>	4:22.30	1:45.30
<i>Surprise</i>	4:24.10	1:47.10
<i>Asagao</i>	4:19.10	1:42.10

Mosquito, *Surprise* and *Asagao* received 22 minutes start from *Daimyo* and *Svanhild*.

The twelve-raters had a rather tempestuous race which resulted as follows:—

<i>Madelaine</i>	3:24.50
<i>Lorna Doone</i>	3:26.50
<i>Vera</i>	3:28.30

Vera capsized once but went round the course; *Shamrock* also capsized and had to be towed back.

THE WRECK OF THE "ISLANDER."

SIXTY-FIVE LIVES LOST.

Canadian papers to hand by the C.P.R. steamer *Empress of Japan* contain full accounts of the wreck of the C. P. N. steamer *Islander*, for years engaged in the Alaskan service. It appears that the vessel was on the return trip from Skagway to Victoria and that she was passing Douglas Island, entering Stephen's Passage from Lynn Canal, when she ran into one of the numerous icebergs that emerge from the adjacent glaciers and fjords. The accident happened at 2.15 on the morning of Thursday, Aug. 15th, and the news did not reach Victoria till late on the evening of the 18th, when it was brought by the steamer *Queen*. The night, it seems, was misty when the ship struck:—

The shock awoke some of the passengers and crew, and, realizing that something terrible had happened, they hurried on deck. Pilot La Blanc was on watch, and reported the vessel having struck an iceberg. Not only this, but the engineer reported the water pouring in below at a rate which made it impossible for the pumps to handle it, and which stamped the vessel as doomed. Steward Simpson rushed below, as well as other officers, and with axes battered down the doors and other parts of the passage-ways in order to expedite the freeing of the imprisoned passengers, who now began to pour up the ladders in a state of excitement. These were soon huddled on the upper works of the ship, and those who were fortunate enough piled into the life boats and life rafts, which had been put hastily over the side.

By this time it was apparent that the loss of the ship was only a matter of a few moments, as she was gradually going down, bow first. In some of the boats there were very few people, the third boat carrying only about seventeen passengers. This was accounted for by the dazed condition of a great

number of the unfortunate people, who awakened suddenly out of their sleep, seemed bewildered and had lost a proper sense of their predicament. Even those in the boats were unable to obtain their bearings, owing to the fog, and many of them rowed around in circles, picking up people here and there who were hanging to doors and other fragments of the vessel which had been thrown over the side when the alarm was sounded. Dr. John Duncan, of Victoria, and Mrs. Ross, wife of the Governor of the Yukon, together with Mrs. Ross's daughter and a Mrs. Bell, were observed standing on the hurricane deck apparently dazed by their danger. They were advised by one of the officers to put on life preservers, but almost immediately the vessel went down.

As to what happened when the vessel went down, there seems to be some difference of opinion. Some state that as she took the water her boilers exploded, while others deny it. One man was running along the passageway when she sank, and says that he was carried to the surface together with the upper works of the vessel, which seemed to be wrenched clear of the boat as she sank.

It is stated that many lives were undoubtedly lost by the suction caused by the sudden disappearance of the vessel. The following incident is told to illustrate this:—Dr. Phillips, of Seattle, with his wife and child, was in his stateroom. Mrs. Phillips feeling the shock urged her husband to get up and ascertain what was wrong, feeling sure that there was some trouble. He rushed out, and hurriedly returning told his wife and daughter to dress, and they ran for the deck. Just then the ship lurched and sank, and the wife and child were caught by the suction of the air shaft and carried to the bottom. Phillips was struck above the eye by the air shaft, which prevented him getting into the shaft, thus saving his life, and he was thrown into the water, coming up under a cabin door, to which he climbed with Engineer Brownlee, who rose to the surface at the same time. Brownlee, who appears to have acted with most commendable presence of mind and bravery, remaining in the engine-room till it was seen that all hope of the ship continuing to float had gone, and then sending his men on deck before him, called for a volunteer crew on reaching shore who walked some miles to the nearest mine and obtained assistance. Captain Foote, the master of the *Islander*, went down with his ship. It was estimated that of 189 souls on board 113 were saved and 67 lost.

The *Islander* was built by Napier, Shanks & Bell, of Glasgow, in 1888 and was modelled by that firm under instructions from Capt. Irving, who was then manager of the C. P. N. Company. She arrived out in December of the same year with Capt. Walbran in command. The voyage was made in the fast time of 80 days. When launched the steamer had a guaranteed speed of 17 knots and her machinery was quite in keeping with the somewhat remarkable speed at that time. She was furnished with two triple-expansion engines of enormous power, and there were few steamers on the coast at the time of her advent that could at all compare with her. Her hull was constructed of the best of steel. It was provided with three collision bulk-heads, one forward, one amidships and one aft.

DALNY.

The *North-China Daily News* just to hand contains the following description of Dalny (Distant City) which Russia is building with such speed on the Liaotung peninsula:—

On the 28th of July (Sunday), the new harbour of Dalny was formally opened by the Russian Commander-in-Chief, Admiral Alexieff, in the presence of as distinguished a gathering of naval, military, and clerical dignitaries as ever took place in Asia, and the first steamer, the *Agudan* (Clyde-built), was moored at the pier, and was announced to take up a regular run between Dalny, Port Arthur, and Chifoo three times each way per week. This new pier is a handsome steel erection, and the harbour has been dredged to allow of a depth alongside at low water of eighteen feet. It is also expected that in another month or so the large graving dock will be completed, after which we may be sure no more Russian vessels will be docked at Shanghai, unless too badly damaged in the Huangpu to leave without docking. In connection with the new harbour works at Dalny, regular goods trains are to run to and from Newchwang, as soon as Newchwang closes this year, and

it is expected that as soon as Newchwang opens in the spring again, the Railway Company will give a preferential tariff to goods from the north, to induce them to come right down to Dalny, instead of shipping at Newchwang. This will more than suit the steamer companies, as their vessels will be able to run alongside a pier where five or six steamers can load at one time, go and come without pilots, have no trouble with sand bars or other obstructions, and at the same time be fully protected from tempestuous weather, which so retards the progress of working cargo at Chefoo and elsewhere, by a big breakwater which is almost completed. The town of Dalny is most delightfully situated, and in general appearance, as one approaches from the sea, is not unlike Kobe, with the long shore, the well-built Bund, and the mountains behind. The streets run at right angles, and are wide and well-shaded with large trees. From a newly-built reservoir on the hills behind the town, a most plentiful supply of excellent fresh water will always be available, and the overflow of this water system will travel seawards, via the main sewer of the town, thus continually flushing it clean. A handsome Russian church has been erected, and sites at the most moderate rentals will be granted to other bodies on application, as soon as sufficient adherents of any particular faith desire a special "Bethel." It is promised that there will be no interference with the commercial community by the military or other Government departments, and it would appear as if the Russians intended to keep this promise, as the Government Departments, with the exception of the Post Office and the Fire Brigade Stations, are all apart by themselves on a separate little peninsula, at the West end of the town. There is a commodious station close to the pier, and the lines run alongside the shore and skirt the town, while numerous side lines are laid down for the carriage of merchandise to godowns on the outskirts, and two miles away there is a large space set aside for the storage of petroleum oil, and another location for coal.

Altogether, Dalny promises to be a very fine place, and if it develops as its promoters appear to hope, will no doubt rise into a position of great commercial prominence. It is thought that when the Trans-Siberian Line is in working order, the mails to and from Europe will come that way, and be dispatched by fast steamers from Dalny to Shanghai, Hongkong, Japan, etc., and there is some talk of granting a subsidy to run special mail-steamers between Dalny and some port in Northern Australia, to cover the distance in about ten days.

The place is well worth a visit, if merely to see a ready-made city—a city prepared like an Exposition, for the reception of those who wish accommodation before it is opened. It will be found that there is everything that can be found in cities of many years' standing, and more than in many places which have been in existence for a long time, such as electric light, telephones, and tramways. There is an elegant and commodious hotel, where superior accommodation can be obtained at most moderate rates. Yes, the place is worth seeing, and both tourists and merchants would find a visit would well repay them.

NEWS OF THE WEEK.

Prince Kanin left Hakodate for the capital on the 1st inst.

A new coal mine was found at Mokupo, Korea, a few days ago.

The first snow fell at Oyama, Ashigara-gori, early on the morning of the 30th Aug.

The Kumamoto Emigrant Company will send 400 Japanese labourers to Mexico on the 27th inst.

The Watarase river, at Ashikaga, rose over 10 feet on the 3rd instant. The Watarase-hashii was washed away.

An earthquake was felt and ashes fell at Nagano-machi, Shimo Takai-gori, Nagano Prefecture, on the morning of the 3rd inst.

Fire broke out in the lamp-room of *No. 12 Kannon Maru* in Moji harbour on the night of the 28th inst. but was extinguished by the crew.

The ninth annual general meeting of shareholders of Brett & Co., Ltd., was held on Friday. The proceedings were conducted in private.

San Francisco papers state that the earthquake shocks which began on the Pacific coast on the 9th of August continued up to the 14th.

A fight occurred between gamblers at Kuroishi-machi, Minami Tsugaru-gori, Aomori Prefecture, on the night of the 1st inst. One man was killed and another injured by a pistol. Three men were arrested.

Kuroda Tamnosuke, arrested by the Tsuchiura police on a charge of theft, hanged himself in the jail on the morning of the 4th inst.

Fire broke out in the Sapporo Electric Light Company's works on the morning of the 4th inst. and the whole building was destroyed.

Lieut.-Colonel Kawada, principal of the Cadets School, and over a hundred students returned to the capital from Kamakura on the 29th inst.

The steamer *Taura Maru* running between Tokyo and Uraga, capsized in Shirahama bay on the morning of the 29th ult. No one was injured.

Mr. W. L. Mitchell, chief engineer of the *Nippon Maru*, who was assaulted some time ago by some of the firemen of that vessel, has rejoined his ship.

After an official enquiry, it was given out that the firemen attacked by plague on board the French mail steamer *Loas* contracted the disease in Hongkong.

The Osaka Shosen Kaisha steamer *Tainan Maru*, laden with 10,000 piculs of Formosan rice, arrived at Nagasaki on the morning of the 4th inst. from Keelung.

Katsuyé Zentaro, a pointsman, was run over by a train at Furukawa station on the Nippon Railway, shortly after 12 o'clock on the morning of the 30th ult.

Shinozaki Fusakichi, living at Asahi-mura, Inashiki-gori, Ibaraki Prefecture, was arrested by the police on the 31st on a charge of poisoning his foster-father.

Four armed burglars entered a house occupied by Arai Tanzo, at Jijouji-mura, Saitama Prefecture on the night of the 28th ult. and stole yen 40 and 40 articles of clothing.

Mr. Hadano Shogoro, Director of the Mitsui Bank, who has been travelling in Europe and America, arrived in Yokohama on the 3rd inst. by the *Empress of Japan*.

Masuda Yoshizo, a farmer, living at Kashiwara-mura, Iruma-gori, Saitama Prefecture, drank some carbolic acid by mistake, on the afternoon of the 1st inst. He died the following morning.

The island of Panay, P.I., which has been afflicted by plague is now visited by famine, and 130 deaths are said to have taken place during July last, at Capiz alone, from starvation.

A telegram to the *Osaka Mainichi* says that owing to the strike in the steel trade the output of American steel for the current year will show a falling off of one-third in the total quantity.

The *Hokkaido Mainichi Shinbun*, the *Hokkai Jihō*, and *Hokkumon Shimpo* of Sapporo have amalgamated in a newspaper called the *Hokkai Times* which will begin on the 3rd September.

An old woman named Tanaka Kaku, living at Shibuya-mura, Toyotama-gori, Tokyo, committed suicide by throwing herself before a train on the evening of the 3rd instant.

The Osaka Shosen Kaisha steamer *Taisui Maru*, 2,000 tons, which has been building at the Osaka Iron Works, will be launched on the 12th inst. She is intended for the Yangtze trade.

The body of a woman was found in the water at Inarigishi, Gyotokumachi, Higashi Katsushika-gori, Chiba Prefecture, on the 3rd inst. It bore several marks and injuries. The police suspect murder.

A mad woman named Hide, wife of a coolie living at Kotobukicho Nichome, Yokohama, suddenly attacked a woman with a kitchen knife on the morning of the 2nd inst. She was arrested by the Kotobukicho police.

Mikame Haru, living at Wakizawa-mura,

Adachi-gori, Fukushima Prefecture, has been arrested by the police on a charge of having concealed the birth of a female child which she buried in the neighbourhood on the 31st ult.

A Copenhagen telegram of Aug. 13th said:—A new state loan of \$10,000,000 will, it is said, be negotiated shortly. The Government hopes for the assistance of American and French bankers in making the loan.

A school boy aged 13 years, living at Tokiwa-cho, Sanehome, Yokohama, while bathing at Yoshida Shinden on Wednesday morning jumped upon a submerged pile and so injured himself that when taken out of the water life was extinct.

Mariyama Fukunosuke, living at Furocho, Yokohama, was arrested by the police on the afternoon of the 1st inst. in a weaving shop at Tomoye-cho, Nishinokubo, Tokyo, on a charge of theft. Stolen goods were found on his person.

Four Japanese, Kawakami Ichiro (18), his young brother Shozo (16), Suzuki Kanzo (17), and his brother Tomejiro (15), of Tokyo, went out in a row-boat on Shinagawa bay on Sunday afternoon and have been reported missing by their fathers.

Miyamoto Nisuke, living at Kitamachi, Aoyama, Tokyo, was arrested on the 3rd inst. on a charge of stealing sixty *kanme* of tobacco leaf valued at 360 yen, from Mr. Iwaya Matsubei, of Ginza. He made the tobacco up into cigarettes and sold them.

Mizutani Yeihiro, living at Mizuho-mura, Minami Katsushika-gori, Tokyo, was arrested by the Komatsugawa police on the 28th ult. charged with having entered a house in that village armed with a sword and with stealing money, on the night of the 21st.

Mr. Tanaka Moichiro, a quarantine officer, was robbed of a gold watch, some medical instruments and money, valued at over 200 yen, while staying at the Iseya Hotel, Minami Shinagawa, Tokyo, between the night of the 1st and the following morning.

A curious poisoning affair occurred in a house at Nagano-mura, Saitama-gori, Saitama Prefecture, a few days ago. Three men and two women ate some cucumber one evening and an hour later were attacked by an irritating rash all over their bodies. One has since recovered.

"A murder resulting from a vendetta of twenty years' duration," says a dispatch to the *Daily Mail* from Vienna, "occurred in a church at Obotti, on Aug. 11th. A general fight ensued in the church between the respective partisans, with the result that seven persons were killed and twenty-three wounded."

The French transport *Lucia* has been totally wrecked in a fog near Bonifacio. The underwriters lose £200,000. The M.M. steamer *Sinar*, with the homeward mail on board has had a serious collision between Singapore and Colombo with the M.M. steamer *Tibet*.

Mr. E. A. Hewett, who has been agent of the P. & O. Co. at Shanghai for some years, has been appointed to succeed Mr. H. A. Ritchie as superintendent at Hongkong, Mr. Ritchie having been transferred to take charge of the West London branch of the company's business.

The Kaiser, it is stated, is writing a historical essay on the capture of Taku by the allied forces. The first edition of 250 pages will be published for the private use of the various Sovereigns, Ministers, and commanders connected with the enterprise. The subsequent editions will be sold by all booksellers.

A new N. Y. K. steamer, the last of three vessels built at the Kawasaki Dockyard for the Japan Mail Steamship Company, was successfully launched on the 28th ult. Viscount Yoshikawa, Minister of Communications, named the new vessel *Teshio Maru*. In the course of an address afterwards delivered by Mr. Matsugata, President of the shipbuilding yard, he said he had secured

a contract for a steamer for the Imperial Chinese Customs.

Chili has refused to attend the Pan-American Congress, unless any discussion of her retention of the provinces captured from Peru is barred. The refusal of Chili has irritated Colonel Hay, the United States Secretary of State. There are indications that Chili objects to the tutelage of the United States, and to the Monroe doctrine.

A thief who had attempted to steal some articles from a skin shop at Senzokumachi, Asakusa, the other night was caught by the shopkeeper and handed over to the police. On investigation, however, the police found that some of the articles were not the property of the shopkeeper, and that he was himself a thief. He also was arrested therefore.

The American petroleum ship, *Louis Adelaide*, was blown up while in the harbour at Goeddivigen, Sweden. The accident was caused by the Customs officials, who dropped a lighted match while they were sealing up the hatches. A terrible explosion ensued, and the ship was broken in two. The captain, nine members of the crew, and two Customs officials were killed.

The body of Nagashima Tamesaburo was found in the water between Maki-mura and Negishi-mura, on the 2nd inst. He is the sendo who drank sake in a shop with another man named Jinkichi at Mitani-mura, Saitama, on the 27th ult. Both left the shop together and Jinkichi was arrested by the police the same evening, and charged with under.

King Edward has revived in the persons of Admiral Sir Michael Culme-Seymour and Admiral the Hon. Sir Edmund R. Fremantle, the "offices or place" of Vice-Admiral of the United Kingdom and Rear-Admiral of the United Kingdom. Neither is a new creation; both posts having simply fallen into desuetude; the present appointments are an interesting revival.

Fire broke out in an old Buddhist temple known as the Hosenji, at Ryoin-mura, Chichibu-gori, Saitama Prefecture, early on the morning of the 28th Aug. Five large buildings were destroyed, and many ancient curios damaged in the godown, only one image of Buddha being saved. It appears that a temple keeper had taken a bath the previous night and forgot to extinguish the fire.

The funeral of the late Mr. Tanaka Kendo took place at Akasaka Church, on the morning of the 30th August. Count Itagaki, Marquis Ito (by representative), Messrs. Yebara Soroku, Uchida Koya, Hayashida Kametaro, Kusaka Yoshio, Sugita Teiichi, Kuribara Ryoichi, Sakurai Tsutomu, Suzuki Jubei, Ishizuka Juhei, Ishida Kannosuke, Yamamoto Yukihiko, Sasaki Shozo, Kato Heishiro, and over 500 persons were present.

The Hongkong Police Magistrate fined the Captain of the N.Y.K. steamer *Kawachi Maru* \$20 for neglecting to take his ship to the dangerous anchorage berth while having dangerous goods aboard, to wit, benzine, and also with neglecting to hoist a red flag on the foremast, according to regulations. On the same day the captain of the *Matsura Maru* was charged, having just come from an infected port, with holding communication with the shore before being permitted to do so by the Health Officer. Defendant pleaded that, his ship being out of fresh water, he attempted to go ashore to arrange for some. He was fined \$50.

The new steamer *Tokachi Maru*, built at the Kawasaki Dockyard to the order of the Nippon Yusen Kaisha, underwent her trials the other day. The vessel maintained a maximum speed of 12.88 knots during six runs over the course, this result being nearly a knot in excess of her contract speed of 12 knots. Everything went most satisfactorily, the engines making 90 revolutions, working perfectly smooth and with a total absence of either hot bearings or vibration.

An interesting find has been made by the Yokohama police in connection with the recent appearance of counterfeit 5 *yen* notes in Tokyo. Some furniture of a widow living at Negishi was sold by auction, and in a chest of drawers was an electric block for the printing of such notes. The matter was reported to the police and it appeared on investigation that the block belonged to a man (who died last March) in whose employment the woman was for some time, and had been entrusted to her by him.

Two carpenters named Suzuki Yashichi and Yoshida Yasugoro, living in a house at Sugamo, Koishikawa, Tokyo, along with other carpenters took a holiday on the 2nd owing to the rain and went in for a sake bout. A quarrel arose between the two former men but they were separated by the others and eventually went home to sleep. During the night, Yashichi got up, took an axe from his tool-box and cut Yasugoro about the ears, head, arms, and other limbs. The wounded man is not expected to recover.

Last year the Anti-Foot-Binding Society of China offered prizes for essays on the subject of its work. Over 200 essays were sent in, most of them strongly condemning the practice of foot-binding. A few, however, says Mrs. Arnold Foster, of Wuchang, defended the custom on the following grounds:—"Bound feet assist women to do their duty, which is to stay at home, and not to gad about in their neighbours' houses." "Bound feet are conducive to health and long life. See how many more old women than old men there are in China! This is because their bound feet prevent women from working too hard. Moreover, they do not see and grieve over the unobtainable; so they are not envious, but have hearts at rest, which is very helpful indeed for women."

A woman named Yasu, wife of Kato Kane-kichi, living at Miyamuracho, Azabu, Tokyo, was arrested by the police on the 21st ult. in a house at Shirokane, charged with attempting to murder an old Buddhist nun named Kobayashi Shoken, who was staying in her house. The nun was a native of Sanshu and entered the temple service at 15, remaining at Okazaki until 3 years ago. She then went up to Tokyo and stayed at Yasu's house. The old woman had saved over 300 *yen* and Yasu desired the money. She took the old woman to a theatre on the morning of the 30th ult., and on her way home, when near Babasaki gate, about 10 o'clock at night stopped near the canal and said she had lost her umbrella. The nun began to help in the search and as she neared the creek Yasu pushed her in. The old woman was rescued by a jinrikishaman.

Reviewing the lessons of the recent French naval manoeuvres, a Service writer in the *Figaro* says that the operations will have served a useful purpose if they only bring the fact home to the authorities that the arsenal at Toulon is useless as a mainstay of the fleet. Notwithstanding that the dock authorities were notified days before that they would be called upon to revictual the fleet, they made a most lamentable failure of the task. In fact, so badly was the work carried out that had the conditions been those of actual war, nothing could have saved France from a most humiliating disaster. The chief difficulty was experienced in coaling the fleet. Admiral Gervais lectured his men upon the high importance of coaling promptly, and pointed out the remarkable records achieved by British ships of war. By his direction, and for the first time, the French naval officers took a part in the work, with the result that a few ships managed to take in 160 tons an hour, a result far below what is the usual record on board the British warships.

The following statistics refer to persons whose promissory notes were dishonoured by the Tokyo Clearing House, during the first half of this year:—

Jan.	227	Feb.	263
Mar.	221	April	171
May	137	June	111

The total stands at 1,140, the number of notes involved being 1,338, representing the amount of 554,184 *yen* approximately. Compared with the

corresponding period of the previous year, these figures show an increase of 164 persons. Classified according to occupation, the figures stand as follows:—

Dealers in dry goods.....	42
Commercial companies	11
Banks.....	23
Hatters	11
Hosiery	16
Paper merchants	11
Hardware dealers.....	11
Members of firms	14
Dealers in spirits	16
Dealers in foreign goods	11
Rice dealers	13
Printers	10
Dealers in wool, coal, charcoal, etc. ...	13
Cotton cloth merchants	10
Keepers of restaurants	13

Particulars were received in London on July 26th of a tragedy on the Matterhorn. The party consisted of Miss Trow (a clergyman's daughter), Miss M. Bell (a daughter of Mr. Edward Bell, a partner of the firm of George Bell and Sons, publishers), Dr. Robert Black (of Brighton), and the guide Carrel. While the party was returning from making a perilous ascent of the Matterhorn to the Val Tournanche Miss Trow slipped. Guide Carrel, who was leading the party, gripped the ice and there hung suspended for two minutes, but the weight was too much for him and the four fell over the precipice, a height of 30 feet, and down a short slope to the next gully, which overhung a precipice of 1,000 feet. On the way down the slope the rope between Miss Bell and Carrel snapped, and Carrel was carried beyond the other members of the party. When they had stopped, falling on the short slope, Miss Trow, seeing that her companions, Dr. Black and Miss Bell, were lying dead, cut the rope which bound her to them and joined Carrel. The bodies of Dr. Black and Miss Bell were terribly mutilated: Miss Trow and Guide Carrel were barely injured. Dr. Black was at the other end of the rope to the guide. Other parties on the Matterhorn saw the catastrophe but of course could do nothing to avert it.

Mr. Arthur Davies, a well-known shipowner, of Croydon, has been killed while mountaineering in the Dibergh Alps. He fell a distance of 300 ft.

The subject, already mentioned in these columns, of foreign students in German Universities, is commented upon by a Japanese journal, the remarks of which we epitomise. After giving figures showing the proportions in which various nationalities are represented at the various seats of learning in Germany, our contemporary notes with disapproval the movement to restrict the privileges enjoyed by foreign students. The attendance of such students has a double influence for good, inasmuch as it benefits the professors who teach as well as the aliens who are taught. Instead of repulsing, the Germans should welcome, visitors of this kind. The discussion of such a topic naturally directs attention to Japan where are to be found the only places in the Far East at which a liberal education may be obtained. There are now in attendance at the Daigakuin one American, at the College of Law one Korean, at the College of Medicine one Indian, at the College of Technology four Chinese, two Indians and one other foreigner, and at the College of Agriculture one Korean. Though that is a very small showing, the Tokyo paper sees in it ground for self-gratulation, for undoubtedly the number will grow in the future. The discipline and curricula of the Japanese universities certainly do not fall short of the German institutions and they are higher and more systematic than those of the United States. Moreover the cost of living and education in Japan is on a very much lower scale, and should Americans and Canadians send their sons to this country they could depend with confidence on the lads being equipped for their career in life satisfactorily and economically. So far, then, from imitating the threatened action of the Germans it is for Japan to encourage foreign visitors to come to her universities and thus confer benefits not merely on the students themselves but also on the Japanese.

LAW CASES.

The well-known poet Okubo Shunan, of Tokyo, his wife and three others were arrested by the police at Hatago-cho, Hakodate, on the night of the 2nd inst. charged with gambling.

A carpenter, Sasaki Takijiro, living at Mayenomura, Chiba Prefecture, was arrested by the Asakusa police on the 3rd inst. charged with having in July stolen a tobacco pouch valued at 28 yen.

The Frenchman Luyat, who has appealed against the sentence pronounced on him in the Yokohama Chihō Saibansho for obtaining goods on false pretences, has been sent to the Kajibashi Prison from Yokohama.

Ikuta Ko, Usami Kurakichi, and Watanabe Ichibei, employed by a fire insurance company at Renjakucho, Kanda, Tokyo, has been arrested by the police on a charge of stealing over yen 450 which they had collected as premia.

Engineer Wakatsuki Kanichi, Chief of the Sea Products Examination Office, Ibaraki Prefecture, was arrested by the Isehama police on a charge of forging official documents and stealing official money, on the morning of the 3rd inst.

Two young men named Tsuji Kojiro and Nakamura Sankuro, of Tokyo, were arrested by the police on the 1st inst. charged with stealing two bicycles from a bicycle shop at Yedogawa-cho the other day. They sold the machines for 50 yen each.

Harajima Yozo, of the Itsukaichi Bank of Hachioji, was arrested by the Asakusa Police on the morning of the 4th inst. charged with having stolen yen 1,000 belonging to the bank on the 28th ult. He spent the money in two houses of ill-fame at Yoshiwara and Yokohama. He had yen 520 left in his pocket.

Suzuki Chotaro, a native of Sendai, was arrested by the Nihonbashi police on the 3rd inst. at Ninowa, on a charge of stealing 41 articles from two houses at Minami Saitama-gori, Saitama Prefecture, on the 2nd ult. He pawned the goods in Tokyo. The man was discharged in July last from prison and was still under police surveillance.

Five men, alleged to be *soshi*, belonging to Shizuoka and Hamamatsu, have been arrested at Oiso and sent to Yokohama for trial on charges of having obtained by threats yen 1,582 from Mr. Sato Kosuke and two other fire-wood merchants of Yokohama and Tokyo, in connection with the sale of a forest belonging to the Imperial estates in Sagami province.

In the Yokohama Chihō Saibansho, on Tuesday, the hearing took place of the suit brought by Mr. Tom Thomas against a Chinese. Plaintiff claimed from defendant the payment of yen 12,000 advanced to him on promissory notes given by the latter, one for yen 8,000 and another for yen 4,000. Defendant denied that he had ever granted the notes in question, and the case was adjourned.

Mitomi Seizo, of Chiba, Okamoto Seizo of Okayama, Kimura Yokichi of Hokkaido, and Fukagawa Hajime of Shizuoka, were arrested by the Nihonbashi police on a charge of having stolen a bag, thirty watches, and two boxes each containing seventy chains from a watch shop at Udagawacho, Shiba, Tokyo, on the night of the 20th ult.

A man named Matsui Hisao (interpreter of Mr. F. Gil, 30, Yamashitacho, Yokohama), and another man were tried on Thursday in the Yokohama Chihō Saibansho on a charge of stealing 41 bags of sugar valued at yen 300, the property of Mr. Gil. It is stated that the stolen property was sold for yen 170. They were each sentenced to suffer four months' major confinement and six months' police surveillance.

Tachikawa Matahachiro of Messrs. Tachikawa & Co., Sannomiya-cho, sued Messrs. W. S. Taylor and F. Perrin Cooper, of Messrs. Taylor, Cooper

& Co., in the Kobe Chihō Saibansho on Sept. 4th for yen 7,175, as demurrage, wages for coolies, and lighterage. The dispute arises over the chartering of three steamers to run to North China. In the course of the hearing the ground was taken by the defence that the case was irregular as the defendants were being sued as individuals. The point was reserved and the case adjourned.

AMERICAN TOPICS.

Arch Rock, one of the chief dangers of San Francisco Bay, was blown up on Aug. 15th. Thirty tons of nitro-glycerine gelatin did the work, 260 holes being bored for its reception 35 feet below the surface of the water. The explosion is believed to have removed the obstacle to navigation.

John Winters, the man who, unaided, carried off \$320,000 (gold) worth of gold bars from the Selby Smelting Works at Vallejo Junction near San Francisco on Aug. 6th has confessed his guilt, and under his directions bullion to the value of \$255,000 has been recovered from the waters of San Francisco Bay.

Diamonds are found in the United States in three distinct districts, according to a report now being prepared by the Geological Survey, which will treat of precious stones in that country. The diamond fields are located: (1) Wisconsin, Michigan, Indiana and Ohio, in the vicinity of Green Bay lobe of the Continental glacier; (2) in Georgia, North Carolina, Tennessee, South Carolina and Kentucky; (3) in California, adjacent to the water sheds of the San Joaquin and Sacramento rivers, where they were first found in the United States.

In a recent interview Governor Stanley of Kansas stated that the year 1901 will mark the close of a five-year period the most successful that Kansas has ever enjoyed. With 75,000,000 bushels of the best wheat that was ever raised in her granaries, with \$70,000,000 deposited in her banks, with 40,000,000 bushels old corn on hand, with larger herds than usual in her pastures and forage plants necessary to carry them through the coming winter, with a people less elated by success and discouraged by adversity than ever before, Kansas is all right.

A Boston paper says:—The Iowa Supreme Court has held that an editor may freely criticize any public entertainment if not actuated by malice. That a Mr. Hamilton did exercise considerable license is seen in the fact that he referred to the Cherry Sisters as "spavined, stringhalt, and with legs as classic as the curves of a broom-handle," and their dancing was described as "a cross between the hootchiekootchie and a fox trot." One of the sisters was referred to as a "jade," another as a "frisky filly," and a third as a "capering monstrosity." Their fingers were called "talons," their mouths "caverns," their features "rancid," and their voices "the wails of damned souls." They were "strange creatures" with "painted faces and hideous mien," and other compliments of like nature were freely bestowed. In a word, this dramatic critic appears to have the right of way in Iowa.

The Right Rev. Abram N. Littlejohn, D.D., L.L.D., Bishop of the Episcopal diocese of Long Island, died suddenly on Aug. 3 at Gray Luck Hotel, Williamstown, of apoplexy. He was 77 years of age. Bishop Littlejohn was born in Florida, N.Y., and was graduated from Union College in 1845. He received deacon's orders in 1848 and was advanced to the priesthood a year later. His ministry was spent at Amsterdam, N.Y.; Meriden, Conn.; Springfield, Mass., and New Haven, Conn., where he remained from 1851 to 1860, when he became rector of Holy Trinity, Brooklyn, where he continued until his consecration. In 1858 he declined the presidency of Geneva (now Hobart) College. For seven years, while rector of St. Paul's, New Haven, he was lecturer on pastoral theology in the Berkely Divinity School, Middletown, Conn. He was chosen Bishop of Central New York, but declined the

election. He was given the degree of D.D. by the University of Pennsylvania, 1858. He was consecrated January 27, 1860. In 1874 he received the appointment of the charge of the foreign churches on the Continent of Europe, in virtue of which assignment he consecrated the Church of St. Paul's-Within-the-Walls, Rome, and opened the American Church of the Holy Trinity, Paris. He delivered a course of lectures before the University of Cambridge, England. In recognition of his scholarship, his culture and the value of his contributions to theology that university conferred upon him the doctorate of laws in 1880. Among his best-known works are "Discourses on Individualism," "Christian Dogma Essential," and "The Christian Ministry at the Close of the Nineteenth Century."

A Greenwich (Conn.) telegram of Aug. 3rd said:—It has become the practice with wealthy men, who make gifts to public institutions here, to do such deeds through third persons with strict injunctions, that, under no consideration shall their names be divulged. They say that where their names are known they are annoyed and made uncomfortable by hundreds of letters asking for aid for worthy as well as for unworthy objects. A few days ago the Greenwich Library Reading Rooms Association was presented with an oil painting 6 feet wide by 5 feet long by a local lawyer, acting on behalf of a rich man, who said that the library could not have the picture if his name was made public. It is a landscape painted by Henry B. Smith of New York, and took a prize in the exhibition of pictures at the World's Fair in Chicago. It is valued at \$6,000.

The year 1901 has been one of unexampled activity with the American shipbuilders of the great lakes, and they have already in hand enough orders to insure continued work for nearly all the plants for another year. The vessels built during the year ended with July and those now under order have an aggregate value of \$16,324,000. A healthful growth is still shown in the seaboard coastwise trade, and the present generation of shipbuilders have never enjoyed a season of such activity. The number of vessels built during the year ended June 30, 1901, was 1,173, of 401,285 gross tons, compared with 1,085, of 305,677 gross tons, for the previous fiscal year. The distribution was as follows: Atlantic and gulf coasts, 735 vessels, of 190,948 tons; great lakes 105, of 153,138 gross tons; Pacific coast, 151, of 46,105 gross tons, and western rivers, 182, of 11,094 gross tons.

The fire loss of the United States and Canada for the month of July, as reported by the *Journal of Commerce*, shows a total of \$15,740,000. That this is rather large will be seen from the subjoined table:—

	1899.	1900.	1901.
January...	\$10,718,000	\$11,755,300	\$16,574,950
February...	18,460,000	15,427,000	13,992,000
March...	11,493,000	13,349,200	15,036,250
April...	9,213,000	25,727,000	12,352,800
May.....	9,091,900	15,759,400	22,380,150
June.....	6,714,850	21,281,000	9,590,000
July.....	11,426,400	13,609,100	15,740,000

Total...\$77,126,150 \$116,980,000 \$104,675,150

It has been suggested that wireless telegraphy may play an important part in future Arctic explorations. "The conditions surrounding Arctic travel are such," says *The Electrical Review*, "that the principal difficulty is found in maintaining communication with a base of supplies. It is believed that wireless telegraphy has now reached a point where, at least, it promises such development that future exploring parties will be able to carry along apparatus and keep constantly in touch with their base camps. If this proves to be the case, much of the terror of the Arctic will be removed and exploration will be made both easier and safer, with the possibility that this added instrumentality will enable the discovery of the pole at no far distant date."

It was to be expected, remarks *Bradstreet's*, that a year of prosperity would be marked by large increases in the savings banks' deposits, especially

in those states where such institutions have obtained the largest share of public confidence and support. During the present week the New York State Banking Department has made public the returns which the savings banks of the state have filed with it, displaying their condition on July 1, 1901. These statistics show that on the date in question the total resources of the New York savings banks were over \$1,105,000,000 as compared with \$1,037,000,000 on July 1, 1900 and only \$968,000,000 the year before. The aggregate deposits at the date of the report were no less than \$987,000,000, an increase of about \$65,500,000 during the year. The actual amount deposited during the year was \$276,000,000, against \$264,000,000 the year before. The figures show that the lead which the New York savings banks hold in regard to their deposits, and their general utility to the community, has been fully maintained during the past year, and also that, despite the inducements which are now offered for small investments in the stocks of corporate enterprises, vast numbers continue to adhere to the savings-bank system as the best method of safeguarding and increasing their accumulations.

FIVE DAYS ENTOMBED.

What seems almost a miraculous escape from death is recorded by Hongkong papers. On the afternoon of Aug. 19th a party of workmen engaged in removing debris from the ruins of the collapsed and burned buildings in Cochrane Street heard cries emanating from the wreckage. It will be remembered that the catastrophe occurred on Aug. 13th. The news soon spread and the chief officials of the colony lent by their presence encouragement, if that were needed, to those striving to rescue the entombed person. After several hours' work, during part of which he was seen and spoken to by the workers, whom he asked to prevent the dust from getting in on him, he was at length liberated, presenting an uncanny spectacle, being powdered from head to foot like a chalk statue. The *China Mail* said:—

It was found that he was perfectly unhurt except for a small skin-deep wound on the head. He complained of no pain. A little brandy was administered, and the Doctor felt his pulse and found it to be beating quite normally. His only complaint was that he was "To ngo" ("Very hungry"), and at the same time, with a shake of his head, he rubbed his stomach. The first excitement having subsided and the Doctor's examination over, the young man was gently led to a chair, which was in waiting. A section of the Europeans could not suppress a cheer as he emerged, while the immense crowd of Chinese demonstrated their joy by shouts of "Hi-yah!" "Well done young fellow," "You have got a hardy life," etc. He was borne through the gaping and excited crowd, and was regarded as nothing short of a marvel. He was first taken to the Central Police Station, where he got an admission ticket for the Hospital. He will be detained there for some days to regain his strength. Starvation is really all that ails him, and notwithstanding his extraordinary trials he is quite sound in mind and body. One of his questions to Mr. Hanson when still below was "Friend, what is the day of the moon?" Mr. Hanson said, "You remember the day when the accident took place?" "Yes," replied the entombed man, "it took place on the first of the Chinese moon." "Well," said Mr. Hanson, "this is the sixth." The intelligence seemed to stagger the inquirer, for he stopped speaking for a little, and then gave vent to a long drawn "Hi Yah!" and the remark, "What a time I have been here." Now and again, he showed little outbursts of impatience, but Mr. Hanson kept up a continuous conversation with him as to his position, asking him if he were being hurt, etc. and in this way kept him from wearying, for it was certainly a toilsome piece of work to get him to the surface.

The escape of this young man five days and five nights after the accident is nothing short of a miracle. He was encased in a space barely large enough to hold him comfortably, and his sufferings must have been terrible. He was within a couple of feet of where the outbreak of fire on the night of the collapse was raging. In addition to this there was the suffocating smell of gas from a broken gas-pipe and the terrible stench of the decomposing bodies of his shopmates. Another remarkable feature is that his clothing was perfectly dry, notwithstanding the heavy rains and the play of the hose.

SIMULTANEOUS EARTHQUAKE SHOCKS.

There seems to have been a close relationship between the earthquake shocks felt in Japan on the 9th and 10th of last month and similar disturbances felt on the other side of the Pacific.

It will be recollected that on the 10th at 3 a.m. a very severe earthquake was felt at Awamori, consisting of some twenty shocks, while from Yamada, a small town on the east coast of Iwate Prefecture (Rikuchiu Province) there came news of a sudden rising of the sea to a height of 3 feet and of seismic shocks between 6 p.m. on the 9th and 3.40 a.m. on the 10th of August. When we remember that this district is immediately to the north of that devastated by the great seismic wave of some years ago we cannot be surprised to learn that the country folks fled in terror to the high lands. It appears from the reports of the Seismological Bureau that from the afternoon of the 9th to the morning of the 10th there were 16th shocks in Awamori and 7 in Tokyo.

About the same time instruments on the other side of the ocean were recording seismic disturbances. Says a Victoria telegram of August 10th:—

The seismograph at the Meteorological Office here on Friday recorded some very severe shocks of earthquake, which the Superintendent believes occurred in Alaska, as the records are similar to those made when the last earthquakes occurred up North.

The preliminary tremors commenced at 1.30 a.m., Victoria time, and continued until 4.08, the pendulum in this interval recording several oscillations of 3 millimetres in amplitude. The boom then remained quiet until 5.15, when another disturbance commenced, which rapidly assumed immense proportions, until at 6.15 the swing of the pendulum had completely crossed the record paper, and maintained this incessant movement for some twenty minutes, when its vibration, though still exceedingly large, began to lessen, and, repeating as it were the echoes of its preliminary tremors, gradually died out, about 10 o'clock. Another rest then occurred for 48 minutes, when a fresh vibration began, which became very pronounced for nearly an hour, and then continued its ever-lessening movements until about half past one, when the pendulum finally came to rest, the extraordinary seismic disturbances having thus lasted for some twelve hours.

From the near correspondence in time of these shocks and movements on two continents it is allowable to suppose that the centre of the disturbance was in the mid-Pacific ocean.

LANGFELDT & CO., LD.

The half-yearly general meeting of shareholder's of Langfeldt & Co., Limited, was held at No. 73, on Friday afternoon, when there were present Messrs. J. F. Lowder, (in the chair), C. B. Bernard, D. H. Blake, E. B. S. Edwards, H. Klinglen and J. Feicke.

The CHAIRMAN stated that the Directors regretted that the accounts for the half year did not show a better return. They could have paid a dividend of 3½ per cent., but this was a small item and it was considered better to carry the amount of profit over to new account. Their stock was still large, and included \$80,000 in coal, which was of full value. With regard to the Manila business, they had 2,932 yen realizable assets.

Mr. BERNARD had been appointed Managing Director and it was proposed that Mr. Feicke should be appointed to undertake the management of a branch of the business at Nagasaki, but this matter was not yet settled by the Directors, and was still in abeyance.

On the proposition of Mr. KLINGEN, seconded by Mr. E. B. S. Edwards, the report and accounts were put to the meeting and passed unanimously, and a vote of thanks to the Chairman and Directors, proposed by Mr. Klingen, brought the proceedings to a close.

The Report and Accounts were as follow:—

REPORT.

The statement of Assets and Liabilities, and the Profit and Loss Account for the half year ended the 30th June 1901, accompany this Report.

The Net Profit for the half year, after providing for general expenses, and Directors' and Auditor's fees

including the amount carried forward from last half year amounts to yen 5,479.55, which it is proposed to carry forward to a new account.

At a private meeting of shareholders the Directors were authorized to open a Branch of the Company at Nagasaki, and the necessary arrangements have been made with Mr. Joseph Feicke, formerly the company's Manager in Yokohama, to take charge of the business at that Port.

Mr. C. Weinberger having resigned, owing to his departure for Europe, Mr. M. F. Bengen and Mr. D. H. Blake have joined the Board of Directors, and Mr. C. B. Bernard has undertaken the Post of Managing Director.

STEALING HALF A TON OF GOLD.

Quite a sensational robbery is reported from San Francisco. Said the *Chronicle* of Aug. 7th: "Cunning, patient and daring thieves broke into a safe in the Selby Smelting and Lead Company's works at Vallejo Junction between midnight and daylight yesterday morning and secured thirty-seven bars of gold. The mass weighed 1,130 pounds and its value was \$280,000. It is the largest theft of gold bullion known in this country.

"The thieves planned their work with infinite caution and patience. They executed the coup with daring and quickness. They disposed of every tell-tale sign with remarkable foresight and made their escape, taking the enormous booty with them, in such fashion that, so far as can be foreseen now, they will never be traced.

"The mere act of taking the gold was one of extreme simplicity. The method followed was the driving of a tunnel not over five feet in length, under the wall of the refinery, turning upward just inside and piercing the bottom of an iron safe that stood next the wall. The tunnel started just outside of the wooden wall, the opening

being a mere hole three feet deep, as many feet long and a foot and a half wide. A grown man could barely squeeze into this hole and wriggle himself into the tunnel leading under the wall. There, lying on his back, he could, if he were an expert, operate a drill and cut through the bottom of the safe. Once the hole was opened, the thief crawled up into the safe and passed gold bars down to his confederates. The thing was perfectly easy."

Easy also it appears to have been for the thieves to transport their booty to the adjacent shore, where two bars valued at \$16,000 were left behind, and thence by boat to some other point in San Francisco or to a waiting ship. "In the safe yesterday morning," says a report "were found \$130,000 in gold bars and two tons of silver bullion, which the robbers did not try to carry away. They could have taken it all if they had wished."

About two tons of silver which had no charms for them!

One man has been arrested but it seems incredible that he could have accomplished the job unaided.

SIR THOMAS HANBURY, K.V.O.

The London *Gazette* of 23rd July announces that the King has been graciously pleased to make the following appointment to the Royal Victorian Order:—To be Knight Commander, Thomas Hanbury, Esq. The investiture by His Majesty took place at Marlborough House on 16th Aug. The Victorian Order, of which there are only twenty-three Knights, was created by the late Queen Victoria, and is confined chiefly to the personal friends of the Royal House. Mr. William Allen, philanthropist, and great uncle to Sir Thomas Hanbury, rendered important service to the Duke of Kent, the father of Queen Victoria, at a critical time, about the years 1816-1817, when he was trustee for the Duke. Old Shanghai friends will welcome the honour now bestowed. Born June 21, 1832, Mr. (now Sir) Thomas Hanbury went to Shanghai in 1853, and resided there as a merchant for 13 years. The firm was first Hanbury and Co., and subsequently became Bower, Hanbury and Co. It is now continued by Sir Thomas's son, a member of the firm of Ward, Hanbury and Co., of London, and Ward, Probst, and Co., Shanghai. Sir Thomas left the China trade in 1874, but still retains large interests in Shanghai in real estate. In 1867 he bought the residence known as La Mortola, Ventimiglia, Italy, which is near Mentone. There, the well-known garden is his own creation, and contains 5,000 species of plants growing in the open air. It was visited twice by the late Queen Victoria and many times by His present Majesty the King, and other members of the Royal Family. The grounds attract about 4,000 visitors annually. Sir Thomas has likewise done much in the philanthropic world, and to his munificence we have the Thomas Hanbury School and Children's Home, Shanghai (in part); the Hanbury Botanical Institute, Genoa; the Queen Victoria Jubilee fountain, Mentone; the Museum Prehistoricum, Mentone; the Hanbury Hall, Alasio; and the Aprosian Library, Ventimiglia. Besides the honour just conferred Sir Thomas is a Knight Commander of the Cross of the Crown of Italy, and of the much more distinguished Order of S.S. Maurizio e Lazzaro.

THE SUGAR CONSUMPTION AND BEER TAX LAWS.

We are requested by the taxation authorities to publish the following regulations for the operation of the Sugar Consumption Tax Law and the Beer Tax Law respectively, which come into operation from the 1st October next:—

IMPERIAL ORDINANCE No. 169.

REGULATIONS FOR THE OPERATION OF THE SUGAR CONSUMPTION TAX LAW.

Art. 1.—A person desiring to manufacture sugar, molasses, and syrup shall determine the place of manufacture and the kind of article to be manufactured and make a report to that effect to the Taxation

Office concerned. In the report should be mentioned the address and name or title of the manufacturer.

Art. 2.—By manufacture is meant in all cases that which may be considered a single manufactory, no matter whether it covers a number of lots or not.

Art. 3.—When the Taxation Office concerned has found it necessary to cause the production of the drawing of a sugar factory or a list of utensils, apparatus, and machinery for manufacturing purposes, and given orders to that effect, a manufacturer of sugar, molasses and syrup must produce them.

Art. 4.—Manufacturers of sugar, molasses and syrup shall fix the time for commencing manufacture and make a report beforehand to the Taxation Office concerned. The same rule shall apply to cases where the work is recommenced after suspension.

Art. 5.—When any change occurs in matters reported in accordance with Arts. 1 and 4 or matters mentioned in drawings or lists presented according to Art. 3, the fact shall on each occasion be notified to the Taxation Office concerned.

Art. 6.—When a manufacturer of sugar, molasses and syrup intends to discontinue his business, a report to that effect shall be made to the Taxation Office concerned.

Art. 7.—The Revenue Officer shall from time to time proceed to each manufactory of sugar, molasses or syrup and inspect the sugar, molasses or syrup, the materials, apparatus and machinery for manufacture or books and documents.

Art. 8.—The Revenue Officer may, if he finds it necessary for the purpose of control, put seals on the sugar, molasses, or syrup stored by the manufacturer or on store houses, or apparatus and machinery for manufacture.

Art. 9.—When a manufacturer of sugar, molasses or syrup wishes to transfer sugar, molasses or syrup outside the manufactory, he must obtain the approval of the Revenue Officer as to the number and weight of same and the place where they are to be transferred.

In the case of the foregoing clause if the Revenue Officer finds it necessary he may put seals on such sugar, molasses or syrup or remove them to other places.

Art. 10.—Persons intending to take delivery of sugar, molasses, or syrup from factories, Custom House or bonded warehouses, shall distinguish those which are to be taken delivery of for the purpose of being consumed in the Empire from those which are not, and the fact shall be notified to the Taxation Office concerned.

Art. 11.—Persons desiring to apply for the postponement of collection of consumption tax in accordance with the proviso of clause 1 in Art. 4 of the Sugar Consumption Tax Law shall make an application to that effect to the Taxation Office concerned simultaneously with making the report of the foregoing article.

Art. 12.—When the report in Art. 10 is made, the Taxation Office concerned shall decide to which kinds enumerated in Art. 3 of the Sugar Consumption Tax Law the articles belong to, and the number of cattie, and steps for collection shall be made for those on which consumption tax should be at once collected, and for those for which an application for the postponement of collection of consumption tax is not required, the amount of security to be deposited shall be indicated.

Art. 13.—The Revenue Officers may take steps themselves for receiving consumption tax at places only where the Treasury is not located.

Persons liable to pay tax may make payment of sugar consumption tax in revenue stamps at places only where the Treasury is not located. In this case revenue stamps should be put on the document in which the rate of sugar consumption tax is determined by inspection and stamps cancelled.

Art. 14.—The Revenue Officers may give verbal notice of payment of tax.

Art. 15.—The kinds of securities to be deposited in accordance with Arts. 4 and 5 of the Sugar Consumption Tax Law are limited to money and negotiable bonds.

Persons wishing to deposit securities shall deposit those in the foregoing clause with the Treasury and present the receipt of the same to the Taxation Office concerned.

Art. 16.—When the value of negotiable bonds has decreased, the Taxation Office concerned may cause the production of additional securities.

Art. 17.—When a manufacturer of sugar, molasses or syrup is to make delivery of sugar, molasses, or syrup the person taking delivery must prove that the consumption tax on the goods has been paid or the securities on them deposited.

Art. 18.—Persons desiring to apply for the release of securities produced in accordance with Art 5 of the Sugar Consumption Tax Law must present to the Taxation Office concerned an application accompanied by the following documents:—

1. Export permit or other documents taking its place.
2. Import permit from a Custom House in a foreign port of import, or other document testifying to the landing of the goods in a foreign country.

Art. 19.—When securities are to be sold by public auction in accordance with clause 2 of Art. 5 of the Sugar Consumption Tax Law, public notice to that effect shall be made and the goods must be sold after at least three days have expired from the first day on which public notice shall have been made.

Art. 20.—In the public notice in the foregoing article should be mentioned the address and name or title of the depositor of securities, kinds of bonds, amount of value, place where, and time when, sale by public auction is to be made and other necessary matters.

Art. 21.—When consumption tax and expenses have been paid in full prior to the carrying into effect of the sale by public auction, the sale in question will be suspended.

Art. 22.—When there is any balance of money to be refunded to the depositor of securities in accordance with the proviso of clause 2 of Art. 4 and the proviso of clause 2 of Art. 5 of the Sugar Consumption Tax Law such balance may be deposited.

Art. 23.—Persons desiring to apply for the refunding of a sum of money in accordance with Art. 11 must, when the sugar or molasses to be used as materials is to be removed to a factory, inform the officials concerned of its kind and weight and the time when it is to be used and obtain their approval beforehand.

When, on obtaining the approval in the foregoing clause, sugar, syrup or alcohol has been made, its kind and weight shall be reported to the official concerned.

Art. 24.—When it is intended to obtain the approval mentioned in the foregoing article a document testifying that the consumption tax has been paid must be produced.

Art. 25.—When an application is made for the refunding of a sum of money in accordance with Art. 11 of the Sugar Consumption Tax Law, the application should be made to the Taxation Office concerned.

Art. 26.—Manufacturers of sugar, molasses and syrup shall enter in their books at least the following matters:—

1. The kind and weight of materials. For those which are taken delivery of from other persons, the date of delivery and the address and name or title of the person making the delivery.

2. The kind and weight of materials used and the date when they were used.

3. The kind and weight of sugar, molasses and the date when they were manufactured.

4. The kind, weight and value of sugar, molasses, and syrup delivered to other persons, the date of delivery and the address and name or title of the person taking the delivery.

Art. 27.—Sellers of sugar, molasses and syrup shall enter in their books at least the following matters:—

1. The kind, weight and value of sugar, molasses and sugar taken delivery of, the date of delivery and the address and name or title of the person making the delivery.

2. The kind, weight and value of sugar, molasses and syrup sold, the date of sale and the address and name or title of the purchaser. In the case of retail it is not required to mention the address and name or title of the purchasers in No. 2 of the foregoing clause.

Art. 28.—No Revenue Officer is allowed to divulge any matters he has become officially acquainted with concerning the business of manufacturers and sellers of sugar, molasses and syrup.

Art. 29.—All business belonging to Taxation Offices in these regulations will be transacted by Branch Taxation Offices in localities where the branches are established.

SUPPLEMENTARY RULES.

Art. 30.—In case a report is to be made to the Government in accordance with Art. 19 of the Sugar Consumption Tax Law such report must be made to the Taxation Office concerned in accordance with Art. 50.

REGULATIONS FOR THE OPERATION OF THE BEER TAX LAW.

Art. 1.—A person wishing to brew beer shall determine a brewery and present to the Taxation Office concerned an application for license. In the application should be mentioned the address and name or title of the applicant.

When a brewery is to be removed the new locality shall be fixed and a report to that effect shall be made to the Taxation Office concerned.

Art. 2.—By beer factory is meant in all cases that which may be considered a single factory no matter whether it covers a number of lots or not.

Art. 3.—Persons who have obtained a license for manufacturing beer shall make a detailed drawing of the ground and buildings of each factory, list of vessels, apparatus and machinery for manufacturing and a written statement relating to the mode of manufacturing beer, and present them to the Taxation Office concerned prior to the commencement of business.

When any change occurs in matters mentioned in the drawing or list in the foregoing clause, a report to that effect should be made at each time of such occurrence. The same rule shall apply to cases where the mode of manufacture is altered or where the address, name or title of the applicant is changed.

Art. 4.—When a beer brewer has presented the list in clause 1 of the foregoing article or made the report in clause 2 of the same article, the Taxation Office concerned shall make inspection of the vessels, apparatus and machinery for manufacture. The Taxation Office may, in this case, mark or brand on them numbers, the quantity which the vessels contain, and other necessary matters.

No brewers are allowed to use vessels, apparatus or machinery for the brewing of beer unless after the inspection in the foregoing clause has been made.

Art. 5.—Brewers of beer shall fix the time for commencing manufacture and a report to that effect shall be made beforehand to the Taxation Office concerned. The same rule shall apply to cases where the manufacture is to be suspended or recommenced after suspension, or where matters which have been reported are to be changed.

Art. 6.—When the business of brewing beer is succeeded by other persons the successors shall make a report to that effect to the Taxation Office concerned.

When the business of brewing beer is to be transferred to other persons, a report to that effect shall be made to the Taxation Office concerned jointly with the transfer.

Art. 7.—When a beer brewer intends to discontinue business, an application for the cancellation of license shall be made to the Taxation Office concerned.

Art. 8.—The official inspection of the quantity to be brewed shall be made at the time when filtering is completed.

Art. 9.—If, during the process of brewing, the fermenting liquid is destroyed, lost or otherwise sustains losses or damage, the brewer shall forthwith make a report to that effect to the Taxation Office concerned.

Art. 10.—Persons desiring to apply for exemption from tax on the quantity brewed in accordance with Art. 7 of the Beer Tax Law must make an application to that effect to the Taxation Office concerned immediately the loss occurs.

Art. 11.—Brewers of beer shall make in their books entries of at least the following matters:—

1. The kind and quantity of materials; in case when taken delivery of from other persons, the date of delivery and the name of the person making the delivery.

2. The kind and quantity of materials used and the date on which they were used.

3. The quantity of beer brewed and the date on which brewing was completed.

4. The quantity, value and date of delivery of beer made to other persons and the name of the person to whom delivery was made.

In the case of retail, it is not required to mention the name of the person to whom delivery was made as provided for in No. 4 of the foregoing clause.

Art. 12.—Sellers of beer shall make in their books entries of at least the following matters:—

1. The quantity and value of beer taken delivery of, the date of the delivery and the name of person making the delivery.

2. The quantity and value of beer sold, the date of sale and the name of the person to whom the sale was made.

In the case of retail, it is not required to mention the name of the person to whom the sale was made as provided for in the second part of the foregoing clause.

Art. 13.—The Revenue Officer shall from time to time proceed to places where beer is brewed or sold and inspect the beer, its materials, vessels, apparatus, machinery or books and documents.

Art. 14.—The Revenue Officer may, if he deems it necessary for the purpose of control, put seals on vessels, apparatus and machinery for brewing purposes.

Art. 15.—Brewers of beer must obtain the approval of the Revenue Office in any of the following cases:—

1. When malt juices are to be put into fermentation casks.

2. When fermented liquid is to be placed in other vessels.

3. When beer is to be filtered.

4. When beer is to be again brewed by using beer residuum.

5. When beer residuum is to be removed outside the factory or mixed with other residuum.

6. When vessels, apparatus or machinery for the purpose of brewing are to be removed outside the factory, no matter whether they belong to the brewer himself or not.

7. When beer is to be transferred from outside the factory to the inside.

Art. 16.—In case a beer brewer does not actually live in the place where the factory is located, he shall appoint a manager for the purpose of concluding business relating to beer tax and notify the fact to the Taxation Office concerned.

Art. 17.—No Revenue Officer is allowed to divulge any matters he has become officially acquainted with concerning the business of brewers and sellers of beer.

SUPPLEMENTARY RULES.

Art. 18.—Clause 2 of Art. 4 of these Regulations shall not be applicable to persons who have reported the brewing of beer in accordance with Art. 22 of the Beer Tax Law only at the time of coming into operation of these regulations.

THE PEACE PROTOCOL.

The following version of the Peace Protocol is translated by the *N.-C. Daily News* from the *Universal Gazette* which, on the other hand, translated it from an English copy sent by a correspondent at Peking:—

ARTICLE I.

Clause 1.—An Imperial edict shall be issued ordering Prince Chun to proceed to Germany as Special Ambassador to apologise for, express the Emperor's regret at, the murder of the late Baron von Ketteler, H.I.G.M. Minister at Peking. Prince Chun has now proceeded on his mission to Germany in obedience to the said Imperial Commands.

Clause 2.—A Monument to be erected in memory of Baron von Ketteler on the spot where he was murdered, the monument to be in accordance with the late Minister's rank and importance. Work on said Monument has now already commenced.

ARTICLE II.

Clause 1.—The punishment of the chief instigators and authors, amongst the officials, of the murders perpetrated on the officers and people of the various Powers in accordance with the Imperial decrees of the 13th and 21st of February, 1901. Also the punishment by order of the Imperial edict of the various guilty provincial officials in accordance with the degree of their several crimes.

Clause 2.—An Imperial edict to be issued commanding that all military and literary examinations shall be stopped for five years wherever the subjects of the various Powers have been murdered or cruelly treated.

ARTICLE III.

Na Tung, Vice-President of the Board of Revenue, has already been ordered to proceed to Japan as Special Ambassador to apologise for the murder of the Japanese Secretary.

ARTICLE IV.

The money has already been paid for the erection of tablets at the cemeteries of the various nationalities, containing words repudiating all libels and contentious epithets that had been hitherto current against foreigners amongst the masses.

ARTICLE V.

An Imperial edict to be issued forbidding for the space of two years the import as well as the manufacture in China of all arms and ammunition and warlike substances.

ARTICLE VI.

On the 29th of May, 1901, an Imperial edict was issued consenting to the payment of an Indemnity to the various Powers to the total sum of Haikuan Taels 450 millions. This said amount is set down in the 2nd article of the agreement concerning subjects and societies, etc., of the various nationalities drawn up on the 22nd of December, 1900.

(a) The said amount of 450 millions is to be in Haikuan taels and to be exchanged according to the market quotations of the time into various foreign gold money.

[Then follows the approximate exchange between the Haikuan tael into the gold sovereign, dollar, franc, etc., etc.]

The interest on this sum of Tls. 450 million will be at 4 per cent., payments to be divided into 30 annual instalments. The principal and interest on each instalment is to be in gold calculated on the exchange of the time, and at the periods agreed upon. The first instalment is to be on the 1st of January 1902, the interest to commence on the 1st of July 1901. The Chinese Government may calculate the first six months' interest down to the end of December 1901, and then begin from the 1st of January 1902 (Chinese Calendar, 22nd day of the 11th moon of this present year); but this interest must be paid within three years and also calculated on a basis of 4 per cent. per annum.

(b) All matters concerning this said amount are to be arranged at Shanghai and the various Powers shall each appoint a Director of a Bank to act conjointly with regard to the principal and interest paid by the Chinese Government, and the Banks concerned shall severally grant receipts for all sums so received.

(c) China shall draw up a Guarantee Paper for the total amount, the Guarantee Paper to be held by the Doyen of the Foreign Ministers at Peking. Subsequently this single Guarantee Paper may be changed into secondary Guarantee Papers, each said

Paper to have the signatures of the Chinese officials seconded.

(d) Such Guarantee Papers when paid up to be deposited in the hands of the said Directors of Banks.

(e) The following are the terms of the said guarantee Papers:—

(1) After deducting such of the Customs revenues as had been agreed upon before in guarantee for the payment of previous loans the balance, together with the revenues arising from the increased duties of 5 per cent. ad valorem on Imports and also the additional revenues derived from the taxation of Imports, hitherto duty free, calculated at 5 per cent. ad valorem with the exception of rice, cereals, flour, gold and silver money.

(2) All import revenues collected by the usual native customs at the various treaty ports must be turned over to the management of the Maritime customs.

(3) After deducting such revenues from salt used to guarantee previous foreign loans the balance shall also be given over to the payment of the Indemnity.

Although the various Powers have consented to the increase of the tariff to 5 per cent. ad valorem there are two conditions to be observed:—

(1) All imports now being valued duties on any goods that can at once come into this new category may be speedily collected; the valuation on imports must be calculated on a basis of averaging the changes in the value of goods within the last three years. Goods that have not changed in value within the said previous three years, duties thereon may be collected on the new basis in the usual way.

(2) The two rivers Peiho and Huangpu must be conserved in order to make them suitable for navigation and the Chinese Government should assist in this work of conservation by devoting a portion of the new increased revenues to said purpose. Work shall begin two months after the signing of these presents.

ARTICLE VII.

The Government of China consents to the granting of an area of ground for the special and independent use of the legations of the various Powers. No Chinese subjects shall be permitted to reside within said area. Steps also may be taken for the defence of the said area by the said legations. The map depicting said area apportioned to the legations is contained in the document of the 16th January, 1901, in which it is also stated that the Chinese Government consents to the independent liberty of action of the various Powers and the retention of guards for their legations.

ARTICLE VIII.

The Chinese Government consents to the razing to the ground of the Taku forts and all forts impeding free progress from Peking to the sea coast. Steps are now being taken for said purpose.

ARTICLE IX.

With regard to the consent of the Chinese Government mentioned in the document of the 16th January, 1901, granting liberty of action to the various Powers to retain troops at various points to protect free progress between Peking and the sea coast, the following points have been selected for the purpose, namely Huangts'un, Langfang, Yangts'un, Tientsin, Chienliangch'eng, Tangku, Lutai, Tangshan, Lanchow, Ch'anglihsien, Chwangtao, and Shanhaikuan.

ARTICLE X.

The Chinese Government consents to the promulgation of Imperial edicts to be posted for the space of two years in the various prefectures, sub-prefectures, departments and districts on the following subject:—

(1) To post the Imperial edict of the 1st of February, 1901, forbidding under pain of decapitation all societies, as well as the entering of anyone into such societies which have for their object hatred and enmity against foreign countries.

(2) An Imperial edict issued on a certain day this year clearly setting forth how the guilty officials are to be punished.

(3) An Imperial edict on a certain date this year ordering the stoppage of all military and literary examinations, in the Cities and towns where foreign subjects were murdered or cruelly treated.

(4) The posting of the Imperial edict of the 1st of February, 1901, ordering the high provincial authorities and local official everywhere to put an immediate stop to all riots or attacks on subjects of foreign Powers and that any failure to do so will be visited with cashiering and dismissal from the public service for ever of the guilty officials concerned. The above edicts are already being gradually posted throughout the Empire.

ARTICLE XI.

The Chinese Government consents to free commerce and navigation in the country. This matter will be discussed later on. In the 6th Article of this protocol, concerning Indemnity, there is a clause stating that the Chinese government shall assist in making good the conservation of the Peiho and Huang rivers:—

(1) Steps concerning the conservation of the Peiho had already been discussed with Chinese officials before. Now after the return of Tientsin to China the

Chinese government may appoint an official to join the Board and to pay Haikuan Tls. 60,000 per annum towards the said object.

(2) The expenses for the Conservation of the Huangpu as estimated, in advance, by the River Conservation Board, constituted by official permission, for the next 20 years will about H.K. Tls. 480,000 per annum, half to be paid by the Chinese Government and one-half by the countries concerned in the matter. The details of this matter are contained in an annexed document.

ARTICLE XII.

An Imperial edict of the 21st July, 1901, ordering the changing of the Tsungli Yamén into the Wai-wu-pu has been received, and agreement entered into as to the ceremonies to be observed when Foreign Ministers are received in audience by the Throne.

Contained in annexed paper; in future all official correspondence between the Foreign Ministers and the Chinese Government shall be in the French language.

CORRESPONDENCE.

MORMONISM.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I read in last evening's issue of the *Herald* the following quotation from your paper:

"As for the accusation of fanaticism and the *Herald's* foolish attempt to demonstrate that if a man refuses to give accommodation to a Mormon mission, he ought to show similar exclusiveness towards every one differing from his own particular form of religious belief, the whole argument is so flagrantly illogical as to be absolutely dishonest. Whatever may be said for the industry and sincerity of the Mormons, there is no gainsaying the fact that many of them practice polygamy and are consequently leading a life which shocks the moral susceptibilities of 999 Christians out of every thousand. No man who controls a hotel or a lodging house would be acting properly towards his ordinary guests if he gave accommodation to Mormons."

Regarding the Staniland incident, I will say nothing in answer to your charge that the *Herald* is "so flagrantly illogical as to be absolutely dishonest." The Editor of the *Herald* seems to be fully able to take care of himself while discussing the question with your paper, as to whether Mr. Staniland is or is not a "lodging house keeper of correct opinions."

Mr. Staniland is without doubt one of the 999 whom you are anxious to protect, and to whom you refer as receiving a "shock" to their "moral susceptibilities" because of the lives which myself and associates in the Church of Jesus Christ of Latter-day Saints are living.

It seems to me you have gone out of your way in defending Mr. Staniland to throw mud at my people. What your reason for the stand you have taken on the Mormon question is, I am not able to say, unless it be that the current which has "shocked" him and the remaining 998 has also reached you.

When you intimate that it is dangerous for a Mormon to be admitted into the home of the most respectable person on earth you are guilty of showing your ignorance of our people, and the record for honest and virtue which they have made. The Mormons are the most virtuous people on the face of the earth. In the early days in Utah when there were "999" Mormons to one non-Mormon there was not a brothel in any of our cities. We have always been honest enough to be true to our wives and leave other men's wives and daughters alone.

I suppose, in your opinion, I owe an apology to the Managers of the Grand Hotel of this city, the Metropole and Imperial of Tokyo for not telling them that I was a Mormon, so that the Managers of each of these hotels could have had an opportunity to be "acting properly towards their ordinary guests" by refusing me, a Mormon, accommodations.

The last sentence in your article is a libel on the people whom I have the honor to represent, and one that I am not willing to pass by without an answer. In 1876 there were thirteen counties in Utah without saloon, brewery, gambling house, brothel or beggar, and the population was exclusively "Mormon."

"By their fruits ye shall know them. Do men gather grapes from thorns or figs from thistles? Can an impure fountain send forth pure water?"—Jesus.

Bishop D. S. Tuttle—for years an Episcopal clergyman in Salt Lake City, but now of St. Louis, Mo.—in a lecture on "Mormonism," published in the *New York Sun*, November, 1877, held these views:

"We of the east are accustomed to look upon the Mormons as either a licentious, arrogant or rebellious mob bent only on defying the United States Government and deriding the faith of the Christians. This is not so. I know them to be honest, faithful, prayerful workers, and earnest in their faith that heaven will bless the Church of Latter-day Saints."

Elder Miles Grant, the Adventist, and editor of *The World's Crisis*, says:

"After a careful observation for some days, we came to the settled conclusion that there is less licentiousness in Salt Lake City than in any other one of the same size in the United States; and were we to bring up a family of children in these last days of wickedness, we should have less fears of their moral corruption, were they in that city than in any other. Swearing, drinking, gambling, idleness and licentiousness have made but little headway there, when compared with other places of equal size."

United States Prosecuting Attorney Dickson of Utah (a non-Mormon):

"It was a matter of history that the Mormons did not cohabit together, in the sense as used by the other side, without a form of marriage, and it was alone this form of marriage and the practice under it, and not sexual sins, that Congress was legislating against. They knew that those sins are not upheld in Utah, but are condemned by the Mormons and deplored by the Gentiles."

General Thomas L. Kane, of Pennsylvania, says: "I have given you in terms the opinion my four years' experience has enabled me to form of the Mormons, preferring to force you to deduce it for yourselves from the facts. But I will add that I have not heard a single charge made against them as a community—against their habitual purity of life, their willing integrity, their toleration of religious differences of opinion, their regard for the laws, their devotion to the constitutional government under which we live—that I do not, from my own observation, or upon the testimony of others, know to be unfounded."

We teach that next to the shedding of blood is the crime of sexual impurity, and in no place on earth is the virtue of woman held so sacred as in Utah.

We are here to preach and practice purity, and to obey, honour and sustain the laws of this Nation.

The above evidence from non-Mormons gives conclusive proof that our people are living in accord with the thirteenth Article of their Faith which reads: We believe in being honest, true, chaste, benevolent, virtuous, and in doing good to all men; indeed we may say that we follow the admonition of Paul. We believe all things, we hope all things, we have endured many things, and hope to be able to endure all things. If there is anything virtuous, lovely, or of good report or praiseworthy, we seek after these things."

Respectfully, HEBER J. GRANT.
Yokohama, August 30th, 1901.

BURGLARIES.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—With reference to the two burglaries reported in your columns during the last day or two, in which reports it is stated that fire-arms were used by the householder, in one case resulting in a wounded eye and mouth, in the other in death from a Murata rifle bullet from behind, I, and indeed most foreigners, would esteem it a great favour if you will publish the results of the inquiries which have been or will be held. The question is what punishment, if any in the first case, will be meted out to the brave defenders of their home?

I do not write in a spirit of wanton curiosity. My house has been subject to untimely visits by burglars no less than five times since the New Year. In the first instance nothing of importance was taken, no disturbance was made. The next visit frightened the two amahs almost out of their lives; they were threatened with a big knife and were forced to hand out all the money they possessed, some twenty yen. They were too frightened to rouse me until the robber had made good his escape some hours.

After this, the police being unable to trace the thief, I designed a simple electrical alarm to notify any unauthorised entrance to my compound. Some month or two ago the bell notified me that a burglar had entered the compound over the gate. I rose and opened fire on the place where I supposed the man to be, with my Mauser, with the result that there was a hurried scuffling and then a thud as the man dropped over the other side of the gate. I let fly again without doing damage. It was a very dark night.

We have had two further visits since that time and have driven the robbers away by means of the Mauser. Now Sir, I am getting tired of attempted burglaries! I work hard during the day and expect to sleep comfortably at night. What will be the legal consequences if I drill one or more holes in my next nocturnal visitors' hides? Have I a right to shoot a man who enters my compound with presumed felonious intent? If so, can I shoot him as he turns to fly? I don't want to kill, but I do want to damage a little to prevent tiresome repetition. At the same time I don't want to go to a Japanese gaol for months for merely shooting a burglar in the legs.

If the result of the inquiries on the two cases

mentioned above are favourable to the householder, can foreigners rely on the precedent this created?

Please excuse the, perhaps unnecessary length of this letter, but I wish to make quite clear the circumstances of the case, especially the point of intrusion to the compound and not into the house. Am I to wait until the man effects an entry and has a good chance of bowling me over with a bullet as I am stalking him? I don't think that there is any question of fair-play in the matter. Burglars are not worthy of much consideration. I enclose my card.

I am, sir, yours, etc.

PERPLEXED.

Yokohama, 30th August, 1901.

FIFTY YEARS OF WORK FOR YOUNG MEN.

(By A CORRESPONDENT.)

In Boston, June 11-16, a convention was held the reports of which, during the past month, have filled many columns of the American metropolitan press, religious papers, and leading monthly magazines. Such an impression was made that the leading papers in other countries have given it much space, the *Fiji Shimpu* on two successive days devoting the editorial page to the significance of the convention and the movement it represents.

This gathering, the International Convention of the Young Men's Christian Associations of North America, was held on the occasion of the semi-centennial of the organization of the first Young Men's Christian Association in the United States, which occurred in Boston June, 1851, the suggestion coming from the London Association, which was organized six years previous. The delegates numbered two thousand from all the large cities and educational centres of the States and Canada, and including over eighty fraternal delegates from twenty-three foreign countries, represent every continent.

The convention was unique in that it was composed largely of the most prominent Christian laymen, young and old, of the communities represented, a considerable number bearing a national reputation in commercial, professional or political circles. Among the number were railroad presidents, presidents and professors of leading universities, generals, admirals, and multi-millionaires who have devoted their means to objects of philanthropy. Personal messages of congratulation were received from their Imperial Majesties King Edward of England, Emperor William of Germany, the King of Italy, and from the President of Switzerland, President McKinley, and Earl Roberts.

The universal adaptability and usefulness of the Young Men's Christian Association has been recognized because it has served interests as varied as the needs of young manhood. This Jubilee Convention revealed the Association's moral, social, educational and economic value in the world. It has been examined by the public, business men, corporations, rulers of nations, governments, and the Church, and endorsed as an agency of genuine and indispensable serviceableness to men in cities, towns, colleges, railroads, mines, army, navy, and to men in lands of Occident and Orient, ministering to the man and conserving his entire well-being.

The first great assemblage of the Jubilee marked the inter-denominational fellowship attained in Association work. At the praise service held on the afternoon of the first day in Trinity Church, the scene of Phillips Brook's labours, the opening sentences of Scripture were read by Bishop Mallalieu of the Methodist Episcopal Church; the prayer of confession and invocation were read by Pres. Wood, of Newton Theological Institute, of the Baptist Church; the Scripture was read by Pres. Capen of the American Board; the congregation joined in the Apostle's Creed read by Rev. F. W. Donald, D.D., rector of Trinity Church, and then knelt for the prayers read by Dr. Chas. Cuthbert Hall of the Presbyterian Church, who also delivered the sermon. In the processional marched the foreign delegates, including two priests of the Greek Church, who were fraternal delegates from Russia.

The fifty years' development of the different phases and departments of the work as reviewed indicates, as one speaker said, that no other organization has been so quick to recognize new elements in American life or so practical and helpful in developing plans to meet these new conditions. The business men have so appreciated this work that they have put large amounts into it, not as a charity but as a profitable business investment, until, besides rented quarters in many places, there are now in the cities of the United States and Canada 391 buildings, valued at \$23,000,000, thoroughly equipped for this many-sided work, and employing 1,522 trained men for its supervision.

The Convention addresses show that at the end of the first twenty-five years the work consisted principally in social parlours, reading rooms, libraries, assistance in finding employment, visiting the sick, gospel meetings, Bible class, etc. With the growing complexity of city life the agencies have been multiplied and

the scope broadened. First came the introduction of physical training, until now the buildings contain the best equipped gymnasiums in the country and have worked out the most successful scheme of body building and physical development applied to the creeds of the average young man. Last year 77,000 men and boys received instruction in the gymnasiums. One of the most scholarly addresses of the convention, that of Pres. G. Stanley Holl, of Clark University, on "The Contribution of the Association to the Physical Development of Young Men," commended it as laying the basis for a strenuous and controlled manhood.

During the past ten years the educational department of the Association has been developed until last year over 26,000 young men were enrolled in the day and night classes, pursuing commercial, mechanical and technical courses which contribute to the increase of their earning power and development of a higher type of citizenship. One of the notable features of the Convention was the mammoth educational exhibit, covering 45,000 square feet of floor space and containing samples from 330 Associations of the work of the students in commercial subjects, common English branches, music and languages, and industrial branches such as free-hand, architectural and mechanical drawing, physics, chemistry and electricity, plumbing, forging, carpentering, etc. Prominent educators at the convention pronounced this display the best educational exhibit ever made on the continent from any source by any schools. Certain addresses indicated a large field of influence before the city associations as yet but partly explored: "The Association and the City Problem," "Relation of the Association to Commercial Industrial Classes," "The Association a Bond between Capital and Labour."

One night was given to the Railroad Department. Along the great trunk lines are 161 Associations ministering exclusively to the needs of railroad men by means of reading rooms, libraries, game rooms, bath rooms, barber shops, restaurants, dormitories, emergency hospitals, classes of instruction in practical railroad, and direct religious agencies. Last year the railroad companies of North America appropriated \$180,000 to these Associations because they believe in the work. This department has been pronounced "the greatest object lesson of Christianity in industrial life yet given to the Church and the business world." The German and Russian Governments have both sent officials to investigate this work with a view to establishing something similar on their own lines. In America whole systems are adopting policies looking to erection of buildings at all their leading terminal and divisional points.

Prominence was given on the programme to the Student Young Men's Christian Association, the largest and most effective American intercollegiate organization of any kind, there being associations in 577 institutions of higher learning. The speakers on College Night were Pres. Patton of Princeton, Pres. Northrop of the University of Minnesota, and Pres. Booker T. Washington of Tuskegee Institute. The following from Pres. Patton is typical of their thought:—"The first duty of the University is the intellectual development of its students, but its duty is also to make good men and good citizens. Good citizens cannot be made without religion, and religion must enter largely into university life. The Young Men's Christian Association must take hold of the student body, it is the most potent agency for presenting the gospel so as to secure the moral and spiritual uplift of the undergraduate."

The most enthusiastic and demonstrative session was the night when Army and Navy officers testified to the value of the Army and Navy Department of the Association and appealed for its further extension. The speakers were Maj.-Gen. Joseph Wheeler, Admirals Watson and Higginson, Captains A. V. Wadhams and R. P. Hobson, the latter the hero of the *Merrimac*. The climax of enthusiasm was marked when Miss Helen M. Gould, who recently gave the \$150,000 building to the Association at the Brooklyn Navy Yard was presented. Last year 39,000 visits were made by sailors of the American Navy to this one building. When war burst upon the United States and 300,000 young men left home for the perils of camp and battlefield the International Committee added a new department to its already heavy work, and "wherever soldiers marched, suffered, battled and died, the secretaries went with club houses, canvas and every possible ministrations, material or spiritual, to cheer, protect and save them." At the request of enlisted men, officers and the U.S. Government this is to be a permanent branch of the Association.

Other phases of work, for boys, for Negro and Indian young men, and for the tens of millions of young men in non-Christian lands were presented. At the great closing meeting on Sunday night, after a masterful presentation by Mr. Jno. R. Mott, of the claims of young men in the Orient, \$15,000 was pledged within a few minutes to send secretaries to respond to the calls for men to organize this work.

The relation of the association to the Church was

well stated in addresses by Pres. W. H. P. Faunce of Brown University, and Dr. F. E. Clark, president of the Society of Christian Endeavor. Dr. Clark said: "The Young Men's Christian Association is one of the most vigorous, aggressive and stalwart of the children of the Church. The Association, without disrupting the Church or forming a new denomination in this over-denominationalized age, has set young men at work for young men. The Association has proved itself most valuable because of the emphasis it has put on the three-fold development of the whole man, body, mind and spirit. It was time for such a demonstration, and who better than the young men of the churches could have made it?"

The religious and spiritual were emphasized throughout the Convention in addresses by Christian leaders on such subjects as, "The Word of God and the Daily Life of Young Men;" "A Right Life Necessary to Bible Knowledge;" "Influence of the Holy Spirit Indispensable;" closing with the gem address of the programme by Rob't. E. Speare on "Need of an overwhelming Sense of Christ in Our Work." Sunday afternoon witnessed the rare spectacle of 4,500 men at the Convention gospel meeting. After a plain, straight gospel talk cards were signed by 442 men signifying their intention to begin a Christian life.

The semi-centennial celebration of the founding of the first Young Men's Christian Association in Japan is interesting to contemplate. The first decade of the work gives signs of promise. There are 39 student associations embracing not only all the mission schools, but all the Government Higher Schools, the two Imperial Universities, the leading private universities, and a few professional schools. The Tokyo City Association is demonstrating what is possible with a well equipped building in effectively touching the life of young men in commercial and professional life. Other cities are making beginnings in this important work. There was recently organized a City Young Men's Christian Association of Japan, with a competent Central Committee, the purpose of which is to give systematic and comprehensive supervision by cultivating the field for this work among the 6,000,000 young men of Japan, particularly in the forty-five cities of 40,000 population and over.

SOME POINTS OF CONTACT WITH, AND OPPOSITION TO CHRISTIANITY IN JAPANESE CHARACTER.*

AN ADDRESS DELIVERED BY THE REV. J. HARADA AT THE ANNUAL MEETING OF THE JAPAN MISSION OF THE A.B.C.F.M. TRANSLATED BY THE REQUEST OF THE MISSION, BY GEO. E. ALBRECHT.

While it is true that human nature everywhere is essentially the same, yet, looked at from another standpoint, it is certainly true that Greeks and Jews, for example, are not in all things alike. We speak of national differences, since each nation has its peculiar characteristics, which are manifest, first, in external appearance, then in different customs and practices, in literature and institutions, and so forth. Thus it is of the greatest importance for preachers and teachers of the Gospel, who intend to be "made all things to all men," that they should study the characteristics of the particular people among whom they are working.

If I were to state the chief characteristics of the Japanese people, looking at them from the ethical side, I would say that there are especially four points, which demand our attention. Without due appreciation of these, we can not understand the Japanese.

First "*Giri*," the Sense of Ought. *Giri* is a term difficult of rendering into foreign languages. "Reasonable," "right," "justice," "ought," or the German *sollen*, are all inadequate translations. In most cases *giri* conflicts with *ninjo* (human affections, natural feelings). What moves the Japanese most in novels, or in theatrical plays, are those scenes in which the conflict between *giri* and *ninjo* is represented. "If you obey the dictates of the former, you can not obey the latter; if you obey the latter, you can not obey the former; standing between *giri* and *nasake* (between duty and natural affection), there is nothing left but to weep." A passage like this moves the Japanese to tears. The scene, in which Shigemori, of the Taira clan, remonstrates with his father upon his plan of violence against the emperor, is one of the finest passages in Japanese history: "If I am loyal, I can not be filial; if I am filial, I can not be loyal; here is my sore dilemma." This is an example of the conflict between *giri* and *ninjo*.

But, as, according to the Japanese saying, "the most sacred relations must give way before great duties," so, when duty demands, the relation between

father and son ceases to be; everything must be sacrificed on the altar of duty. One's own interests, or welfare can not be taken into consideration. *Giri* includes the spirit of chivalry and of self-sacrifice. A man who does not acknowledge these principles is despised as a man devoid of the sense of *giri*.

"Full well I knew this course must end in death: It was Yamato-spirit urged me on To dare whate'er betide."*

This verse we may well consider as expressing the sense of *giri* applied to patriotism.

Such words as these of the Apostle Paul: "For I wish that myself were accursed from Christ for my brethren, my kinsmen according to the flesh," while hard to understand on utilitarian principles, are readily understood from the standpoint of *giri*. Words also like these of Christ: "He that loveth father or mother more than me is not worthy of me; and he that loveth son or daughter more than me is not worthy of me. And he that taketh not his cross, and followeth after me, is not worthy of me," when considered in the light of the principle I have stated before, that "the most sacred relations must give way before great duties," are wholly natural.

The life of Christ is an example of the victory of *giri* over *ninjo*. The temptations of Satan were all addressed to the natural feelings of Christ as a man; but Christ, discerning clearly what duty demanded, overcome them. Again, when Christ prayed: "O my Father, if it be possible, let this cup pass from me," He gave expression to his natural feelings; but when He added "nevertheless not as I will, but as Thou wilt," He conquered them by His sense of duty. This is an explanation, which, I think, is readily understood by the Japanese. Such theological statements as that the cross of Christ is an atonement, offered up for the appeasing of God's wrath, find very reluctant acceptance from the Japanese. But if we explain the cross from the standpoint of self-sacrifice, it presents no special difficulty to them. There is not a Japanese whose admiration is not aroused when hearing of Sakuragi Sôgorô of Shimosa, who took his life in his hands and went to the cross for the sake of his neighbours. They admire his loyalty to his sense of duty. Looked at from this standpoint, though the cross may be a "stumbling-block to Jews and foolishness to Greeks," it is not so to the Japanese.

Second, *Hon*, the Sense of Gratitude.

I remember being frequently taught as a child, that to be ungrateful is to be brutish. Even among animals the dog remembers a kindness, while the cat is considered with less favour, because it has little or no gratitude. Buddhism teaches "the four blessings," viz. the blessings of parents, of one's country, of the people at large, of Buddha; to be thankful for these is the duty of man. To show gratitude for blessings received is a teaching common to Shintoism, Buddhism and Confucianism. We have it impressed upon us from childhood on, that there is nothing so base as ingratitude.

One reason why the Japanese have opposed Christianity is, that they have mistakenly thought that it makes light of the favours and mercies which we receive from rulers and parents. If they would understand its real teachings regarding gratitude to God, they would gladly accept them. But to teach them, that, if they do not believe in God, they will receive punishment, while if they believe, they will be rewarded, has no influence whatever over them; nay rather it arouses in their minds strong opposition.

"If but my heart is in accord with truth,

Though suppliant hands I do not raise to heaven,

The gods will not refuse me their protection."

This will be the answer of a Japanese to such teaching. But if they are taught that the chief purpose of prayer is to express our gratitude to God, and that to walk in the way of righteousness is to requite the favours of heaven, there is not one who will fail to understand such teaching.

Fukuzawa Yukichi recently opposed severely Kaibara Ekken (1630-1714) on account of his teaching regarding woman. But while Fukuzawa's merit is great for diffusing the ideas of Western civilization during the Meiji era, that of Kaibara Ekken is not less for diffusing the moral ideas of Confucianism in a way easily comprehended. And books like Kaibara's "Ten Precepts," or "The Great Teaching of Women" were esteemed by the people of the pre-Meiji era as their Bible. In the writings of Kaibara we find the following passage:—"Man receives his life from heaven and earth; thus he secures from them unlimited blessings, as from father and mother; not only is he born through the mercy of heaven and earth, but his whole life is sustained by them, even as after his birth through his parents he is nourished by them, and thus grows up to manhood; so also, after having been born into this world, he is constantly to think how to serve heaven and earth, and how to requite their favours; this is to serve them with a filial spirit." There is scarcely a single Japanese, I think, who does not agree with

* The Japanese text of this address appeared in the *Tokyo Mainichi Shimbun* of August 23rd.

* Translation taken from "Bushido" by Dr. Nitobe.

these words. Of course, by 'heaven and earth' Kaibara means the Supreme Being, who is the ruler of them. That he had no clear idea of a heavenly Father is, of course, true. But his idea is, that if man derives his life from the Supreme Being, it is but natural that he should serve Him. It is worthy of our attention that these words of the Confucian teacher of two hundred years ago closely resemble those of the Bible.

Third, *Renkatsu no Sei*, the Spirit of Disinterestedness.

Renkatsu is a term expressing the opposite of "covetousness," "greed," "love of money." Of course, every nation values this spirit, but it is not too much to say that there is no nation, where it is held in as high esteem as by the Japanese. We have the saying:—"The true gentleman does not think about his own advantage"; and this spirit formerly went to the extreme of considering the mere handling of money degrading. In the age of feudalism, for example, the saying was, that "even though the warrior has nothing to eat, he uses a long toothpick;"* and so, even when hungry, he was ashamed in any way to act as if soliciting a favour. And this spirit existed not only among the warrior-class, but among all classes, down to the common day labourer. Here lies the great difference between the Japanese and the Chinese. A Chinese does not mind getting his ears boxed for the sake of making an extra penny or two; but a Japanese will box the other man's ears, though he loses money through it.

Through ignorance of this characteristic foreigners frequently err in their treatment of the Japanese. Japanese engaged in evangelistic, or educational work, especially dislike to speak of their salaries. To be asked: "How much salary do you have?" is considered by such a man as an insult. Among Japanese evangelists there are not a few who have used up their property for the spread of Christianity, and who now are satisfied with a small and insufficient income. It is in consequence of this spirit of disinterestedness that to-day there are many, who, in accordance with their principle of self-support, endure hardships, and are content to remain poor. I think this is because of the influence of *bushido*.

When at the time of the restoration, before the complete abolition of the feudal system, three hundred *daimyō* passed over their ancestral estates to the Imperial Government without reluctance, it was indeed an unprecedented act; it was an event unparalleled in the history of the world. Anyone not understanding the spirit of the Japanese can scarcely appreciate such an incident.

Some years ago I went with a friend from America to see Count Okuma's garden. We were shown around most politely by a young man attached to the count's house. As we were about to leave, my friend handed to the young man a small amount of money without first wrapping it in paper.† The young man considered this very strange, while I felt sorry for him. I explained to him, that, as it was customary in other countries to give a fee to guides, my friend, not knowing the customs of this country, had acted accordingly. I, therefore, apologised for him, and took back the money. When I explained the matter to my friend, he, in his turn, thought it exceedingly strange. It was a point where Eastern and Western ideas differ.

It is to be greatly regretted, that, together with ideas of Western civilization, the "almighty-dollar" idea is spreading more and more in our land. But the conviction, that, while "a man lives but one generation, his name lives unto all generations," is still the great motive ruling the Japanese. Several years ago a whole family of the *samurai* class in Kumamoto died of hunger. They considered it unbecoming and cowardly to ask for aid, and so they lay down and died together. But in the alcove of their room, it is said, stood intact a box with a splendid set of armour.

No doubt this high sense of honor, if misused, may degenerate into hypocrisy; but the *samurai's* sense of honour was in itself certainly beautiful. If developed in the right direction, its possessor, we may well believe, is not far removed from him who is "poor in spirit who is pure in heart," who is "persecuted for righteousness' sake."

Fourth, *Chūko*, the Virtue of Loyalty and of Filial Piety.

That this has exerted a very great influence in Japanese thought is too well known to need demonstration anew. To-day, it is true, these two ideas are apt to be degraded by mere outward observance, and not a few evil practices result therefrom. This is in consequence of carrying to an extreme the esteem in which they are held, and of applying them mistakenly. But certainly loyalty and filial piety, as such, are not wrong. To-day yet they are the greatest inspiration to millions of Japanese. They are closely related to the spirit of gratitude of which I have spoken before.

* i.e. Even in poverty the warrior does not forget his dignity.

† This refers to the polite custom in Japan of wrapping a fee, or any gift, in paper, before presenting it.

"Even though the master fall short of his duties as master, the servant must not fall short of his duty as servant; even though parents fall short of their duties as parents, the child must not fall short in his." Loyalty and filial piety demand from us nothing short of complete surrender of ourselves to our master, or parents. It is the spirit of not living unto one's self, but unto our superiors. The *samurai* considered it a matter of course that he should fall fighting in front of his lord's horse. That his life was not his own was his firm conviction.

As an illustration of the former education of a *samurai*, let me give you an account, which I take from the *Taiyō*, Vol. 4, No. 1. The people of Kagoshima were accustomed to foster among themselves a spirit of utter disregard of death. When a boy had grown to the age of seven, or eight, his father, or elder brother, or any one standing in place of them, would ask him, without giving any further reason: "Are you ready to die for your lord and for your father?" The boy, then, would reply in the same frank manner, as if making a sacred pledge: "I am ready to die; I am ready to die!" But even among the bold and daring Satsuma *samurai* were some weak-spirited boys, who did not reply thus promptly. Their father, or brother then would expostulate with them, and even beat them until they gave their pledge. Looked at in the light of to-day this was a barbarous custom; but it is evident, that there was something in the education of a *samurai*, that was closely akin to a religious spirit.

The superiority of the Japanese soldiers in the war with China is not explained merely by the fact that they had superior arms, and were more thoroughly disciplined; every one, acquainted with the facts, will say, that it was because of the spirit of loyalty in their breasts.

We may well say that the spirit of the ancient *bushi* in his relation to his lord was essentially the same as that expressed in the apostle's words: "For none of us liveth to himself, and no man dieth to himself; for whether we live, we live unto the Lord; and whether we die, we die unto the Lord, whether we live, therefore, or die, we are the Lord's." The essential spirit can not differ; there can only be a higher, or lower, a nobler, or a less noble object of attachment. If this spirit is developed by the spirit of Christianity, it will become towards God the spirit of loyalty and of filial devotion, and towards man that spirit of benevolence, which gives itself for the welfare of mankind. Jesus Christ said: "I am not come to destroy, but to fulfill." Christianity, I believe, is to develop such virtues, is to enable them, is to lead them on to perfection.

According to what I have said so far, we may conclude that in Japanese character, looked at on its ethical side, there are not only no points of opposition to Christianity, but many points of close contact. But if we ask again, in what respects do the Japanese offer opposition to the Gospel, we will have to reply that the points of opposition are found along intellectual and philosophical lines. Chief among these are the following three, of which I will speak but briefly:—

First, the Japanese are inclined to Positivism, and consequently to Anti-Supernaturalism.

Speaking in a general way, Japanese nature is not fertile soil for pure philosophy. It has produced many men of the type of Aristotle, or Franklin, but scarcely any of that of Plato, or Kant, or Hegel. Buddhism has flourished in Japan, but the most eminent men among Buddhist believers, men like Nichiren, Kōbō, Shinran, have in every case been eminent for their qualities of religious statesmanship. The sects which these men founded have spread widely among the Japanese, while more erudite and mystical sects, like the *Tendai*, or *Kyōon* sects, have never found a large following. And a world-view, like that influenced by Confucianism, which says: we do not know what life is, how can we know what death is, has the greatest influence among the middle and upper classes. In Confucianism itself also, the *Shūshi*-school, which keeps closer to realities, has had by far greater influence than the more philosophically inclined *Yüei*-school. That in the religious ideas and customs of former ages much superstition intermingled, is, of course, true; there was much talk about mysterious supernatural beings and strange powers; but together with the incoming of Western scientific thought this has readily and entirely disappeared. This, we must say, is in consequence of the positivistic tendencies of Japanese character.

It is, therefore, exceedingly difficult to explain to the Japanese the supernatural element in Christianity. The miracles are for them not a proof in favour of the Gospel, but rather a stumbling block.

Secondly, the Japanese are Pantheists. That Buddhism is pantheistic, is a well-known fact. Shintoism also is pantheistic. The Japanese are deficient in the sense of personality. They speak about "heaven," or "the way," or "truth"; but they do not possess the conception of a personal Heavenly Father. This is an entirely new thought.

And again, Japanese thought is greatly deficient

in the Christian conceptions of righteousness and sin; rather the principle has become prevalent that, for the sake of accomplishing one's purpose, it is proper to use cunning expedients, or pious frauds. And the failure of men and women to observe strict chastity in their intercourse with each other, this great weakness of the Japanese people, has its origin in this same deficiency. The criticism of Canon Barnett a few years ago, that there is no fifty-first Psalm in all Japanese literature, is certainly correct.

That such a pantheistic tendency is of advantage in the explanation of some Christian doctrines, is no doubt true; but at the same time it presents not a few obstacles. If we wish to establish Christian theism both firmly and widely, we must begin at the very foundation.

Third, as a result of these positivistic and pantheistic tendencies Fatalism has a powerful influence over the Japanese.

This is the reason why at times the daring courage and recklessness of the Japanese cool so quickly. The Japanese, on the whole, dislike an excess that tends to offend good taste in anything; for example, in the colouring of any object of art, they do not like loud colours; in their food they prefer articles of plain and delicate flavour.

"Isles of blest Japan!

Should your Yamato spirit

Strangers seek to scan,

Say, scented morn's sun-lit air,

Blows the cherry wild and fair!"*

While this spirit is certainly beautiful, it has its defects. Thus, the Japanese readily gives up and says *shikata ga nai* (there is no help for it); or when fighting against some enemy, he again very quickly makes peace. To fight to the bitter end, even in the cause of righteousness, is not his strong characteristic. Therefore he can willingly sacrifice himself; but to take care of himself, and be faithful until his time of death comes, may more, to cherish the noble hope of eternal life, this spirit, I believe, he can attain unto only through the influence of Christianity.

In the above presentation of Japanese character I have not tried to speak in detail of the causes that have shaped it; but that among these we have to reckon the influence exerted by Shintoism, Buddhism and Confucianism is too well-known to need special mention. The social institutions of Japan have also greatly influenced it; and I believe that the natural characteristics and the scenery of our country have likewise contributed much.

In short, Japanese character being as I have briefly outlined it, we can say that on its ethical side it offers points of contact to Christianity, and even welcomes it; while, on the other hand, on its intellectual side it offers not a few obstacles. For my part, I have no doubt that the Gospel of Christ is the "power of God unto the salvation" of the Japanese, that, "even as among other Gentiles" it will "have some fruit" among the Japanese also. But I do not think that the fruit will be exactly the same as that produced among other nations; yes, I believe that it ought not to be the same. Unfortunately the sense of duty, of disinterestedness, and the other noble virtues, of which I have spoken, have been greatly impaired by contact with materialistic civilisation. The Gospel of Christ is the power to revive them and breathe into them new life. To develop the ancient, ethical conceptions towards still nobler and loftier ideals, and thus to perfect them; yes, even more, to show to the Japanese the true relation between God and His world; to make them acquainted with a Heavenly Father; to strengthen in them the sense of personality; to arouse in them a deeper sense of responsibility; to build up strong, noble characters, this, I believe, is the message which Christianity has for Japan.

THE LOSS OF THE "SOBRAON."

FINDING OF THE COURT.

The Times prints the following finding, which was delivered in London in the inquiry held into the stranding of the P. & O. steamer *Sobraon* on Tung Yung Island on April 24, 1901:—

The *Sobraon* was 450ft. long, 45.2ft. broad, depth 31.65ft., schooner rigged, and fitted with triple expansion engines of 1,700 h.p. She carried 11 lifeboats, one steam launch, 387 lifebelts, 14 lifebuoys, and three compasses. She left Shanghai for London April 23rd with 70 passengers, a crew of 210 hands, and about 800 tons of general cargo. At 5.30 p.m. she passed Finger Rock, which was distant about six miles to the north-west. The course set was expected to take the *Sobraon* past the Tung Yung Island at a distance of ten miles to the east. At 10.30 p.m. she was reckoned to be about 80 miles from Tung Yung. The master went below, giving orders to the third officer to take castings at midnight, at 2 o'clock, and at 4 o'clock, and to report to him if necessary. At midnight the second officer went in charge; a cast of

* Translation taken from Nitobe's "Bushido."

the lead was taken, and showed 34 fathoms with a mud bottom. She was then reckoned to be about 45 miles distant from Tung Yung. At 2 a.m. on the morning of April 24th another cast of the lead was taken showing 28 fathoms with a mud bottom. The night was dark and clear, and the second officer reported to the master that the vessel was a mile to a mile and a half inside her course. At 18 minutes past 3 she went aground on the north-west corner of Tung Yung Island. The *Sobran* took a heavy list to starboard. During April 24th assistance was obtained, and all the passengers and the mails were landed. The vessel ultimately became a total loss.

The Court, in answer to the questions set by the Board of Trade, said that the vessel had three compasses, two being on the bridge, the standard and the steering compass, by which the vessel was steered and navigated, and one in the wheel-house aft. They were in good order and sufficient for the safe navigation of the vessel, and were last adjusted on April 3rd, 1900, by Mr. A. W. Baird, before leaving the Clyde, where the vessel was fitted up. The master ascertained the deviation of his compasses from time to time, the errors were correctly ascertained and entered in a deviation book, and the corrections were properly applied to the courses steered. The position of the vessels was assumed at 5.30 p.m. on April 23rd last by a bearing taken of Finger Rack which bore N. 59 W., distant six miles, a previous bearing of Hieshan lighthouse having been taken at 2 o'clock which gave N. 79 W., 5½ miles distant. At 8 p.m. the position was merely ascertained by dead reckoning from the position given by the two bearings at 3 and 5.30 and from the course since steered. The position of the vessel was then, at 8 p.m., estimated to be 27° 49' north latitude, 21° 38' east longitude. A safe and proper course was set at 5.30 p.m. if the vessel was in the position assumed by the two previous bearings. No allowance was made for tide and currents. Proper measures were taken at midnight and at 2 a.m. to ascertain the position of the vessel by a cast of the lead on each occasion. The cast at 2 a.m. placed the vessel about 1½ mile inside the position the master intended her to be in at that time, which showed that the course set was not made good. This was reported to the master, who had been below since 10.30 p.m., but as he had set a course to pass ten miles outside Tung Yung he thought it unnecessary to alter the course or come on deck. In the circumstances there was no necessity for the master to have been on deck at 2 a.m., but, bearing in mind the fact that the cast of the lead had placed the vessel 1½ miles inside the course he had intended to steer, it would have been better for him to have come on deck or given orders to haul her further out. The Court thought it was desirable the lead should have been used more frequently after 2 a.m. considering the scarcity of soundings on the chart. The Court was not however, prepared to say that the more frequent use of the lead would have given sufficient information to avert the casualty. From the evidence of the principal witnesses the weather was dark and cloudy, but not foggy, and lights could be seen two to five miles off. The fog only became apparent when the vessel struck. It was then too late to reduce the speed, and the Court saw no reason why the speed should have been reduced earlier. It was stated that a good and proper look-out was kept. The cause of the casualty was that the course set by the master when off Hieshan to pass ten miles eastward of Tung Yung was not made good and that Tung Yung being hidden by a fog and the night dark, that island was not seen when the vessel struck. There was some ground for supposing that there was an abnormal current setting towards the westward, which seemed more probable in consequence of the change in the monsoons at that time. The Court was not prepared to say that the vessel was not navigated with proper and seamanlike care. The loss was not caused by the wrongful act or default of the master and officers, or of any of them.

TELEGRAMS.

(REUTER'S SERVICE TO THE "JAPAN MAIL.")

PRINCE CHUN AND THE KAISER.

Shanghai, August 30.

Prince Chun's delay is causing inconvenience to the Kaiser, who is unable to go to Kiel. The Kaiser will possibly be compelled to modify his demands.

SIR ALFRED GASELEE.

Sir Alfred Gaselee has arrived at Vancouver.

NAVAL RATIONS.

The committee on Naval Rations has re-

commended modifications entailing an additional outlay of £187,000.

THE CHINESE EMBASSY TO GERMANY.

A later telegram says that Prince Chun has recovered from his recent indisposition but shows no signs of proceeding. He has sent several long dispatches to the Court at Hsian-fu. The retiring Chinese Ambassador has arrived at Basle. He left Berlin suddenly and unceremoniously without saying farewell to the Emperor.

FRANCE AND TURKEY.

Shanghai, August 31.

M. Constans, late Ambassador of France to the Sublime Porte, on being interviewed, said that he hoped for a favourable issue of the complications, and that he regarded the eventuality of hostilities with Turkey as out of the question.

NEW PACIFIC LINERS.

The Northern Pacific Railroad Co. is building two steamers for the Pacific trade. These steamers are to form the nucleus of a fleet intended to carry freight at half the ordinary rates.

PROBABLE RETIREMENT OF LORD SALISBURY.

The *Pull Mall Gazette* says that it is now pretty certain that Lord Salisbury will retire from office after King Edward's coronation.

(Note—The Marquess of Salisbury was born at Hatfield on the 3rd February, 1830. He entered Parliament in 1853 as member for Stamford and first took office as Secretary for India in 1866, while still Lord Robert Cecil. Succeeding his father in 1868, he remained out of office until 1874 when he again took charge of Indian Affairs. In 1878 he became Principal Secretary of State for Foreign Affairs, but it was not until 1885 that he was made Prime Minister, an office he held until 1892. After Lord Rosebery went out of office in 1895 he again took up the reins as Prime Minister and has continued at the head of affairs ever since.—Ed. J. M.)

GERMANY AND THE CHINESE ENVOY.

German papers state that the German Government has made representations to Prince Chun regarding the tone of the address which he will read, and the Kaiser also insists on a modified form of *kowtow* to his Majesty.

KOREAN MINISTER TO GERMANY.

The Kaiser has received the Korean Minister in audience.

THE THIBETAN MISSION TO RUSSIA.

Shanghai, September 1.

The *Times'* Moscow correspondent telegraphs that the departure of the Thibetan Mission from Russia is shrouded in mystery. It is believed that it is returning overland, escorted through Mongolia by a Russian force consisting largely of Intelligence Officers, though serving nominally in the ranks.

SOUTH AFRICA.

A train was blown up on the 31st of August south of Samansdaal, and 250 Boers immediately rushed up and fired the trucks. Vandeleur, of the Irish Guards, was killed. The other casualties are not reported.

KRUGER AND THE CZAR.

Dr. Leyds has failed to obtain an interview for Mr. Kruger on the occasion of the Czar's visit to France.

THE TRAIN AFFAIR.

Shanghai, Sept. 2.

Besides Vandeleur, 9 were killed and 15 wounded at the blowing up of the train.

PRINCE CHUN FIRM.

A telegram from Basle says that there is

no sign of a settlement of the Chinese Mission dispute. The Chinese declare that they would rather die than perform the humiliating *kow-tow* before the Kaiser.

FRANCE AND TURKEY.

Shanghai, Sept. 3.

The Turkish Ambassador has quitted Paris, but a telegram says that Turkey has solicited Germany's mediation.

VENEZUELA AND COLOMBIA.

Hostilities are imminent between Venezuela and Colombia. Nine thousand Venezuelan regulars are massed on the frontier ready to assist the Colombian revolutionists.

SOUTH AFRICA.

Herzog's and Lutegan's commandoes are said to have been driven back into the Orange Colony. Middelburg, Cradock, Graafreinet and Steynsburg are nearly clear of the enemy.

CHARGE OF TREASON.

Shanghai, Sept. 4.

Mr. Krause, former Governor of Johannesburg, who had resided in England for four months after swearing allegiance, has been arrested in London on a charge of supplying information to the enemy.

THE CHINESE MISSION TO GERMANY.

The Kaiser has waived the demand that the Chinese mission should *kowtow*, and also the procession through Berlin. His Majesty has consented to receive Prince Chun at Potsdam, the latter accompanied only by an interpreter. The Mission has accordingly left Basle in a special imperial saloon train with German officials. The public is surprised at the attempt to revive the obsolete *kowtow*.

THE CHARGE AGAINST KRAUSSE.

Later.

Krause has been charged with high treason and remanded for a week, bail being refused.

PRINCE CHUN.

Prince Chun has arrived at Potsdam.

BOER REPRISALS.

Shanghai, Sept. 5.

The Boer leaders in South Africa have issued orders to shoot colonials found under arms after Sept. 15th [the date on which Lord Kitchener's proclamation takes effect.]

GERMANY AND CHINA.

A semi-official statement explains that it would be impossible for Germany to insist that China should beg forgiveness, as that would imply that the Chinese Government had abetted the murder of Baron von Ketteler.

THE CHARGE OF TREASON.

The indictment of Krause is *en route* to England, where nobody is aware of the nature of the charge. The mails of certain suspects have been stopped and important correspondence seized.

THE RECEPTION OF PRINCE CHUN.

Later.

The Kaiser has received Prince Chun. His Majesty remained seated on the throne, and beckoned Prince Chun to approach. The Prince bowed thrice arriving and departing. He handed to the Emperor a letter of regret from the Emperor of China. The Kaiser made a stern speech. He said that he was willing to admit that the Emperor of China had held aloof from the crime committed, but that the guilt of his advisers was all the greater. He warned the Chinese Government that they could not obtain pardon merely by sending an expiatory mis-

sion, but by maintaining in future an attitude of conformity with the prescriptions of international law and of civilization.

(RECEIVED AT THE LEGATION OF FRANCE.)

THE TURKISH QUESTION.

Saigon, August 30.
M. Constans, on his arrival, had a long interview with M. Delcassé.

THE CZAR AND PARIS.

The Municipality of Paris have invited the Czar to visit the capital.

CZAR AND KAISER.

The Czar, in going to France, will pay a visit to the Emperor William and will be present at the naval manoeuvres at Dantzig.

THE CZAR.

Saigon, August 31.
Count Lamsdoff will accompany the Czar to France.

THE TURKISH QUESTION.

M. Constans, in an interview, declared that the conflict with Turkey will be promptly settled and that there is no fear of war. He denies that certain ambassadors contributed to the rupture.

THE CHINESE MISSION TO GERMANY.

Saigon, Sept. 5.
The Emperor William has received Prince Chun, who handed to His Majesty a letter of apology from the Emperor of China.

(RECEIVED IN TOKYO.)

THE PEACE PROTOCOL.

There is still no news of the signing of the Peace Protocol.

PLAGUE AT NEWCHWANG.

A telegram from the Japanese Consul at Newchwang, dated the 30th of August, announces that a case of plague has occurred in that place.

THE PROTOCOL.

The Chinese Court telegraphed on August 23rd to the Plenipotentiaries in Peking informing them that an Imperial Decree had been issued authorising the signature of the Protocol, but the Foreign Ministers desired to see the Decree before signing the Protocol, and as an interval of about ten days was required to get the Decree from Hsian it is probable the Protocol will not be signed for one or two days longer.

PRINCE CHUN'S MISSION.

An arrangement has been effected with regard to the reception of Prince Chun in Berlin, but the details are not yet public.

(TRANSLATED BY THE "NAGASAKI PRESS" FROM THE "VOSTOCHNY VESTNIK.")

DIVULGING STATE SECRETS.

London, August 15.
In the House of Commons Mr. Brodrick, Secretary of State for War, stated that an official belonging to the War Office had been dismissed for committing an indiscretion in divulging confidential matter.

KING EDWARD'S TITLE.

Lord Rosebery has made a suggestion that the title of King Edward VII. should be "King of all the British Trans-Oceanic Dominions," instead of "King of the British beyond the Seas," as primarily determined.

THE CHINESE QUESTION.

Peking, August 16.
The total amount of the Chinese indemnity, together with interest, will reach the enormous sum of one milliard taels. It is estimated that China will be entirely free from foreign debt in 1910, provided she does not involve herself in fresh obligations. As to the punishment of guilty parties insisted upon at first and the suspension of examinations, the foreign plenipotentiaries take it for granted that the promises of the Chinese Government to that effect will be made good.

The Chinese Government has protested against the heavy fortifications now being erected in the grounds of the British Embassy. China complains that these forts dominate the Imperial city and suggests that the armaments should be employed in guarding the railway line.

The *Times* correspondent in Peking states that the Russian Minister there has expressed an opinion that China cannot enter into any separate agreement with any of the Powers so long as the indemnity question remains unsettled, but as soon as the latter is settled, China will be free to act as she pleases. Russia at that juncture will renew her claims to the recent Russo-Manchurian treaty, hitherto opposed by the Powers, and will insist upon her right to deal with China alone.

WAR DISCUSSION IN PARLIAMENT.

London, August 21.
Sir William Harcourt, in the House of Commons, asked the Secretary for Colonial Affairs, Mr. J. Chamberlain, what was the present fighting strength of the enemy and how long hostilities would be likely to continue. Continuing, Sir William Harcourt said the policy of the Government was neither honest nor effective. The Government had no right, he said, to menace the Boers with exile, for by this means the enemy will only be further exasperated.

Mr. Chamberlain, in reply to Sir William Harcourt, stated that the Government has power, after the war is over, to expel anyone from South Africa. He further asserted that a line must be drawn between soldiers and bandits, and isolated groups of men acting on their own authority should be dealt with as bandits.

The rumour circulated to the effect that Lord Kitchener will leave South Africa for England on 2nd September has not been confirmed.

The Boer commandants are still holding their men under arms, hoping for foreign intervention.

Lord Kitchener's proclamation, it is generally believed, will either end the war or free the country of elements which never can be reconciled.

(FROM THE "N.-C. DAILY NEWS.")

NEWS FROM THE CAPITAL.

Hsianfu, 26th August.
The party from Taiyuanfu, consisting of Major Pereira, Dr. Smith, and Mr. Duncan, arrived safely at Hsianfu to-day (Monday).

THE COURTS DEPARTURE.

The Court expects to start on its return about the 16th of September.

RUSSIAN EARTH-HUNGER.

A report is current at Hsianfu that Outer Mongolia has been secured by Russia.

PEACE AT HAND.

Peking, August 28.
The Foreign Ministers at their meeting have approved the edict forbidding the importation of arms. Two other edicts are expected to-night, and the Protocol can then be signed.

A TRAGEDY AT SINGAPORE.

Singapore, August 29.
Mr. Jones, second officer of the steamer *Remora*, has been fatally stabbed by an Italian seaman whilst the vessel was alongside the wharf. The Italian refused to work, on which a row ensued; the Italian drew his sheath knife and stabbed Mr. Jones in the abdomen, and the wounded man died on his way to the hospital. The Italian was arrested.

THE MURDER IN THE HARBOUR.

Singapore, August 30.
The coroner's jury found the Italian who killed Mr. Jones guilty of culpable homicide; the prisoner, however, was charged before the magistrate to-day with murder, and the case was remanded until Monday.

(FROM THE "OSTASIATISCHE LLOYD.")

NEWS FROM THE NORTH.

Peking, August 24.
The Wai-wu-pu (Foreign Office) has extended to all open ports from the 1st of July past the facility as to the "Drawbacks," which the Governor-General of Nanking agreed to some time ago.

PRINCE CHUN.

Berlin, Aug. 28.
The report that Prince Chun has fallen ill when on the way to Germany, being therefore unable to proceed to Berlin, is utterly incorrect. Prince Chun is in absolutely good health. But he has received orders from Sianfu to wait for further instructions from the Chinese Government.

A GLOOMY FORECAST.

Mr. A. J. Wilson, a pessimist of pessimists, writing in the *Investors' Review* on June 29th, thus bewails the fate which is approaching the English investor:—

Slowly, but with the sureness of fate, stock markets are settling down towards that crisis of liquidation which is coming upon them as inevitably as the succession of seasons. Cheap money makes no difference, brings no relief; prices sink, and business becomes more and more scanty in a manner indicative of approaching affliction. In the circumstances it is useless to labour over this or that section of the market. They are all paralysed more or less, and business cannot revive in a genuine way at any point while we continue to throw good money after bad in South Africa.

South Africa dominates the whole position, and the demands of the war there are acting like a creeping paralysis, stealing over market after market, and rendering efforts to galvanise them into life impotent. We should in any event, sooner or later, have had a crisis of far-reaching consequences, because the nation has been living upon its capital in a thousand ways, wasting its means in chasing phantoms of wealth, not merely in the shape of bubble mining companies, but in joint-stock enterprises, of all descriptions. Dividends of old corporations also have been, in numberless instances, sustained by help of fresh issues of capital. Interest upon Indian and Colonial loans has never failed at the hour due through the same assistance, continually in one form or another administered. Our foreign commerce with many parts of the world has frequently been sustained by our money-lenders, and one day we were bound to reap as we had sown. What the South African expenditure has done is to hasten the date of this liquidation, and it is now approaching with swift and inevitable steps. It might have been slow, with pauses for recuperation; now it promises to be swift and devouring as the avalanche. Such being the case we can, until the end comes, only look for a continuance of the present shrivelling up of market quotations and the present scarcity of business, accompanied by an increase almost week by week of the uneasiness and dread found everywhere beneath the surface. Men go about their affairs as in a dream, fearing they know not what, but increasingly conscious that a something which might be disastrous overhangs the City. Sir Michael Hicks-Beach thought it becoming the other

day to gibe at the City's "pessimism," but he will know presently why it cannot be sanguine.

Allsopp stocks are dealt with elsewhere, and we need only note here that the price for the two classes of ordinary stock hardened this morning on the issue of the circular. What we should like to know is, who let the secrets of its contents out a fortnight or so ago, when the stock began to tumble? Doubtless the privileged people who then sold came in to-day to buy back and close their "bears," hence the hardening of the stock. The market wonders which company will be the next to confess its over-capitalisation and begin heaving the dead weight over-board. Is it any wonder, with such things lying around on every side, that business should be almost impossible?

ENGLISH CRICKET.

The following is the relative positions of the English counties up to the 6th August:—

	Played.	Won.	Lost.	Drawn.	Points.	Per cent.
Yorkshire	23	17	1	5	16	88.88
Lancashire	22	10	5	7	5	33.33

FOR BABY'S SKIN SCALP AND HAIR

Something for Mothers to Think About

EVERY CHILD born into the world with an inherited or early developed tendency to distressing, disfiguring humours of the skin, scalp, and blood, becomes an object of the most tender solicitude, not only because of its suffering but because of the dreadful fear that the disfiguration is to be lifelong and mar its future happiness and prosperity. Hence it becomes the duty of mothers of such afflicted children to acquaint themselves with the best, the purest, and most effective treatment available.

That warm baths with CUTICURA SOAP to cleanse the skin and scalp of crusts and scales, and gentle applications of CUTICURA Ointment to instantly allay itching, irritation, and inflammation, and soothe and heal, to be followed in the severest cases by mild doses of CUTICURA RESOLVENT are all that can be desired for the alleviation of the suffering of skin-tortured infants and children and the comfort of worn-out worried mothers has been demonstrated in countless homes in every land. Their absolute safety, purity, and sweetness, instantaneous and grateful relief, speedy cure, and great economy leave nothing more to be desired by anxious parents.

Complete External and Internal Treatment for Every Humour. Consisting of CUTICURA SOAP, to cleanse the skin and scalp of crusts and scales, and soothe the thickened cuticle, CUTICURA Ointment, to instantly allay itching and irritation, and soothe and heal, and CUTICURA RESOLVENT, to cool and cleanse the blood. Sold throughout the world. Aust. Depot: R. TOWNS & Co., Sydney, N. S. W. Sa. African Depot: L. KRUGER Ltd., Cape Town. "How to Cure Baby Humours," free. PUTTER DEBUT AND CHIEF, CORP., Boston, U. S. A., Sole Props., CUTICURA REMEDIES.

YOKOHAMA: SATURDAY, SEPTEMBER 14TH, 1901.

MARRIAGE.

On August 27th, 1901, at the British Consulate, Yokohama, ALICE LILIAN, widow of the late B. SPAIN of Toronto, to J. W. WEAVER of Yokohama.

DEATH.

On Sept. 11th, 1901, at No. 260 Bluff, Yokohama, JEANNETTE LOVETT BROWER, widow of the late Anthony Brower of New York, U.S.A.

The Funeral Service and Interment will take place in New York.

SUMMARY OF NEWS.

SEVENTY-NINE Japanese emigrants of both sexes left Japan for Hawaii on the 11th inst. by the *Pern*.

The body of a woman was found by the harbour police under Nipponbashi, Yokohama, on Wednesday morning.

The engine of a train was derailed at Tanagura station of the Nara Railway on the morning of the 7th inst. and two passengers were injured.

A YOUNG girl, daughter of Kondo Ikutaro, living at Minami Yoshida-machi, Yokohama, was drowned in a pond near her father's house, on the 7th inst.

A SATTAMA man named Negishi was handed over to the procurator's office on Sept. 7th on a charge of stealing articles and money from various hotels

in Tokyo. An attempt to rob a guest in a Yokohama hotel was the immediate cause of his capture.

A YOUNG girl Kiyosawa Matsuye living at Asahi-mura, Higashi Chukune-gori, Nagano Prefecture, was murdered by her foster mother on the 7th inst.

A COOLIE residing at Odawara attempted to murder his wife on the morning of the 7th. Afterwards he cut his own throat and is not expected to recover.

A TRAIN ran into a stage coach, plying between Honjo and Kotama, on the new Chichibu road on the morning of the 6th inst. one passenger and the driver were injured.

AN embankment between Okise and Uyenogahara on the Central Railway was damaged by floods, and traffic has been suspended since the morning of the 7th inst.

THE upper floors of 136, Queen's Road Central, Hongkong, were gutted by fire on the 28th. ult. The premises were insured for \$31,000 in German and Chinese Offices.

THE U.S. storeship *Justin* has been detained in Yokohama owing to fire having broken out in her bunkers. The coal has been discharged and repairs are now being executed.

A BOY aged about eight years while bathing at Ishikawa, near Okinabashi, was on the point of drowning on Sunday afternoon when he was seen and rescued by two *jinrikisha*-men.

PRESIDENT MCKINLEY while visiting the Buffalo Exhibition last week was shot in the chest and stomach by a Polish anarchist. The distinguished patient is expected to recover.

MR. TOTSUKA BUNKAI, former Surgeon-General of the Navy, died at his residence in Tokyo on the afternoon of the 9th inst. He was President of the Aikoku Life Insurance Company.

THE Yokohama Water-police have effected some arrests of men supposed to be implicated in the recent theft of oil-cake from the steamer *Yangtze*, among them being a foreigner.

THE Yokosuka Naval Headquarters notify that submarine mines have been sunk at Nagaura and will remain there 15 days from the 1st October; and all vessels are warned not to approach the place.

A PLASTERER engaged on the roof of the Agricultural and Commercial Department building in Tokyo on the afternoon of Sept. 8th slipped and fell during a shower of rain. He died on the way to hospital.

Two women and a man were attacked and severely wounded at Tokushima on Sept. 5th by the husband of one of the women who resented her threats to leave him because of his idle and dissolute life.

THE German Emperor has conferred the rank of non-commissioned officer upon each of the German guards who took part in the defence of the Legation under the command of Lieut. Count von Soden.

MISS WOOD, the daughter of Vice-Admiral Wood, and a companion, the wife of the German Military Attaché at Constantinople, have, says Dalziel, succeeded in swimming across the Bosphorus at its widest part. The distance covered

by the two swimmers was two miles. This quite rivals the feat of swimming the Hellespont which, as Byron says, "Leander, Mr. Ekenhead and I did."

THE Osaka Shosen Kaisha steamer *Tairi Maru*, which was damaged by running ashore on a sand bank in the Yangtze the other day, arrived at the Akuma shipyard, Nagasaki, on the night of the 8th inst. for repairs.

ISHIWARA GENJIRO, a native of Mikawa, employed in a diary at Minami Otamachi, Yokohama, attempted to commit suicide at Sakuragicho, on the night of the 9th inst. by jumping before a train. He was rescued by a police constable.

MR. W. W. ROCKHILL, U.S. Commissioner, is considered at the State Department at Washington to have rendered admirable service during his stay at Peking, and it is said, a high diplomatic appointment in Europe will be offered to him.

WHILE some eighteen hundred soldiers of the 19th regiment and many of the public were visiting the standing squadron at Tsuruga harbour on the 7th instant, a boat was capsized and two men were drowned. The bodies have not been found.

A BURGLAR gained admission on the night of September 8th to the house of Mr. Kabayama, Secretary of Tochigi Prefecture. Mrs. Kabayama hearing a noise called up the police by telephone and the culprit was arrested in a pine tree where he had sought refuge.

A MAN named Akasaka Taneo, living at Hachobori, Kyobashi, Tokyo, was arrested in a boarding house at Miyoshicho, Yokohama, by the Kotobukicho police on the 7th September charged with coating 5 *rin* coins with quicksilver and passing them as 20 *sen* silver pieces.

MR. NISHIYAMA TEIKAN, a steward of Viscount Kyogoku, Tokyo, was robbed of a tobacco pouch valued at *yen* 200 at Shimabashi station on the 4th inst. He reported the matter to the police. On the morning of the 6th inst. the pouch was sent to the Honjo police station by parcel post.

A WOMAN named Satoya Sato, living at Gofukuchō, Nihonbashi, Tokyo, was arrested by the Shitaya Police on the night of the 9th instant, charged with having stolen several articles valued at *yen* 260 from a house at Inarimachi, the other day. She had been employed in the place as a maid-servant.

OWING to heavy rains several rivers of Hokkaido overflowed and up to the 9th instant at Kamikawa forty houses had been washed away while ninety houses were submerged at Fukagawa, the street being 5 feet under water; the traffic between Kamikawa and Teshio and the telegraph are interrupted.

SERGEANT SASANUMA MASATARO, of the First Infantry Division, left barracks on the afternoon of the 4th inst. and returned about 9 o'clock a little the worse for drink. He walked upstairs and opened a window and while leaning out overbalanced himself and fell. His head struck a stone, and he died immediately.

DURING the quarantine examination of the Nippon Yusen Kaisha steamer *Nagato Maru* at Moji on the 7th inst. it was found that a lampman named Nagaoka Gunpei and three others were missing. They had been at work the previous night. The Captain of the steamer expressed the belief that they had fallen overboard between Yeboshi-jima and Futakami-jima.

THE CHINESE MISSIONS OF APOLOGY.

Saturday, Sept. 7.

It is evident that we shall have to await for the arrival of detailed journalistic accounts before we can know exactly what happened in Germany with regard to the mission of Prince Chun. The telegrams sent by Reuter were so explicit that no reasonable doubt could be entertained of their substantial correctness. They made it quite plain, too, that the "Kow-tow" question was agitating public opinion in Germany, and even the telegram sent from Berlin to the German journal in Shanghai went to confirm that fact, for it is obvious that no such message of contradiction would have been forwarded unless the rumour it undertook to deny had been current in Europe. Our conjecture is that the German Government proposed some form of ceremonial or some terms of apology which would have assigned to Prince Chung the character of a mission conveying direct apologies from the Emperor of China himself, and that the Prince objected on the ground that such procedure would associate his Sovereign with the assassins. The Kaiser recognised the justice of that view, and consented to waive a part of the intended programme. But His Majesty did not let the occasion pass without inculcating some truths, wholesome and timely, though perhaps wanting in graciousness. As to the latter criticism, however, there is a somewhat subtle question to be considered. It appears to us more than probable that from China's point of view Prince Chun's visit to Germany was not a mission of apology but a mission of condolence. It would be quite in accord with Oriental usages to despatch a mission of the latter character. There would be nothing derogatory in such a proceeding. On the contrary, the Chinese would reckon it among the international courtesies to which they have always attached value. But it is evident that the reception accorded to a mission of condolence might, and probably would, be very different from the reception accorded to a mission of apology. We shall not be at all surprised therefore, to learn that the difficulty connected with Prince Chun's reception arose from that distinction, and that while the Kaiser consented to dispense with outward forms calculated to publicly proclaim the apologetic character of the mission, His Majesty took care that his own speech should remove all doubts on the subject.

Monday, Sept. 9.

Although it is still necessary to depend largely upon conjecture in constructing a theory about the incidents of the Chun complication, an impression gains ground which seems to fit the fragmentary facts communicated by telegram. It is that the Emperor of Germany demanded two things: first, that the document carried by Prince Chun for presentation to the Kaiser must be modified so as to convey an unequivocal apology from the Emperor of China himself; and secondly that the Prince and his suite, when they presented themselves for the purpose of transmitting the document, must observe the same ceremonial forms as those prescribed on the occasion of audiences at the Chinese Court. As to the former point, the German Emperor probably found, on closely examining the document carried by Chun, that it contained merely an expression of the Chinese Sovereign's regret for the murder of Baron Von Ketteler, and that it did not in

any sense amount to a definite apology. When, however, the Chinese Government was required to modify the document in that sense, they replied that to do so would be equivalent to acknowledging their Sovereign's complicity in the assassination, and that they must positively decline to make the proposed change. It will be remembered that one of Reuter's telegrams assigned such an attitude to the Chinese Government, but seemed to connect it with the question of obeisance, an unintelligible connection. Moreover, Reuter did not tell us anything about the Kaiser's having demanded a change in the wording of the document. If, however, we insert the latter circumstance, the chain of events becomes clear. It would further appear that the Kaiser waived his demand, and that His Majesty allowed a semi-official publication of the gist of the Chinese objection in order to explain why the modification of the document had not been insisted on.

With regard to the question of obeisance, the Chinese appear to have utterly refused to comply. It is easy to conceive the reasons advanced by them, reasons which were probably reinforced by the arguments of the Imperial Chancellor, who, we may assume, had not been a party originally to the Kaiser's demands. A species of compromise appears to have then been proposed, namely, that the Envoy himself should observe the European form of etiquette, but that his suite should follow the etiquette of the Chinese Court. The Chinese still remained obdurate. It seems to have been then that they avowed their preference for death rather than the "Kow-tow," and as it was impossible to enforce the Kaiser's proposal and would have been inconvenient to continue the deadlock for such a reason, His Majesty finally decided to receive the Envoy alone, without the latter's suite, and to receive him without rising, which is a marked departure from the etiquette of the German Court. In fact His Majesty resolved that if the Chinese abbreviated the marks of respect which he considered expedient and becoming, he, on his side, would retort by similar clipping of the canons of European courtesy. Further, in order to indicate in the most unequivocal manner that the mission was to be regarded as one of apology, whatever objections the Chinese might raise to such an interpretation, the Emperor, in receiving the Envoy, used language which would otherwise have been needlessly harsh.

Of course this is a very unsatisfactory story, and we feel greatly disinclined to credit it, especially the part which relates to the supposed compromise in the matter of the "Kow-tow." It is a story which the Chinese would be justified in construing as a diplomatic victory, whatever that may be worth to them. Still it would be nothing new to find the Emperor of Germany adopt, without previously consulting his advisers, a position from which they could not ultimately extricate him without some sacrifice.

Saturday, Sept. 7.

Immediately after his arrival at the Imperial Hotel in Tokyo, Mr. Na Tung conveyed to the Foreign Office through the Chinese Representative an official statement of his coming. Up to that time he may be said to have travelled incognito. He was accompanied by a suite of twelve, and fourteen are to follow by sea. Nothing has yet been fixed as to his reception by the Emperor.

A representative of the indefatigable *Asahi* gained access to Mr. Na Tung at Kobe, and after some difficulty persuaded

him to speak, in order that the spirit of his mission might be known to the Japanese nation. Mr. Na set out with a highly interesting statement. He alleged that his mission was partly for the purpose of expressing condolences (*chosu*) for the death of Mr. Sugiyama and partly to convey the thanks of the Chinese Government for valuable assistance rendered by the Japanese troops in preserving order in Peking. In carrying out those objects the envoy desired to follow the procedure prescribed by the general law of international relations, but would be guided by the Minister of Foreign Affairs in Tokyo. Asked what he proposed to do with regard to the late Mr. Sugiyama, the Envoy said that his mission was to the Japanese Government, not to an individual Japanese. Mr. Sugiyama's case had already been disposed of. A sum of five thousand taels had been paid to his family and a visit had been made to his grave. Still in this matter Mr. Na would be guided by the views of the Chinese Minister in Tokyo. At a later stage of the interview the Envoy gave unequivocal expression to the apologetic purpose of his mission, and said that until his duties were performed he could not know any rest, or devote his attention to extraneous affairs.

Monday, Sept. 9.

We do not see how a copy of the Imperial Edict carried by Na Tung can have become public property, but an avowedly verbatim copy of it is published by the *Yomiuri Shimbun* and also by the *Chuo Shimbun*, the latter transposing the Chinese text into Japanese form. According to this document Na Tung's mission can scarcely be regarded as one of apology. There is not a word about apology in the whole edict. It sets out by a preamble eminently calculated to obscure the supposed object of the embassy, a preamble in which the ancient philosophers are quoted as sanctioning and recommending the despatch of envoys to neighbouring states for the purpose of cementing and maintaining relations of friendship and mutual helpfulness, and it declares that this principle is specially applicable to the case of a country inhabited by a people of the same race as the Chinese. With regard to Mr. Sugiyama, who is mentioned by name, the Envoy's business is to do honour to his memory and to express the grief that his death caused to the Chinese Emperor, and the Edict winds up by exhorting Na Tung to discharge his duties in such a manner as to cement unity between the two States.

This document assumes, at first sight, the character of a very remarkable evidence of Japanese journalistic enterprise. For that it is a pure fabrication we have not the smallest doubt. But on careful examination we find difficulty in imagining that such an edict was fabricated for newspaper purposes. Had that been the object something bearing the stamp of probability would have been concocted, whereas this edict is altogether ludicrous. Its preamble indicating that the embassy is sent, not because of the Sugiyama incident but in deference to the advice of the ancient philosophers, is really a fine stroke of humour, but has the defect of giving away the whole joke at once. Who was the fabricator of such a canard? He must have relied implicitly on the credulity of the newspapers, and his confidence was evidently not misplaced.

Tuesday, Sept. 10.

The Chinese Envoy, Mr. Na Tung, and

the Japanese Minister of Foreign Affairs, have exchanged visits. The former has also submitted a copy of the letter from his Sovereign to the Emperor of Japan, and the document, having been carefully examined, is said to have been found quite satisfactory. It may therefore be taken for granted that the affair of the mission will not give rise to any complications whatever. As to the ceremony of presenting the letter, it is expected that the Imperial Household Department will send a carriage and one chamberlain to the Imperial Hotel to carry the Envoy to the Palace, and that the etiquette observed at the reception of the Envoy and his letter will be of the simplest description.

Wednesday, Sept. 11.

Mr. Na Tung has made formal application for an audience, and it is expected that he will be received by the Emperor about the 13th or the 14th inst. It may be well to repeat that the letter of apology carried by him has been found quite satisfactory. Doubts appear to be entertained on that subject in many quarters, but they are probably the result of the fictitious version of the letter published by two Tokyo journals. There is no reason to apprehend any complications. The Imperial Court is said to have decided that the Envoy shall be received without any special ceremonial, and there will consequently be no grounds for objection.

Thursday, Sept. 12.

It is now settled, apparently, that the reception given to Mr. Na at the Japanese Court will be identical with that accorded to a Special Minister Plenipotentiary. The envoy will be attended by four of his suite and will hand his Sovereign's letter to the Emperor of Japan. The date of the reception has not yet been definitely fixed, but it will probably be on the 13th or 14th inst.

Friday, Sept. 13.

Mr. Na is to be received by the Emperor to-day. The arrangements are to be as already announced in these columns:—The Envoy will be accompanied by four of his suite and will be driven from the Imperial Hotel to the Palace in a carriage sent from the Household Department. An Imperial Chamberlain will act as guide, and the ceremony at the Palace will be limited to presentation of the letter of apology which Na carries, after which refreshments will be served as usual. It is stated that Mr. Na applied for an audience with the Empress also, but the Court will not immediately respond to that request. An impression seems to prevail in some quarters that the Envoy is receiving unwisely lenient treatment. Probably that idea is suggested by the rumours that reached us about Prince Chun's experiences in Berlin. What really happened in Berlin is not known, however, and truly it is difficult to see that any course could be reasonably pursued in Mr. Na's case except that which is now being followed. It would evidently be extravagant and unreasonable to organise any demonstration for the purpose of imparting a publicly apologetic aspect to his mission, nor is it easy to see what kind of demonstration could be organized without subjecting the Envoy to humiliation which he and his country would naturally resent. He can not be dressed in sackcloth and led through the streets of Tokyo with ashes on his head. The duty he has been sent to discharge is summed up in presenting himself before the Sovereign of Japan and handing to His Majesty a letter

from the Chinese Emperor expressing regrets for Mr. Sugiyama's death. There is a certain fixed routine for foreign envoys repairing to the Japanese Palace and being received in audience by the Sovereign, and the most dignified course for Japan to follow is to adhere strictly to that routine. China's apology does not consist in the attitude of Mr. Na himself or in the manner of his progress through the streets of the capital, but in the language of the letter he carries.

On the 14th instant the Chinese Envoy, Mr. Na Tung, is to pay a visit to the grave of the late Mr. Sugiyama. The Vice-Minister of Foreign Affairs, Mr. Uchida, and the Head of the Business Bureau in the Foreign Office will be present at the ceremony, which thus assumes an official character.

PRESIDENT MCKINLEY SHOT AT BUFFALO.

The shocking news from America has not yet been commented on widely by the Japanese press. The *Jiji* alone has a leading article on the subject. It dwells on the splendid work done by President McKinley not only in the field of foreign affairs, but also, and above all, in restoring his country to a state of unprecedented prosperity. As for the anarchists, of whom the assassin Niemann is said to be one, our contemporary dubs them a parcel of mad dogs, and it must be confessed that the epithet is well chosen. The *Jiji* takes the opportunity of reading a lesson to such of its Japanese contemporaries as have shown overt or covert approval of Iba Sotaro's murderous performance.

It is assumed that Niemann, or Czolgorz, is an anarchist, but what seems more probable is that he will be found to have socialistic convictions. The enormous accumulations of wealth by individuals in America at present represent conditions eminently likely to nourish socialism, and considering that the population of the States now receives its largest increment from Italians, Poles and other nationalities among whom socialistic tendencies prevail, there is evidently reason to apprehend catastrophes such as that just reported by telegram. The socialists, it is true, have not been making themselves conspicuous of late, but the spirit is always there awaiting occasion only to burst into activity.

The telegrams which we publish this morning show that there are grounds to hope that the President's wounds may not terminate fatally. In the present state of medical science injuries formerly considered to be beyond all succour, yield to skilled treatment. We have heard it said by an eminent physician that had the surgery of to-day been practised in Garfield's time, he might have been saved. Besides, it seems a reasonable assumption that the pistol used by Czolgorz was not of large calibre. The weapon must have been small in order to be concealed under a pocket handkerchief and carried in one hand. Of course the very close range at which the shots were fired is a bad element. The shock must have been great.

MCKINLEY, HON. WILLIAM, twenty-fourth President of the United States, was born at Niles, Ohio, Jan. 29, 1843. He was educated at the public schools, and at the Poland (Ohio) Academy. In 1861, at the outbreak of the Civil War, he enlisted as a private in the Union army, and before its close had risen to the rank of captain and brevet major. In 1867 he was admitted to the bar, and began the practice of the law at Canton, Ohio. He was chosen prosecuting attorney of Stark Co., Ohio, in 1869, and in 1871 was elected a Representative in Congress, and was continuously re-elected until 1891. Mr. McKinley was Chairman of the Committee on Ways and Means

that framed the Revenue Bill of 1890, and hence that measure has been known as "the McKinley tariff." He was elected Governor of Ohio in 1891, and re-elected by an increased plurality in 1893, serving until the close of 1895. As his name was closely connected in the minds of the people with the principles of a protective tariff, both these elections were contested on the national question of tariff policy, and this point was fully discussed by orators on both sides all over the country, so that when Mr. McKinley's election in 1893 was found to be more pronounced than it had been in 1891, it was considered an indication that he would be the candidate of his party for the Presidential election in 1896. This nomination took place at a Convention of Delegates from the party in all parts of the country, which was held at St. Louis, Missouri, in June, 1896. Soon after (July 7, 1896) the Democratic Convention was held in Chicago, and selected as their candidate Wm. Jennings Bryan, with a platform of principles advocating the unlimited coinage of silver, a low tariff, and the non-interference of the Federal authorities in local affairs, even when national interests were involved. In the ensuing election (November, 1896) Mr. McKinley received the votes of many who were Democrats with reference to the tariff, while his opponent received many Republican votes in the west and south because of his views concerning silver. The tariff question was discussed during the canvass, but it did not take the pre-eminent place it had before occupied, and as a result the old party lines were much broken up. Mr. McKinley received a plurality over Mr. Bryan of over 600,000 votes, and was inducted into office Mar. 4, 1897. As the tariff of 1894, shorn of the income-tax feature, did not produce sufficient revenue for the support of the Government, an extra session of Congress was called to meet. Mar. 15, 1897, and a new tariff, with strongly protective features (known from the name of the chairman of the committee in which it originated as "the Dingley Bill"), was agreed upon. In the meantime relations between the United States and Spain were becoming more and more strained because of the sympathy of the Americans with the sufferings of the people in Cuba, occasioned by the restrictions of the Spanish authorities growing in part out of the insurrection there. This tension was greatly increased by an explosion by which the U.S. battleship *Maine* was destroyed in the harbour of Havana on the night of Feb. 15, 1898, together with the lives of two of her officers and more than 250 of her crew. A careful investigation failed to show with certainty the cause of the explosion, but there were strong indications that it came from a point outside and, other events occurring which increased the existing irritation, war was declared in April following. Within four months the power of Spain on the sea had been destroyed, her army in Eastern Cuba had surrendered, and lodgments by the American land forces had been effected in Porto Rico and in the Philippine Islands. Spain then sued for peace, and a protocol was signed August 12, stopping hostilities and providing for the appointment of Peace Commissioners to settle the details with reference to the Spanish islands in the Pacific, her army to be withdrawn entirely from her West Indian possessions, and Porto Rico to be ceded to the United States. During the war the President enjoyed a vast popularity in the States.

More recent events are doubtless fresh in the minds of our readers, of which the most prominent are President McKinley's selection for a second term, his intimation that he would not be a candidate for a third term, and his recent tour through the United States.

Baron Kaneko, President of the Beiyukyō-kai (Society of American Friends) despatched a telegram to President McKinley on receipt of the news of his injury. The message expressed profound sympathy and an earnest hope for the illustrious sufferer's speedy recovery. The Tokyo Chamber of Commerce and the Yokohama Chamber also took similar steps.

We are informed that the following telegram was despatched to President McKinley at 3 p.m. on Sept. 9th:—

"President MCKINLEY,
"Buffalo, U.S.

"The Yokohama Japanese Chamber of Commerce deeply sympathizes and earnestly hopes for your early recovery."

One hundred and ninety-seven American troops under command of Major-General Cope arrived at Nagasaki on the 11th inst. from Manila. There were fifteen cases of dysentery among them.

PRINCE KONOYE'S EXPERIENCE.

There appears to be a growing conviction that Newchwang should be regarded as a prize of war. When Prince Konoye recently visited the place, an entertainment had been organized in honour of the anniversary of the entry of the Russians, which event was commonly described as the "anniversary of the taking of Newchwang." Prince Konoye was invited to the banquet but did not go. He heard, however, that a Russian staff officer, speaking after the health of the Czar had been proposed by Admiral Alexieff, declared that when once the flag of Russia had been raised, it was never lowered. That is a very natural sentiment in the mouth of a Russian officer, but it illustrates the old lesson of Russian history that whatever moderating influence St. Petersburg may exercise, the man at the front virtually controls the situation.

Another point made by Prince Konoye is that only Russian nationals are allowed to ride on the Newchwang railway. That is a statement which might be advantageously made more explicit. Does the Prince intend that it should apply to the railway running westward from Newchwang as well as to the line built by Russia? At all events his impression that Russia means to stay at Newchwang is evidently very strong.

The Prince was much struck by the extensive works that Russia is carrying on at Talien—docks, quays, railways, roads, harbour improvements, water-works and so on. The harbour construction is on a scale that would put Osaka to the blush, some of the concrete blocks weighing as much as 35 tons. As for the town, its scale is for a population of five hundred thousand, though where they are to come from, is not clear. At the same time Prince Konoye remarked that things were being done in a rough and ready style. The railway, for example, is so rudely built that every fall of rain entails a suspension of traffic. It is curious to think that all these costly operations are undertaken by Russia at a place of which she is supposed to have a temporary lease only.

At Soul the Prince says he was "obliged to meet the Russian Minister," a somewhat quaint manner of accounting for an ordinary fact. The conversation turned on the Soul-Fusan Railway, of which the ceremony for inaugurating the construction had just taken place. Mr. Pavlov said that the railway was likely to be a source of trouble, and he charged Mr. Takenouchi with having stated in his address at the time of the ceremony that the railway would be useful when Japan and Russia went to war. Mr. Takenouchi is one of the principal promoters of the Railway. The Prince, surprised to hear that he had made such a statement, spoke to him on the subject, but Mr. Takenouchi's account was very different. He alleged that Mr. Pavlov had asked whether the railway was not intended for warlike purposes against Russia, and that he, Takenouchi, had repudiated such an idea. He complained that all Japanese undertakings in Korea were regarded by Russia with an unfriendly eye, just as she objected to the British works at Ching-wan-tao.

The Prince concluded by saying that Russia was not yet provided with a suitable naval basis in Far Eastern waters and that she will surely not rest until she has one. He indicated Chihl-won promontory as the place she will select. This is the promontory concerning which some rumours were recently circulated. It lies to the west the Masampho Bay.

CHINESE AFFAIRS.

Tuesday, Sept. 10.

The weary Protocol has at length been signed and the Foreign Representatives have had a congratulatory dinner at the German Legation. It appears that the Protocol itself consists of 12 articles and there is an appendix of 37 articles with reference to the conservation of the Wangpo. The *Yomiuri Shinbun's* correspondent telegraphs that the signing was unexpectedly expeditious and that the fact is generally ascribed to the exertions of England and Japan. The same correspondent adds that Mr. Komura's reputation stands very high among diplomatists in Peking, and that he will now set out at once for Japan. There seems to be some uncertainty as to whether the usual ceremonies of ratification and exchange will be observed. The *Asahi* says that Mr. Komura will bring a copy of the Protocol to Japan and that, so far as his plenipotentiary credentials indicate, the usual routine will have to be observed just as in the case of any ordinary treaty, unless the Japanese Government makes some modification.

The *Asahi Shinbun* thinks that China has obtained extraordinarily easy terms. Considering that she besieged the foreign Legations in Peking and made every effort to destroy their inmates, and considering that she was completely defeated in the war which ensued, she may now congratulate herself on having escaped in a manner quite unprecedented. Four hundred and fifty million taels is not in itself a large payment, especially when spread over a space of forty years. But in this case it has been made easy for China by the Foreign Powers consenting to an increase of the tariff rates. In fact, she obtains a permanent source of augmented income at the expense of a few years' trifling inconvenience. Our contemporary attributes the leniency of this arrangement to the exertions of England, America, and Japan, and expresses a hope that China will now open her eyes and step out of her unreasoning and stupid rut of conservatism. But the *Asahi* justly notes that no arrangement has been made about the withdrawal of the foreign troops. They are planted in China for all time, so far as the Protocol goes. Of course China can not endure a permanent military occupation of her metropolitan province. Yet the only way to get rid of the troops will be to prove unequivocally by her conduct that their presence is no longer necessary.

The *Chuo Shinbun* observes that the next step of vital importance is to get the Court back to Peking, which may prove very difficult, and to induce the Court to dismiss its conservative advisers, which may prove more difficult still. Our contemporary urges that England, America and Japan should work hand in hand to bring about these results.

If these two journals—the only ones that have yet written about the Protocol—may be taken as representing public opinion in Japan, it would seem that the Chinese complication has drawn America, Japan and England very close together.

Mr. Komura was to leave Peking on the 9th, and after spending one day at Tientsin, was to embark on the *Chitose* for Japan. The *Chitose* had been waiting at Taku for some time to carry home the Minister.

Viceroy Liu Kun-yi is reported to be sick and to have obtained a month's leave.

It is stated that Liu Tien-ling, the Minis-

ter who has persistently opposed the return of the Court to Peking, has been impeached in a memorial addressed to the Throne by thirty-seven of the principal officials in Peking.

Telegrams from Peking announce that the withdrawal of the superfluous portion of the foreign troops from Peking will be effected on the 20th instant, and that the reduction will be extended to the whole of Chili on the 22nd.

Wednesday, Sept. 11.

The railway from Kiao-chow to Kau-nieh, a distance of over 80 miles, has been opened. This line has been a considerable time under construction. It will ultimately be continued to the capital of Shantung.

It is stated that Governor Yuan Shih-kai has issued an order for the collection of a poll tax of 30 *sen* per head in the province of Shantung, the proceeds to be applied to paying the Indemnity. But as provision is already made for that purpose, Governor Yuan—assuming the report to be correct—doubtless intends that the money realized by the tax shall take the place of funds diverted to the indemnity. If his experiment prove successful, we should not be surprised to see the same device applied throughout the whole of China. Supposing that the population is three hundred millions and that one half of the tax were successfully collected, the result would be a revenue of 45 million *yen*.

The alleged withdrawal of troops from Chili probably means nothing more than that they are to be at once collected at the various points of permanent occupation.

The Peace Protocol was signed on the 7th instant. Telegrams received in Tokyo on the 6th instant announced the probability of such an event, and the news has now been confirmed. The signature took place at 11 a.m. in the Spanish Legation.

Friday, Sept. 13.

It is now thought probable that the ceremony of exchanging ratifications will be dispensed with in the case of the Peace Protocol, no such step being required by international usages. The Protocol was expected to arrive by the hand of Mr. Komura, who is now on his way to Japan, but that active official forwarded it so early that it is understood to have reached Tokyo on the 11th instant.

We may note here that there does not appear to be any truth whatever in the statements recently circulated by certain newspapers that Mr. Komura is disposed to decline the portfolio of Foreign Affairs. He accepted the portfolio long ago, but it was always understood that he would remain in Peking until the signature of the Peace Protocol was an accomplished fact. There has not been any departure from that programme.

The new Chinese Representative at the Court of Japan, Mr. Tsai Kim, has been ordered to repair to Hsian to receive instructions direct from the Imperial Court. This *détour* will necessarily postpone his departure for his post in Tokyo, but it is understood that he will leave China not later than the end of this month.

THE WEATHER.

The 220th day, the 10th, brought good weather to every part of the country. A few more days of the present conditions will place the rice crop beyond the injurious reach of all climatic influences.

KOREAN AFFAIRS.

Monday, Sept. 9.

It is reported from Korea that Russia has abandoned her attempt to obtain Yulkumi as a naval station and that she has now fixed her eyes on Chhil-won, a promontory at the entrance of Chinha Bay, a little westward of Masampho, and a most commanding position. With reference to this it is observed by the *Fiji Shimpō* that when, at the time of the Masampho complication, Russia exacted from the Korean Government a promise that no part of Masampho should be alienated, undertaking at the same time on her own account not to ask for any part of the district, the arrangement covered not only Koje Island but also the promontory of Chhil-won. Should it prove true that she is now attempting to procure the promontory for a naval station, she will be manifestly departing from that arrangement.

Another report says that M. Lefevre has resigned his official position in order to devote himself entirely to the superintendence of the Sôul-Wiju railway.

The *Jimin* says that Masampho is not fulfilling the expectations formed of it. It shows no sign of progress, and the settlement looks desolate and neglected. People are closing their shops and going away. The hotel started by two Russians has no guests and threatens to ruin its proprietors. There are altogether 67 houses in the place and 36 of them belong to Japanese. The foreign community numbers 237 persons, namely 159 males and 78 females; the various nationalities being thus represented:—

	Men.	Women.
Russian	8	3
German	1	1
Chinese	33	—

The remainder are all Japanese.

The Emperor of Korea gave a banquet on the 7th instant to ten thousand persons in commemoration of attaining his fiftieth year. He received from his faithful subjects contributions amounting to 480,000 *yen* towards the payment of expenses. There were various other demonstrations in the shape of fire-works and illuminations, the Japanese quarter being conspicuous for a display of bunting and lanterns. His Majesty seized the occasion to distribute several Korean Orders.

Tuesday, Sept. 10.

It is confidently affirmed that the Korean Government has concluded an agreement with the First Bank of Japan for a loan of five hundred thousand *yen* for a period of one year at 10 per cent. interest. There is no connexion, it is alleged, between this loan and the affair of the Yunnan Syndicate. The Korean Government wants the money to meet pressing administrative calls, and it has pledged the taxes as security for the temporary accommodation. Pledging the taxes means nothing at all. The First Bank can not get any kind of lien upon the general taxes of the Korean Government. It is said, however, that the Emperor of Korea has sealed the bond.

On the 7th instant there were demonstrations of various kinds—flag flying, salute firing, banquets and illuminations—in honour of the fiftieth birthday of the Emperor of Korea. From what point of view, we wonder, does His Majesty merit these tokens of love and rejoicing? But the world must always have its full measure of make-believes.

Thursday, Sept. 12.

It is now alleged that the accommodation given by the First Bank to the Korean Government is not in the form of a regular loan. The Bank merely agrees to meet any calls that may be made on the Korean treasury to the total amount of five hundred thousand *yen*, the payments to be gradual as required, and interest at the rate of ten per cent. to be charged on them. The transaction is equivalent to an arrangement by which the Bank allows the Korean Government to over-draw its account to the extent of half a million *yen* should necessity arise. Of course it is in effect a loan, but Korea naturally objects to the idea of entering the public market as a borrower for such a paltry sum as fifty thousand pounds sterling.

ST. PETERSBURG AND PEKING.

Now that the Protocol is signed the concert of Powers for restoring peace may be said to have been dissolved, and Russia is free to take independent action for the purpose of securing her position in Manchuria. Some observers are disposed to think that the recently announced changes of Chinese Representatives were inspired from St. Petersburg with a view to the reopening of Manchurian negotiations. The changes are that Mr. Wu Ting-fang goes from Washington to London and Mr. Lo Feng-loh from London to St. Petersburg. The present Chinese Representative in St. Petersburg, Mr. Yang, is the gentleman who devised a new diplomatic expedient by falling down stairs when there was question of signing an agreement injurious to his country's interests. That he should not be a *persona grata* in the Russian capital is not strange under the circumstances. A very different mood would probably be shown by Mr. Lo Feng-loh. This official was for many years Viceroy Li's right-hand man, and he has always been regarded as an earnest supporter of the Viceroy's policy. If he goes to St. Petersburg, it may be taken for granted that he will be prepared to give practical expression to the attitude of approval assumed by Li towards the proposed Manchurian agreement. Indeed, with Lo in St. Petersburg and Li in Peking, supposing the aged Viceroy's authority to be undiminished, the probabilities of a new Manchurian covenant being concluded on the old lines, approximately, would be very strong.

THE SALE OF BONDS.

It having been objected by some critics that the sale of bonds abroad this year by the Finance Department must be regarded as the inauguration of a policy which would probably be repeated next year, an official of that Department has informed the *Fiji Shimpō* that such is not the case. The fifty million *yen* which the Treasury is now seeking to obtain is to be spent on carrying out the works sanctioned by the Diet last session and forming part of the programme drafted by the Government and approved by the Sovereign. The Cabinet considers that such works must be carried out. With regard to next year, however, although the Budget is not yet finally drafted, the Finance Department sees its way to prosecuting the *post-bellum* undertakings without any recourse to foreign capital.

If the sale of 50 million *yen* be duly effected on reasonable terms, and if arrangements for next year can be effected as stated in the above interview, Viscount Watanabe's wail will become rather ridiculous.

MR. GRANT'S EXPLANATION.

With regard to Mr. Heber J. Grant's letter published elsewhere in our columns, we have again to point out that the most important issue between him and this journal receives only incidental attention at his hands. The whole of this controversy, as he himself points out, had its origin in an interview given by him to a local newspaper. Reading that interview we learned that Mr. Grant and his follow-propagandists, though they had surrendered their legal right to contract plural marriages, still maintained the propriety of the practice. Mr. Grant's words were:—"We still believe that under certain restrictions honourable men should be allowed to take additional wives with the consent of their first wife." That statement of his was quoted by us verbatim, and made the text of an article in which we recommended that the preaching of Mormonism should be forbidden in Japan. Mr. Grant then called upon the editor of this journal and made certain statements which he now sums up by saying:—"I gave you my personal assurances that neither my associates nor I would preach or practise polygamy in this land." We demur emphatically to that summary. Mr. Grant did not, so far as we were conscious, convey any such impression to us. On the contrary, he plainly stated that he still approved of plural marriages and that he himself had two wives. In other words, while alleging that polygamy would not be preached by himself or his people in Japan, he led us to believe that it would undoubtedly be practised. We suggested to him that if he thought he had suffered any injustice at the hands of the *Japan Mail*, he had better write to that journal. He did so and his letter was published in our columns on the 23rd of August. In that letter he said not one syllable about the practice of polygamy. His words were:—"Permit me to assure you that we are not in Japan to preach polygamy," therefore, in commenting on his letter, we wrote on August 26th:—

Mr. Grant, in a letter addressed to this journal a few days ago, explained that he and his fellow-workers do not teach the doctrine of polygamy and that they pay full respect to the laws of the country where they find themselves. Probably they will thus escape prohibition. But it is a subtle distinction. What is preaching and what is teaching? If a man, highly educated, eloquent and gifted with the power of stating his convictions in an attractive and impressive form, tells us that he does not preach polygamy as a doctrine of his creed, since the law has forbidden him to do so, but that he nevertheless approves of it and practises it, and if he further adduces many practical evidences of the successful working of the system, and as the same time insists that it has never been proved to be opposed to the Christian creed but is, on the contrary, sanctioned by the practice of the Christian patriarchs, is not that man teaching polygamy? Is he not endeavouring to win others to his own way of thinking, and is not his example calculated to lend weight to his words? We fail to see that there is any room for equivocation in this matter. The Mormon apostles come to this country as avowed believers in polygamy and as illustrating the practice in their own lives. If they are not propagandists of polygamy, what are they?

If, on the occasion of his interview with the editor of this journal, Mr. Grant, as he now states, "gave you (us) his personal assurances that neither my (his) associates nor I (he) would preach or practice polygamy in this land," why did he suffer our article of August 26th to pass unchallenged? That article showed in the clearest manner that, in our belief, plural marriages were approved and practised by the Mormon propagandists now visiting Japan. Mr. Grant nevertheless suffered the article to pass entirely unchallenged though he now affirms that at the interview indirectly responsible for the article

he personally assured us that neither he nor his associates would practice polygamy in Japan. We deny that he gave us any such assurance. He does so now in his letter published this morning and we are therefore bound to admit that one of the most objectionable features of his creed is removed. We note however, that with unconscious inconsistency, he preaches polygamy in the very letter written for the purpose of denying his intention of preaching it, and that he there holds up for imitation the lives of Abraham and of Jacob, who, did they live in this twentieth century, would be shunned by all honorable men, not merely because they led openly licentious lives, but also because they violated the fundamental laws of honesty and self-respect. If we are to imitate the marriage habits of these patriarchs why should we not also imitate them in selling our wives' virtue for political purposes and in cheating our elder brothers out of their inheritances?

AN OBSERVANT BUDDHIST PRIEST.

Mr. Oda Tokuno, an eminent priest of the Shin Sect, had an interview with Viceroy Li on the 25th of August, fragments of which are published in the *Nichi Nichi Shimbun*. The conversation derives interest from two facts; first, that Li evinced his conviction that the missionaries were the chief cause of the Boxer trouble, and secondly that Mr. Oda's thoughts are evidently governed in large part by his wishes. It is a hard thing for the missionaries to hear that a man in Viceroy Li's position entertains such a view, but they may find comfort in the reflection that not all missionaries are implicated by the Viceroy but only the missionaries to whom such a large and ill-advised measure of official assistance has been granted by France. Concerning Mr. Oda's statement, we read that he conveyed to the Viceroy a very poor impression of Christianity's progress in Japan. After the Restoration, he explained, when Buddhism passed through a period of financial difficulty and general depression, Christianity had managed to raise its head for a moment. But its success had been short-lived, and its brief season of prosperity had been followed by steady decadence. There was no comparison between Buddhism and Christianity in Japan. The former had ten million followers; the latter had only ten thousand. It might also be asserted that Christianity no longer wins any converts. The Viceroy received these statements with a show of skeptical satisfaction, and observed that under such circumstances, Japan was quite safe. Now does Mr. Oda Tokuro believe what he told the Viceroy? We are bound to suppose that he does. He is then a singularly ignorant man. Yet he enjoys the reputation of being one of the more erudite scholars of his sect. It would seem that the Buddhists of Japan are in the condition of the foolish virgins.

Mr. Oda Tokuno, and the other Japanese priests who went with the Lama on his return to Peking, have come back to Kyoto, and are accompanied by some students who desire to study in this country. They are also the bearers of a letter of thanks from the Lama for the courtesy extended to him in Japan. The letter, however, is more than a mere expression of gratitude. It contains also a promise which, if implemented, may lead to interesting results. It appears that the Japanese priests of the Hongwan Temple requested the Lama to make arrangements

for the visit of a Japanese Buddhist mission to Lassa. The Lama now explains—in the letter just received—that the roads are in a bad condition at present and that he can not recommend the immediate despatch of a mission. But he adds that he himself is now setting out for Mongolia and Thibet, and that, on his return to Peking in the winter, he will communicate through the Japanese Legation in Peking when there will be no obstacle to the passage of the proposed mission to Lassa. He declares it to be his ambition to effect a genuinely cooperative union of all the Buddhists in Asia.

THE YOGYO-KYOKAI EXHIBITION.

The Yogyo-kyokai is the name of a Kiln-Workers' Association in which are included manufacturers of enamels, bricks, cements, and ceramic wares. The Exhibition now going on in Uyeno in the rooms of the Bijitsu-kyokai (Art Society) is the first of the kind in its comprehensive nature. Not only all kinds of manufactures, but also the places of production are represented. As might be expected, ceramic products are the main feature of the Exhibition. Apart from the classes of porcelain and faience exclusively made for export in Kyoto, Tokyo and elsewhere, there are many vases and bowls of pure Japanese taste, though they are chiefly in the line of the *Chujin*. Even among the decorated pieces, not a few recall the chaste simplicity of the old masters. The exhibits are very cheap in price. Some vases that would easily fetch several dollars abroad are marked one or two yen. It would be a good thing for Japan's porcelain trade if the manufacturers were prepared to duplicate their wares at the prices marked, which, however, can hardly be expected at the present stage of progress. The things sold are delivered on the spot, except those reserved for the Jury's examination, and are being rapidly replaced. The principal feature of the exhibition is that one can observe and compare the characteristic products of all the porcelain districts of Japan. The exhibition will be open till the end of this month.

THE RICE CROP.

The weather since the commencement of this month has been ideal for the growth of the rice crop. Alternating bursts of rain and sunshine with a steady prevalence of damp heat and an absence of storm are conditions seldom experienced during the first week in September, and nothing could possibly be better for the earing and filling of the plants. A few days more of such weather will assure to the country a splendid yield. The estimate of the Department of Agriculture and Commerce is that the output will reach 44½ million *koku*, being the largest crop since 1892 with one exception. The following figures are given:—

	Koku.
1892	41,429,676
1893	37,267,418
1894	41,859,047
1895	39,960,798
1896	36,240,351
1897	33,039,293
1898	34,387,666
1899	39,698,258
1900	41,466,734
1901 (estimated)	44,550,100
Average	39,845,038

This makes the crop 3,083,366 *koku*, or 6.9 per cent., larger than last year's yield, and 4,705,062 *koku*, or 10.06 per cent. above the average.

COUNT OKUMA ON THE ECONOMIC SITUATION.

Count Okuma says that in order to induce foreign capitalists to bring their money to this country, their ignorance of Japan is to be desired not their knowledge. For when they come to know they find many things of a deterrent nature. They find, for example, judges applying the law without any discretion whatever. What is to be said of a Tokyo tribunal which decided that unless a promissory note bore the word "Tokyo" on its face, its validity could not be recognised even though the locality of the transaction were indubitably fixed by other indications? The affair between Mr. Morse and the Kobe Municipality is another case in point. Which ever party may have been technically in the right, it is certain that the origin of the difficulty was the Finance Department's refusal to allow the Kobe Municipality to pledge itself to a sterling rate. The Department itself can not get money abroad without giving such a pledge. Why then should it forbid a municipality to give it? That is senseless obstruction by no means calculated to encourage foreign capitalists.

The Count concluded his criticism by condemning the Government's efforts to sell bonds in America. The countries, he said, where interest is cheapest, are England, and France. The United States can not be mentioned in the same breath. What sense is there in selling a Japanese thousand yen bond in New York for £94 when it fetches £102 in London? That is undoubtedly true, but is the Count right in saying that the Treasury seeks to place bonds in New York?

THE SPECIE BANK.

The Specie Bank held its semi-annual meeting on the 10th instant. The accounts were read and passed, their principal figures being:—

	Yen.
Gross Profits	6,019,593
Brought over from previous account...	404,338
	6,423,931
Expenses, &c.	4,526,850
Net Profit.....	1,897,081
	Yen.
To reserves	200,000
To dividend (13 per cent.).....	1,170,000
Carried forward	527,081
	1,897,081

At a special meeting subsequently held, it was decided to establish a branch in Peking and also to issue, in case of expediency, notes payable to bearer at branches or agencies abroad.

Mr. Soma, the President, in the course of a speech afterwards delivered, said that the recent failures of banks had been limited to institutions of doubtful stability, and that no considerable effect had been produced upon the banking world in general. He further noted that owing to depreciation of prices and trade depression import business had been checked, so that the volume of imports as compared with last year's figures, showed thus far a decrease of 32 million yen. On the other hand, in consequence of briskness in the silk market and other causes, exports showed an increase of 23 millions. Apparently the balance of trade was likely to be soon restored.

MARQUIS ITO.

According to the *Nichi Nichi Shimbun* Marquis Ito has at length shown signs of yielding to the advice of his physicians, and making a sea voyage. For a long time he was unable to reconcile himself to the idea, but it is said that he has now recognised the difficulty of making a complete recovery unless he has recourse to sea air. The present programme is that he will start on the 18th instant.

It seems tolerably certain that Marquis Ito will take a trip to America at an early date. His Excellency's health is not by any means restored and he is said to find it impossible to obtain the necessary rest in Japan. In general his spirits are good and he shows considerable vigour, but from time to time he has attacks of giddiness and even moments of insensibility which alarm his medical advisers. Dr. Hashimoto has strongly urged a sea voyage, and probably Dr. Baelz, who is understood to have been invited to Marquis Ito's villa at Oiso on Sunday, confirmed the recommendation. It need scarcely be said that this renewed rumour of the Marquis' departure furnishes capital to the opposition, and that various strange rumours are circulated. In order to prevent misunderstanding, the Marquis will, it is said, convene an extraordinary meeting of the Committee of the Seiyu-kai on the 10th instant, and will give a clear statement of his reasons for making a voyage to America. The general expectation is that Marquis Saionji will be appointed President of the Seiyu-kai during Marquis Ito's absence.

It is stated that Marquis Ito will be accompanied on his travels by Mr. Tsuzuki K. Iku, but as to his other companions no very definite is known. It need scarcely be said that journals opposed to the Marquis are turning much capital out of his departure. They contend that he has grown tired of the Seiyu-kai and that his journey to the west is a device for severing his connection with that Party. Of course such talk is pure foolishness. What is much more important is that some dissatisfaction seems to have been caused in the ranks of the Seiyu-kai itself by the announcement of His Excellency's departure. The Tohoku-kai, which had been promised a visit by the Marquis, naturally shows some discontent, but that is a small matter compared with a misapprehension which even the *Nichi Nichi Shimbun* seems to entertain, that the object the Marquis has in view is, not to recruit his health, but to study American finance. On that hypothesis a visit to America and perhaps to Europe appears inopportune at a time when the business of organizing the Seiyu-kai is most pressing, and when the Cabinet's projects of administrative reform require to be carefully watched. Such is the *Nichi Nichi Shimbun's* view. But the truth is that ill-health and ill-health only is driving Marquis Ito away. All his medical advisers concur in urging the necessity for a thorough change, and under the circumstances it is highly unreasonable to raise any objection. If Marquis Ito's health broke down permanently as the result of unwise hesitation to follow the advice of his doctors, the loss to the country would be irreparable. It is true that the moment is inconvenient, as a journey westward at present means that the Marquis will be absent when the Diet meets. But sickness does not choose its times and seasons so as to suit public convenience.

Several influential members of the Seiyu-kai recently held a meeting and decided to ask Marquis Ito to appoint Marquis Saionji as his *locum tenens* during his absence from Japan. Two of these members, Messrs. Matsuda and Hara, proceeded to Oiso on the 11th for the purpose of communicating their desire to the Marquis. It appears, however, that Marquis Ito is not convinced of the expediency or necessity of making any such appointment as his absence from Japan will be very brief and all that is essential can be done by the Committee while he is away. He has not definitely expressed that opinion, but he declined to give any final answer to the deputation and asked them to wait until the 12th, when he purposed returning to Tokyo and holding a conference with the general committee of the Party. It is, moreover, doubtful whether Marquis Saionji could be persuaded to accept the post of *locum tenens*, as his health is greatly impaired and his position of President of the Privy Council would render it difficult for him to take such an active part in politics. It may be assumed that the chief cause of the Seiyu-kai's disquiet is the prospect of Marquis Ito's absence when the Diet meets. The Marquis leaves Yokohama on the 18th instant, and even supposing that he limits his journey to the United States, it is not likely that he can return before the fall of the year, whereas the Diet will doubtless be convened at the end of November. Probably not a few members of the Seiyu-kai have been looking forward to the Diet's meeting as the occasion for their return to power, a prospect which can not be realized in Marquis Ito's absence.

IBA SOTARO.

Thursday, Sept. 12.

The judges do not dwell upon their reasons for commuting the death sentence to one of penal servitude for life in the case of Iba Sotaro. They find him, unquestionably, guilty of deliberate murder, premeditated and fully determined with full knowledge of every consequence, as, for example, the parting from his wife and children, to whom he addressed a letter of farewell on the eve of perpetrating the deed. But the law empowers a court of justice to mitigate the penalty by one or even two degrees according to the circumstances of the case (*shohan jojo*), and the judges in this instance admit the plea that the man acted under a mistaken conception of public duty. The discretion given to them by the Code is wide. It does not define the meaning of the term "circumstances." The interpretation is left entirely to the Court. Consequently the Court is not bound to set forth in detail the nature of the circumstances by which it is influenced, and the judges in this case have apparently been careful to avoid an exposition which might have been difficult to frame innocuously. The Public Procurator has appealed against the sentence, but it is not likely that any change will be made by a higher tribunal.

One of the bystanders present in court when the judgment was delivered behaved in a somewhat insane manner. He was dressed entirely in white, and he shouted aloud that Iba was a deity, but he declined to give his name and address to the police when they desired to secure means of watching the future development of his reverential tendencies. He was therefore conducted to the nearest station.

Another individual described as a *soshi*,

gave vent to ejaculations of a different nature. He seemed intensely chagrined that such a miserable curtain should drop upon such a fine scene. That, we imagine, is the feeling of many *soshi*, if, indeed there remain many gentlemen of that persuasion.

Iba Sotaro himself, interviewed by his counsel after the trial, is said to have declared that, having from the outset been reconciled to the sacrifice of his life, he had little interest in the nature of the sentence. All that he desired was to have his motive recognised by the Court. That wish satisfied, he would not have appealed against any form of punishment, still less against a sentence obviously dictated by considerations of mercy. Asked whether he desired to have any arrangement made about his wife and children, he said that everything necessary had been already done, and that they were provided for.

Friday, Sept. 13.

Count Itagaki does not at all approve of the sentence passed on Iba Sotaro. He says, in effect, that Mr. Hoshi was one of the people's representatives, and that so long as his constituency did not reject him, no private individual had any title to condemn him. The Count also thinks that Iba's crime was aggravated by the place he chose for committing it. Altogether it would be impossible to conceive a greater criminal under a constitutional system of government. It was a pity that the public procurator did not emphasize these points more strongly.

The *Nippon* writes in its wonted strain. It denies that the clemency shown to Iba is likely to encourage similar crimes, but the only ground for such an argument, so far as we can discover in the article, is that men of the calibre of Hoshi and Iba are born not made. Very characteristic of the casuistry sometimes exhibited by our contemporary and other Japanese controversialists, is the contention that if to share Iba's life is to encourage imitators, then to leave Hoshi alive would have been to promote the multiplication of Hoshis. Thus the *Nippon* quietly takes it for granted that Mr. Hoshi was as great a malefactor in his own line as Iba was in his. It does not even descend to discuss the comparison, but quietly brackets the two men together. Of course the *Nippon* does not express Japanese public opinion in general, but it certainly reflects one phase of it.

Perhaps it may interest observers of this remarkable drama to learn that a graphic account of it from the pen of Dr. Clay MacCauley, which appears in the *Boston Evening Transcript*, is headed by that journal "A Noble Assassin."

GENERAL FUKUSHIMA.

General Fukushima's "cool retreat," as he himself called his visit to the Yangtze region, has had for incidents an interview with Viceroy Chan Chih-tung and also with Viceroy Liu Kun-yi. The General is expected to return to Kobe on the 18th instant by the *Saikyo Maru*. Shanghai papers, we observe, have "learned on good authority" that the object of General Fukushima's visit to the Middle Kingdom was to arrange for the organization of military schools and academies where officers and non-commissioned officers will be trained according to the Western system of tactics and strategy. We suspect that the "good authority" in this case is somewhat premature.

A REFLECTION.

It is certainly curious to observe the moral inconsistency shown by some journalists in China. While, on the one hand, they invariably write of the Chinese as a treacherous, Occidental-hating people, in whose military weakness lies the only hope of safety for the stranger within their gates, on the other they gladly welcome any sign of the old empire's regeneration, and are particularly pleased when she gives evidence of an intention to organise an efficient army and navy. Does it ever occur to these people to speculate how things would fare with them if China possessed and was in a position to wield the strength which they are willing that she should develop? Suppose that she were as competent to assert herself as Japan is, for example. After South-African experience no one supposes, we imagine, that the invasion of Japan by an over-sea army is within the capacity of any military organization now possessed by the Occident. Suppose that China had an army and a navy proportionately as large as Japan's navy and army, and suppose that the possession of these instruments of defence and offence was not accompanied by a change of those leopard's spots which her local critics and so many of her foreign observers regard as her normal complexion. What would then be the situation? If when the Boxer rising occurred last year, China had been able to assign ten thousand men to the attack of the Legations and to place a hundred and fifty thousand more between Peking and Taku, and if the men so assigned and so placed had been disciplined, trained, equipped and efficient as are the troops of Japan to-day, is it not absolutely certain that the Legations would have been reduced in a week and that the whole strength of Europe, America, and Japan would barely have sufficed to take vengeance and exact reparation? We do not desire to be construed as arguing against China's progress in deference to the distrust her doings have inspired. We believe that, when due allowance is made for differences of ethical standards, she has been as much sinned against as sinning. But we certainly find it strange that critics who habitually refuse to credit her with any sentiment of international good faith or any disposition to hold out the right hand of friendship towards foreigners, should nevertheless be gratified by every sign she shows of acquiring strength to break covenants and to harry strangers with impunity. That is a remarkable display of loyalty to progressive principles in despite of practical risks.

THE NATIONAL UNION AND CHINESE OFFICIALS.

The *Yomiuri* alleges that Mr. Li, Chinese Representative in Tokyo, having forwarded to General Yung Lu and Mr. Wang Wen-shao copies of the programme of the National Union with some covering remarks of his own, the two officials sent to him a despatch highly commending the purpose of the Union, and signifying their endorsement of the opinion expressed by the Minister that China has not yet emerged by any means from her difficulties. It is very natural that all patriotic Chinese should be gratified by the sympathetic attitude of Prince Konoye and his followers, nor can we agree with the criticism that because the Prince is not in power and because his fellow-thinkers do not wield any great political influence, the measure of the aid they could lend to China

in any emergency would be insignificant. The National Union represents a not unimportant section of public opinion with which every Japanese Cabinet would have to reckon. But what is quite certain is that so long as China remains in her present groove, neither Japan nor any other Power will make a resolute effort to save her from destruction. If she does not open her eyes, she must be prepared to be lowered into the grave sleeping though the National Union and Prince Konoye were ten times as strong as they are.

MARQUIS OYAMA.

There seems to be no doubt that Marquis Oyama desires to resign his position as Chief of the Head Quarters Staff. Marquis Yamagata, who returned to Tokyo on the 10th instant, and was soon afterwards visited by the Minister President of State, is spoken of as Marquis Oyama's probable successor. It need scarcely be said that some of the Tokyo newspapers are seeking to make capital out of this event. They allege that under the direction of Marquis Oyama and Viscount Terauchi the Head Quarters Staff has lost its pride of place, and that whereas people used formerly to speak of "the Army of the Head Quarters Staff," they now speak of "the Head Quarters Staff of the Army." No incident escapes an invidious rendering at the hands of these slanderers. If the health of a high official breaks down, he can always be sure that in addition to the pain of his malady and the chagrin of having to retire from active duty, he will have the misfortune to be misrepresented and maligned by some of "the organs of public opinion."

REWARDS.

Various rewards have been granted to the Japanese that passed through the siege of Peking, from the Minister down to the hairdresser, and also to several persons who were beleaguered in Tientsin, the total number being 81. Baron Nishi receives the First Class Order of the Rising Sun, to which is attached a pension of 740 yen. Mr. Ishii Kikujiro, of the Foreign Office, receives the Fifth Class with an honorarium of 1,500 yen. Mr. Tei, Secretary of Legation, gets the Sixth Class and 1,000 yen. Another Mr. Tei, Consul at Tientsin, receives the Fifth Class with 500 yen. Mrs. Tei, wife of the latter gentleman, has the honour of receiving the Sixth Class of the Sacred Jewel, which is the highest Order yet bestowed on a woman in Japan, excepting, of course, the Court ladies. Sixty nurses of the Red Cross Hospital received the Eighth Class of the Jewel at the time of the China-Japan War. The Peking garrison gets 31 out of the 81 Decorations. The Press is much distinguished. Three representatives of the *Jiji*, Messrs. Sugi Ikutaro, Mr. Nishigori Sozaburo and Mr. Oka Seiichii are decorated, the first two getting the Sixth class of the Rising Sun and 500 yen each, and the third getting the Seventh class of the Mirror and 300 yen. The other journalists decorated are Mr. Kojo Teikichi of the *Nichi Nichi Shinbun* (7th class of the Mirror), and Mr. Murai of the *Asahi* (11th class of the Mirror).

Lord Lansdowne has informed the Church Missionary Society that it is impossible to indicate the time when it will be safe to remove the restrictions placed upon missionary work in the Soudan.

GERMAN NOTES.

The proposed tariff changes in Germany continue to be discussed with the greatest animation, and so strong is the opposition they provoke that the probability of their being greatly modified in passing through the Reichstag becomes less and less remote. They are, in fact, merely in the draft stage, and since both the Federal Council and Parliament have yet to pronounce upon them, the chief use of the present controversy will be to guide the final decision. An anonymous statesman in Berlin attributes the origin of the Bill to Count Von Bülow's conviction that agriculture plays a highly important part in the economic life of Germany, and further that for conscription purposes the maintenance of a vigorous peasantry and a prosperous agricultural community is essential. On the other hand, German agriculture has for years demanded a fuller measure of protection than it now receives, and the demand can no longer be ignored as it is supported by majorities in the most influential Federal Parliaments and in the Reichstag itself. Besides, the only fixed minimum duty in the tariff is that on corn, all the other duties being open to discussion in negotiations with other States. Austria-Hungary, which was very bitter at first against the tariff, seems to be now more reconciled to it, but Belgium is much incensed, as the tariff would paralyse several important Belgian industries which depend on the German market.

Two German aeronauts, Herr Berson and Dr. Suering, have made a balloon ascent to a height of at least 10,300 metres. They may have gone higher, but there is no knowing, for both lost consciousness owing to the rarefaction of the air. The lowest temperature registered was minus forty centigrade. The record height previously had been that supposed to have been attained by Glaisher and Coxwell in 1862, namely from ten thousand to eleven thousand metres, but the correctness of their calculation has been doubted.

The Cassel Treber-Tracknung Company have put in a claim of fifty million marks—2½ millions sterling—against Herr Sierup, the former Chairman of the Supervisory Board of the Company.

Germany has to consider a question which came before Japan also in bygone years. The Colombian Government has taken an insurgent, Murillo, off a German merchant ship lying in the harbour of Cartagena. International law sanctions Colombia's procedure, but the respect paid to international law depends largely on the parties concerned. For example, when Guatemala arrested the political refugee Barrundia on board an American merchant ship in a Guatemalan port some years ago the United States Secretary of State, Mr. Blaine, recalled the American Representative, who had advised the ship's captain to submit, and censured the commander of an American gun-boat for not interfering. The United States, therefore, can not consistently refuse to recognise the justice of a remonstrance from Germany about the procedure of Colombia, should Germany frame a protest, though probably the United States Government would gladly ignore Mr. Blaine's former decision altogether.

Count von Walderssee, speaking at Algiers, where the French gave him a fine reception on his way home, said that during the burning of the Palace in Peking, he had owed

his life to a French soldier, who carried him on his back and hoisted him out of a window.

"According to official statistics, the value both of German imports and German exports during the first half of 1901 is less than during the corresponding period of last year. The value of the imports is estimated at 2,884,500,000 marks, or 106,700,000 marks less than during the first six months of 1900; and that of the exports at 2,253,200,000 marks, which shows a decrease of 73,000,000 marks. The figures for the month of June show, as compared with June, 1900, a considerable decrease in the quantity of imports and an increase of exports. It is interesting to note that the amount of coal imported during that month is less by 196,679 tons than last year, while the export of coal has increased by 128,686 tons."

NOTES ON CURRENT EVENTS.

Lotter's commando, whose annihilation by Scobell's column this morning's telegram reports, must have made a splendid fight. Seventy-one men out of a total of 133—or nearly 54 per cent., were killed or wounded before the rest surrendered. They are brave fellows these Boers, whatever may be said of the mad obstinacy with which they continue the fight.

Dr. Baelz has returned to Tokyo where, it is needless to say, he received a most hearty welcome. He has taken up his residence at No. 41 Imaicho, Azabu, in the house formerly occupied by General Palmer, Sir Edwin Arnold, Mr. T. H. James and Archdeacon Shaw in succession.

It is reported that Marquis Oyama contemplates resigning his position as head of the Staff. He has been suffering greatly from ill-health of late, and is now afflicted with catarrh of the stomach which greatly interferes with the discharge of his duties. There is still a hope, however, that he may recover sufficiently without actually giving up his post.

It appears that the Kazusa coast was visited by a heavy gale on the 7th instant. Several hundreds of fishing boats are said to have been wrecked. Twelve boats with a total crew of 74 are missing.

The Ishikari district suffered on the same day from an inundation which seems to have caused considerable damage.

At its meeting on the 9th instant the Tokyo Chamber of Commerce unanimously adopted the Representation described in one of our recent issues, which urges the Cabinet to lose no time in allowing foreigners to own real estate and to work mines. Mr. Amenomiya moved, and his motion was approved without demur, that the Chamber should not rest content with merely memorializing the Government, but should appoint a Committee to press for the practical introduction of the proposed change. The Committee consisted of Baron Shibusawa, Mr. Shibusawa Kisaku and Mr. Asabuki Yeiji. The Committee was also instructed to consider the advisability of memorializing the Government in the sense that the Treasury's policy of borrowing large sums from the Bank of Japan had the effect of exhausting the Bank's note-issuing power, and thus preventing it from giving accommodation to merchants and manufacturers.

At the next meeting of the Tokyo Chamber of Commerce on the 9th instant, a bill will be introduced embodying a representa-

tion to the Government on the subject of the ownership of land by foreigners in Japan and the working of mines. The representation is based on the necessity of introducing foreign capital. It recalls the fact that resolutions were passed twice by the United Chambers of Commerce—once in May 1900 and once in January 1901—advocating the grant of land-owning and mining privileges to foreigners, and it expresses great regret that the Government has not yet seen its way to put the principle into practice.

The Third Division has been engaging in a series of field exercises on the Kagami moor in Mino. The artillery used ball cartridge and it is reported that the results were most distressing to the people of the neighbourhood. Twenty-two shells are said to have fallen into one village in two hours, and several houses were partially wrecked. The people made repeated remonstrances, and received assurances that a different direction should be given to the guns, but the report—published by the *Jiji* and the *Asahi*—alleges that the reckless aim of the gunners continued unamended, and that the people had to escape for their lives.

It is hard that the memory of the *Unebi Kwan* should now become an object of ridicule. A rumour has been set afloat that the disappearance of the ill-fated vessel was due not to "the act of God" but to the piratical performance of a certain great Power, which swooped down upon the vessel as she was nearing Japan, killed all her crew except one man and stole the ship. That one man has acted as pilot ever since, guarded continually by soldiers. Five or six times the ship has entered Japanese ports, but only the other day in Nagasaki did the man manage to escape by swimming. He hastened to the police, but it does not appear that a posse of constables was sent to arrest the vessel, which would have been a worthy sequel.

The *Official Gazette* publishes a summary of the settled accounts of the fiscal year, ended March 31st, 1901. From it we learn that the total revenue for the year was 295,794,552 yen, and the total expenditures, 292,726,996 yen, the surplus on the side of revenue being 3,067,556 yen. The expenditures include the outlays on account of the expedition to China and on account of appropriations for the sinking fund of the national debts. The original revenue shown in the estimates for the year was 254,549,818 yen, and the expenditures stood at 257,430,017. But the revenue was increased by 20 million yen taken from the reserves, and by a sum of 834 millions brought over from the previous year, as well as by 5½ millions in the shape of a temporary loan.

Mr. Kagami Kahei, who was accused of forging shares of the Agricultural and Commercial Bank, has been apprehended. It appears that he redeemed all the spurious shares on the eve of discovery. After discovery, however, he went into hiding, and has only now given himself up. Mr. Kagami is a member of the House of Representatives and of the *Seiyun-kai*.

Information has come to hand respecting the operations of the German warship *Cormoran*, which was recently sent to the Matthias Islands to punish the natives for the massacre of Herr Mencke and three or four others, forming a party of German scientists. A pitched battle with the natives took place, the latter having 80 killed, and 17 were captured. The prisoners were conveyed to Herbertshöhe, New Guinea.

NEW BANKS.

Some misunderstanding seems to have arisen over instructions recently issued by the Finance Department to local authorities, with reference to the granting of permission for the establishment of new banks. The officials were advised that they must make close and searching enquiries with regard to the property, occupation, and standing of the promoters of each enterprise and as to the necessity for its establishment, and report minutely to the Department on those points, and they must not issue a charter to any bank the capital of which does not exceed yen 500,000. It is now understood, however, that the last mentioned provision is not intended to be absolutely fixed and binding. Thus a small bank which does not come up to this requirement will still receive official permission if its claims in other respects are good and sufficient; while large undertakings with the necessary capital will be refused if on other points their right to be recognised is unsatisfactory. The limit of yen 500,000 was simply put as a guide, by no means fixed and unalterable, to enable local authorities to restrict the establishment of petty banks with small capital and without any prospect of serving a useful commercial or trade purpose.

CRICKET.

A revival of interest in cricket, which has unaccountably fallen off recently, seems to have taken place, if we may attach that meaning to the fact that a game was played on Saturday afternoon between "Bankers, Brokers and Insurance" and "The Rest." The weather was on the whole favourable though one or two showers of rain fell. "The Rest" won the toss and went in first making 104, while their opponents scored 112 before closing their innings, with Brady not out and Read to bat. Following were the scores:

THE REST.

Mr. A. R. Firth, c. F. Lammert, b. E. W. Maitland	18
Mr. F. O. Stuart, c. Lammert, b. E. W. Maitland	16
Mr. K. F. Crawford, c. Firth, b. Maitland	43
Mr. F. E. Wilkinson, b. Wheeler	10
Mr. S. Moss, c. Lammert, st. Wheeler	0
Mr. O. Strome, b. Lammert	0
Mr. F. H. Bugbird, b. Lammert	7
Mr. A. Scott, st. Duff, b. Lammert	3
Mr. A. W. Read not out	4
Mr. G. Philip, c. & b. Maitland	0
Mr. C. E. Libeaud, c. Japanese, b. Maitland	1

Notes on the cuttle-fish trade in the Hakodate district of Hokkaido indicate that it has been of the most satisfactory description. The total "crop," if one may use the term, consists of 6,600 bales of dried fish, representing a value of yen 110,000, and all engaged in connection with the trade are busy and prosperous.

THE SŌUL-WIJU RAILWAY.

IF is reported that M. LEFEVRE, who has been appointed superintendent of the works for the Sŏul-Wiju line, has entrusted to a French firm in Japan the duty of providing materials. This line is growing more and more mysterious. It is impossible, in the face of persistent rumours, to doubt that active measures are being taken for the construction of the road, yet the question of finance remains altogether unanswered. The Korean Government can not be furnishing funds. The fact that it has to seek the aid of a Japanese Bank to defray its every-day outlays is a sufficient proof of its impecuniosity. Only one source seems available, namely, the 4¼ million yen which the Yunnan Syndicate agreed to put up. But the affair of the Yunnan Syndicate did not mature, so far as the public knows. Certainly if the money had been paid over we should have heard of the transaction. Altogether this most essential part of the project is enshrouded in mystery.

Concerning the road itself, no one can imagine for a moment that it is a genuine financial enterprise. As far as Pyong-yang a profitable traffic might be forthcoming, though even that is problematical. But from Pyong-yang to Wiju the line will pass through poor, sparsely populated districts, to emerge finally at a town scarcely worthy of the name. On the other hand, the strategic potentialities of the road are evident. Russia being in Manchuria, her dominions may be said to extend to the northern bank of the Yalu. There she can mass troops at pleasure, and with a railway thence to Sŏul in French hands she could pour a large force into the Korean capital with little difficulty, and certainly much more quickly than the troops of any outside Power could advance to oppose her. It is not our desire to suggest that either Russia or France now deliberately contemplates any such project, but in the face of Russia's steady advance southward in Eastern Asia no observer can pretend to imagine that she will stop short at the Yalu, or that the Korean peninsula, which would satisfy all the requirements now pushing her towards the sea-board, will be excluded permanently from her field of operations. She and France are open allies, and their partnership in Korea is apparently about to bear fruit of the same kind that it has hitherto uniformly produced, fruit for Russia to pluck. The French Government, under its present control, is not likely to lend itself to any scheme of deliberate aggression, nor, indeed, have we any right to suspect Russia of such a scheme. But Russia is remarkably clever in furnishing herself with opportunities, and remarkably fortunate in finding pleas to utilize them. When she is seated on the Yalu with a railway stretching from her feet straight to the Korean capital, what chance is there that St. Petersburg will be able to hold back the man at the front? Russia's conventions with Japan handicap her for open operations on

her own account in Korea, but her association with France enables her to do by proxy all that she desires. Thus the situation in the Far East grows steadily more menacing, for there is no reason, nor can there be any reason, to suppose that Japan would tamely consent to see Korea added to Russia's dominions, which, nevertheless, is a consummation rendered palpably more probable by the construction of the Sŏul-Wiju Railway. No French capitalist is putting money into that line with the hope of getting even a moderately good return from ordinary traffic receipts.

IBA SOTARO.

IF in Japan, as in some Western countries, capital punishment did not exist, there would be nothing to say against the sentence of penal servitude for life passed on IBA SOTARO. But since the law of this country provides for the execution of wilful murderers, IBA SOTARO's judges have laid themselves open to criticism which will be loud and many tongued. It will surely be said that they allowed themselves to be emotionally moved by the romance of the deed, that at heart they considered the assassin to have been justified by his motive, and that their judgment has placed all Japanese rulers and statesmen at the mercy of the political murderer. Undoubtedly such criticism will be warranted from one point of view, namely, the point of view of foreign observers. But an important question must be considered before coming to any conclusion; namely, what kind of sentence is most likely to act as a deterrent in this country. We ourselves have no hesitation in answering, penal servitude for life. The penalty of death is what the assassin himself hoped for. Nothing less would have consummated the drama which he had conceived. To labour for the whole remainder of his life among common felons is a prospect from which he would have shrunk with horror. He never thought of falling into the ranks of common felons. He looked forward to a sensational death upon the scaffold and to occupying a grave whither numbers of his countrymen would repair in subsequent generations of burn incense and offer flowers in memory of the brave patriot, as they have done and still do in the case of NISHINO BUNTARO and in the case of KURUSHIMA TSUNEKI. But among the herd of vulgar criminals, the incendiaries, the burglars and the swindlers, IBA SOTARO will soon lose all the tinsel of romance that now gilds his crime, and will be either forgotten or remembered with indifference. We do not know whether these considerations influenced his judges, but by whatever process of reasoning they arrived at the decision announced by them on the morning of the 10th instant, we believe that they have taken the wisest course in the interests of public peace and good order. They have pulled down IBA SOTARO from the fictitious eminence on which a hysterical section of his countrymen had placed him,

and they have reduced him to his proper position, that of a vulgar malefactor with a morbid longing for notoriety. His drama has been robbed of its climax.

AQUATIC SPORTS.

The aquatic sports of the Yokohama Amateur Rowing Club were held on Saturday afternoon and were quite as successful as this class of meeting usually is—indeed, it may perhaps be said that there was more interest taken in the affair by members generally than is ordinarily the case and fortunately the weather was all that could be wished for. A slight shower fell towards the end and just as the last event was concluded a smart little rain-squall sent most of the spectators rather hurriedly home. There was a fair attendance of ladies, for whom as on former occasions refreshments were provided, and the upper floor of the Boathouse was cleared for dancing, the Town Band being present and playing a number of airs during the afternoon.

The following were the Committee: Messrs. H. C. Litchfield, President; P. S. Bent, Captain; Dr. E. Wheeler, F. J. Hall, W. M. Squire, H. Keswick, W. Goddard, C. Thwaites; H. A. Poole, Hon. Treasurer; H. E. Hayward, Hon. Secretary.

First on the list of events was the first heat of the Tournament, which contest was perhaps most highly appreciated by the spectators. This resulted as follows:—

W. B. Mason.	C. Roth.
A. Kingdon.	H. E. Hayward.
W. M. Carst.	J. Helm.
C. H. Moss.	...Beat... R. Meiklejohn.
H. Y. Irwine.	J. E. Moss.
F. Pollard.	S. H. Kuhn.
C. H. Thorn.	A. Bye.

Next came the blindfold race, which caused considerable amusement. Arthur Kingdon steered fairly straight and got in first but many pursued very erratic courses. The result was:—

A. Kingdon	1
E. J. Moss	2
T. Jensen	3
W. M. Carst	0
H. Goddard	0
H. E. Hayward	0
J. Helm	0
H. Y. Irwine	0
S. H. Kuhn	0
F. Luther	0
J. F. Marques	0
R. Meiklejohn	0
C. H. Moss	0
F. J. Nutter	0
O. M. Poole	0
C. Roth	0
C. H. Thorn	0

The second round of the Tournament brought out the winners of the first trial, and several sharp tussles took place with the result that

Carst.)	(Kingdon.
Irvine.)	...Beat... C. Moss.
Thorn.)	(Pollard.

The team race was a very good event. Three sides competed, five men a side, each successive swimmer taking up the race for his team at the moment his predecessor touched the pontoon on the return trip from the sampan which constituted the other end of the course. The swimmers and the result were as follow:—

W. B. Mason.	S. H. Kuhn.	A. Kingdon.
R. Meiklejohn.	F. Luther.	O. M. Poole.
E. M. Barnby.	C. Roth.	J. F. Marques.
J. Helm.	J. E. Moss.	W. M. Carst.
H. Y. Irwine.	H. Goddard.	H. E. Hayward.

The Greasy Pole competition brought out a large number of competitors. The affair was not eventful, and at length W. Carst was declared winner. The duck escaped early and, really, might quite humanely be dispensed with.

In the semi-final heat of the Tournament W. Carst defeated Mason, and Irvine capsized Thorn, and when Carst and Irvine came together in the final a fairly even struggle was given in favour of the latter. Herbert Goddard acted as oarsman for Carst and J. E. Moss piloted Irvine.

The Obstacle Race required competitors to plunge from the pontoon, which was moored

close in, cljib over a horizontal bar (which H. Goddard negotiated like a bird and got a good lead thereby) dive under a sampan anchored at right angles to the course, scramble up on the bathing barge, wriggle into a coat and a pair of pants and, thus retarded, return to the pontoon. Goddard's clothes lost him the advantage he had gained, and Hayward who had reached the large second was unaccountably slow in dressing, with the result that H. Y. Irvine took the water first for the trip home, followed closely by Hayward. Irvine soon drew ahead and was already home while Goddard and Hayward laboriously dragged themselves over the horizontal pole. The result was:—

H. Y. Irvine	1
H. Goddard	2
J. E. Moss	3
W. M. Carst.	0
H. E. Hayward	0
J. Helm	0
T. Jensen	0
A. Kingdon	0
S. H. Kuhn	0
F. Euther	0
J. F. Marques	0
W. B. Mason	0
R. Meiklejohn	0
F. J. Nutter	0
F. Pollard	0
C. H. Thom	0

There was a tug-of-war for which teams were provided of ten men each but when their turn came only eight swimmers went out and, four a side, tugged futilely at opposite sections of a rope. It does not seem that a tug-of-war lends itself greatly to aquatic conditions and, we suggest for the consideration of the Committee that the maximum of exercise such as is afforded by that kind of contest, and a great deal more interest would be gained if teams of men were harnessed to dinghies and required to tow these in haste from one point to another, over, say, a fifty yard course.

The last item on the programme was Water Polo. The sides were:—

Red.		White.
H. E. Hayward.)	Forwards.	J. E. Moss.
H. Y. Irvine.)		S. H. Kuhn.
J. Helm.)		O. M. Poole.
W. B. Mason.)	Half-Backs.	H. Goddard.
F. M. Barnby.)		F. Luther.
F. Pollard.)	Backs.	F. J. Nutter.
T. Jensen.)	Goal.	J. F. Marques.

White scored once in the first half and the second was unproductive.

THE SOUTH AMERICAN IMBROGLIO.

The situation in South America which was set forth in a telegram on Thursday appears to have been foreshadowed in despatches that were published in American papers. The immediate cause of friction between the states of Venezuela and Colombia has been the unconcealed sympathy of the dominant party in the former republic with a large revolutionary section in the latter led by General Rafael Uribe-Urbe, whose objects have been understood to include the union of the two republics. Frequent encounters appear to have taken place on the frontier, the Colombian troops finding themselves opposed at times to the revolutionists of their own country and at others to these assisted by their Venezuela sympathisers. As indicated by the latest telegram the regular army of Venezuela, with, of course, the cognizance and approval of its Government, has not veiled its approval of the revolutionary movement in the neighbouring state.

By Aug. 12th the friction had developed so far that the Colombian Minister, influenced doubtless by the undisguised attitude of the Government to which he was accredited, left the Venezuela capital, Caracas. No news was obtainable from Bogota, the Colombian capital, but the manner of the Minister's departure left no doubt as to the intention of the Colombian Government to hold President Castro of Venezuela and his ministry responsible for recent events upon the border. In response to a cable despatch from Mr. Russell, U.S. *Chargé d'Affaires* at Caracas, the State Department at Washington empowered that gentleman to assume charge of the archives

and other property of the Colombian Legation during the absence of the Colombian Minister.

Later telegrams announced the death of General Uribe-Urbe on July 27th at San Cristobal, Venezuela, while fighting with Venezuelan regulars against Colombian invaders, but the news was very generally discredited on the ground that since the inception of the present revolt in Colombia, Uribe's death has been almost an every-day occurrence.

Meantime the situation has been freely discussed by the American press, which unanimously approves of the steps taken by the Government at Washington to have the U.S. flag represented on the scene by several ships. As already reported, it had been decided to send the *Machias* (which has probably left Hampton Roads ere this on her mission). As the gravity of the situation became apparent the necessity for more ships asserted itself, and attempts were made to establish communication with the battleship *Wisconsin*, then cruising off Puget Sound. Wireless telegraphy might have facilitated matters, but under prevailing conditions the authorities had to abandon the effort and requisition the battleship *Iowa*. It was even contemplated that should there be any apparent danger of "European intervention" the *Machias* would be reinforced at Colon, possibly by the entire North Atlantic squadron. We extract some of the press comments on this subject:—

The position taken by the New York *Herald* in its recent editorial advocating a speedy demonstration in Colombian waters in order to forestall European intervention in Venezuelan-Colombian affairs has elicited the following expressions of opinions:—

The *Philadelphia Public Ledger* to-morrow (Aug. 13th) will say: "If, in the interest of peace, warships are to be sent to Colon and Panama, the more powerful the fleet the more surely will the rights of foreigners be respected by the governments of Venezuela and Colombia over the Isthmus of Panama, and to do so our warships must be where they can protect American and foreign interests in both Venezuela and Colombia."

The *Philadelphia Inquirer* says editorially:—"We can not believe that there is any serious danger in this Colombia-Venezuela business, but we are entirely with the *Herald* to this extent—if the administration should discover any menace it would be justified in ordering a fleet to Colombian waters. That could be very readily done as a measure of precaution for the protection of our interests, just as we protected ourselves in China. It would not even be a threat, for the nation that is always prepared through its navy for emergencies simply commands peace."

The *Pittsburg Dispatch* says:—"The United States should be prepared to uphold the Monroe doctrine where absolutely necessary to prevent European acquisition of territory or the seizure of governmental powers, but we should not seek any quarrel or take grave steps without positive evidence of their necessity to preserve the independence of the American republics."

The *St. Louis Republic* agrees with the New York *Herald* that no European Power can safely be permitted to take priority of the United States in a course of intervention. At the same time the Republic does not see that the time has arrived for a coercive demonstration, either as interference with the domestic affairs of Colombia or as a prohibition of Venezuela's action.

The *Minneapolis Times* says:—"Europe must be given no pretext for interference, for that would mean a foothold and an opening that might compel us either to abandon all pretense of solicitude for republicanism in South America or entangle us in serious complications with England or Germany. A show of authority now will be the best preventive of grave trouble later on."

The *Buffalo Courier* says of the situation in Colombia and Venezuela:—"With revolutions in progress and recognized war between two countries imminent, the contingency of European intervention must be seriously considered. American interests must, of course, be protected, as far as they can with justice claim protection, and foreign intervention to the extent of seizing South American territory certainly cannot be permitted, if deference is given to the sentiment of the American people, irrespective of parties."

Latest news may be summed up in the statement (from Caracas) that another Colombian force—subsequent to the St. Cristobal fight—had invaded Venezuela, the strength of this body being put at 5,000. On Aug. 9th an affair of outposts took place which ended in the repulse of the Colombians, but up to date the main bodies of the two armies had not been engaged. And, it is scarcely necessary to add, as yet there was no indication of European intervention.

CORRESPONDENCE.

MORMONS AND POLYGAMY.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In your article of yesterday "The Mormon Controversy," you say: "It astonishes us that a man of his (Grant's) intelligence should so weakly attempt to shirk the real issue." "Nor is our disposition to oppose them (the Mormons) diminished by their leader's strange attempt to divert public attention from the point really at issue." "The unique and clearly explained ground forming the basis of our conclusion was polygamy, and about polygamy Mr. Grant says not one single word in a letter filling three-quarters of a column." "Is it conceivable that Mr. Grant can be in any doubt about the count upon which he is really arraigned?"

If my letter of three-quarters of a column "astonishes" you it may be interesting to know that your reply of a column and a half "astonishes" me.

I am in this country to preach the gospel of our Lord and Master Jesus Christ, as revealed direct from heaven in this the last dispensation, and to uphold and maintain the laws of this country, agreeable to the Articles of our Faith. I have not, neither will I attempt "to shirk the real issue" or "divert public attention from it." To show that you have absolutely and with an utter lack of fairness, and in direct opposition to your own words tried "to divert public attention," shall be the main object of this letter.

Shortly after my arrival I was asked for an interview by the Editor of the *Herald* of this city, and with the utmost frankness and pleasure told him what he wished to know, and among other things I said, speaking of polygamy: "We fought the question in the Courts, carrying it to the last court of resort, and claiming that we had a right to marry more than one wife. Finally, however, we surrendered. Utah has been admitted into the Union, and there are no more Polygamous Marriages." I also stated in the same interview: "Some years ago the then President of the Church, Willford Woodruff, issued a notice prohibiting plural marriages."

In this same interview was published the Articles of our Faith and the following was one of them. "We believe in being subject to kings, presidents, rulers and magistrates, in obeying, honouring and sustaining the law?"

The next morning you quote, from my interview and advocate that the Mormons be prohibited from preaching in this country, notwithstanding the fact that you must have read all of the above statements, as it is not to be presumed that you would read part of what I had said and then be guilty of invoking the law against me and my associates in a land of perfect freedom on the question of religion. Therefore quoting your words it truly "astonishes us (me) that a man of his (your) intelligence should so weakly attempt to shirk the real issue."

Your position was so illogical that I at once sat down and wrote an answer, but in that evening's issue of the *Herald* you were answered so completely that I destroyed what I had written, and concluded to let the matter pass. I did desire, however, that you should not have a wrong impression as to my mission in this land, and so went to Tokyo and gave you my personal assurances that neither my associates nor I would preach or practice polygamy in this land, and at your suggestion I wrote a card to your paper which you kindly published, in which I state:—"Permit me to assure you that we are not in Japan to preach polygamy. Our Church discontinued allowing men to take plural wives a number of years ago, and in no part of the world are our missionaries advocating the doctrine. We are here to maintain and uphold the laws of this country, and recognize the fact that if we were to teach the doctrine of polygamy we would not only be preaching that which is contrary to the law of the land, but also of the Church of Jesus Christ of Latter-day Saints, which we represent." This ended the question of polygamy in my opinion; therefore, I purposely avoided making any mention of it in my refutation of the libel published in your paper that "no man who controls a hotel or lodging house would be acting properly towards his ordinary guests if he gave accommodation to Mormons."

In view of all the above facts and after reading in your paper of yesterday that "We concede every man's right to hold what opinions he pleases," I am confirmed in the opinion that there was no necessity to refer to polygamy.

I also concede a man's right of opinion, and that is the very reason that I informed you in our conversation in Tokyo, that I had no fault to find with you for saying and thinking that polygamy was "damnable." I know that plural marriage as practiced by the Latter-day Saints was the very opposite of what you thought it, and assured you that I was proud of the noble woman who is my mother, than whom no sweeter, purer woman ever lived on this earth, and who gave me an existence by becoming the honoured and beloved plural wife of my father.

I again assure you that we will not preach or practice polygamy in this land, and as you concede freedom of opinion and state that you would be the first to welcome us, "to these shores" were it not for polygamy, I shall now be pleased to have you do so.

I do not object to your still maintaining that "no man who controls a hotel or lodging-house would be acting properly towards his ordinary guests if he gave accommodation to Mormons," but how you can still hold such an opinion is more than I can understand when you say in the same article: "He (Grant) devotes himself to asserting, and he adduces various appreciations by other persons in support of his assertion" that the Mormons are honest and virtuous, conspicuously free from drunkenness, licentiousness, debauchery and vice of every kind. "As to all that we have nothing to say. Nor have we ever had anything to say. The Mormons may be everything that Mr. Grant claims for them, and indeed we go so far as to admit that whatever we have read or heard of them justifies Mr. Grant's encomium." I made no attempt to answer the statement regarding the "shocks the moral susceptibilities of 999 Christians out of every thousand" were receiving on account of the lives some of our people were living. I, like you, "concede every man's right to hold what opinions he pleases," and therefore have no quarrel with my Christian friends, but will incidentally remark that perhaps some of them will refuse to enter the "New Jerusalem" when they find Abraham and Isaac there dwelling with our Lord and Master Jesus Christ, as men beloved of God. The "moral susceptibilities" of the "999" may be so badly "shocked" that when they get to the city, and see upon its gates the names of the twelve sons of Jacob, born to him by his four wives, they will turn away in horror lest upon entering they would become contaminated by the associations that they would find therein.

There was a war in the United States, some years ago between the North and the South, which resulted in the defeat of the Southerners, who upon their surrender agreed to support the laws of their country, and yet men are still living in the South who honestly believe their cause was just, but thanks to the broad liberality of General Grant and others these men were not made outcasts from their country because of their opinions. Some years ago the Mormons in compliance with a direct command from God practiced plural marriage, and some of the noblest men and women on earth entered that relation and their posterity proves that the women who entered it have brought forth some of the noblest of children, but we have surrendered and propose to honour and obey the laws of our country and those of all other countries, no matter what our opinions may be.

Yours respectfully, HEBER J. GRANT.
Yokohama, September 5th, 1901.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Enclosed please find an article from the pen of General John Eaton, Ph.D., LL.D., of Washington, D.C., which appeared in the *Homiletic Review* of New York last month. If you should find it possible to publish this article, entitled "The Mormon Menace," and if the Japanese press would reproduce the same, or at least the substance of it, it would, no doubt, be rendering very valuable service to the good people of Japan by way of warning them of the dangerous Mormon plague which has already caused indescribable pain and sorrow in America, and there is reason to fear that the worst has not yet come. General Eaton is an American scholar of national reputation, who is personally familiar with many of the tricks and deceptions perpetrated by Mormon leaders and their emissaries at home and abroad. His brief but clear statements of the situation of Mormonism in America are certainly worthy of careful consideration in Japan at this time.

Yours truly, AMERICAN.
Tokyo, September 6th, 1901.

THE P. & O. AND THE PUBLIC.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Apropos the discussion now going on with regard to the relative merits, from the passengers' point of view, of the various lines whose steamers ply to and from Yokohama, I wish in justice to testify, without drawing comparisons, that having travelled by most of these lines, I have never been better accommodated, better served, better fed, or better entertained by Captain and Officers, than I have been on several occasions on board the P. & O. steamer *Rohilla*; and that my fellow passengers have invariably expressed themselves in similar terms, thus showing that the treatment I have met with has not been exceptional. My experience of other vessels of the same line by which I have from time to time travelled during the last forty years has been the same; and let me add that I have always been treated with as much civility

at the offices of the P. & O. as I have at the offices of other steamship companies.

Yours faithfully, J. F. LOWDER.
Yokohama, Sept. 6th, 1901.

"RELIGION FOR JAPAN."

TO THE EDITOR OF THE "JAPAN MAIL."

After reading such ideas about "Religion for Japan" as those of Dr. Inouye which your most valuable "Summary of the Religious Press" presents to us every month, two thoughts generally are left uppermost in my mind bearing one upon the relation of religion to morality, and the other on the relation of religion to truth.

1. In all the discussions as to what the new religion for Japan should be there is never, so far as I can see, a word about whether it is to be true or even to be based on truth. The nearest approach to any "search for truth" is to be found in such statements as that man's nature has in itself an aspiration for things above and beyond the limits of our scientific proofs. Such things must, I suppose, be regarded by those who write in this strain as real and existent therefore, though this seems never to be clearly stated.

At the same time I am glad to find that Dr. Inouye considers such aspiration to belong to his nature and not to his occasional weaknesses only; so that the scholars, the prosperous and the healthy as well as the ignorant, the poor and the sick, need religion for bringing out the highest that is in them. He seems to teach that lack of the religious aspiration is an incompleteness, not a mark of superiority in a man's character.

But a religion to have any value cannot be dissociated from truth of fact. The religious enquiry which takes the form of "What religion shall I adopt?" and does not immediately pass on for its answer, "What is true?" That and that alone is the religion which I will adopt, is absolutely futile. Demonstration in religion may be, nay is, impossible; but it is only as believed to be true that it has any value at all; and all the discussions which take the form "Japan needs a religion: what shall we have?" are quite worthless for their own professed object, though they may throw sidelights on many things and may familiarize people with certain valuable ideas.

It may be answered that the so-called facts of Christianity can no longer be believed by reasonable persons. This is not true, for many of the leaders in Science, Art, Law, Politics and every other line devoutly believe them, teach them, and shape their lives by them; but if it had been true I should hope that Christianity being built upon falsehood, should perish. There is a story that Talleyrand, the witty Bishop who gave up his profession of Christianity—not perhaps his belief in it—and became the minister of Napoleon, was interviewed by a man who said, "France needs a religion suited to the knowledge and character of our enlightened times. Now I have invented one, which I believe exactly meets the case. The only difficulty is how to get it accepted. Can you help me?" "Well," answered Talleyrand, "I should advise you to be publicly crucified for the sake of it, and to rise again." If Christ did not rise again from death let no man "adopt" Christianity for it is built upon a lie; but if He did, then it will be admitted that its fundamental teachings may well be believed. It is founded on truth. Other doctrines become credible and reasonable if the Resurrection is a fact.

And here comes in the relation of Religion to Morality. No doubt if a person can be sincerely persuaded that any fact, religious or other, is true he can honestly shape his religious and his moral life upon it, and that genuine faith will produce in him some at least of the good moral results of a genuine religion, for the man is sincere. But what of his teachers if they taught him what they did not believe to be true in order to make a good man of him? Surely their moral character is rotten to the core, for sincerity is the very foundation stone of all moral character; and the man who will teach as true what he believes to be untrue is a profoundly immoral man, quite unfit to be entrusted with the moral training of others.

WILLIAM AWDRY, Bishop.

Sept. 9, 1901.

* This would be immediately seen so far as England is concerned by anyone who would look at the lists of Presidents of the British Association, and of the Royal Academy, the Lord Chancellors and the Premiers of the past 30 years.

NEWS OF THE WEEK.

The Japanese standing squadron arrived at Aomori on the 9th inst.

H.M.S. *Argonaut*, arrived at Nagasaki on the 9th inst. from Wei-hai-wei.

Mr. Kiyoura Keigo, Minister of Justice, accompanied by H.E. Mr. Sufu, Governor of Kanagawa,

the Superintendent of Jail Judges and Procurators, proceeded to Negishi Jail on the 9th inst.

Railway traffic between Okise and Utsunogahara was reopened on the 8th inst.

The U.S. flagship *Kentucky* arrived at Nagasaki on the 7th inst. from Manila.

The Crown Prince will leave Nikko on the morning of the 15th inst. for Tokyo.

The Japanese war-vessels *Kasagi* and *Iwate* arrived at Vladivostok on the 9th instant.

Two Chinese, a man and a woman, died in Hongkong on Sept. 1st from fish poisoning.

A violent earthquake was felt in Yokohama shortly after three o'clock on Monday morning.

The working hours of Government offices will be 9 o'clock to 4 p.m. from and after the 11th inst.

Heavy rain has fallen at Sapporo since the night of the 10th inst. and all the rivers are overflowing.

The Emperor William is sending to King Edward an enormous silver gilt epergne of his own design.

Princesses Tsune and Kane will leave the Hakone Detached Palace on the afternoon of the 14th inst. for the capital.

The Hisahara coal mine, Kasaya-gori, Fukuoka Prefecture, has been flooded and three coolies were drowned on the 11th inst.

The Emperor on the 11th inst. presented yen 300 to the Dai Nippon Yogyo Kyokai (Kiln-workers' Association) as a mark of encouragement.

Mr. Komura Jutaro, Japanese Minister at Peking, left Taku for Japan on the 11th instant, and will arrive at Yokosuka on the 18th inst.

The French war-vessel *Redoutable* left Nagasaki for Kobe on the 7th inst. and the *Vipere* arrived at Nagasaki on the same day from Foochoo.

Asaoka Teikyo, an accountant in the Niikawa District Office, Toyama Prefecture, stole yen 1,821.04 belonging to the office on the 24th ult. and absconded.

The Norddeutscher Lloyd begins a three-weekly service to and from Sydney, Australia, in November next with nine modern twin-screw steamers, all over 10,000 tons.

H.M.S. *Phoenix* has gone from Hongkong to Canton, where she will remain, it is presumed, until such time as the obnoxious house-tax has become less of a cause of anti-foreign feeling.

Mr. Aoki, Director of the Yokohama Post-Telegraph office, who was to have left Japan for Europe and America on the 18th inst., has postponed his departure till the 28th inst.

William, Crown Prince of Germany, arrived in England on the 16th August. If the *Daily News* is to be believed, his visit was not unconnected with a desire to marry a daughter of the Duke of Connaught.

A bluejacket named Nakagaki Chiyokage, belonging to the Japanese war-vessel *Chiyoda* committed suicide by throwing himself before a train at No. 7 tunnel near Yokosuka on the evening of the 4th inst.

A man named Naito Kumajiro living at Nakagishi, Shitaya, Tokyo, proceeded on Sept. 9th to the house of a cousin at Tabata and demanded money. Being refused he stabbed his cousin with a fishknife and on the latter running out for assistance went to the kitchen and fatally wounded his wife. He then sat by the side of the dying woman and drank *sake* till the police came and arrested him.

A case of considerable interest and of importance to the residents in the British concession of Tientsin was heard at the Consular Court on

Sept. 30th, when Mr. Buchan, a well-known and respected resident, was charged at the instance of the German military authorities with assault. The charge was that he "did on the 27th July last unlawfully assault a German orderly named Paul Burger by striking him with a fly-flap." The case had reference to the practice, which is frequently exercised by foreigners in Tientsin, but which does not exist in England, to ride or drive on the right hand side of the road. The evidence showed that the German was cycling on the right-hand side, in face of all the traffic of the town. It was admitted, however, that Mr. Buchan (who was riding a restive pony) flicked him with the fly-whisk, constituting a technical assault, and a fine of \$3 including costs was imposed.

Two gamblers, named respectively Hasegawa Kunigoro, and Tanaka Hanshichi, had a "scrap" at Fujisawa on Saturday which ended in the former being taken to the hospital for repairs. It appears that on the previous day while Kunigoro and friends were having a small game at his house the police intruded and took off two of the players—Kunigoro and the others withdrawing from the scene in time to avoid arrest. Believing that his rival had set the police on him Kunigoro called on Saturday at Hanshichi's house and requested an interview in the open air. Hanshichi, however declined to go out, and Kunigoro, announcing his intention to drag him forth jumped into the house with his *geta* on his feet, drew a sword and seized the other by the collar. Hanshichi was prepared, however, and taking a revolver from the drawer of the *hibachi* fired three shots at the visitor, then snatching a long sword from the top of a *tanusu* slashed him thrice with considerable effect. Kunigoro was able to reach his *jinrikisha* and at once drove to the hospital; Hanshichi gave himself up at the nearest police station.

The intimations that are published in our columns respecting steamers to New York via the Suez Canal suggest the thought that there must be many whose time does not require them to travel by the shortest route, who would enjoy a trip by one of these vessels. Take for instance the steamship *Glengyle* of the well-known "Glen" line, which calls and stays for a few days at Kobe, Shanghai, Amoy (perhaps), Foochow, Hongkong and Singapore. The whole passage occupies about two months; the rates are low; there is splendid cabin accommodation and a doctor is carried. It is difficult to imagine for persons of leisure or others to whom an extended sea voyage has been recommended a more pleasant or profitable trip, and it is matter for wonder that the facilities for this method of travel are not more largely availed of. An inspection of these ships would immediately convince the merest tyro in steamship travel that he was being offered accommodation equal to that of many and superior to that of some mails. The Yokohama Agents are Messrs. Jardine, Matheson & Co.

The *Foochow Echo* of the 24th August reports the following case of deliberate suicide amid unusual circumstances:—Last Sunday, in one of the suburbs, after two postponements, one on account of the typhoon and the other owing to the floods, the public suicide by hanging of a Chinese widow was witnessed by several hundreds of spectators. The poor woman resolved on committing the deed immediately after the death of her husband. She sold the paddyfield she possessed for \$160, and purchased some splendid clothes and a coffin with the money. The Taotai, getting wind of her intention, had her brought before him, and kindly expostulated with her, pointing out the unreasonableness and wrong of the resolve she had made, but all to no effect. She said that her husband and all her children were dead, and that she no longer desired to live. The Taotai's offer to make provision for her did not turn her from her purpose, and the sending for the brother-in-law to the yamen and ordering him to prevent her carrying out her intention was equally useless. It was in vain, so the story goes, that the Taotai tried to frighten her by the assertion that such visitations as

the late typhoon and floods had been brought upon us through such wickednesses as hers; besides, did she not know that to take her own life was against the law of the land? "How is it then," she asked, "that the temple specially set apart for the worship of widows intending to commit suicide should be allowed by the Government to remain?" All argument was unavailing. Suffice it to say the suicide came off, as already stated, on Sunday last without let or hindrance on the part of the authorities or anybody else, in the presence of an admiring crowd, the woman having bedecked herself in the finest of fine clothes for the occasion.

According to statistics compiled by the Spinners' Union Association, the following shows the quantities of home-made cotton thread, the exports and imports, and the quantity remaining to be carried over:—

Year.	Thread home made. Bales.	Thread imported. Bales.	Thread exported. Bales.	Remaining. Bales.
1894	304,583	53,142	11,706	345,929
1895	384,105	48,626	11,776	420,964
1896	428,864	66,713	42,249	452,328
1897	544,460	53,636	140,116	457,980
1898	610,067	5,099	229,445	493,721
1899	868,203	27,368	341,002	584,269
1900	642,084	30,108	308,732	463,531

The above shows that the average amount of thread consumed yearly in Japan during the past seven years was 459,831 bales. Classified according to quality of thread the respective quantities imported during the past three years were as follows:—

Year.	Fine thread. Bales.	Coarse thread. Bales.
1898	80,379	5,923
1899	30,650	3,591
1900	46,645	2,542

LAW CASE.

A man named Makita Tatsugoro was arrested on the evening of Sept. 8th in the Public Gardens charged with having obtained money from foot passengers by means of intimidation.

A musical instrument-maker named Sugimoto Takesaburo, employed by a music factory at Ryusenji-machi, Shitaya, Tokyo, was arrested by the police on the 7th inst. on a charge of stealing an army trumpet, which had been sent in for repairs and which he sold in a music shop for *yen* 180.

An expert in ancient M.S.S. and pictures named Tanabe Shinsei, living at Shinmachi, Akasaka, Tokyo, was arrested by the police a few days ago, charged with having stolen gold and silver screens, swords, *kakemono*, and other wares valued at 1,700 *yen*, deposited with him by various people. He pawned the articles at Tamachi.

Kumazawa Kanji, tried for the theft of *yen* 30,000 from the Government Printing Office, who appealed against the first Court's sentence of 5 years' imprisonment with hard labour and one year's police surveillance, came before the Tokyo Court of Appeal on Tuesday. He was sentenced to four years' imprisonment with hard labour and one year's police surveillance.

In the Yokohama Chiho Saibansho on Thursday the hearing was resumed of the suit brought by Messrs. Carl, Rohde & Co. against Mr. Ogaki Hikotaro. Counsel for plaintiff applied for the further examination of a witness named Okamura, who gave evidence at the last hearing, on the ground that he made a false statement at that time. The hearing was adjourned.

An interlocutory judgment in the action brought by the Tachikawa Shokai against Messrs. Taylor, Cooper & Co., claiming the payment of certain charter money alleged to be due to the plaintiffs, which was heard in the Kobe Chiho Saibansho on 4th Sept. was given on Saturday last, when the Court decided that the claim was against Messrs. Taylor, Cooper & Co., and not against Messrs. Taylor and Cooper as private individuals.

In the Yokohama Chiho Saibansho on Thursday, before Judge Yasuda, M. Loyer, of Lyons,

France, sued J. F. Wagen. Plaintiff claimed payment of *yen* 650.121, alleging that in January and July, 1895, he sent to defendant five boxes of cotton and antiseptic bandages, the price of which was to be paid immediately on arrival of the goods. The goods arrived at Yokohama on April 13th and October 9th, 1895, but the defendant has failed to pay for them. Defendant contended that the first lot of goods were samples and that he had remitted 990 francs for the second lot. The hearing was adjourned.

In the Yokohama Chiho Saibansho before Judge Yasuda on Friday Mr. T. Kern, of Messrs. Siber, Wolff & Co., sued Mr. Okawa Sahei, drug merchant of Otamachi Nichome. Yokohama, Plaintiff's case was that defendant issued on June 28th last a promissory note for *yen* 1,383 payable on July 28th. The latter date fell on Sunday and therefore plaintiff presented the promissory note to defendant for payment the following day, but he refused to pay. Defendant in reply denied having given any promissory note to plaintiff. The case was adjourned. In the same court a petition by the same plaintiff to have the same defendant adjudged a bankrupt was heard. This case also was adjourned.

The Chief Justice of the British Consular Court, Shanghai, is coming to Tientsin, says the *China Times*, in September, to conduct any outstanding cases against British subjects, included in which will be the case against H. F. Piper, formerly of the *N. C. Daily News*, charged with robbery and obtaining Tls. 500 by means of threats and menaces, in company with three Americans and a Dane, at Chang-ko-chuang, about 30 miles N.E. of Peking, on or about June 25 last. It will be remembered that the three Americans with whom Piper is alleged to have been associated were tried recently by the American Consul at Tientsin, and are now fulfilling the sentence passed upon them.

AMERICAN TOPICS.

Dr. Tenney, who has just had the degree of LL.D. conferred to him by Dartmouth University, is endeavouring to resuscitate the Tientsin University.

General Alejandrino, formerly an insurgent leader, is now Superintendent of the Department of Buildings and Illuminations in Manila, with a salary of \$1,200 per annum.

The U.S. forces are following up General Malvar in the Batangas Province. A detachment of the 20th Infantry, under Capt. Harry Hale, defeated Malvar on the 27th August, and drove him towards Calamba.

The mail robber was industrious in the United States during the fiscal year ending June 30, 1901. According to the chief inspector of the Post Office Department, 1635 postoffices were robbed, 37 stage coaches were held up and 656 mail pouches were stolen.

Rear-Admiral Robley D. Evans, U.S.N., has been reprimanded by the Secretary of the Navy for his strictures upon Mr. William E. Chandler, President of the Spanish Treaty Claims Commission, lately a Senator of the United States and formerly Secretary of the Navy, contained in a book called "A Sailor's Log."

According to statistics collected on the subject of school savings banks, there are 3,588 of them in the United States at present, with 63,567 depositors. The amount deposited since the work of establishing these banks began, up to January 1st, is placed at \$876,000, of which \$335,000 remained on deposit on the date named.

As soon as American inventive genius and the adaptation of machinery render it practicable to perform by machinery such share of the labour now done by hand in China, Japan and Ceylon as to render competition with them practicable the United States may produce all of its own tea and much more. The tests have been conducted for several years and through several trying win-

ters, and show that the plants thrive in our climate, while the quality of the tea and the quantity per acre compare favourably with the highest average in the Orient.—*Everybody's Magazine*.

The only Southern State in which the negro rate of increase is shown in the census to be higher than that of the whites is Mississippi. There the negroes constituted 58 per cent. of the population ten years ago; now they constitute 59 per cent. The whites have increased during the past decade 19 per cent. the blacks 20 per cent.

Captain McCabe, in charge of the Forestry Bureau in the Philippines, has commenced a series of experiments to test the extent of damage done to wood by white ant termites, and to learn remedies or checks for these tropical scourges. He is obtaining specimens of the wood-boring ants and testing their damage to the various classes of woods grown and used here, and the tests extend also to American woods in use.

Emulating the exploit of General Funston, Lieut. Hazzard of the 3rd Cavalry entered a Filipino camp disguised as an insurgent, accompanied by another American and eight Macabebes, and captured Arthur Howard, an American deserter, a private of the Californian Volunteers, who disappeared mysteriously in August, 1898. Howard used to boast that it was he who killed General Lawton. Perhaps, remarks an exchange, he will boast less now.

Women have been more successful than men in the recent competitive civil service examinations in Washington. Over 77 per cent. of the women candidates passed, against 62 per cent. of the men. One-third of the clerical positions in the Washington departments are now held by women. Three of them get salaries of \$1,800 a year, fifty get \$1,600, 100 get \$1,400, 450 get \$1,200 and 300 of the sex get \$1,000 a year each. The rest of the women in the Government service are paid from \$660 to \$900 each.

It is stated that Rear-Admiral Bowles, Chief Constructor of the U.S. Navy, is taking steps for the transportation of the Spanish dry dock in Havana harbour to Subig bay. The route and the distance the dock would be towed are thus stated by the Department: Havana to Canary islands, 3,100 miles; Canary islands to Gibraltar, 700 miles; Gibraltar to Port said, 1920 miles; Port Said to Aden, 1310 miles; Aden to Colombo, 1330 miles; Colombo to Singapore, 1270 miles; Singapore to Manila 1386 miles; Manila to Subig bay, 100 miles. Total distance to be towed 11,916 miles.

A census bulletin settles the mooted question of the boundaries of the territory acquired by the United States through the Louisiana purchase from Napoleon Bonaparte in 1803. The western line ran south through what is now Western Montana, cut through Yellowstone Park and Western Wyoming and Colorado, went east through Southern Colorado and Kansas to Garden City, and thence south into Texas, where it followed the Red and Sabine rivers to the Gulf of Mexico. Practically this constituted the western line of the United States until Texas was annexed and the cession of territory was made by Mexico through the treaty of Guadalupe Hidalgo.

The doctors are now discussing the future college graduate from the standpoint of the effects of environment. According to experiments by Dr. Seaver, of Yale University, the future collegiate threatens to develop into a semi-barrel hoop, as the result of the development of scoliosis, and a New Orleans physician predicts that the spread of the disease will produce a race with one shoulder raised, the other lowered, one side of the trunk bulging, with the other correspondingly depressed; and when the curve extends to the lower part of the spine one hip will be raised and the other lowered, making an apparent difference in the length of the limbs, which, in turn, will cause a halt or limping in walking. These physical deformities will be more apparent in women, it is claimed, than in men, because the former take

less exercise. Fortunately only a small percentage of the human race follows a college course, and there is, consequently, a reasonable prospect that it will escape the deformities produced by scoliosis.

The U.S. transport *Thomas*, which reached Honolulu on August 1st, having on board 300 male and 100 female teachers en route for the Philippines to engage in educational service under the Taft Commission, developed a veritable matrimonial epidemic en route. The young men and women on board represented almost the entire Union. After the transport left San Francisco friendships were formed which soon ripened into love and the day prior to the arrival at Honolulu Captain Buford found that thirty couples desired the nuptial knot tied. He refused to permit the ceremony on board the vessel and the next day a clergyman at Honolulu made the thirty pairs happy by uniting them in matrimony. Prior to the sailing of the transport from Honolulu several other cases were reported.

The new transatlantic steamship line established between Chicago and Liverpool has been forced to withdraw, because of the discriminating rates charged for cargo insurance. Shippers were being charged as high as \$1.75 per \$100 on cargoes which paid from seaboard ports only \$1.25. The discrimination amounted to about \$3,500 per cargo, or \$7,000 per round trip, against the new line. Steamers running from Montreal to Liverpool are said to be able to secure insurance as low as 30 cents per \$100. Two of the four Chicago steamships employed by the company have been withdrawn and the other two are likely to be taken off and the route abandoned as soon as they reach their home port from Liverpool.

Mr. F. Marion Crawford, the well-known American novelist, had a perilous adventure in Jersey at the end of July. He was returning from a visit to Victor Hugo's exile retreat, when he espied, from an abandoned road winding along the shore, a quiet little cove. The weather was excessively warm, and Mr. Crawford found the temptation to bathe in the blue water of the deserted spot irresistible. He stopped the carriage and undressed among the rocks. While looking for a path down to the water he lost his balance and plunged over a cliff thirty-five feet high. Fortunately the top of the cliff hung over the sea, and he fell into deep water. He was stunned and barely able to swim to safety. The beach all along there is narrow, and where his body shot over the inlet was dotted with half-submerged rocks. Mr. Crawford was laid up for three days.

The U.S. Cruiser *Wilmington*, Captain Prime commanding, arrived at Pagoda Anchorage from Amoy on Friday Aug. 30th says the *Poochoo Echo*. As their steam launch, containing five officers and several seamen was coming from the Anchorage to the city, they had just passed the head of Green island, when an explosion of its boiler occurred. The entire top of the boiler was blown high into the air, but strange to say not a person on board was seriously hurt; save a few scratches and soiled summer suits no injuries were sustained. The launch was rendered useless for the time being, and later in the day was towed back to the vessel at Pagoda. The explosion was heard at Ewo and other places in the lower part of the settlement and persons who happened to be looking in the direction of the launch say the boiler head went higher than the top of the masts of a junk near by. The cause of the accident has not been determined.

For the second time in the history of the American Navy, said the *Manila Times* of Aug. 29th, three Admiral's pennants fly from the mastsheads of three flagships in Oriental waters. The first time was in the harbour of Yokohama, when Admirals Remey, Kempff and Watson met in their respective ships, the *Brooklyn*, *Newark* and *Baltimore*. The second time was the arrival of the cruiser *New York* yesterday at Cavite with Admiral Rodgers, from

Yokohama, where he was the guest of honour at the unveiling of the Perry monument. Three pennants now fly in Manila Bay.—Admiral Remey's on the *Brooklyn*, Commander in Chief of the Asiatic squadron; Admiral Rodgers' on the *New York*, second in command; and Admiral Kempff, on the battleship *Kentucky*, third in command. The three flags in the order of their rank are blue, red and white. This interesting event will only be of short duration as Admiral Remey will leave soon for an inspection of the island ports and Admiral Kempff sails next week for northern waters.

Artificial silk is not making much progress, if we are to give credence to the recent consular reports to the State Department at Washington, which are to the effect that the only three factories in operation, at Wolston, England, at Besancon, France, and in Germany, are not producing above 9,000 pounds a week, and that most of those who have experimented with its use have lost money. The reports further state:—"Silk made from wood pulp is not adapted to weaving, except on hand looms, because of its fragility, it being quite brittle, having but about eighty per cent. of the strength of true silk. Aside from all this, the cost is seriously against it, being much greater than that for natural silk. The inducement for its manufacture has been the scarcity of the silk-worm for the production of genuine silk(?), aside from the constant tendency of all inventors to get up something to take the place of a natural product."

According to a bulletin issued by the Census Bureau there are 5,809 farms in Arizona, with a total acreage of 1,935,327 acres, of which 254,521 are improved. Of these farms 1,769 are owned by Indians. In 1890 there were only 104,128 acres of improved land in the territory. In 1890 the average size of farms was 910 acres and in 1900 468 acres. The total value of the farm land, with improvements, implements and live stock, is placed at \$29,906,877. The increase in farm wealth for the decade amounted to 162 per cent. Of the total number there are seventy-one farms of more than 1,000 acres and 814 of less than three acres. About half of the latter class belong to Indians. Of the total investment in farms, over half, or \$15,458,717, was in live stock. The number of cattle is placed at 907,544, and of sheep at 668,458. The report shows that of the total area of the territory a little more than one-third of 1 per cent. is improved. During the last decade 545 miles of irrigation ditches were constructed at a cost of \$1,508,469. The prediction is made that ultimately a much larger area will be brought under cultivation by these ditches than now. The principal crop is alfalfa, of which 62,585 acres were grown in 1899. There also were several thousand acres in fruits and nuts.

ANTARCTIC EXPLORATION.

The British Antarctic Expedition sailed in the barque-rigged steamer *Discovery* on Aug. 6th. The King inspected the vessel at Cowes on the previous day. Assisting Captain R. F. Scott, R.N., who commands the *Discovery*, are Lieutenant Armitage R.N.R. (navigating officer), Lieutenant Rawson Roys, R.N., Lieutenant Barnes, R.N., Lieutenant E. H. Shackleton, R.N.R., and Mr. Skelton, R.N. (chief engineer). The scientific staff is composed of Dr. Koettlitz, Dr. George Murray (director), Mr. Wilson, and Mr. Bernachi. There are five warrant officers and 38 men in the crew, and five stokers, so that the complement will be 59 all told. The ship carries five whaling boats, a cutter, and a dinghy, and her total cost has been £50,000. It is expected that the vessel will, altogether, be away for three years, the expedition involving a total outlay of £120,000. Towards this sum the Government—beyond lending the services of the designer, the commander, three naval officers, and several warrant officers—has contributed £45,000. The balance has been received from generous donors, together with further amounts which will be utilised in preparing a second ship, in case it should be necessary to send out a search party. The whole of the stores will be tinned, the goods being carefully selected by experts. Twenty Siberian dogs will be put aboard when the *Discovery* reaches Australia. It is expected that the vessel will arrive at Melbourne early in November, leaving again early in the following month.

CHINA NOTES.

A telegram from Hsianfu in the *Shanghai Mercury* of Aug. 31st, states that the Empress Dowager has deprived Puchun, the heir presumptive, of his silk button and that he is now only allowed to wear the red button that is worn by all Princes of the first degree. Only the Princes who are closely related to the Emperor are allowed to wear the silk button.

A telegram in Shanghai on Aug. 31st said: The Chinese Peace Commissioners have opened negotiations with the Foreign Ministers with regard to the importation and selling of salt by foreigners in Peking, and as the Salt Gabelle is given as security for the indemnity it is probable that the Foreign Ministers will grant the request of the Commissioners that no salt is to be sold or imported except for the exclusive use of foreigners.

A telegram dated Hsian, Aug. 29th and published in Shanghai said:—

1.—A long decree abolishing for ever the eight-sectioned essay in the government examinations. The Decree begins by stating that the present dynasty in the use of the essay was but following the custom of the Mings. But now the times are changed and call for a knowledge of foreign affairs as well as of Chinese. Hence while the Classics will still be retained on the curriculum, the old essay is abolished and a discussion takes its place. The first examination for the M.A. will require five "discussions" on Chinese Government, the second five "discussions" on government of all lands together with their arts and sciences, the third on the Four Books. The degrees will be granted upon the general results of all subjects, without merely emphasising one division. The B.A., the Chinsih and other high examinations are similarly modified.

2.—The old military examinations, consisting of drawing the stiff bow and lifting the heavy sword and stones, and archery, are for ever abolished, for these things have no relation to actual warfare as carried on at the present day. As to a substitute, when proper military schools are established, arrangements can be made for new examinations.

ENGLISH AND OTHER TOPICS.

A Jesuit priest declares in an interview, published in the *Liberty*, that as a result of the Associations Bill, the Jesuits of France will probably take up their domicile in England. The Benedictines of Solesmes have already sent their library to Farnborough.

The Emperor William has bought, with the consent of the Italian Government, 12 paintings representing scenes from the Old Testament, which formerly adorned the Mansi Palace at Lucques. They are (states the *Temps*) the work of the celebrated painter Giovanni Pinotti, and they are destined for the Imperial Museum.

A great removal, affecting some 60,000 volumes of manuscripts, is now being carried out at the Bibliothèque Nationale in Paris. The space which they have hitherto occupied is to be given up to the department of printed books. It is expected that the removal will occupy a staff of fifty workers for at least a week. This is a preliminary to the rearrangement of the printed books, numbering about 1,200,000, and occupying close on two miles of shelving.

The new Bishop of Bloemfontein, the Rev. A. G. S. Gibson, is a brother of the present vicar of Leeds. He was ordained in 1879, and served for some time as Vice-Principal of St. Paul's Missionary House, Burgh, and curate of Croft in Lincolnshire. He went to the Cape in 1882 as incumbent of the pro-cathedral at Umata, and was appointed Bishop-coadjutor of Cape Town in 1894. The diocese of Bloemfontein has been vacant since Bishop Hicks's death in the autumn of 1899.

Herr Rorig, a German savant, has spent many years in the endeavour to solve the problem, "Are crows, benefactors or malefactors to the human race?" The result of his labours appears in his recently-published work, based on the study of the stomachs of 3,529 carrion crows and 1,500 rooks. He concludes (says the

Liverpool Post) that crows each do damage to the extent of 14s. annually, but they are also benefactors in the destruction of mice, pernicious insects, especially canker-worms, and wire-worms the balance working out at about 11d. in their favour, while in the case of the rook it amounts to as much as 4s.

Private advices have reached India from home, says the *Bombay Gazette* of the 10th inst., which indicate that Lord Roberts is finding the War Office overpoweringly heavy at his advanced age. Should he retire from its direction it is thought probable, in well-informed circles, that Lord Kitchener will become the right-hand man of the Commander-in-Chief at home. In this case the way will be clear for the Duke of Connaught to come out to India, a thing he is said to be desirous of doing when Sir Power Palmer's tenure expires. By that time the return of the Duke of York from Australia will have removed the reason which existed last spring against the Duke of Connaught leaving England.

One striking fact is brought out very clearly by Master Macdonnell, C.B., in his valuable *Introduction to the English Criminal Statistics for 1899*. Crime has undergone a great reduction during the past thirty-one years. In 1868, when the population of England and Wales was 21,948,713, the recorded number of crimes was 101,369. In 1899, when the population was 31,764,714, the number was 76,025. Despite, therefore, the increase in the population, the amount of crime was smaller. If the proportion of crime to population had been the same in 1899 as in 1868, the number of crimes in 1899 would have been 146,704, instead of 76,025. In other words, the number of crimes, having regard to the increase in the population, is about half what it was thirty-one years ago.

During the progress of the meeting of the Houlder Line (limited), in the Pillar Hall of the Cannon-street Hotel, on July 29th, a painful incident occurred. The proceedings had nearly terminated, when Mr. Edwin Savory Houlder, a director, fainted. One of his brothers, who was sitting by his side at the directors' table, at once noticed his condition, and, with the assistance of several shareholders, carried him to an ante-room. For the moment the incident created a good deal of excitement, but no one realised at the time the serious nature of the illness. It was the general opinion that Mr. Holder had merely fainted, as a result of the hot atmosphere in the room coupled with some excitement consequent upon the remarks of a shareholder. Two medical gentlemen, who were among the shareholders, at once entered the ante-room and applied restoratives. Their efforts, however, proved ineffectual, and in about 10 minutes from the time the proceedings terminated Mr. E. S. Houlder passed away, in the presence of his brothers and other members of the board. Mr. Edwin Savory Houlder was the senior partner of the well-known Liverpool line of steamers which bears his name, and was upwards of 70 years of age.

The Bill for a new express railway service between Manchester and Liverpool having received full Parliamentary sanction, another long stride is made in that acceleration of locomotion which the United Kingdom so urgently needs. Although the mono-rail principle of construction has many strenuous antagonists, it harmonises with the national character that the innovation should be allowed a fair trial under favourable conditions. The passenger traffic between the two great Lancashire cities is of such exceptional magnitude and so largely composed of men to whom time is money, that public patronage is secured beforehand. It is estimated that the journey of 34½ miles will be made within 20 minutes at the outside, and that, too, with even less risk than attaches to ordinary railway travelling. Whether, however, the venture will prove financially successful remains to be seen; unless fairly satisfactory dividends are earned by this pioneer line, it will not be likely to beget imitation. The promoters affirm that all they aim at is to prove the feasibility of running passenger trains at 110 miles an hour; when that is demonstrated, they propose to leave it to rail-

way companies to adopt the system as an addition to their respective lines. But to do that would, of necessity, involve enormous outlay, and this augmentation of capital expenditure could not fail to "water" dividends for some years, if not permanently.

WALES AND BRITTANY.

The Rev. S. Baring Gould has just brought out through Messrs. Methuen and Co., "A Book of Brittany," and the occasion has drawn forth a very pleasant article from the pen of one of the members of the staff of the *Saturday Review*. He says:—

Ten centuries and three have passed since the day on which the warriors of the Celtic tribe, that had fought its way from the Clyde to the Towy or the Tamar, broke into two hosts. As one race and one army they had fought in the battles of Arthur's wars from the hill of Badon to the rocks of Lyonesse, until the hour when the Faery Bark bore the great King to rest for awhile in the Vale of Avalon. And then the one part remained to abide the King's second coming in the King's own land. And the other part unmoored the barks and sailed to the forest-hung shore, where stood the castle of Sir Lancelot of the Lake and the palace of the fair Iseult. And there they made a new Wales beyond the sea, and told the tale of Arthur's fame and the dream of his second coming to the fairies of the forest glade. And to these Kelts, on either side the sea, there has remained, until this day, as a heritage, the dream of Arthur's second coming, and the remembrance of the tie of blood, that makes Wales and Brittany one land.

Yet otherwise the life of these divided children of one race has flowed in different streams. On both has pressed the heel of a rougher and stronger conqueror, and both have found a haven of safety. But the Cymric land bears marks of a Teutonic, the Breton of a Latin conquest, and to the one race the mountain and to the other the forest has been the God-built city of refuge. And so the mountain breeze has braced Wales, and the solitude of the forest has saddened Brittany.

The scattered farm homesteads in either land tell a like story of labour and endurance, of piety and hospitality; but even to such village life as cheers the Welshman, the Breton is a stranger. He has lived alone in his weird forests, or by the rocks of his cruel sea, and the glad song has passed from his lips. There were bards in Brittany, and Renan in his boyhood knew them: but they have gone the hard way that the Scottish minstrels and the troubadours and love songsters of old Provence have trod before them. In silence the fishing boats leave the Breton harbour: in silence they return. Only when the assembled pilgrims chant the litanies at the Pardon, or when the congregation at a wayside church breaks into an old Celtic hymn, does the Breton find a voice. And then the voice is sad, even as the "fitful wailings" of the mournful binion (or bagpipe) of the land.

Yet Wales remains the land of song, and her local Eisteddfods (for her national ones are overrun by the Philistine) are still her schools of music and poesy, as they were in the days when the priest was poet, and the bard was the counsellor of kings.

Yet if the gay song has departed from the mournful Breton, he still worships at the mystic shrine of Iona. The Anglican divine watches his devotions and asks in wonder how it was that the Roman Church ever gained those stubborn, dark-thoughted people, who now pay to her so undivided and whole-hearted an allegiance? * The crucifix that guards the fountain in the wild wood of Brociliande, where the great magician poured his tale of love into Vivien's scornful ear, the crosses that rise mid the relics of Druidic faith at mysterious Carnac or holy Dol reply with the words of the Celtic proverb "The Church with the people."

The conscience of the Breton has never been stirred into revolt against his religious past. To him, despite all the changes that Latin Bishop or Jesuit teacher may have wrought, the Catholic Church in Brittany is still the Church of Gildas and of Padarn. So the old spirit of Celtic hagiology (that worships in the saint the master of the forces of nature, whom his asceticism has subdued) speaks boldly still in the strange prayers of mingled entreaty and oburgation that he pours forth before the little statuette in one of the chapels that preserves the memories of the Celtic tutelaries of his race, saints whom Rome tolerates, rather than acknowledges, and more gently in the votive tablets that adorn

* "Human nature is the same everywhere, but I doubt if anywhere it is more disciplined and self-restrained than in Catholic Brittany. A tree is known by its fruit, but there are fruits of a different kind. If the fruit of Christianity be cultivated intelligence then undoubtedly Nonconformist Wales and Cornwall are more prolific than Catholic Brittany; but if it be innocence and singleness of mind, and a piety that pervades and governs the whole of life, then the positions are reversed." Baring-Gould, "Book of Brittany."

the noble shrine of his patron saint, Ste. Anne of Auray.

But 'tis in the Pardon that Breton religion strikes its truest note. The scene is the porch of a tiny church in the forest land, and the day the patronal festival. From an early hour the woodland paths are alive with the eager pilgrims wending their way on horse or foot to the tryst, and the diverse hues of the costumes of the various districts (still often, though not always worn) set off the leafy background with many a shade of colour. There is ever a passing to and from the church, for it can at one moment hold not a fifth of the pilgrims. Within there are sounds and sights to startle alike the frivolity of Latin and the decorum of Teutonic religion. The passionate singing of the kneeling multitude, the intense spiritual absorption expressed in the patient toil-worn faces, almost prove the truth of the dream of the Celtic poet that her race has a closer touch with the mysteries of the unseen than has any other people on earth. Without the sacred enclosure are the stalls, where they sell old Breton hymns, and pictures of saints, and bottles of water from the holy wells and fruits and syrups, and wine, and perchance there stands in the far background a herd of cattle, waiting to receive the priest's blessing.

And in the evening when the vesper prayers are said they all walk (the men bare-headed) in procession behind the crucifix and the banners borne by the maidens in white, until they reach a heap of brush-wood and furs, which on a signal given is set aflame. The hot breath of the fire scatters the procession and the rest of the eve is merry-making. The young dance around the blaze. The elders form themselves into knots and listen to the beggars' stories or the local poet's rhapsodies or the humorous jokes of the loved peasant priest. And as they walk home they will whisper some ghastly story, it may be of the sermons that on the dark night Death himself preaches to the kneeling skeletons in Carnar Church, or it may be of the spectral battle that the ghosts of the slain men still fight under the moonlight on the stricken field of Pluvigner.

The mystic note of Iona still speaks in the valleys of Wales; but only alas! in ancient story and dying custom. The black-hearted prelate of the days of Whig corruption, and the nature-hating preacher of the Methodist upheaval have together torn the nation's heart from its ancient moorings. The peasant always speaks of the Methodist revival as the beginning of a new religion. And all save himself know that the ideals and inspirations of this his new creed are of the coarsest Saxon store. And yet it is not all evil. "Nihil tēgit, quod non ornabit." Celtic sentiment has coloured even religious Philistinism with romance. The closing words of the sermon on the hillside, when the great preacher's voice attuned to the howl holds thousands motionless beneath its spell, may still recall the day when the land on which David the prophet stood, rose up as he preached and grew into a mighty hill. And the wayside chapel to which the aged peasant walks for many a mile, hideous to the eye, is redolent with the memories of Thomas Charles or John Elias, and consecrated by the musical glories of the hymns that entrance the walk of the Sabbath wanderer. And the old saints, whom the Breton still adores, yet watch over many an old church in Wales, though the countrymen of S. David seek their prayers no more.

"De tout temps la fidélité Bretonne rendit hommage à ses souverains" is the proud boast inscribed on the mausoleum in the church at Plœrmel, where rest the remains of the second and the third Dukes of Brittany. And it is true. Pass through the towns of the Duchy, and from the stately monument that recalls the fame of Bertrand du Guesclin in the market place of Dinan to the chapelle expiatoire by haunted Auray, where the wayfarer drops his sou "pour les messes" for the ill-starred émigrés of Quiberon, you will see the romantic and glorious story of the Brittany of the Knightly Years imaged on canvas or on stone. The liberties of Brittany are gone, but the stately Parliament House at Rennes, where of yore the estates sat, and the battlements that still guard Dinan and Vannes, recall the glories that have been. In the towns of Wales, save in the ruined castles, relics of the Norman shame, the past has left no visible trace. Giraldus, Llewelyn, Glendower—there is no memorial to their fame, in the land for which they fought. Nay, a national museum for Wales remains a dream. For this difference there is a double cause. Neither in Wales nor in Brittany did the Kelt build the towns. Cardiff, Carnarvon, Beaumaris; Rennes, St. Malo, Nantes, each of these is but a vice, by which the hand of the alien conqueror has gripped tight a people, that would otherwise have slipped from his hold. And in part 'tis from the artistic genius of the Latin race that the Breton town draws its beauty, as it is to the Philistinism of the Teuton that the Welsh town owes its hideousness. But there is also another cause. 'Twas as a people under native rule that the Breton Kelt grew into modern civilisation. And 'twas only in the chaos of '89 that his national

institutions passed away. 'Twas otherwise with the Welshman. The painting in the Hôtel de Ville of Vannes that presents the marriage of Louis XII. in 1530 to the Duchess Anne and blends the arms of the Kingdom and Duchy raises sorrowful thoughts to the Welsh patriot who recalls the tragedy on the banks of Wye and the passing of Glendower. To him his medieval story is a tale of failure; and as his Philistine religion has made him a worshipper of success, he cares not to recall it overmuch.

At least for him the present outlook is happier than for his brother Kelt. Half from weariness and half it may be from contempt, the Englishman leaves him free to speak his own tongue and live his own life. The only true danger that threatens him to-day is the Philistinism of the politics and religion that he has taken to his bosom. 'Tis otherwise with his brother. The feminine temper of the Gaul has never forgiven the musket shots that flashed from the Chouan forests upon the hypocrites of the Revolution. In Brittany the native language is to-day proscribed by law in the peasant school and in the places of honour; in his own country the Breton is a stranger. And yet the sturdy native tongue is as strong in the forest land, as on the day when its last Duchess gave her hand to the French King.

"They went to the war, but they always fell." To-day to the outward eye there is nought in Brittany but what the Celtic poet would call the glory of the fading sunset, and verily the national revival of Wales has yielded but a drear and clouded morning. Yet the Kelt always conquered always survives and his dreams of "impossible" ideals none may take from him.

The essays of the Celtic poets which lie before us sing alike of the return of Arthur. Breton and Welshman, they have exchanged the Chouan forest and the Cymric glen for the Boulevards and Fleet Street, but they are in and not of the Latin or the Teutonic crowd. 'Tis the dream of Arthur that binds them together and keeps them apart from the rest, as it is in this faith that this divided race has lived on for the ten centuries and three. And as one muses of their dreams, and turns to Mr. Baring Gould's glowing appreciation of the Breton, one wonders whether it may not be the mission of the Kelt to purify those creatures of a material and worldly civilisation, the ruling nations of the earth, by driving them forth from their thrones to seek and to find the Holy Grail, and so may Arthur come again.

THE BANK OF FORMOSA.

The fourth general meeting of shareholders of the Bank of Formosa was held in the Tokyo Bankers' Consulting Club at 1 p.m. on the 2nd inst. After a speech by Dr. Soyeda, President of the Bank, the meeting proceeded to discuss particulars concerning the report on the settlement of accounts for the first half of this year. Mr. Katsujirō Shimada asked a question about the estimated value of public loan bonds, to which Dr. Soyeda replied that they were estimated at 90 yen in the previous term but lowered to 88.50 yen for this term. A minute explanation by Dr. Soyeda was also given in reply to Mr. Shimada's question as to why the business expenses were so large; and then the meeting passed the report unanimously. The question of dividend came next to be discussed. It was proposed by Mr. Shimada that the dividend for this term should be raised to 9 per cent. per annum but as no one seconded his motion, the original proposal was carried.

The following is a summary of the accounts passed at the meeting:—

	Yen.
Gross profit for the half year	557,542.078
Brought from the previous term	23,757.420
Total	581,299.498
Expenditure for the half year	476,589.478
Net profit for the half year	104,710.020
This amount is appropriated as follows:—	
Reserve fund, for making goods unexpected losses	22,000.000
(In the above is included 10,000 yen which are, in conformity with the second article of the Bank of Formosa Assistance Act, to be disbursed as dividend for 10,000 shares belonging to Government.)	
Reserve fund, for equalising dividends	3,000.000
Special Reserve, for future use	10,000.000
Remuneration Bonuses, etc.	5,600.000
Dividend	40,000.000
(Setting aside the 10,000 shares belonging to Government, the amount represents dividend on the remaining 40,000 shares at the rate of 1 yen per share, that is, 8 per cent.)	
To be carried over to the next term	24,100.000

Dr. Soyeda, President of the Bank, said:—At this fourth periodical general meeting of shareholders, I

am very happy to have the honour to address you. I shall speak on the present situation of economic circles in Formosa and the general conditions of the business of the Bank. If my speech serves to you for reference, I shall feel recompensed. Tea, the most important article exported from Formosa, is usually in its highest prosperity and activity during the last half of every year; but in this term, the trade was extremely dull: the spring tea suffered so much from the changeableness of the weather in its germinating stage, that when it appeared in the market it was quite out of season; the market for the *iron* tea in America was being narrowed gradually and its market price was reduced in a considerable degree. The total quantity of *iron* and *hōshu* teas exported from the island during this term was valued at 1,060,000 yen showing a diminution of 17 per cent. as compared with that in the corresponding term of the previous year. Quite contrary to this, camphor, in spite of damage by savages in one of the most productive localities during the previous term, was exported, with camphor oil, to the amount of over 2,690,000 yen, which shows an increase of 44 per cent. in comparison with that of the corresponding term in the previous year. Sugar also, when compared with that of the corresponding term in the previous year, shows an enormous increase in production, the value being over 2,810,000 yen, showing an increase of 35 per cent. as compared with that of the corresponding term in the previous year.

As can be easily understood from what I have stated, the foreign trade in Formosa has maintained its former disproportion, the increased exportation of camphor and sugar being insufficient to make good the loss of money on imports from abroad. In the foreign trade during six months this year, from January to June, the export stood at over 4,430,000 yen, while the import was more over 6,960,000 yen, the latter exceeding the former by about 3,520,000 yen. In the same way, the imports exceeded the exports by 260,000 yen in the trade with Japan proper, standing at over 4,750,000 yen and over 4,480,000 yen respectively. It must be remarked that the export to foreign countries showed a decrease of some 260,000 yen when compared with that of the corresponding term in the previous year and the increase in import stood at the not considerable sum of 530,000 yen; while at the same time, export and import from Japan proper increased by more than 1,760,000 yen and over 1,040,000 yen respectively. This is evidently a sign of the foreign trade being turned toward Japan proper slow but steadily.

In addition to the enormous excess of import over export in the foreign trade during this term, there was circulated a rumour that all Government works would be stopped for the time being causing a withdrawal of capital and labour, so that the number of bills of exchange drawn on Japan proper increased so suddenly that the system of drawing bills of exchange between the island and Japan was very much deranged, making those concerned in it experience difficulties for a time. But the officials of the Bank, exerting their energies to the utmost, managed to supply the funds for bills of exchange and at last succeeded in getting out of the critical situation. The economic conditions of the island, however, became dull, partly because they were influenced by the straitened circulation of money in Japan proper, but mainly because Government enterprises did not make so much progress as was expected.

The confidence of the public in notes issued by the Bank augmented each day; for, notwithstanding some uneasiness felt by a portion of the ignorant natives on account of a rumour about the suspension of Government works referred to, which caused the people of some provinces in greater number than ever to demand specie from the Bank in exchange for the notes they possessed, the actual amount of notes circulating in the island in the latter part of this term was very much greater than that in the latter part of the previous term. As to the reduction in the issued amount of bank-notes during this term, it is to be ascribed to precautions against emergencies taken by the Bank, which acted with moderation in lending out money and in other similar business.

It goes without saying that any fluctuation in the price of Silver very seriously concerns the business of the Bank. The current price of Silver in London in the latter part of the previous term stood at 29 1/2 pence, which was lowered to 28 in January following, and then to 27. After many fluctuations, it was finally fixed at 27 1/2 at the end of this term. In consequence of this, the publicly fixed price of the one yen silver coin, too, was changed from 1 yen and three sen to 1 yen on the 1st of February, and then to 97 sen on the 24th of April. In spite of these great changes, however, the Bank did not feel their effect in any considerable degree, for we took precaution's against them.

The office for assaying gold and silver in the branch office at Keelung worked satisfactorily, and is very promising at present. Gold purchased since the opening of the office in November last year up to the latter part of this term amounted to over 137 *keumme* in weight, valued at over 572,000

yen; the average amount purchased per month being 19 *kwan* and 900 *me* in weight, worth upwards of 81,000 yen. As the office has been winning, since its opening, more and more confidence from the natives, many of whom regard it as very convenient and indispensable, its future prospects must be exceedingly hopeful and encouraging, as long as there does not occur any unexpected change in its production.

In a word, the Bank passed through many difficulties during this term. Fluctuations in the price of silver, inequality of bills of exchange, unusual depression of trade in Japan proper, dullness of commerce in general, and other similar unfavourable conditions all interfered more or less with the business of the Bank. But the Bank had the best of it for all that. You can see yourselves how much profit there was. It may not give you much satisfaction, I am afraid, but as the essential point to be always kept in view is to solidify the foundation of the Bank, by taking safe and steady steps in all our movements, it is my earnest desire that you will approve this proposal without any change.

THE MORMON MENACE.

By GEN. JOHN EATON, Ph.D., LL.D., WASHINGTON, D. C., PRESIDENT SHELTON JOCKERLY COLLEGE, SALT LAKE CITY, UTAH, FORMERLY UNITED STATES COMMISSIONER OF EDUCATION.

An intelligent American is naturally surprised when he hears that some of the Oriental religions of Japan, China, or India are sending missionaries to our shores. These religions stand to him for the most backward human conditions. To adopt them we must right about face and go from bad to worse. This average American adds to his surprise shame and disgust, when he finds that during the past century his own free country has furnished the field for the origin and growth of an Antichrist known to the public as Mormonism, one no less essentially destructive of all he holds dear than those commanding the religious homage of so many millions in Asia and Africa. We too readily fall into the habit of regarding our opportunities as our securities, and allow perils to accumulate around us until sharp warning arouses our attention. No czar or king enforces any religion for us, and we are assured freedom of belief and action to whatever comes under this sacred title. Even the fantastic declarations of Dowie suffer no limitation until they violate some law. So the votaries of the Joss-house celebrate their rites in Chinese temples in our cities with the utmost freedom until a civil line is crossed. What has been, may be. Minds have a likeness the world over. The beliefs congenial to so many Oriental millions will find responsive mental attitudes in a country where the liberty of belief or action is so great as in America. These perversions may be expected to attract the imagination of young people. This condition furnishes an added reason for those who are raising twentieth-century funds, to safeguard the future with institutions for Christian education. Naturally such perversions take shape to meet special conditions. Whatever answers to the demands of nature, whether good or bad, is so far sure of acceptance among mankind. To this region of human experience Mormonism aspires, and in it finds place for its growth and strength.

There is not space here to rehearse the so familiar history of the Mormons, from their origin in the arch-impostor, Joe Smith, through their migrations from Palmyra, N.Y., first to Kirtland, Ohio, then to Nauvoo, Ill., where Smith was shot, and finally under Brigham Young to the valley of Salt Lake, Utah.

The incompatibility of Mormonism with prevailing public sentiment was but too manifest, yet this new situation was so far removed from the American public and communication was so limited that there was little intercourse, and public demands upon the Mormons had to be made through the national Government.

The story of the conflict is a long one, but should not be overlooked in any study of the nature of Mormonism. Brigham continued his power, keeping the whole internal situation well in hand, sometimes winning political influence, so that he was at one time governor of the Territory and Indian agent by appointment, and yet was well known to encourage to the utmost disloyalty to the flag. His treatment of the military expedition which he forced to winter at Fort Bridger can not be forgotten. Perhaps the one Mormon act that gave greatest shock to the public was the Mountain Meadow massacre, when innocent emigrants to California to the number of one hundred and twenty were betrayed when passing through the Mormon country, and massacred by Mormons disguised as Indians. Years after, Bishop Lee, by General Grant's persistency, was tried and executed for this crime. His confession has been published.

One who would understand the nature of Mormonism should study its unfolding in the valleys of Utah, under Brigham Young, while he was able to carry out his own will in a homogeneous, growing community, that is, before interferences began in

connection with the settlement of the Pacific coast and the operations of the Government. His will was absolute. Missions in the States and in Europe prospered. Emigrants came from Europe by hundreds at a time. Those who had possessions gave a tenth to the church. Those who were poor were aided from its treasury, for which aid they were to pay principal with interest. All who came were made to feel Brigham's grip. Those who did not conform to his will often disappeared in the darkness of the night. The Danites were active. "Avenging angels" were on duty. Some one, a few years ago, undertook to study the agencies provided through which Brigham's will was to be carried out, and the minuteness of his operations. There were the Melchizedek and Aaronic priesthoods. There were counted 1,219 "elders," 4,747 "seventies," 1,611 priests, 413 high priests, 68 patriarchs, 12 apostles, and a first presidency of three, to say nothing of the 5,000 deacons and others. Some will recall Brigham's declaration illustrating his methods: "I have a perfect right to dictate in everything, from the setting of a stocking to the ribbons on a woman's bonnet." At Nauvoo, celestial marriages were charged and denied; in Utah Brigham not only practised polygamy himself but commanded others to do likewise, and declared that the doctrine was revealed to Smith before his death. This was denied by the Josephites, whose headquarters are in Iowa.

The so-called system of schools crowned with a university was permeated by their teachings. In addition to day-schools, there were Sabbath-schools. Not satisfied with these manifold opportunities for shaping the ideas of the young, little tots were gathered in primaries in districts, under matrons, where they were occupied and diverted, not in well-devised kindergartens, but with dances and Mormon stories and songs. At eight years of age they were baptized and admitted to the church; and now that Young is dead, every occasion is improved to impress his memory. Collections of sands in goblets, representing these primaries, were exhibited in Chicago, where Brigham's statue confronted those who entered the Utah house. There is a feeling abroad that would place his statue in the old hall of the House of Representatives in Washington, D.C.

To learn in how many ways these sentiments may be inculcated, one needs to watch the Mormon press. Their daily and weekly papers and magazines are under skilful editors. At a recent meeting of young people's associations there were reported 507 young ladies' organizations with 21,619 members, which included foreign missionaries, and 550 young men's associations with a membership of 28,047, of which 2,048 were "local" and 958 foreign missionaries. Thus through this organization the work goes on the world over. As travel through the Mormon country increased, and the Government enforcement of law made the general American public more familiar with the facts in the Mormon settlements, the conviction grew that there were springing up under the flag communities disloyal to it and hostile to Christianity. The extent to which, in the more out-of-the-way valleys, this hostility was carried on it would be difficult to express. The several evangelical Christian denominations were roused, and began to send in missionaries. These missionaries were received with hardly less opposition than they might have encountered in central Asia or Africa. It was difficult for them to rent buildings for temporary use.

The benighted conditions here and there reported, the sadness in polygamous homes, the threats and abuses heaped upon missionaries, the vicious practices that prevailed, one could hardly believe to exist on American soil. Methodists, Episcopalians, Congregationalists, Baptists, Presbyterians, Christians, united in one deplorable testimony. The preaching of the Word found little encouragement among adult Mormons. The twist into which the adult mind had grown strangely unfitted it for the truth; but the children, the growing youth, could be reached, and so schools were added. The Holy Spirit seemed to rest upon the work. Churches were organized as well as schools. The Christian teachers were better qualified and taught better schools than the Mormons. The parental instinct for the welfare of their children responded, and the demand arose quite generally for improved schools. This was specially true in Salt Lake City. Indeed, the change there went on so efficiently that the anti-Mormon element united and voted for a so-called Gentile government. A notable revolution in schools followed.

Moreover, a more general change was brought about. That great statesman, Senator George F. Edmunds, fastening his attention upon the constitutional provision for the police administration of Territories, saw there was ample power for regulating marriages and destroying polygamy without touching the so-called religious errors of Mormonism. The Mormon leaders were quick to see the situation. To resist the authority of the United States would be useless. Opposition was changed to conciliation. Everything possible was done to convince the country of good intentions. The Mormons declared for order, for industry, for peace among themselves. They

boasted their temperance. They invited attention to their prosperity. Did not they make the desert blossom like the rose? Utah asked for statehood and was refused. But political parties wanted her vote; and, her population increasing, Congress was finally conciliated, and granted the needed permission to organize a State. Everybody rejoiced in the happy time. A constitution prohibiting polygamy was adopted. Presidents Cleveland and Harrison were satisfied with the solemn enactments of the leaders. So gratifying was the situation that many most bitterly opposed to Mormonism voted for statehood.

No sooner was the State organized, however, than adverse signs began to appear; the intense Mormon element could restrain itself no longer. The polygamous portion were in control, and they knew it, and they elected to a seat in the United States House of Representatives one who both taught and practised polygamy. This was too much for the conscience of the country, and he was excluded. Again there was quiet for a time, and then the polygamous element in the legislature passed a bill in effect protecting polygamy. This the governor was wise enough to veto, but it should be noted that in this veto he confessed that he was a product of the prevailing system—that he had nothing to say against polygamy as wrong, but his veto power against the proposed legislation was exercised to prevent the passage of a constitutional amendment.

But while it is evident that the Mormons have accomplished the results which are so plain, it is after all manifest that Mormonism has kept down the immigration of capital and enterprise which the soil and climate, and especially the rich mines, would have secured. Careful observers do not need to penetrate the conciliatory policy to discover a deception prevailing and controlling the intercourse with the American public. Mormons wished it understood that they had given up polygamy. The secrecy of marriages rendered proof difficult. When proof was furnished, and births were offered in evidence, there were those among them who confessed that there might be fifteen hundred living in polygamy. They, however, admitted it to be a fundamental doctrine of their belief, and claimed not to practise it in deference to the law.

It is interesting to study the operations by which the processes of conciliation are carried on, and how they often defeat themselves. Mrs. Gates, editor of one of their magazines, travels in the States to convince ladies how well up Mormon women are in all questions affecting their sex, and what a happy condition they are in; but when in her zeal she affirms that there are but two families in Provo living in polygamy, the protests that follow leave no doubt of her mistake. Women, carefully selected by the leaders, appear in various national conventions to represent their attitude in Utah as woman-suffragists, temperance workers, advanced educators, and advocates of purity. Every opportunity is improved by which a good word may be secured for Mormons. The governor of Idaho testifies to their excellence as citizens. Everything possible is turned to account. Much deception is practised.

They aspire to fellowship with Christian churches. The Presbytery of Utah, made up of able and intelligent men, familiar with all the facts, after careful consideration, have issued ten cogent reasons why this is impossible: First, because the Mormon Church recognizes no other church but itself, and thus unchurches all Christians; second, because Mormons destroy the Bible by their so-called revelations; third, because they make belief in Joseph Smith as a prophet of God an essential article of faith; fourth, because they make the Mormon priesthood infallible; fifth, because in their God-man doctrine they teach that man may become God; sixth, because they teach that Adam is God and that Jesus Christ is the son of God by natural generation; seventh, because they teach that there are many gods, men becoming gods by plural and "celestial" marriage; eighth, because while they claim to teach the atonement of Christ for original sin, the sin of Adam, they teach man's salvation from personal sins by his own good works; ninth, because they believe in polygamy and teach that Jesus Christ was a polygamist; tenth, because they teach that God the Father is a polygamist.

This statement of reasons has been formally adopted by several other evangelical bodies, and may be said to be generally held. It is seen, therefore, that under cover of a so-called church they claim all the freedom accorded to religious belief. Few consider the extent to which this may be carried, but the cover is sufficient for all Mormon purposes. Under its astute leaders plan in secret and order all operations. They claim to have three hundred thousand followers, and affirm that their increase is not less than forty-three thousand a year. In politics, under the American system, in which there are two or more parties and the majority rules, they have complete control in Utah, and constitute the balance of power in five other States, and may touch with force the political nerve in additional States and Congressional districts. As a State Utah is one of the forty-five in the Union, and controls the State offices. They have in their hands

the system of State courts, the police, and the schools from the smallest district organization to the university.

The extent to which Mormons are favoured need not be stated. They have one vote in the national House of Representatives, three in the presidential college, and two in the Senate, and morally all the weight these positions carry with them. Through their press, their priestly communications, and their two thousand missionaries, their leaders can easily enforce their will. The church system of tithing has given them large wealth. They are a factor in trade, they can boycott industry, they can touch the nerve of the press. The increase of railroad travel and the presence of Gentiles have rendered it possible to know more of the internal conditions of Mormon communities, but those who live among them for gain have special reason to fall in with their deceptive conciliation.

The resident Christian missionaries may be expected to see things as they are, to understand how the Mormon conditions and surroundings are adapted to render minds under such control unfitted to receive the truth—also, through the confidence accorded them for their kindnesses, to know the real situation. This statement can hardly be dismissed with a laugh or a sneer. The preaching of the Gospel and the teaching of Christian schools are the saving power for the local communities. They stand within the "imperium in imperio" as lights to all minds looking toward the truth or seeking to be led by the Holy Spirit. Several denominations have mission-schools and academies, doing good work at important centres. In this educating work, the Presbyterians may be said to lead in number of schools and completeness of system. Sheldon Jackson College has just finished its four-year course and graduated one student. No longer will it be necessary for those pupils completing their studies in Christian schools and academies either to terminate their course, or to be at the expense of going to other States, or to the State University to come under Mormon influences likely to dull their moral discrimination. The college is the natural capstone of Christian education, and strengthens all the evangelical work among the Mormons. It is of supreme importance.

As Mormons see their own operations going on in various forms and in a variety of localities in all the States—they number five thousand in Hawaii, five thousand in Mexico, three thousand in Canada—they dream of their final triumph, the promised millennium; they wish only to be let alone, self-assured of their own progress. Let no one mistake Mormon subtleties; they would deceive the very elect. Their missionaries swarm in Christian communities. They assume to conduct his services for any evangelical pastor. Their use of terms means one thing to them and another to their Christian hearers. One of their tracts, which happens to lie before me, is filled with Bible quotations and declares that the "first" step toward salvation is to believe in the Lord Jesus Christ; the second step is to repent and turn from sin; the third is to be baptized by immersion for the remission of sins; the fourth is to receive the gift of the Holy Ghost through the laying on of hands by those having the authority to confer it. Thus step by step, those who go with them are led on until they are completely in the hands of those who claim to have the right to confer the Holy Ghost. This self-surrender is not to God, but to the priesthood. Meanwhile the leaders do their best to avoid being assailed by the pulpit or by the press.

It is not surprising that select women of all denominations have become alarmed and sent out their warnings, "Guard our homes," the citadel of our purity, of our motherhood, and of all that women hold dear. We should concentrate on the constitutional amendment, as advised by the great, clear-sighted statesman, and give the people no rest until it is enacted, as the one political measure that will stay much of the evil. In the mean time let us always give our energies to Christian education, the last, the comprehensive appeal to the forces that save mankind. Some may recall occasions when slight majorities turned the ballot in favor of slavery, and so perpetuated a system that could be removed only by the blood of the nation. Shall this history be repeated?—*The Homiletic Review*.

OUR FUTURE MOTHERS.

(By MRS. OSCAR BEHRINGER.)

This is question of supreme and vital importance to the individual woman and the State. The superfluous woman is a quantity which even the most conservative myope amongst us can no longer deny. Her lamentable superfluity has been recognised, and in greater or lesser degree, according to the customs of the country to which she belongs certain channels of employment have been opened to her. Public opinion allows her to live alone, without any imputation of malice prepense. Locomotion has been made cheap and easy for her. She is comfortably catered for at various tariffs, and sympathetically con-

sidered as a definite human unit. In fact, her economic importance is established. She is moreover—greatest advance of all, of which we women have yet to learn how to avail ourselves fully—credited with the necessity for play, and without which Jenny infallibly becomes a very dull girl indeed. So far, so excellent. And it may be taken as read that these excellent conditions have satisfactorily disposed of a decade of feminine superfluity.

We are now faced by the situation that we have taught and made it pleasant for a large body of women to lead a life entirely free from, and unhampered by, home ties. The superfluous woman, by force of her superfluity, knows as little of the endless and inevitable sacrifices as of the joys of the wife and mother. She is, in fact, if she is a successful superfluity, self-centred and self-sufficing, with a completeness neither attained nor sought after by her bachelor brother. The fact of her having remained superfluous demonstrates her lack of charm for, or her not having tried to attract, the strong half of the world, i.e., that she is primarily deficient in the qualities which eventually lead to the desire of a woman to have a child, the gift of the man she loves. These are the superfluous women.

We will now consider the women who are not superfluous, who attract, and also who are sought in union by men. We will first turn to that "woman's land," America, where the reproach of superfluity has never found entry, and whose manners and customs we are so freely adopting. No more pithy or striking definition of the American woman can be found than in Paul Bourget's "Ouvre Mer." In addition to the keen observation of a professional analyst of women, we reap the advantage of the vivid impression produced upon a Frenchman by a freedom unknown to his unmarried countrymen. "Not a hotel, not a bank, not a public building where they do not go in and out as independently, as much a law to themselves as men can be!" he exclaims, and is evidently equally astounded at the habit of equality between the two sexes. He is so bold as to say when he talks of the woman of to-day as a "living orchid," an "unexpected masterpiece of this civilisation." It is possible that there are men who could dispense with "living orchids" like this in their "button holes." This woman of to-day can do without being loved. She has no need of being loved. What she symbolises is neither sensuality nor tenderness. She is like a living object of art, the last fine work of human skill, attesting that the Yankee, but yesterday, despairing, vanquished by the Old World, has been able to draw from this savage world, upon which fate has cast him, a wholly new civilisation, incarnated in this woman, her luxury, and her pride.

It is undeniable that the whole face of society, and our daily lives, is becoming more and more Americanised hour by hour. Or shall we call it enfranchised? Girls of the lower middle class, dismounted from their "bikes," chat at street corners of the "lovely times" they've had. Girls of the upper middle class compare their "lovely times" at the Carlton, Prince's, Claridge's, and Ranelagh. Modern womanhood demands her "lovely time" as her right, a priori, of existence, and if she can't command them she takes the next best substitute—work, in whatever groove her inclination and ability may lead her. Her ego is complete, "a whole little universe," and her physique is excellent, thanks to the improved physiological and hygienic knowledge of the generation of women who preceded her. She never looks back, like the old maid in the early forties of the last century. "My dear, we should get on splendidly if there were no men and babies in the world." Modern woman does get on splendidly—without them.

I have now broadly indicated the conditions of the superfluous and the appropriated women, and the most inveterate grumbler can hardly boast a grievance on their behalf. But how are we to account for the steady and alarming decrease in the birthrate throughout England and her possessions? As a matter of statistics it is at present lower than that in France, according to recent takings. What is the reason of this decline? Do we marry less? Or, having married does inevitable evolution step in, render us barren because we have directed all the strength and all the power of our natures to self-development and self-cultivation, mental and physical? Has our admittance into the ranks with men in the daily, hourly struggle for life absorbed all our energies, sapped our vitality, and atrophied the "mother" side of us? Has the encouraged, unrestrained, and frank cultivation of the inner and outer ego of modern womanhood resulted in indifference to a tie which tugs only at the heart strings, and demands the immolation, sacrifice, of self on an altar whose fires must be fed from within? Have our strenuous endeavours to exist resulted in a material diminution and diverting of the maternal instinct?—*Free Lance*.

TELEGRAMS.

(REUTER'S SERVICE TO THE "JAPAN MAIL.")

PRESIDENT McKINLEY SHOT.

Shanghai, Sept. 7.
A late telegram says that President McKinley has been shot twice in the stomach while visiting the Buffalo Pan-American Exposition. It is believed that the wounds are mortal.

SHOT WHILE SHAKING HANDS.

Shanghai, Sept. 8.
President McKinley was holding a reception at the Buffalo Pan-American Exhibition when he was shot twice—in the breast and in the stomach. He was in the act of shaking hands with his assailant when the latter fired at him with a revolver which he had concealed in a handkerchief in his left hand. Mr. McKinley was at once conveyed to the residence of a Senator. The bullet was extracted from the chest, the injury inflicted there being a flesh wound. The second bullet penetrated the back wall of the stomach and has not been extracted.

THE PRESIDENT RALLIES.

The latest news is to the effect that President McKinley is rallying satisfactorily.

THE ASSASSIN ARRESTED.

The assassin of President McKinley has been arrested. He is a Pole named Niemann.

PRESIDENT McKINLEY.

LATEST BULLETINS.

Shanghai, Sept. 9.
Vice-President Roosevelt and the Members of the Cabinet have arrived at Buffalo. The physicians have assured Mr. Roosevelt that President McKinley will recover.

The bulletin issued at nine o'clock on Sunday morning was to the effect that the President had passed a good night; his mind was clear, and the patient was resting well. The wound was very satisfactory and there was no indication of peritonitis.

The bulletin posted at 6 o'clock in the evening was satisfactory. The distinguished patient had been sleeping quietly.

ASSAILANT MAKES CONFESSION.

The real name of the assailant of President McKinley is Czolgorz. He has signed a confession in which he states that he acted solely under the influence of anarchist literature and lectures. He declares that he had no accomplices.

THE PRESIDENT'S CONDITION.

Later.

President McKinley has not taken any nourishment since he was shot. The physicians declare that it is unnecessary as there is plenty of reserve strength.

THE WORLD'S SYMPATHY.

There have been thousands of telegrams of sympathy received.

LATEST BULLETINS.

Shanghai, Sept. 10.

President McKinley is now suffering considerably but is sleeping fairly.

The latest bulletin says that his condition is satisfactory.

Later.

The bulletin issued at 3 o'clock in the afternoon says that President McKinley's condition shows steady improvement without pain or unfavourable symptoms. The patient's temperature is 100°.

All the doctors in attendance take the most hopeful view owing to the absence of all complications.

Shanghai, Sept. 11.

The evening bulletin states that President McKinley's condition continues favourable.

Later.

President McKinley's condition continues eminently satisfactory, and unless complications ensue his rapid convalescence may be expected.

Shanghai, Sept. 12.

A bulletin issued at 10.30 in the evening of Sept. 10th said the condition of Mr. McKinley was unchanged. The healing of the wound is delayed in consequence of irritation caused by a fragment of the President's coat, which was carried by the bullet beneath the skin. This removed, no complications are feared.

Later.

Mr. McKinley's progress continues excellent.

FAST TRIP OF THE "TOSA MARU."

Shanghai, Sept. 6.

The *Tosa Maru* has arrived at Vancouver [more probably Victoria] having made a record voyage of 13½ days.

AUSTRALIA AND WHITE CREWS.

The Australian Parliament has adopted an amendment of the Posts and Telegraphs Bill limiting the mail contract to ships manned entirely by whites.

THE "AMERICA CUP."

The *Columbia* defends the "America" Cup.

SOUTH AFRICA.

Various columns are actively harassing

the fragmentary commandoes. Scheepers is proceeding northward.

RUSSIA AND FRANCE.

Shanghai, Sept. 7.

The *Times* Paris correspondent telegraphs that it is expected that the result of the Czar's visit to France will be the signature of a treaty of commerce.

SOUTH AFRICAN AFFAIRS.

Fouché attacked the town of Herschel this week but was repulsed with loss.

Mr. Merriman has been given his parole and is now in Capetown.

A BRITISH SUCCESS.

General Scobell has captured the whole of Lotter's commando at Pietersburg, Cape Colony. Nineteen Boers were killed, 52 wounded; and 62 unwounded were captured, with all of their belongings. Among the captured are Commandant Breedt, two Krugers, and Lieutenant Schoeman. The British casualties were ten killed and eight wounded.

THE PEACE PROTOCOL.

Shanghai, Sept. 9.

The Peace Protocol has been signed at Peking.

SOUTH AFRICA.

Shanghai, Sept. 10.

De Wet and Steyn have fled from Reitz, a town in the north-eastern part of the Orange River Colony, on the approach of General Rimington.

THE COMMAND IN NATAL.

Shanghai, Sept. 11.

Lieut.-General Lyttelton, who accompanied Lord Milner to the Cape, is to command in Natal.

THE CHINA SQUADRON.

Rear-Admiral Grenfell succeeds Rear-Admiral Bruce as second-in-command of the British squadron in China.

[NOTE.—The *Navy List* says of the new Admiral:—Grenfell, H.T., Commander of *Cockatrice* during Egyptian war, 1882 (Egyptian Medal, Khedive's Bronze Star); Inventor of Night Sights for Ordnance, 1892; when Captain of *Benbow* the boys belonging to the ship were ordered to bathe in Plymouth Sound, when one of them, Frank Godfrey, was seen to be in danger of drowning. Captain Grenfell and Commander Wells promptly jumped overboard with all their clothes on, caught the boy as he was sinking, and held him until picked up by a boat in attendance and taken back to the ship; Captain's Good Service Pension, May 1889; made a C.M.G., 1st January, 1900, for services in Crete.]

THE CHARGE OF HIGH TREASON.

Krausse, late of Johannesburg, has reappeared at Bow Street. The Treasury has announced that a fresh charge will be brought against him, viz., that of inciting to murder. He was remanded until the arrival of papers from South Africa.

THE CZAR.

The Czar has arrived at Dantzig.

THE ST. LEGER.

Following is the result of the St. Leger:

Dorides	1
Volodyovski	2
Revenue	3

BOER REVERSES.

Lord Methuen has successfully engaged Van Foubler and Delarey, driving them from a strong position.

Colonel Crabbe has overwhelmed a hundred Boers, killing Van der Merje, Scheepers' principal lieutenant.

(RECEIVED AT THE LEGATION OF FRANCE.)

PRESIDENT MCKINLEY.

Saigon, Sept. 9.

The state of President McKinley is improved.

(RECEIVED IN TOKYO.)

JAPANESE IN CANADA.

The Japanese Consul in Vancouver reports that there were 4,586 Japanese subjects in Canada last June.

CZAR AND KAISER.

On the 11th instant the Czar and the Kaiser met at Dantzig. The only persons present were the Ministers of Foreign Affairs of the two countries. On the 16th instant there is to be a review at which both Sovereigns will be present.

THE HONOLULU QUARANTINE OUTRAGE.

The Finance Department of the United States is investigating the question of the indignity offered to Japanese ladies by the health officers at Hawaii, and a decision will soon be reached, doubtless. The matter is in the hands of the Finance Department because the Customs are concerned.

(FROM THE "NORTH-CHINA DAILY NEWS.")

THE PLAGUE AGAIN.

Newchwang, August 30.

There is a case of plague at Newchwang.

A DISASTROUS EXPLOSION.

Tientsin, Sept. 1.

A box of friction tubes exploded yesterday, while being handled by Mr. Bauld, the representative of Messrs. Vickers, Maxim & Co., Ltd. He was burnt on the face and hands and was taken to the Victoria Hospital, where he now lies.

THE PRIVATE COOLIE DIFFICULTY.

Hongkong, Sept. 2.

The Hongkong Government has appointed a commission to report on the difficulty of procuring and retaining private chair and ricksha coolies.

THE PROGRESS OF KOWLOON.

The Governor, Sir Henry Blake, opened the greens of the Kowloon Bowling Club on Saturday last.

THE BRITISH COURT OF CLAIMS.

Tientsin, Sept. 2.

The Session for hearing British claims was opened here by Mr. H. P. Wilkinson to-day. The Tientsin claims number about 350.

NEWS FROM EUROPE.

Berlin, September 2.

It is reported that Prince Chun is expected to proceed to Berlin immediately.

The Czar and Czarina have arrived to-day at Copenhagen.

The great Hamburg shipping firms, headed by the Hamburg-America Line, intend to erect and maintain large coaling wharves everywhere abroad. The first wharf will be opened soon at Port Said.

The *Cologne Gazette* reports that a state of siege has been declared at Teheran, Persia, in consequence of riots having taken place among the people who were making demonstrations against the Government, for having opened negotiations with Russia regarding a loan.

THE BRITISH FLAG IN THE FAR WEST.

Suifu, September 5.

H.M.S. *Woodcock* arrived at Kiating on the 3rd instant, all well.

THE PRELIMINARIES COMPLETED.

Peking, September 6.

The two remaining edicts (relating to punishments and examinations) have just been received by the Ministers, the Plenipotentiaries claiming that they have just arrived from Hsian.

THE PROTOCOL TO BE SIGNED ON SATURDAY.

Later.

At the meeting of the Ministers to-day the edicts just communicated were approved, and the signatures will be affixed to all the copies of the protocol tomorrow. H. E. Li will probably be unable to be present, being sick, but he will sign them at his residence.

(FROM THE "OSTASIATISCHE LLOYD.")

PRINCE CHUN'S AUDIENCE WITH THE KAISER.

Berlin, Sept. 3.

Prince Chun and his Mission have arrived at Pots-

dram, where they have been received by the high officials. His Majesty the Emperor will receive Prince Chun alone. The wording of the address of Prince Chun has been made much more stronger than before. All reports about the kowtow to be performed by Prince Chun and his followers are entirely false and have a marked tendency. A kowtow or anything similar has never been demanded by Germany.

A ROYAL VISITOR TO ESSEN.

The Crown Prince of Siam, who is at present in Europe, has arrived at Essen to pay a visit to Krupp's establishment.

CHUN'S RECEPTION.

Berlin, Sept. 4.

Prince Chun, accompanied by General Yin Chang, will be received to-day in Potsdam by His Majesty the Emperor.

His Majesty the Emperor received the Chinese special ambassador Prince Chun this forenoon in the New Palace, near Potsdam. All Princes of the Royal House; the Secretary of State for Foreign Affairs, Baron von Richthofen; all Prussian Ministers; the chiefs of the Privy Councils, and all the military Generals of Berlin and Potsdam were present.

Prince Chun expressed the sincere regret of the Emperor of China with regard to the events of last year, and said the Emperor of China himself was not in anyway connected with the troubles, but he has, of course, to take the responsibility for those who are guilty, and he had therefore taken it. If in consequence of late events the relations of both countries (China and Germany) had been for the time being clouded over; finally these events have been the cause of both nations to know and esteem one another better than before.

His Majesty the Emperor then characterised what had happened in Peking as an unheard of crime. He said he was convinced that the Emperor was not personally in any way connected with late events, and that the guilt was decidedly more that of his councillors. He said the Chinese Government could not expect that it could be forgiven merely because China had sent an expiatory mission to Berlin. Forgiveness could only be secured by the future good behaviour of the Chinese Government, and by it most exactly observing the rules of international law, and it is only if China does this that she can hope that friendly relations may again be established with her, so that she may share the blessings of human civilization.

During these addresses there were acting as interpreters on the German side, Baron von Seckendorff, late German Consul at Tientsin, now at Prague, and on the Chinese side Lieut.-General Yin Chang, the future Chinese Minister at Berlin.

Then Prince Chun handed to His Majesty the Emperor a letter written by his brother, the Emperor of China. In this letter the Emperor of China again expressed his regret at the murder of the German Minister, Baron von Ketteler, for whom he is now erecting a monument at Peking. He further thanks the German Emperor for sending troops to China, thereby assisting in an essential way the re-establishment of peace. Finally he expresses his hope and firm conviction that the relations between Germany and China will in the future be more friendly, larger and more blissful than before.

When Prince Chun left, after this ceremony, the New Palace guard of honour presented arms and the band played.

Later in the day the Emperor paid a visit to Prince Chun at the Orangery.

Prince Chun drove in the afternoon to Friedenskirche in Potsdam, depositing wreaths at the sarcophagus of the Emperor and Empress Frederick.

LOSS OF A GERMAN DESPATCH VESSEL.

Berlin, Sept. 5.

Near Cape Arcona (Rugen Island) H.M. battleship *Sachsen* collided with H.M. despatch boat *Wacht*. The *Wacht* sank at once but there was no loss of life.

[The *Wacht* was one of the oldest ships of the German Navy. She was built in 1887 at Bremen. Her displacement was 1,250 tons, she being 262 feet long and 31.6 feet wide and having a draught of 13.9 feet. The indicated horse-power was 4,000, her speed 19.6 knots. She had a two-inches armour protection for her deck and was equipped with a 4.34-inch quick firing guns, 2 Maxims and three torpedo tubes. Her crew was 141 men.—The Ed.]

(FROM THE "VOSTOCHNY VESTNIK.")

THE PROROGATION OF PARLIAMENT.

London, August 18.

In the Speech from the Throne with which Parliament was closed, it was stated that the cordial relations between Great Britain and the Powers remained unaltered. The general agreement was a source of great satisfaction, as was also the settlement of the Chinese question, where an indemnity had been demanded, and a guarantee given as to the payment of the same.

The success of England's forces in South Africa was decided and uninterrupted, but military operations are protracted because of the great extent of fighting line.

The visit of the Duke and Duchess of York and Cornwall to Australia had been a decided success. This had given the King great pleasure. The magnificent reception accorded the heir to the throne and his consort bore evidence to the patriotism, loyalty and attachment of the Colonies.

Both Houses of Parliament were thanked for their generous grant for the increase of the Army and Navy next year.

COMMERCIAL ENGLISH.

Commercial English contains some of the curiosities of the language. It is a strangely varied mixture—partly technical, partly vulgar, and, to the purist, wholly displeasing. It does not always hold grammar in due respect, but breaks Priscian's head in a calmly irritating manner. What can be more offensive than the legend now to be seen over so many shop-windows and on so many advertising circulars, of "Bespoke Tailor" or "Bespoke Bootmaker"? Another irritating modern term, the invention of northern commercial hotel-keepers, is "smoke-room." It may be considered pedantic to cavil at a name which is so much used, and which has been heard within the walls of the House of Commons, once sacred to pure English and classical quotation, but as we do not visit the "read-room," nor use a "sit-room," nor eat in a "dine-room," it is not unreasonable to ask why we should take our tobacco in a "smoke-room." This is, however, by the way. The choicest specimens of ungrammatical commercial English are usually to be found in those circulars, familiar to dwellers in the suburbs, issued when a business changes hands, and "patrons" are thanked for their "esteemed orders" by the retiring tradesman, while the new-comer solicits a "continuance of the same."

Orthography fares no better at the hands of a few enterprising tradesmen than grammar. There is at least one firm which persistently advertises its dealings in "sox." This is supposed to be a conveniently shortened version of "socks." In America it is said to be customary, in making out bills of lading, to use "sax" for "sacks," the idea being that the saving of two letters in each entry becomes a very large economy of ink and time when the entries run into thousands. But if such solecisms are to be allowed, why should not the hardware-seller deal in "tax," or the builder in "brix"?

Another word in universal use among traders, wholesale and retail, and among commercial travellers, is "line." This seems to hover on the borderland between the technical and the slang vocabulary. It is difficult to say to which category it belongs. The traveller offers his customers, a special line in parcels, or a cheap line in blankets, or a good line—that is, a bargain—in linens; or attention is drawn to new lines in this or that commodity. The proprietor of some novelty advertises that he wants "two or three gentlemen calling upon drapers," or grocers, or fancy-dealers, or what not, to "take up a line which is selling well." Again, the word is used in another way. A traveller, disappointed in getting an order, remarks to the shopkeeper whom he has been interviewing, "Well, perhaps, you'll be able to give me a line some other day"; while the successful traveller chuckles as he book "a good line." So that the same word serves both as a synonym for an order, and as a general name for a particular class or quality of goods.

The "line" is supposed to have been originally simply the line in a commercial traveller's note-book booking an order. From the note-book the word spread to the shop-window, the advertising-circular, and the sale-list. Another use of the same word is as a synonym for trade or occupation. Dickens long ago described, in "Sketches by Boz,"—in the paper on "The Dials"—how "the man in the shop, perhaps, is in the baked 'jemmy' line, or the firewood and hearth-stone line, or any other line which requires a floating capital of eighteenpence or thereabouts." The present writer well remembers how once, years ago, towards the end of a pedestrian excursion prolonged through several weeks of glorious summer weather, he was asked by a tramp, as he sat resting under a roadside tree, what "line" he was in. Appearances were certainly against him, for the sun had blazed fiercely for many days, his costume was unconventional, a good many miles of dusty road had been covered on that particular day, and, moreover, he carried a knapsack—which the tramp probably took for a pedlar's pack. Altogether, the "line" fills a tolerably large page in the vocabulary of trade.

But perhaps the most curious examples of commercial English are to be found in its adjectives. Trade price-lists, especially of one or two particular

kinds of commodities, are quite curious reading. Tea lists abound in curious adjectives and quaintly-phrased descriptions, which seem to need considerable technical knowledge for their due appreciation. "Full flavoured," "choice cup," and the like need no explanation; but "brisk liquoring," "strong and liquoring," seem a little cryptic, and "strong grippy character" sounds alarming. "Musky" does not sound complimentary, and when applied to tea means soft and flavourless; "minty" describes a flavour which can hardly be regarded as desirable. "Malty," "thick soft," and "every fine tippy" require technical knowledge for due appreciation of their meaning as adjectives for tea. The wording of tea descriptions is sometimes amusingly flowery. One is advertised as producing a "liquor robust and rosy, syrupy, and juicy"; another is said to possess "pretty leaf, bright out-turn, very strong liquor"; and when the tea-drinker is offered "superbly choice pure flavoured high-grown Ceylon," what more can he desire? "Pure high-grown," the writer has been told, means tea which has a "pale, flavoury liquor," while "thick valley grown" teas are "coloured, but not flavoury." The explanations, if they do nothing else, at least illustrate the peculiarities of commercial adjectives.

Wine lists give examples of another class of trade descriptive epithets. Sherry is specially favoured. Imagination runs riot in the various qualities of gold, brown, pale, nutty, soft, delicate, elegant, full-flavoured, dry, stimulating, high-class, rich, full-bodied, and the like. But the adjective which most doth stimulate the imagination in connection with sherry is surely, "Amontillado." It not only recalls memories of Edgar Allan Poe, but suggests the warmth and brightness of sunny Spain more than any other wine name. The sound of Amontillado suggests Keats's—

Beaker full of the warm South.

Full of the true, the blushing Hippocrene.

With beaded bubbles winking at the brim,

And purple-stained mouth.

Other kinds of wine have their own acts of adjectives, and "fruity," "tawny," and the rest are appropriated by a special department of commercial English. Still other departments can be studied in the lists of rose-growers, which contain not a few quaint conceits of seedsman, and, indeed, of most tradesmen. The old book trade, for instance, has a vocabulary of its own. Such adjectives as "tall" and "uncut," "topshelf" and "facetious" are not always understood by the uninitiated in their esoteric applications. Few departments of commercial activity possess a more specialised or more interesting vocabulary than the printing office—the word "chapel" alone might almost afford material for an article—but here we seem to cross the borderland and reach the purely technical element in trade speech.—*The Globe*.

DOGS OF WAR.

A good deal has lately been written about dogs and their work in the Army, but so far few details of the actual work have been given to the public. The *Temple Magazine*, however, has a very interesting article on the subject. As to the kind of dog best adapted to ambulance and other work in the battle-field the writer says: "Provided that you take a dog with a broad head, of an intellectual race, and that you are in the habit of training animals, you can make him do almost anything that you please." Absolute obedience is the first principle in which the soldiering dog, as the soldier himself, must be trained. He is then "provided with a neat little saddle, with a pocket on either side, in which are placed all kinds of lint and bandages, and slung round his throat is a flask of brandy. On the outside of the saddle pockets there are two conspicuous red crosses, which should protect the dog from molestation by the enemy." And thus equipped he starts on the mission for which he has been carefully trained, and which is to carry assistance to the wounded.

When the battle is over and the firing has ceased the ambulance dog is let loose:

"The animal makes straight for the bushes with a businesslike air that is very funny to watch. From tree to tree he hurries, sometimes snuffing the air, but more often running with his nose to the ground, scenting, until he comes on the wounded man. Then he calmly sits down to await the arrival of his master and the stretcher-bearers, who will be guided to him by the bell which is hung upon his neck."

As the soldiers of an army which employs ambulance dogs are taught where to look for bandages, &c., a wounded man can easily avail himself of the help thus brought to him, especially as "the dog understands precisely what is going on and meekly stands close up to the man to enable him to reach the pockets." Thus the old idea carried out by the famous St. Bernard dogs in the High Alps is now being utilised on a vast scale and with most important results.

Another interesting part filled by the "Army dog" is that of doing outpost duty:—

"The outpost dog is taught not to bark upon observing the approach of a stranger. On a still night he will detect footsteps at a distance of 400 or 500 yards, and on seeing or hearing anything suspicious he makes no kind of remark on the subject, but turns tail and trots into camp, to 'inform.' This, of course, is very important work, and it is to be hoped that, while yet the days seem far off when war will be counted among the horrors of the past, Army authorities will fully avail themselves of this new use of the most faithful and most intelligent among 'dumb things.'"

With regard to the most suitable dogs for work in the Army, Miss Bowser explains at the end of her interesting article in the *Temple Magazine*:

"The average dog takes about eighteen months to train, and in the German Army each one has to pass an examination before he is put 'on the strength.' Thus they can be depended upon almost absolutely, for it is exceedingly rare that a trained dog will play his master or his orders false. The only reason that pointers cannot be used for this work is that their natural love of sport is too strongly inherent in them, and they could not be depended upon, if they happened to come across the chance of a good chase, as they would probably forget all about their work and go flying off after their own pleasure. But the steadfastness of collies and sheepdogs is not to be feared; they are faithful and valiant, striking to their duty with conscientiousness, and fighting to the death in a manner that gives a fine example to their superiors."

LATEST SHIPPING.

ARRIVALS.

Kobe Maru, Japanese steamer, 1,645, R. Swain, 6th Sept.—Shanghai via ports, 31st Aug., Mails and General.—Nippon Yusen Kaisha.
Asagao Maru, Japanese steamer, 1,525, J. Campbell, 6th Sept.—Otaru via ports, General.—Nippon Yusen Kaisha.

PASSENGERS.

ARRIVED.

Per Japanese steamer *Kobe Maru*, from Shanghai via ports:—Mrs. D. C. Beligay and child, Mrs. Endicott, Miss Rogers, Miss Smith, Miss Cameron, Mr. and Master Ambrose, Madame Bliccnoff and child, Mrs. Moncoffs, Mr. and Mrs. Fulford and child, Mr. J. Sachse, Mr. H. Cherry, Mr. Hugodements, Rear-Admiral Kimotsuki, Mrs. I. Iga, Miss H. Iga, Dr. Wirth, Mr. L. T. Titley, and Master Kenderdine, in cabin; Second Surg. S. Shimada, Viscount M. Mori, Mr. K. Mori, Mr. T. Emi, 6 Chinese, Mrs. T. Hojo, Mr. K. Hojo, Mr. H. Hojo, and Mrs. Albert Pfeunigsdorff, in second class; 73 in steerage.
 Per American steamer *City of Peking*, from San Francisco via Honolulu:—Baroness Romano, Miss Miller, Mr. H. B. Freeman, Mr. John Hurley, and Mrs. C. Yamamura, in cabin. For Shanghai:—Mr. Mary Carleton, Miss J. A. Marriott, Mrs. A. M. Todd, and Mr. E. T. Williams, in cabin. For Hongkong:—Mr. J. H. Bacon, Mrs. W. S. Conron, Mr. F. J. Jones, Mrs. H. D. Wolfe, child and maid, and Mr. A. Sinclair, in cabin.
 Per American steamer *Peru*, from Hongkong via ports:—Mr. F. B. Reid, Capt. Farenholt, Dr. D. B. Nye, Capt. C. S. Hatch, and Mr. F. E. White, in cabin. For San Francisco:—Mr. S. H. Ingram, Mrs.

C. Hansen and infant, Mr. Frank Wilder, Dr. Carl Hansen, Miss Lillian Hansen, Miss F. A. Eakin, and R. M. Marble, in cabin.

Per Japanese steamer *Idzumi Maru*, from Seattle, Wash.:—Mr. H. J. M. Ellis, in cabin; 8 Japanese, and to Chinese, in steerage.

For Japanese steamer *Formosa*, from London via ports:—Mrs. Murray Robertson, Miss Burdett Leach, Master G. Irwine, Mr. P. Kleinwort, Mr. F. Grosser, and Mr. G. R. Allen, in cabin.

DEPARTED.

Per British steamer *Empress of India*, for Vancouver, B.C.:—Mr. Henry Arnold, Mr. E. T. Bailey, Mr. E. J. Bell, Miss E. Bell, Miss L. Bell, Mr. Beretta, Lieut. F. Boljahn, Mr. A. B. Bowers, Lieut. Com. T. F. Burgdorff, U.S.N., Mr. Fleming D. Cheshire, Mr. J. Milne Cheetham, Mr. G. Clarke, Mrs. Geo. Clarke, Mr. G. W. Colton, Mr. A. Cooper, Major-Gen. Henry C. Corbin, U.S.A., Mr. E. Cushing, Capt. H. B. Des Voex, R.E., Mr. Edgar, Mr. R. C. Euler, Rev. C. H. Evans, Mrs. C. H. Evans, Mr. J. W. Fuller, Mr. E. F. Harris, Miss Harris, Mr. John G. Hecksher, Mr. Léon de Hoyer, Mr. H. R. Hunt, Lieut.-Col. John A. Johnston, U.S.A., Mr. M. Kuhara, Mr. Fred Lincoln, Mrs. Fred Lincoln, Lieut. Longridge, Capt. P. Lydig, Mr. Geo. McConnell, Dr. E. Merchant, Mr. H. Muraoka, Capt. Orr, R.H.A., Mrs. V. Otis, Right Rev. S. C. Partridge, Bishop of Kyoto, Mr. Wm. T. Payne, Capt. J. Van Ness Philip, Lieut.-Col. Radford, Mr. Alexander Reid, Mr. Paul Rickmers, Capt. von Seebach, Mrs. von Seebach, Mr. M. J. Seckendorff, Major Serno, Miss Eliza Ruhamah Scidmore, Mr. S. Tamura, Rev. M. N. Trollope, Mr. J. E. Townsend, Mr. J. M. Valdez, Mr. Weil, Mr. W. Pierpont White, Miss M. P. White, Major J. R. Wilson, and Mr. A. Dudley Yorke, in cabin.

Per German steamer *Prinz Heinrich*, for Europe via ports:—Prof. and Mrs. J. K. Goodrich, child and amah, Prof. Fritz S. Brusch, Mr. P. H. McKay, Mr. F. Grünwald, Mr. C. S. Averill, Mr. Kleinwort, Mr. S. Schwob, Mr. N. M. O. Lochead, Mrs. von Ransalaer child and amah, Mrs. Bissel and amah, Mr. J. L. Watson, Mr. Rümcker and boy, Mr. G. R. Allen, Mr. F. Grosser, Mr. Amthor, Mr. K. Page, Mr. J. T. Hamilton, Mrs. F. Mackie, Mr. and Mrs. J. S. Clark, General and Mrs. Geo. Sternberg, Mr. H. S. Playfair, Mr. and Mrs. J. Kahn, Mr. C. A. Gane, Miss N. D. and A. Evans, Mr. E. Toepfer, Mr. and Mrs. Wilcockson, Rev. E. C. Darwent, Mr. and Mrs. C. E. Geddes, Mr. and Mrs. Rodewald, Mr. and Mrs. F. W. Hoffmann and son, Miss W. Zimmer, Mrs. Suethlage, Mr. Paul Kracke, Mr. and Mrs. W. L. Franklin, Mr. J. A. W. Loureiro, Mr. Mandl and boy, Mr. Lim Pong Siang and servant, Mr. Stepharles, Mr. Philipp, Mrs. and 2 Misses Lysaught, Mrs. E. M. Elliott, Mr. and Mrs. W. H. Davis, child and amah, Mr. K. S. Corfield, Mr. Begas, Mr. Frank M. Higgins, Mr. and Mrs. R. A. Morgan, Dr. Waldeger, Mr. and Mrs. A. de Groot, General Greely, Mr. Robert H. Sulzer, Capt. McMillan, Intendanturatt Krueger, Rev. C. M. Warren, Mr. Francis McCullagh, Mr. and Mrs. A. Vandam, Dr. and Mrs. Jones, baby and amah, and Miss McLennen, in cabin.

Per Japanese steamer *Tamba Maru*, for London via ports:—Mr. H. Kasahara, Mr. James MacBeth, Mr. J. G. de G. Martyr, Mr. and Mrs. J. Bryan, Miss Anne M. Page, Mr. K. Katsuda, Mr. K. Yabe, Mr. K. Taguchi, Mr. N. Iwano, Com. Sudzuki, and Mr. Max Schlesinger, in cabin; Mr. T. Tsuji, Mr. M. Sato, Mr. T. Sasaki, Mr. S. Hashimoto, Mr. K. Ikehara, Mr. T. Sato, Mr. K. Isomo, and Mr. Angus Hamilton, in second class.

Per American steamer *City of Peking*, for Hongkong via ports:—Mr. I. Ali, Mr. J. H. Bacon, Mr. H. W. Bird, Miss E. Bird, Mr. A. W. Brewin, Dr. Macy Carleton, Lieut.-Col. F. Coe, Mrs. W. S. Conrow, Miss I. A. Marriott, Mr. T. D. McKay, Miss Miller, Baroness Romano, Miss A. M. Todd, Mr. R. T. Williams, and Mrs. H. D. Woolfe, child and maid, in cabin.

Per Japanese steamer *Kobe Maru*, for Shanghai via ports:—Miss Julia Gulick, Mr. F. W. Hammond, R.N., Mrs. C. C. Murray, Miss Cox, Rev. and Mrs. James Hind, Mr. and Mrs. Pallister, Mrs. H. C. Davis and child, Miss Rogers, Mrs. Endicott, Mrs. de Berigny, Mrs. Patton, Miss Hunt, Capt. T. Suto, I.J.A., Paymaster K. Shiga, I.J.A., and Capt. and Mrs. J. R. Roberts, in cabin; Major-Surg. Shimoda, I.J.A., Mrs. C. Hansen, Mrs. S. Mine, Mr. Y. Okada, and Mrs. M. Arai, in second class; 22 in steerage.

Per American steamer *Peru*, for San Francisco Honolulu:—Miss E. A. Rakin, Dr. Carl Hansen, Mrs. Lillian Hansen, Mr. S. H. Ingram, Mr. R. M. Marble, Capt. Nordseick, and Mr. Frank Wilder, in cabin.

Per French steamer *Indus*, for Marseilles via ports:—Mr. Grimbale, Mr. H. E. Wheeler, Mr. B. C. Howard, Mr. Masujima, Mr. H. Smith, Mr. Percé, Miss Chigagoff, Miss Postuloff, Mrs. Hyde, Mr. and Mrs. Smeeth, Mr. Marix, Mr. T. W. Kingsmill, Mr. and Mrs. H. G. Barrie, Capt. Hartford, Mr. Barrett,

Mr. Lam Shew Tong, Mr. Maurice Ponteville, Sir Alexander Swettenham, Lieut. Shimaoka, and Lieut. Ogata, in cabin.

EXPORTS.

RAW SILK.

There has been considerable fluctuation in the market. No. 1 Filatures fell from yen 752 to yen 725 at which figure they stood when news arrived of the attack on President McKinley. Quotations then dropped to yen 705 for Kaimeisha class and at that there was a reaction and a rise to yen 710, with a further advance as we write to yen 730.

QUOTATIONS.

	Y.	970 to	980
Filatures—Extra, Fine	970 to	980	
Filatures—Extra, Coarse	960 to	970	
Filatures—No. 1, Fine	940 to	950

SHARE AND STOCK BROKER: OFFICIAL CLOSING

QUOTATIONS OF TOKYO STOCK EXCHANGE.

September 12.

The much dreaded storm period known as Nohyaku-hatsuka having passed away, the prospect of the rice crop is well assured. This combined with the excess of exports over imports for the last ten days has imparted much activity to the market. The financial aspect is also improving. The signing of the peace protocol in Peking partly accounts for the activity, since the North China trade is soon expected to assume a busy aspect. And the reported strong condition of the Yokohama silk market has had a stimulating influence. Especially in case of the Tokyo Stock Exchange shares, the upward movement is marked, influenced greatly by the rise of the Osaka Stock Exchange shares. Yesterday and to-day large buying orders for the "To-kabu" (Tokyo

Stock Exchange Shares) having been placed with the commission houses.

Falling Hair

Prevented by Warm Shampoos of CUTICURA SOAP, followed by light dressings of CUTICURA, purest of emollient Skin Cures. This treatment at once stops falling hair, clears the scalp of crusts, scales, and dandruff, soothes irritated, itching surfaces, stimulates the hair follicles, supplies the roots with energy and nourishment, and makes the hair grow on a clean, wholesome scalp, when all else fails.

Complete External and Internal Treatment for Every Humour,

Consisting of CUTICURA SOAP, to cleanse the skin of crusts and scales and soften the thickened cuticle, CUTICURA Ointment, to instantly allay itching, irritation, and inflammation, and soothe and heal, and CUTICURA RESOLVENT, to cool and cleanse the blood. A SINGLE BATH is often sufficient to cure the severest humours, when all other remedies fail. Sold throughout the world. Aust. Depot: E. Towns & Co., Sydney, N.S.W. So. African Depot: LEXSON LTD., Cape Town, Natal, Port Elizabeth. "All about the Skin, Scalp, and Hair," post free. POTTER & CO., Sole Props., Boston, U.S.A.

YOKOHAMA: SATURDAY, SEPTEMBER 21ST, 1901.

SUMMARY OF NEWS.

PRESIDENT MCKINLEY died at Buffalo last Saturday morning.

THE British Consulate at Bakan was opened on the 13th inst. by Mr. Playfair.

MR. NADEKURA has been appointed chief of the Peking branch of the Specie Bank.

THE Osaka Mainichi learns that profound anti-anarchist excitement prevails in Chicago.

A MAN murdered his father at Yaitamachi, Shioyama-gori, Tochigi Prefecture, on the night of the 14th inst.

MR. SUZUKI RIHEI, President of the Chiba Commercial Bank, was arrested in Tokyo, on the night of the 11th inst., charged with forgery.

LADY SMITH, wife of Sir Archibald Lewin Smith, Master of the Rolls since 1900, was found floating in the River Spey on August 27. It is not known how she was drowned.

THE Emperor has presented yen 700 towards the funeral expenses of the late Surgeon-General

Totsuka Bunkai and also sent a Chamberlain with two rolls of white silk to the deceased's late residence.

LIEUT. PEARY, the Arctic Explorer, has been found. He was met by his wife on May 6th at Cape Sabine, and she returned to Cape Breton. Peary is wintering in the north.

A TORPEDO-BOAT belonging to a British war-vessel at Nagasaki ran ashore at Megami on the night of the 12th inst. but was floated the next morning, considerably damaged.

TOKUTOMI TARO, a member of the staff of the *Kansai Shinbun*, was arrested at Bakan and sent to Yamaguchi on the 17th inst., charged with insulting officials and blackmailing.

AN engine and five goods cars on the Kiushu Railway, capsized at Saigawa station, Kyoto-gori, Fukuoka Prefecture, on the 16th inst. and were much damaged, but no lives were lost.

NATSUI HYOYEMON, chief of the Nagoya branch of the Kanazawa Savings Bank and three other members of the staff of the Bank were arrested on a charge of forgery on the 17th inst.

A LONDON telegram printed by the *Osaka Mainichi* says that vigilance committees are being formed throughout the United States with the avowed intention of lynching anarchists.

THE body of a young woman was found in the river near Nihonbashi, Minami Yoshidamachi, Yokohama on Saturday afternoon. The identity of the deceased has not yet been discovered.

A LANDSLIP occurred in a tunnel on the Tomihama line of the Central Railway, at Kita Tsurugori, Yamanashi Prefecture, on the night of the 11th inst. and one coolie was buried in the debris.

ON the 17th inst. while a train was running between Rifu and Matsushima on the Sendai line, some malicious person fired a gun at the train and shot the engineer in the breast, inflicting a serious wound.

CAPTAIN BISBEE, so well-known in China in connection with the Coast Inspectorship of the Imperial Maritime Customs, died in Shanghai on the 7th at the age of 60. His death is widely regretted.

A FISH dealer named Tanaka Goro, living at Iriyamazu-mura, Yeburagori, Tokyo, was run over by a goods train on the afternoon of the 16th inst. while attempting to cross the line near Omori station.

AKABA MASA, living at Funabu-mura, Shioyama-gori, Tochigi Prefecture, murdered his father, Gosaburo, with an axe on night of the 13th inst. The murderer was arrested by the Yaita Police on the 15th inst.

A TELEGRAM received by the Yokohama Silk Company from New York on the 16th inst. states that the effect on trade of the death of President McKinley was only slight; the silk market is quiet and prices lower.

MR. GERALD A. LOWTHER, Secretary of the British Embassy at Washington, has been appointed Minister for Great Britain to Chile. Mr. Lowther's many friends in Japan will hear of his promotion with much pleasure.

A TERRIBLE accident occurred in a theatre at Tome-machi, Tome-gori, Aomori Prefecture, on the night of the 13th inst. While the performance was in progress a large hanging lamp fell among

the audience and set fire to the building. Two men were burnt to death and ten more or less seriously injured. The theatre was totally destroyed.

SEVEN hundred and four exiled persons, many of them being women, left Constantinople for Yemen, Arabia, on August 14. The prisoners include those who were implicated in the recent fire at the harem of the Yildiz palace.

A ROBBER entered a house occupied by Sahoda Shusuke, at Inada mura, Tachibana-gori, Kanagawa Prefecture, on the night of the 14th inst., and stole 362 yen in bank notes, 13 yen in silver coins, and several articles of clothing.

SUGIYAMA NAOMASA, living at Kita Misujimachi, Tokyo, employed by the Savings Bureau of the Post Office, was arrested by the police on the 11th inst., charged with attempting to obtain by forgery 50 yen belonging to another man.

THE census of Norway, which has just been completed, gives it a population of 2,200,000, against 2,110,000 in 1891. This is an average of 16.80 inhabitants to the square mile, making Norway the most thinly settled country in Europe.

THE Japanese Chamber of Commerce of Yokohama, and Mr. Otani Kahei, President of the Central Tea Guild Association, Yokohama, sent a telegraphic message of condolence on the death of President McKinley to the new President of the United States on the 16th inst.

A SACRED mikoshi, containing several persons, fell into the canal near Yoshihama-bashi, Yokohama on Sunday afternoon, and several persons were injured and had a narrow escape from drowning. The mikoshi was being paraded in honour of the Hiejinja festival.

A LANDSLIP occurred at Handa-yama, Dategori, Fukushima Prefecture, on the night of the 6th inst. and the following morning. Three houses were buried but no injury done to any persons, the inmates being removed to another place. Several police-constables and coolies rendered assistance.

A WOMAN named Mitsu, wife of a silversmith at Hashimoto-cho, Kanda, Tokyo, having been ill some time determined to make away with herself. On the night of the 15th inst., she stabbed herself in the throat with a small knife but failing to succeed by that means, hung herself from the window.

A WOMAN named Hide, wife of Kato Chusuke, living at Hidate-mura Takagori, Ibaraki Prefecture, was murdered between 8 and 10 o'clock on the morning of the 15th inst. The Mito Local Court sent a Judge to make investigation. The murderer has not yet been discovered but it is believed that robbery was his object.

THE Japanese steamer Tenyu Maru, belonging to the Seigy Kaisha, Morioka, Rikuchu Province, left Ishinomaki on February of the present year on an otter-hunting cruise in the Northern sea. Nine men of her crew were arrested by the Russians near Robben Island on suspicion of poaching and were sent to Vladivostok, while 350 fur-seals caught by them were confiscated.

A SHARP fight occurred between coolies working on the Sasako tunnel on the Central Railway at Hanazaki on the 9th inst. The police hearing the discharge of pistols and dynamite shortly arrived and found a number of coolies running about armed with swords, pistols, swordsticks, etc. One of the coolies was killed by a shot and several injured. One police-constable was badly injured.

THE DEAD PRESIDENT.

It is evident that we shall not know the real cause of President McKinley's death until newspapers are received containing a detailed statement of the autopsy. Nothing could be more perplexing and unsatisfactory than the accounts that have been sent over the telegraph. The first explanation was that serious trouble developed after solid food had been administered. But it is almost inconceivable that solid food can have been administered within a few days of such an injury. The natural course would have been to carefully refrain from administering any nourishment by the mouth for at least three weeks. Then comes news as to the revelations of the post-mortem. We are told that, according to that evidence, gangrene could not possibly have been prevented along the track of the bullet. But if that be so, the surgeons in attendance must have known from the first that there was at least an imminent danger of gangrene's supervening, and they would have been careful to make that reservation instead of giving to the world an announcement which amounted virtually to a declaration that serious peril was over. To be told by scientific men that an autopsy of the body of a patient whom they have been treating and whose recovery they predicted, shows death to have resulted from a complication which was inevitable, is not the kind of information that thinking people expect. If we had learned that the effects of the shock, which must have been terrible, had not developed immediately, but had ultimately proved fatal, the news would be intelligible. But it is not credible that something now declared to have been inevitable was not even suspected by the eminent surgeons in attendance on the patient.

Within less than forty years three Presidents of the United States have fallen under the hand of the assassin. Assuming that one President has been chosen every fourth year, it appears that three out of ten chief magistrates, or thirty per cent., have been done to death violently. That is an appalling record. No other country is so unfortunate as to show anything of the kind. In Europe the percentage is incomparably smaller. What are the reasons? America enjoys all the advantages of freedom. Her citizens breathe the air of liberty from the time of their entry into the world until the time of their departure. The nihilist and the anarchist should have no *raison d'être* in such a land. "My country 'tis of thee, sweet land of liberty" are among the magic words instinct with power to thrill the heart of every Anglo-Saxon. But in America, with such a song for charter, rulers chosen by the people themselves are murdered much more frequently than in any other State. It is certain that this subject will be taken up and discussed abundantly in the United States and in England. It is indeed an interesting text.

The new President of the United States, the Hon. Theodore Roosevelt, was born in New York on Oct. 27th, 1858. On his father's side he comes of Knickerbock stock, while his mother's ancestry is Scottish. He was educated at Harvard University, and became a member of the New York Legislature in 1882; leader of the minority in 1883; and leader of the House in 1884. He was a U.S. Civil Service Commissioner from 1889-95; President of the New York Police Board from 1895-97; appointed Assistant-Secretary of the Navy in April, 1897. On the

outbreak of war with Spain he organised the 1st U.S. Cavalry Volunteers (Roosevelt's Rough Riders) and commanded it in Cuba with distinction. He is of man of intellectual tastes and has published several well-known volumes, including the "War of 1812," "Hunting Trips of a Ranchman," "Ranch Life and the Hunting Trail," "The Winning of the West," "The Wilderness Hunter," "American Ideals," "The Rough Riders." He is greatly addicted to ranching and big game hunting on the great plains and in the Rocky Mountains. He is also much interested in zoology, and field natural history generally. He is married and has a family of six children. Americans generally entertain high hopes of the new President.

THE JAPANESE PRESS AND PRESIDENT MCKINLEY.

It need scarcely be said that Japanese newspapers are unanimous in their expressions of regret for the lamentable event that has just thrown America into mourning. The *Jiji Shimpō* speaks in feeling terms of the widow's sorrow; denounces the anarchists as enemies of civilization and declares that Japan's friendship for her great neighbour renders her sympathy especially keen. The *Jiji* does not think, however, that the general course of events in America will reflect this catastrophe, or that there will be any disturbance of trade and industry.

The *Asahi Shimbun*, after expressing the pain that all nations must feel on this occasion, and declaring that Japan is notably grieved for the sake of the great people towards whom her sentiments of friendship are so sincere, says that it is impossible to regard such events as dispensations of Providence, and that there should be some possibility of preventing them. Americans will probably feel President McKinley's death more than they did that of President Lincoln, for under the former they enjoyed an extraordinary season of prosperity and were moreover led to abandon the Monroe Doctrine and strike out an imperial policy. From one point of view, that of protection, Japan had cause to object to President McKinley's policy, but in everything else she approved and applauded him, especially in his attitude towards the Chinese complication.

The *fummin*, which appears with mourning borders, says that humanity has lost a man well worthy to be the President of the greatest republic in the world. President McKinley may be said to have inaugurated a new chapter of American politics since the times of Washington, of Lincoln and of Monroe. All civilized nations must mourn his loss, above all the Japanese, who were assisted primarily by America to enter the comity of nations, and who have to thank the late President for the kindly and sympathetic words publicly used by him with reference to their country. American progress, however, will not be interrupted by this event, however lamentable it is in itself.

The *Chuo Shimbun* writes in the most laudatory strain of the President's domestic and foreign policy; of his broad views and of his wise measures. It is a terrible loss to America to be deprived of such a man, and she may be assured of Japan's sympathy, who has always regarded her with feelings of the warmest friendship.

The *Yomiuri*, after speaking of Japan's special sorrow that such a calamity should have befallen her close friend, says that the whole civilized world must mourn the loss of a conspicuous leader of enlightened

progress. Among the 24 Presidents that have directed American affairs, President McKinley was one of the greatest, and history will associate his name with some of the most memorable events in the domestic and foreign policies of his country. The *Yomiuri* does not profess to admire the late President's imperial policy, but considering we live in times when the leading nations disgrace the principles of civilization by huge armaments and unscrupulous aggressions, President McKinley may be leniently viewed on some scores, while on others he must be regarded as a splendid figure on the stage of the world's progress. The *Yomiuri* recalls that the late President's tariff policy and his absorption of Hawaii were opposed to Japan's interests, but that in general the Japanese regarded his procedure with approval and applause.

We quote above the gist of comments made by several leading Japanese journals on the death of President McKinley. All the rest of our Tokyo contemporaries add their voices to the chorus of regret and sympathy. Their utterances, however, are virtually uniform. They speak of America in terms of the warmest friendship, and they note that the two distinctive features of the President's career were his inauguration of the policy of imperialism and his enforcement of an extreme form of protection. The *Kokumin Shimbun* alone departs somewhat from the general appreciations published by its contemporaries. It says that the President was not a great originator in any sense; that his strength lay in reading the signs of the times and in obeying them shrewdly. That, however, is a great gift. The *Kokumin* is particularly struck by his dying words—"Goodbye all; goodbye! 'Tis God's way. His will be done." It finds that such an expression on the lips of a dying man bear eloquent testimony to the strength of his Christian convictions, and his submission to heaven's decrees. But the *Kokumin* does not comment on the obvious fact that if the death of President McKinley by the hand of a Polish anarchist was in accordance with the will of God, then the anarchist becomes an agent appointed by the Almighty, and as such should be held exempt from punishment.

MARQUIS ITO'S FAREWELL SPEECHES.

Saturday, Sept. 14.

Marquis Ito is said to have decided that there is no occasion to nominate a Vice-President of the *Seiyun-kai* during his absence. He will, however, appoint a chairman of committee, and Mr. Matsuda Masahisa is confidently spoken of for that post. Mr. Ozaki Yukiyo's appointment was at first anticipated, but he appears to have declined. According to the *Asahi*, the Marquis delegates all business and the responsibility of making all decisions to the Permanent Committee, and directs that its instructions shall be followed in all matters relating to the Diet. As to the leadership of the Party in the House of Representatives, which post is vacant owing to the death of Mr. Hoshi, the Marquis undertakes to make an appointment at a future date. He announces—and the announcement is to be conveyed in writing to all branches of the Party—that his visit to the West is caused mainly by the state of his health, but that, incidentally, he will undertake some financial investigations. Concerning the length of his absence from Japan he

is unable to say anything definite until after his arrival in America.

With reference to this trip to the West the *Fiji Shimpō* makes a shrewd comment. It says that the great difficulty of Marquis Ito's position is his dual character. He is at once a party leader and an "elder statesman." In the former role he is obliged to adopt courses inconsistent with the obligations imposed by the latter. The great defect of political parties in Japan was that none of them had the confidence of the nation. Therefore, when a man who possessed that confidence in a conspicuous degree, as Marquis Ito does, agreed to place himself at the head of the *Seiyū-kai*, it was felt that a really competent party had at length been organized. The expectation was disappointed, however, solely because Marquis Ito could not shake off his old character when assuming the new. He still continued to be hampered by all sorts of relations and considerations which militated against his efficiency as a party leader. Perhaps, during his approaching absence of two or three months from Japan, he will have time to think out this problem seriously and definitely adopt one side or the other. Such is the *Fiji's* view. We can easily appreciate it in a certain sense, but our opinion is that the position of *Genro* is not so incompatible with that of party leader as the *Fiji's* article would imply. Rome was not built in a day. Things move fast in Japan but she is in the transition period none the less, and if the parties and the *Genro* can not work together to inaugurate the new regime, the placidity that has hitherto marked her progress is likely to be disturbed.

Monday, Sept. 16.

At a garden-party given at the residence of Baron Suyematsu on the 13th instant, Marquis Ito, responding to a toast proposed by Mr. Ebara Soroku who, in the name of the numerous guests assembled wished him a pleasant journey and a safe return, said that he purposed visiting Europe and America mainly for his health but also for the purpose of investigating financial affairs and exchanging views with the leading statesmen of the West. His physicians had advised him that a short voyage of a week or ten days would be of little value, and he had therefore determined upon the journey he was now about to undertake. He would travel in a purely private capacity and whatever he might say or do would be upon his own responsibility. As for the *Seiyū-kai*, he had too much confidence in the strength of its organization to suppose that his absence for a few months would affect its stability.

These remarks were received with loud applause, and it may be taken for granted that the Party is now quite reconciled to the departure of its leader. It will be observed that Marquis Ito's tour is to be extended to Europe, which means that his absence will be prolonged for four or five months at least, and that he will not return before March next; in other words, before the conclusion of the 16th session of the Diet. Of course there are commentators who find that coincidence suggestive. The *Asahi Shimbun*, for example, alleges that the Marquis is escaping because he finds the situation intolerable. The *Seiyū-kai* are determined, according to that journal, to oppose the Cabinet, whereas Marquis Ito gave a pledge when the Cabinet was formed that it would not have to reckon with a hostile house of Representatives next session. Being unable to control his Party, the Marquis is taking his departure. It is

because the *Asahi* opens its columns to such silly mischief-making that, despite the admirable enterprise shown by it in collecting news, it can not compete with the *Fiji Shimpō* as a recipient of public confidence. The plain and undoubted fact is that Marquis Ito is unable to recover his health unless he makes a voyage. Otherwise his departure from Japan would certainly not take place now. He has appointed Mr. Ozaki Yukio as leader of the Party in the House of Representatives, and Mr. Matsuda Masahisa to be Chairman of the General Committee.

Tuesday, Sept. 17.

The dinner given by Viscount Katsura on the 14th instant by way of farewell to Marquis Ito was remarkable in that it proved the occasion for a gathering of the "Elder Statesmen" without distinction of political creed. Count Okuma and Count Itagaki were among the guests, as were Count Inouye, Marquis Yamagata, Count Matsukata, Marquis Saionji, Count Hijikata, Baron Ito, and all the Ministers of State. Marquises Oyama and Saigo and Viscount Tanaka were unavoidably prevented from attending.

Marquis Ito, made a short but pregnant speech. He said that this trip to the West would be his fifth, but that four had been on public business and that now for the first time would he travel on his own account. He added that when Japanese are abroad the one thought never absent from their minds is the thought of Japan, and the thing most painful of all others is to hear that political complications or other troubles have occurred in their beloved country. He earnestly hoped that the months of his absence would be months of tranquillity and harmonious government at home, and he appealed to his audience to cooperate in securing that end. He promised that if he could collect any useful information during his journey it should be at once transmitted to the Cabinet.

On the 15th inst. at 10 a.m. a meeting of the *Seiyū-kai* was held at the Party offices in Tokyo, to celebrate the first anniversary of the Party's organization. Baron Suyematsu acted as Chairman. He spoke briefly to the effect that the future of the Party had been a matter of some doubt at first, as was natural considering the inevitable difficulty of coalescing old and new elements. Owing, however, partly to skilful leadership and partly to the exertion of those he was addressing, the *Seiyū-kai* was now established on a firm basis. He believed that the visit of Marquis Ito to the West would inure to the benefit of the Party and in the name of those assembled he wished His Excellency a pleasant and safe journey.

Marquis Ito, who was received with much applause, after briefly alluding to the formation of the Party and its success hitherto, said that doubtless the members had seen many grounds of complaint since he had become their leader and the reflection caused him some humiliation. They had nevertheless continued to place implicit confidence in him, for which he thanked them sincerely. He had now to say farewell to them on the eve of his departure for the Occident. He was leaving Japan by the advice of his physicians, but he hoped also to garner on his journey some knowledge which would be useful to the Party. Far Eastern affairs had begun to occupy a much larger share of Occidental attention during recent years, and numerous complications had recurred, rendering it all the more necessary to gather information at first hand in Europe and America. The opportunity of doing so was favourable so far as domestic

affairs were concerned, for things were tolerably quiet and there was no reason to anticipate any serious question. Neither could he see that any appreciable difference existed between the policy of the present Cabinet and that of the *Seiyū-kai*. He therefore hoped that during his absence the attitude of the Party towards the Government would be one of circumspection. The Ministry now in power was not a party Ministry, and there was consequently no reason why its actions should be regarded as an enemy by any political association. In that respect the situation remained as it had been when he resigned office some months ago. The *Seiyū-kai* should keep these facts in mind, and should be guided strictly by national interests, putting them always before party interests, never taking any course that had not been maturely considered, and constantly endeavouring to act a role worthy of the greatest party in the empire. With reference to this matter he had communicated his ideas in detail to the General Committee, of which he had nominated Mr. Matsuda Masahisa to be chairman. He had also nominated Mr. Ozaki Yukio to be the Party's leader in the House of Representatives, and he trusted that to these two gentlemen all questions concerning the Party would be submitted.

Subsequently a farewell party was given to the Marquis at the Maple Club, about a hundred and fifty being present at luncheon. The Marquis spoke briefly, and his speech was virtually the same in substance as that delivered by him on the occasion of the banquet at the Prime Minister's residence, described above. The party broke up at 3 o'clock.

Wednesday, Sept. 18.

The Opposition journals are busily endeavouring to make mischief in connexion with Marquis Ito's departure for the West. They allege that although outward appearances have been arranged so as to convey the impression of concord between the Marquis and the *Seiyū-kai*, many members of the latter are at heart indignant that their leader should take his departure at this juncture. It is even affirmed that they showed their indignation in a pronounced and exceedingly rude manner at the farewell banquet recently held in the Maple Club. The *Nippon* makes itself conspicuous as a formulator of these accusations, but its language is so vindictive and the statements it makes are so wild that credence can not possibly be placed in them. It is undoubtedly unfortunate that Marquis Ito should be obliged to leave Japan at this juncture, for such a course furnishes to his enemies and to the enemies of the *Seiyū-kai* admirable materials for attack. Nothing short of peremptory advice from his physicians could have induced him to take the step. But whatever mischief-makers may allege, the plain fact is that Marquis Ito is in a very debilitated condition. He is frequently threatened with loss of consciousness, and his general condition indicates that nothing except a complete change of scene and a rest of some duration can restore him to health. Under such circumstances one would suppose that even journals like the *Nippon*, the *Asahi*, the *Hochi* and the *Yomiuri* would sympathise with the sufferings of one of their country's greatest statesmen and would at least refrain from openly seeking to make political capital out of his malady. But party politics have disturbed the social vessel in Japan so that there have been thrown to the surface

many unsightly dregs which lack all the redeeming qualities of Japanese character.

Thursday, Sept. 19.

Marquis Ito gave a farewell entertainment at his villa, the Soro-kaku, in Oiso on the 17th instant. About forty persons were present, including Viscount Katsura. The Marquis left Oiso by the 11.29 train on the forenoon of the 18th, and after a brief rest in the offices of the Nippon Yusen Kaisha in Yokohama, proceeded on board the *Kaga Maru*.

Among those who assembled at the habotoba were Marchioness Ito, Marquis Saionji, President of the Privy Council; Count Inouye, Viscount Yoshikawa, Minister of Agriculture and Commerce; Dr. Kikuchi, Minister of Education; Mr. Yamamoto, Minister of the Navy; Mr. Sone, Minister for Foreign Affairs; Mr. Oura, Superintendent of the Metropolitan Police Board; Count Itagaki, Viscount Aoki, Mr. Egi, Councillor of the Kanagawa Kencho; Mr. Kuroiwa, Chief of the Kanagawa Ken Police Board; Baron Suyematsu, ex-President of Education; Mr. Watanabe, ex-President of the Board of Auditors; and Messrs. Ozaki Yukio, Ebara Soroku, Komuro Shigehiro, Otani Kabei, Takashima Kaemon, and many other well-known Japanese and foreigners.

The *Fiji Shimpō* has a very quaint cartoon inspired by the departure of the Marquis. His Excellency is shown lying on a stretcher and in the act of being carried by two very decrepit coolies towards a building labelled *Obeido-iin* (the European and American Hospital), from the window of which Viscount Watanabe is looking out with a face of sarcastic delight as the sick man approaches. The Viscount holds in his hand a Buddhist *hosu*; the stretcher is marked *Kaga Maru* and the coolies' coats have the Hi-no-Maru for badge.

CHINESE AFFAIRS.

Saturday, Sept. 14.

Germany's resolve to post troops in Shanghai seems to have prompted Japan to adopt a similar course. Tokyo journals announce that a battalion—with some slight reductions—of Japanese infantry will be stationed there under the command of Major Imai. Shanghai's position will then be greatly changed. The place used to rely entirely upon a somewhat fitful force of volunteers, but now it will be protected by quite a strong body of soldiers supplied by various Powers. Doubtless the idea is to make Shanghai a kind of depot from which troops can be quickly drawn in time of need. It is to be hoped that the presence of these regulars will not damp the ardour of the local volunteers, for if trouble arose in the north—where it is most likely to arise—the forces of the various Powers would be carried at once from Shanghai to the scene of disturbance, and if the model settlement were then without its volunteers its state might be parlous.

Monday, Sept. 16.

The *Chitose*, having Mr. Komura on board, reached Chemulpho on the 13th instant. Mr. Komura landed at 3 p.m., and was met by General Nozu and Hayashi. He proceeded at once to Seoul, where he was received in audience by the Emperor the same evening. On the 14th he re-embarked and resumed his journey to Japan.

Wednesday, Sept. 18.

The withdrawal of the foreign troops from Peking is proceeding apace. The last of the

Japanese forces left the city on the 15th for Tientsin.

There seems to be a very serious inundation in Manchuria. Most alarming accounts are forwarded by telegraph. It is alleged that the greater part of the country is under water; that the railways are so much injured as to require complete reconstruction in many places; that the stations can not be approached except by raft; that the crops are totally destroyed, and that Chinese merchants have already begun to buy up grain and beans in anticipation of a famine. Making every allowance for exaggeration, the trouble seems to be sufficiently formidable.

A Japanese traveller who has just returned from Manchuria tells a traveller's tale to the effect that the oppressive measures of the Russian Government in Manchuria defy description, and that the people, unable to offer any resistance, are in a pitiable state. The result is that their hatred for the Russians has augmented their liking for the Japanese, whom they receive everywhere with open arms, even giving them food and lodging gratis. This traveller suggests that Russia's reason for not allowing Japanese subjects to travel in Manchuria may be due to the above facts. It appears to us that the story is little worthy of credence.

It is alleged that France has made all arrangements for constructing a line of telegraph from Tonquin to Amoy, and that there is a project to prolong it thence to Port Arthur. By that method Russia and France would have direct telegraphic communication with the Far East independently of all English lines.

The Japanese marines in Shanghai, 300 in number, are to be immediately exchanged for an equal force of land troops.

On the 15th instant the Young Men's Union—which may be regarded as a branch of the National Unionists—held a meeting and passed resolutions to the effect that the Peace Protocol having now been signed, steps must be taken to get Russia out of Manchuria, and that Japan must proceed resolutely to extend her sphere of influence in China so as not to lose the advantages conferred by her recent military successes. The meeting further decided that measures must be adopted to contradict the rumours circulated as to an alliance between Japan and Russia, and as to an arrangement pointing to the exchange of Manchuria for Korea.

Mr. Komura left Fusan on the 16th and is expected to reach Yokosuka on the 19th. There have been renewed rumours that he is resolved to refuse the portfolio of Foreign Affairs, but inasmuch as he is returning expressly to take it, such stories do not deserve any credence.

Thursday, Sept. 19.

It is telegraphed from China that Viceroy Liu and Governor Yuan desire to employ in offices of State men educated according to foreign methods, but that Viceroy Chang has not yet made up his mind on the subject. It is interesting to observe how largely these three men, Liu, Chang and Yuan, now bulk in the eyes of the world. They practically represent China, and a very good thing it would be for her if they had complete control of her affairs.

On the 17th instant, the Chinese troops re-entered Peking after an absence of a year and two days. There were only three hundred of them, presumably belonging to the army of Yuan Shih-kai. Had things

been expedited forty-eight hours, the re-entry might have occurred on the anniversary of the relief, which coincidence would probably have conveyed some interesting meaning to the Chinese.

It is now stated that the force of Japanese troops stationed in Shanghai will be a battalion, not 300 men as recently rumoured. The First Battalion of the Third Regiment of the First Division, now in Tientsin, has been told off for this duty. It becomes difficult to discern the exact number of troops that will be left in Chili. Previous reports assigned six thousand to Tientsin and two thousand to Shan-hai-kwan, apart, of course, from the garrison of Peking. Among these, fifteen hundred of the Tientsin troops and five hundred of the Shan-hai-kwan force were to have been Japanese. But if the latter are to send a battalion from Tientsin to Shanghai, there will remain only a thousand Japanese troops in Chili outside Peking.

The French have given notice of their intention to evacuate Paoting on the 22nd instant, and the Imperial Court is said to have instructed Wang Wen-shao to take steps for forwarding the baggage of the Court to Peking at the end of this month.

THE RUSSO-CHINESE BANK AND THE 130TH BANK.

Saturday, Sept. 14.

Some time ago the Hozen Railway Company—the Yoshida-Shinjo line, 13 miles long—drew a bill for 200,000 yen which was endorsed by a branch of the 130th Bank and cashed by the Russo-Chinese Bank. The bill fell due on the 21st August, but when it was presented for payment, the 130th Bank refused to meet it on the ground—so far as we can discover—that the endorsement had been made by an agent contrary to direct instructions from his principal and for his own private benefit. The question is to be carried before a Court of Law. It is creating some excitement. The President of the 130th Bank is understood to say that he will take up the bill at once if the law decides that he is bound to do so, but that he is determined to test the Bank's liability under such circumstances. In Osaka, where the affair occurred, there is evidently much apprehension that unless prudent steps are adopted, the matter may seriously impair the credit of Japanese banks in the eyes of their foreign colleagues. Mr. Matsumoto Jutaro, President of the 130th Bank, occupies in Osaka a position nearly analogous to that held by Baron Shibusawa in Tokyo. His name is connected with numerous trustworthy enterprises and he enjoys universal credit.

Tuesday, Sept. 17.

According to newspaper accounts, the 130th Bank cuts a sorry figure in its dispute with the Russo-Chinese Bank on the subject of the Toyokawa-Railway note for 200,000 yen. The note, having been duly endorsed by Mr. Kondo Senkichi, Manager of the 130th Bank, was cashed by the Russo-Chinese Bank, and not being taken up by the drawer at the date of maturity, August 21st, the Russo-Chinese Bank naturally had recourse to the 130th Bank. It was then that the latter put forward two extraordinary pleas; first, that although Mr. Kondo Senkichi was actually officiating as its Manager, and had been so officiating for over two years, he nevertheless was not in legal occupation of that post, and consequently the Bank could not be responsible for his proceed-

ings; secondly, that whereas the course sanctioned by trade custom would have been that the drawer of the bill should receive the money from the 130th Bank, and that the latter should then negotiate with the Russo-Chinese Bank, the drawer had gone direct to the Russo-Chinese Bank after obtaining the endorsement of the 130th Bank. Such pleas seem like mere trickery to ordinary minds, and we are astonished to find Mr. Matsumoto Jutaro's name connected with them. The Russo-Chinese Bank naturally replies that it has nothing to do with the 130th Bank's method of appointing its Managers, but must deal with them as managers when it finds then discharging the functions of manager, and that, with regard to the second plea, it received the note from the endorser, not from the drawer. We read in the *Jimmin* that the matter is likely to be settled amicably, but if the whole story has been told, it reflects little credit on the 130th Bank.

Wednesday, Sept. 18.

The opinions of leading Japanese bankers and men of business seem to be universally condemnatory of the action of the 130th Bank in the matter of the promissory note endorsed by it and cashed by the Russo-Chinese Bank. Four persons interviewed by the *Shogyo Shimpō* are unanimous in declaring that whatever may be the law of the case—and upon that they do not undertake to express any definite opinion—there can be no room for doubt about its moral aspect, and they regard it as most regrettable in the interests of Japanese banking credit that action so undefensible should have been taken by a bank of such importance as the 130th, and endorsed by a man of Mr. Matsumoto Jutaro's reputation. Several prominent business-men are said to be endeavouring to bring about a settlement.

THE "KOW-TOW."

What the "Kow-tow" really means is thus described by the *North-China Daily News* :—

Of the making of books about China there has been no end of late years, but Dr. Wells Williams's "Middle Kingdom" is still the eminent authority, and he insists on the religious character of the kowtow, and it is this religious character which makes it repugnant to Western nations. He says: "The Emperor, considering himself as the representative of divine power, exacts the same prostration which is paid the gods; and the ceremonies which are performed in his presence partake, therefore, of a religious character and are not merely particular forms of etiquette, which may be altered according to circumstances." After describing the eight forms of obeisance, Dr. Williams reaches the most elaborate form, which is that practised before the Emperor. "The climax is closed by the *san kwei kin kao*, or thrice kneeling and nine times knocking the head. Some of the gods of China are entitled to the *san kao* (thrice knocking), others to the *shu kao* (kneeling and knocking the head thrice upon the ground, then standing upright and again kneeling and knocking the head three times more), while the Emperor and Heaven are worshipped by the last (three kneelings and nine knockings)."

Our contemporary adds that had Prince Chun and his suite made the "Kow-tow" before the Kaiser the obeisance would have signified the transfer of their allegiance from their own Emperor to the German sovereign. We can not understand the logic of that conclusion, but if it be correct, then one can easily conjecture that so soon as the Kaiser learned what interpretation the Chinese gave to the "Kow-tow," he willingly abandoned all idea of exacting it.

THE MISSION OF APOLOGY.

On the 13th instant the Chinese Envoy, Na Tung, was received by the Emperor and presented an autograph letter from his Sovereign, of which the following is a translation :—

The Emperor of China to His Majesty the Emperor of Japan, Greeting!

Great and illustrious Sovereign!

The relations of mutual confidence and cordial friendship between China and Japan,—the two countries situated alike in Asia in close geographical proximity to each other,—have happily been fostered and strengthened ever since the practice was inaugurated of reciprocally sending Envoys from one Empire to the other, in permanent resident missions. Unfortunately, however, when the Capital of Our country was suddenly infested by the Boxer insurgents in the fifth moon of the last year, and in consequence when both the soldiery and civic population gave themselves up to uncontrolled fury and disorder, Sugiyama Akira, the Chancellor of Your Majesty's Legation in Peking, fell a victim to their lawlessness and lost his life. The Chancellor coming to China, as he did, in the suite of Your Majesty's Minister was entitled to the highest protection from Us. The disturbance, however, broke out so suddenly and so unexpectedly that his grievous death could not be averted. We are conscious that the immeasurably deplorable end, which befell an official of a friendly Power, and the consequent interruption of cordial relations between the two countries are the results of Our failings, in that We were unable to prevent in time the critical turn of events. We therefore feel the deepest regret, and We have accordingly caused Our Minister to perform religious rites for the memory of the lamented Chancellor and at the same time We have made offerings from Our private purse in honour of the deceased.

We have commanded Na Tung, a Vice-Minister for Finance of the first degree of rank (T'ou p'in Ting tai), to proceed to Your Majesty's Empire and to present this Imperial Letter, in the capacity of Our Envoy in Special Mission. The loyalty and fidelity of Na Tung are already well known to Us, and reposing full confidence in him We have specially charged him to execute his mission in the spirit of highest respect and reverence, and to make known Our feelings of profound regret, thus making honourable reparation for the death of Sugiyama.

When the forces, which were sent by Your Majesty on their distant expedition, arrived in Peking their first and paramount aim was to give peace and security to the inhabitants. In the negotiations for peace which followed, Your Majesty's beneficent influence was invariably felt in the adjustment of important questions. That the general situation in the Orient has so happily been preserved intact, is due to the just and impartial views which Your Majesty has maintained in the councils of nations. Your Majesty's fame as a just and humane Sovereign now extends far and wide; and deeply touched by Your Majesty's benevolent attitude We have commanded Our Envoy to present to Your Majesty in Our name Our sincere thanks. It only remains for Us to express Our earnest wish that Your Majesty, setting aside the displeasure which past events have occasioned, will be graciously disposed to draw closer and closer the bonds of friendship which unite the two countries; that the existing sentiments of mutual good-will may be fostered more and more as time progresses; that tranquility may henceforth reign over the earth; and that the blessings of peace and prosperity may descend upon Our respective Empires.

The twentieth day of the sixth moon
of the twenty-seventh year of
Kwang Hsi.

In presenting this letter the Envoy made the following speech :—

[TRANSLATION.]

Speech of His Excellency Na Tung, Envoy on a Special Mission from His Majesty the Emperor of China.

Your Imperial Majesty in graciously permitting

me to approach Your Majesty in the discharge of a mission confided to me by His Majesty the Emperor of China, my August Sovereign, has conferred upon me a high honour which I esteem all the more because of my personal knowledge of the magnificent results of Your Majesty's enlightened rule, which are becoming more and more conspicuous day by day.

The reciprocal relations between Japan and China, situated alike in Asia, have been marked by the utmost cordiality. Unfortunately, however, when a disturbance suddenly broke out in China in the summer of last year, Sugiyama Akira, the Chancellor of Your Majesty's Legation, met a violent death. My August Sovereign deeply regretting the occurrence has sent me to Your Majesty Court in the capacity of His Special Envoy to present His letter, and has charged me to convey to Your Majesty an expression of His profound grief. At the same time I have been commanded by His Majesty the Emperor to accord honourable reparation to the memory of Sugiyama Akira by performing religious ceremonies before his tomb and by transmitting to the proper recipient an offering from my Imperial Master.

It only remains for me to express the hope, in the interest of the two Empires, that Your Majesty, favourably moved by the sense of geographical propinquity, may be pleased to foster the relations of good friendship which unite the two countries and to promote the common welfare of Eastern Asia through an undisturbed maintenance of the general situation.

In conclusion I have the honour to present to Your Majesty my humble wishes for Your Majesty's health and the prosperity of the Empire of Japan.

The reply of His Majesty the Emperor was :—

[TRANSLATION.]

In the disturbance which occurred in Peking last year, Sugiyama Akira, the Chancellor of Our Legation, was made the victim of a cruel assassination, perpetrated by the soldiers of your country. His Majesty the Emperor of China, feeling profound regret at the incident, has been pleased to send you to Our Court on a special mission, with an Imperial Letter in acknowledgment of the reparation which is due to Us. In accepting the message which you have been charged to deliver to Us it behoves Us to express Our belief that the friendly relations between the two countries will in the future become closer and closer. It is Our earnest wish that the great work of reform, which depends on your Sovereign, will soon be found in effective progress, and that the maintenance of permanent peace in Eastern Asia will be thereby secured. In submitting to His Majesty the result of your mission you will not fail to state that We pray for His unbounded happiness and prosperity.

It is stated that the Chinese Envoy sought information from the Foreign Office in Tokyo as to whether it would be advisable to follow the Chinese form of etiquette when visiting the grave of Mr. Sugiyama on the 14th instant, or whether the Japanese form should be adopted. The Foreign Office replied that as Mr. Na was a Chinese Envoy he had better adhere to Chinese methods. There is no marked difference, so far as we know, the essential feature of each being the offering of flowers and the burning of incense at the tomb. It is understood that the sum of five thousand *yen*—not taels—sent by the Emperor of China to Mr. Sugiyama's family, will be laid before the grave by the Envoy, and that the Vice-Minister of Foreign Affairs will charge himself with the duty of transmitting it to its destination.

The Chinese Envoy had the honour of being received by the Empress on the 16th instant. He was to have been entertained by the Minister of State for Foreign Affairs the same evening, but the banquet was postponed in consequence of the death of the President of the United States.

Seal of the
Emperor.

SHANGHAI AND THE JAPANESE TROOPS.

It will be curious to see how the members of the Shanghai Club will treat the officers of the Japanese force stationed there. Nothing more regrettable has occurred in the history of foreign relations with the Orient than the action taken by the Club last year in the case of Japanese naval officers. While Japanese troops were marching in the van of the army despatched to relieve the Legations in Peking, and were fighting gallantly in Tientsin to preserve foreign life and property, a Japanese man-of-war went to Shanghai to assist in protecting that place against the dangers supposed to menace it. Certainly the officers of that war-ship ought to have been welcomed with open arms by Shanghai. If ever there was an occasion when gratitude should have augmented the warmth of a reception, that was the occasion. Shanghai had no consciousness of these facts, however. Instead of welcoming the officers, the gentlemen of the Club met and decided that its doors should be closed against them. Every other national visiting Shanghai from beyond the sea had the free *entrée* of the place, but the Japanese who were laying down their lives for the countrymen of the Club gentlemen and who, by their bravery and military skill, were making it possible for these Club gentlemen to live in peace in Shanghai and to have a club at all, these Japanese were excluded, discriminated against as though they were unworthy to mix with civilized folks. There is an excellent reason for not opening the doors of the Shanghai Club to the Chinese; the accommodation afforded by the building is too small for the great influx of members that would probably result from such a measure. But no such reason applies to the Japanese; still less to Japanese naval officers who occasionally visit the place. Their exclusion was due to racial prejudice pure and unalloyed; prejudice which, did the Japanese themselves display it, would be denounced as barbarous and disgraceful by these very Club gentlemen of Shanghai above all others. When foreigners come to Japan everything is at their disposal and every place is open to them. They are treated with almost lavish hospitality. But when a Japanese goes to Shanghai, he learns for the first time what racial prejudice really is. If Colonel Shiba and General Fukushima were to visit Shanghai to-morrow, neither the one nor the other might set foot within the walls of the Club. There will be an opportunity of remedying this miserable state of affairs when a battalion of Japanese troops is stationed in Shanghai. There will also be an opportunity for the Club gentlemen to display once more their spirit of civilized courtesy and international liberty. We wonder what their choice will be.

THE HUANG-PU.

The *North-China Daily News*, referring to Annex No. 17 of the Peace Protocol, which deals with the conservancy and improvement of the Huang-pu—generally called Wang-poo, but every Sinologue seems to have his own way of transliteration—says that "it will be a great good out of evil if the rehabilitation of Shanghai springs out of the Boxer madness of the closing year of the 19th century." Shanghai, in short, may become once more a sea-port not in name only but in fact. We sincerely trust that it will.

Talking of this, does it not seem singular that foreign students of the Chinese language can not agree about some method of

transliteration? It is most exasperating to find the same place spelled in half a dozen different ways. The city of the Imperial Court's present sojourn is a perpetual case in point: some folks write it "Siang"; some "Shiang" and some "Hsi-an." So the Shanghai river appear as the "Wang-poo" in one journal; as the "Whang-poo" in another, and as the "Huang-pu" in a third. Even the enclitics are a subject of variation, some folks using them and others discarding them. We in Japan have been blessed for many years by the possession of a system of transliteration which seems to be thoroughly rational and which has evidently come to stay. Even the Educational Authorities, when they last year essayed to alter it in a moment of vertigo, were unable to do so. The Sinologues of China ought to be able to strike out something equally commendable.

THE LAND QUESTION.

The volume of opinion in favour of removing the restriction upon foreign ownership of land is increasing. A strong article on the subject appears in the *Hochi Shimbun*, which takes the line that under existing arrangements foreigners are able to circumvent the law and become landed proprietors in fact, though they are unable to obtain the privilege for legitimate purposes of trade or manufacture. The *Niroku Shimbun* writes emphatically on the same subject. It insists that the Japanese injure themselves seriously by insular prejudice, and by their pettifogging habits which destroy all confidence. As a case in point it adduces the Tokyo Street Electric Railway Company. According to our contemporary, the company simultaneously approached Mr. Kessler, agent of Messrs. Siemens & Company, and the Russo-Chinese Bank, making different proposals to each and imagining that it could do so secretly. But both firms happen to have the same adviser, Dr. Loenholm, and thus they detected at once the manoeuvre that was being practised, with the result that the proposal for a loan of three million *yen* fell through completely. We do not know whether these facts are correct, but assuming them to be so, we really fail to see that so much importance attaches to them. The obvious explanation is that two different agents approached the Bank and Messrs. Siemens and Company's agent with different propositions. That sort of thing is only too common in Japan. People who have important business to transact show singular want of discrimination in choosing agents, and men who think they see an opportunity to accomplish something profitable to themselves do not hesitate to assume the unauthorized, or only partially authorized, character of agent. Of course there lies at the root of it all the unfortunately fast-and-loose methods too habitual among Japanese business men. If the prospects of the Tokyo Street Railways have been obscured by such methods, it is indeed regrettable. Certainly no worse example could easily be conceived than that now set by the 130th Bank in its dealings with the Russo-Chinese Bank. It was reported that some arrangement had been effected, but the report is not confirmed, and there seems to be no doubt that the case will come before the law courts. Judging from the comments of the Japanese press and of the Japanese Chambers of Commerce, the procedure of the 130th Bank fails to obtain approval anywhere. But Mr. Matsumoto

Jutaro, President of the Bank, is a man of established repute, and we entertain the hope that he may be able to offer some valid plea for the course he is pursuing. So far as our present knowledge goes, there is no plea but the plea of a hedge lawyer.

KOREA.

The attempt to have Lady Om raised to the position of Empress of Korea seems to have been unsuccessful owing to opposition in influential circles. Rumour associates the names of the Russian and French Representatives with this attempt, but the activity attributed to these two officials by some newsmongers is probably very largely exaggerated.

The importation of rice from Annam to meet the deficiency which was expected to result from a defective harvest in Korea, appears to have been a disastrous speculation. The telegraph tells us that the rice was found so expensive that no market offered. A further complication resulted from a proposal to give the rice to junior officials in lieu of salary. This idea aroused great indignation, and as Li Yong-ik's name is associated with it, his influence is said to be threatened.

The latest rumour is that the French have discovered smokeless coal in the vicinity of the Tadong River, and that they are now engaged surveying the place preparatory to obtaining a mining concession from the Korean Government.

The Japanese Representative in Seoul is still endeavouring to have the operation of the grain edict limited to the time of harvest. It is reported that a long conference has taken place on the subject, but that no decision has yet been arrived at.

In the course of a couple of letters from Korea to the *Pall Mall Gazette*, Mr. Angus Hamilton, who left for Europe by the *Tamha Maru*, renders a just tribute to what Mr. McLeavy Brown has accomplished in the way of reconstructing the roads and drains, and generally improving Seoul, until with its trains, its cars, and its lights, its miles of telegraph lines, its railway station hotel and native shops and glass windows and brick houses, the city is within measurable distance of becoming the highest, most interesting and cleanest city in the East. And this is accomplished without denuding it of its own characteristics. There is no hostile feeling, because these things are Western. Nothing can improve upon the law, order, and public decency which are noticeable while the crowds of cleanly-clad people throng the streets. There is nothing which could offend the sense of good taste of the most refined, and there is happily a complete absence of those gross indecencies which would seem to be the characteristic feature of street life in Chinese cities. It is true, says Mr. Hamilton, that the liberal tendencies of Korea have been aroused by association with the Japanese, and that without the guiding hand of that energetic country the position which she would enjoy to-day is infinitely problematical. But the contact has been wholly beneficial.

The amount of imports passing through the hands of Japanese merchants at Seoul during 1900 stood at *yen* 972,484, of which *yen* 773,723 were paid for Japanese goods, *yen* 168,767 for foreign articles and *yen* 29,994 for goods of Korean manufacture. Exports during the same period were, gold bullion valued at *yen* 815,943, oxhides at *yen* 28,385, ox bones at *yen* 3,500, and ox fat at *yen* 1,561, totalling *yen* 849,389. The total exports and imports show an increase of *yen* 567,844, as compared with the previous year. From a statistical point of view, this shows an apparently not insignificant degree of progress on the part

of Japanese traders; but as a matter of fact a good many lines were handled by them simply because the Chinese traders withdrew from the country at the outbreak of disturbances in North China. Recently a great many Chinese have returned and the Korean merchants are giving them every support.

Exports from and imports into Mokpho during the year 1900 stood at yen 2,324,320, the exports being yen 1,257,148, the imports yen 267,172, the excess of the former being yen 289,976. As compared with that of the previous year, the total increased by yen 443,168 or something over 22 per cent.

The amount of foreign trade at Chemulpo during three months from April to June was 3,269,791 yen of which imports were yen 1,543,249 and exports yen 726,542. Domestic trade amounted to yen 888,008.

At Fusan during the six months from January till June of this year imports and exports amounted to yen 3,755,124; while the sum of the foreign trade conducted along the coast reached yen 753,786.

FIELD MARSHAL OYAMA.

Field Marshal Oyama's resolve to resign is said to be immovable. He has been urged from various quarters to reconsider it, but he insists that he accepted the post originally as a temporary measure, not anticipating by any means that he would hold it as long as he has done. He was willing, however, to remain in office until the conclusion of the Chinese complication, and that being now finally disposed of, his mind is made up to resign so as to obtain leisure for attending to his health, which has been very indifferent of late.

The question of the Field Marshal's successor is causing some discussion. General Nozu is said to have been offered the post, but he declined to accept it. If Field Marshal Yamagata agreed to take it, there would be no difficulty. But his consent also appears to be problematical, and it may be necessary in the end to appoint one of the Imperial Princes.

It appears that nothing will induce Marquis Oyama to remain at the head of the General Staff, and as there are reasons which induce Marquis Yamagata to decline the post, it is now affirmed that Field-Marshal Prince Komatsu will be Marquis Oyama's successor. In that event the present holder of the second place on the staff, Lieut.-General Viscount Terauchi, will probably become Governor-General of Formosa, and be succeeded on the staff by Lieut.-General Baron Iseji, now commanding the Sixth Division. Baron Kodama has for some time been desirous of giving up the post of Governor-General of Formosa, finding it impossible to discharge the duties of that position in conjunction with those of Minister of War.

TELEPHONES.

Although it has seemed for some time as though people had grown weary of complaining about the policy of the Department of Communications in the matter of telephones, an occasional lament still makes itself heard. Something like two years, certainly more than one, elapses from the time of making application for a telephone to the time of installation. The trouble is due, doubtless, to lack of capital. The Government has no money to lay out on telephones and the Diet will not grant money, the result being that a highly lucrative enterprise is virtually undeveloped. In Europe or America if a man makes application for a telephone it is installed

in his house within one or two days. The operation pays and those responsible are not so short-sighted as to throw any obstacles in the way of their customers. But in Japan one has to go bowing and scraping to be kindly allowed to put profit into the pockets of the official monopolists of the telephone, and one has to accompany one's request with a deposit of coin which remains unfruitful for some two years. The Japanese are patient people. They possess the faculty of waiting to quite an exceptional degree. But we suspect that many thousands of them refrain from putting in an application for a telephone since it entails a payment of ready money at the outset and a subsequent delay of years. It is a pity that the Government can not contrive to set a better example to this people. Formerly officialdom undertook to furnish models for popular imitation, but times have changed.

THE RAILWAY QUESTION.

In reply to a question from the Directors of the Kansai Railway and the Hokuyetsu Railway—namely the lines from Nagoya to Osaka and from Naoyetsu to Nuttari—, as to whether the law permits the mortgaging of railways to foreigners by way of security for loans, the Government has replied that such an operation is undoubtedly provided for by the treaty with Switzerland. All nationals consequently enjoy the privilege under the most-favoured-clause, provided that there is such a clause in their treaties. It may be assumed that this often mooted question is now settled. The privilege is not of much practical value so long as the foreign mortgagee can not own the land on which a railway is "built; for if, in the event of the company's failure to implement its engagements, he was compelled to foreclose, public sale would be compulsory and the recovery of the original loan might be more than problematical. The fact is that these partial concessions are unimportant. Until all impediments are removed, very little real progress can be made.

LABOUR UNIONISM.

There are several associations in Japan calling themselves labour unions (*rodo dantai*)—the *Rodo Kyokai*, the *Rodo Kumiai-kiseikai*, the *Tekko Kumiai*, the *Kappanko Kumiai*, and the *Nittetsu Kyoseikai*. These have now combined themselves into one body called the *Rodo Dantai Kengokai*, a fact which sounds formidable and may ultimately prove so. At present, however, the united association announces that its purpose is not to fight against capitalists or to follow any programme of socialism, but rather to smoothe the relations between capital and labour. Nevertheless the leaders think that labour does not enjoy in Japan the status properly belonging to it, and as status, after all, is mainly a question of money, Japan may now be on the verge of troubles such as are crippling the productive power of England. It should be useful in this context to quote the words recently written by Mr. Benjamin Taylor in the *North American Review*:—

The great object in American production is the saving of labor. The great object in British trade union production is the dissipation of labor—which is waste. This is the central idea of the "machine question" among the engineers of the eight-hour-day movement, of the miners' weekly "idle day." The less each man does for his wages, the more will there be for other men to do for the same wages—so they foolishly think, as if there were a common wage fund into which every man can dip, share and share alike with his neighbor. This is why all labor saving ma-

chinery is still hated by British workingmen, almost as much as it was in the days of the Luddites. Men do not smash machine tools nowadays, it is true; but they manage to get the minimum of work out of them, and to extract the maximum pay for attending to them, and that is how it has been computed that if the numerals 1 to 14 be taken as representing the producing capacity of the British workman, 2½ must be taken as representing the producing capacity (not the technical skill) of the American workman. The objects of the British trade unionist are—to equalize the wage of the mediocre or inferior and the capable workman; to restrict the amount of work done by each workman, so that there may be fewer unemployed; to restrict the total output, so that prices, and consequently wages, may not be borne down by the oversupply. In carrying out these objects, then, the British trade unions are neither more nor less than organizations for the restraint of labor and the curtailment of production.

Trade unions may drive an industry away from the country altogether. They have already done so to a large extent, and in many instances they have driven an industry out of a district. It was for example, the exactions and limitations of the Thames shipbuilders that drove the great shipbuilding industry from London to the northern rivers, where it has flourished ever since, while the Thames has now only one shipyard of any importance. It was the exactions and limitations of the trade unions that drove lace-making from Nottingham to Scotland. It was the exactions and limitations of trade unions that drove flint glass-making from England to Germany, and bottle-making from Scotland to Belgium.

If Great Britain fails in the industrial race, it will not be because her workmen can not create as well as others, but that they will not. And we do not need to go much farther than this in search of an explanation of the pressure of foreign competition—that a German or American workman will give equal attention simultaneously to three, four, or six machines or tools, whilst the British workman is compelled by his trade union to limit his attention to one, so that employment may be given to half a dozen other men who ought to be busy elsewhere.

Britain's greatest national danger lies in the destruction of free trade in labor. It threatens not only British industries, but also British defences, as has been seen in delays in the construction of warships caused by trade union obstructions. It is not so much technical education that is required as the awakening of the workman to the fact that he becomes his own worst enemy when he joins a trade union. Meanwhile, the conditions of international competition will not be equalized until in America trade unionism has developed as it has done in Britain. And such development has already begun.

NOTES ON CURRENT EVENTS.

The Nippon Yusen Kaisha's new steamer *Kamano Maru* is expected to leave London very shortly and will arrive in Japan in time to take her place on the Australian line next December. She is said to be a splendid vessel of 4,800 tons, steaming 17.2 knots and fitted up in accordance with all the latest devices for the comfort of passengers.

Mr. Gody, a Belgian official, who has just returned from Johannesburg, gives this account of the Boer methods:—"What makes this war interminable is—and it cannot be too strongly insisted upon—the impossibility of capturing the Boer commandos. As soon as one body of men finds itself cornered, exhausted, and starved it disperses. The men hand in their submission, take whatever oath is required of them, only to resume the field and join their leader as soon as their strength permits." We wonder whether such proceedings are calculated in Mr. Kruger's opinion to secure the assistance of the God to whom he appeals so constantly for protection. And we wonder, too, how England's German and Dutch critics would deal with such an enemy as the Boers.

Mr. Hiranuma Senzo is fated to attract public attention. History will probably remember him as the usurper *par excellence* of the Meiji era. That is not enough, however. Having offered himself as a candidate for the House of Peers in the capacity of one of the highest tax-payers of Kanagawa Prefec-

ture, he nearly threw several good people into hysterics, who declared that the Peers would never consent to give him a seat in their midst. When he was elected, the outcry redoubled, but of course it died away in time, and Mr. Hiranuma took his seat without any fracas. Now, however, he has again set rumour's tongue wagging by resigning his seat. Some say that he finds the Upper House too hot for him; others, that he had promised from the outset not to sit in more than one session. At any rate he is once more in men's mouths.

The National Union has just passed through a crisis of its existence. At a meeting of its leaders held in Prince Konoye's residence, the advisability of dissolving the association and awaiting some more favourable occasion for resuming the propagation of its doctrines, was seriously discussed. A majority, however, were opposed to that course, and the final decision was that pending a settlement of the Manchurian question, the Union must hold together. It is difficult, indeed, to understand why the Union should abandon its labours at the present moment. Assuming that its real object is the preservation of China's integrity, that object was never farther from achievement than it is to-day, with Russia seated firmly in Manchuria, and Sir Lo Feng-Loh about to proceed to St. Petersburg as China's Representative. The Union has something tangible to work for now, whatever be its facilities for making its influence felt.

It really does seem ungrateful that Yokohama, which has the best roads in almost any part of the empire—certainly the best if the comparative accessibility of road-making materials be taken into account—should complain so constantly. A casual observer would suppose from the articles and letters appearing in local journals that very little attention was paid to the state of the streets, and that when repairs were undertaken, they were carried out in the clumsiest and most unscientific manner. Never by any chance, however, does any one think of uttering a word of approval and thankfulness for the trouble taken by the local authorities, though the residents in other towns and cities of Japan would count themselves fortunate indeed did they possess equally good roads. It may safely be asserted, we think, that considering the real state of the streets, there never was another place in the world where so much newspaper grumbling was heard. One is tempted to think that whenever a local journal is in difficulties for copy or desires to make itself conspicuous, it attacks the question of roads. And while these complaints are so loudly formulated, many of the foreign residents refuse to pay their house tax, the proceeds of which are a principal source of revenue for such purposes as road-repairing.

A Japanese subject of Moji having acquired a plot of land at Maizuru measuring 110,000 *tsubo* endeavoured to sell it to the Japanese Government, but failing in that attempt is now making efforts to find a Russian purchaser. Apparently this transaction is causing some excitement but it remains to be seen whether any Russian would care for land in such a place.

The exquisitely cool bright weather we are now enjoying is apparently prophetic of a storm. A centre of depression has declared itself near Formosa and seems to be working up northwards. In the Riukiu Islands on the morning of the 17th instant the barometer registered 739 m.m. having

stood at 753 m.m. on the preceding day. As yet there are no signs of a fall of the barometer in Tokyo, but the Meteorological Authorities are said to be of the opinion that the climatic conditions render it probable that the gale will invade the main islands. From Kiushiu it is already announced that there are symptoms of rain and storm.

The Third Regiment of the Third Division is receiving very severe and apparently not altogether undeserved censure at the hands of the Tokyo press, in consequence of its recent performances on the plains of Kagami in Gifu. Apparently the artillery of the Regiment were not well informed as to the great range of the Arisaka guns which had just been served out to them. Nobody blames them much for that ignorance. But it appears that they continued their dangerous practice from day to day, dropping shells into one village, and then treating another similarly when they were warned of what had happened at the first. It seems that the Kagami plains are a favourite place for military exercises, and that they are used by both the Ninth Division and the Third. The former, however, is said to be most considerate towards the people, always making inquiries whether they have sustained any damage and recompensing them fully. The Third Division, on the contrary, is proverbially careless in its conduct and reluctant to give compensation. So the Third Division is now condemned in terms probably more severe than the occasion merits.

A German firm has had the enterprise to open a telephone exchange at Chefoo, but as not more than 30 subscribers have been obtained, the affair is not likely to succeed, especially as the charge is only \$5 monthly, which is less than the tariff in Japan.

The *jinmin* complains that municipal expenditure is increasing with excessive rapidity in Tokyo. It gives the following figures:—

	Yen.		Yen.
1892	1,360,361	1897	1,596,570
1893	1,402,016	1898	1,953,012
1894	1,426,398	1899	2,306,987
1895	1,433,280	1900	2,212,270
1896	1,559,600	1901	2,155,000

We do not see very much to complain of in these returns, especially since there is a tendency to decrease during the past three years. If only the municipality spent its money in an intelligent manner there would be nothing to say, but such road-making methods as are now pursued can only be called astounding.

A case of bankruptcy is reported from Chefoo which may cause considerable inconvenience. According to Japanese reports it is the well known firm of Messrs. Ferguson and Co., agents for no less than 25 different associations.

FRENCH NOTES.

Detailed news of the tactics pursued by the Opposition at the French elections show that the Royalists followed the Irishman's manoeuvre of joining any one that was against the Government. According to an injunction from the Duke of Orleans, they were to carry on a frankly loyal campaign where that was possible, but where it was not possible, they were to combine for the support of the anti-Ministerial candidate. Indeed the most interesting feature of the election was an endeavour on the part of all sections of the Opposition to coalesce under the name of "Nationalists" for the purpose of putting down the Government, which,

according to them, consists of neo-Jacobins and pseudo-Socialists who are engaged in the interesting process of "grinding under foot France's ancient traditions of tolerance, generosity and self-respect."

The French Army's autumn manoeuvres began on the 9th of September and are to end on the 19th. The contending forces are under Generals Duchesne and Kessler.

A very "old-time" incident has been recalled by the pardoning of Gomez, one of the men engaged in throwing the Orsini bombs. Gomez was 29 years of age when he engaged in that plot and he is now 72. Thus he has been in penal servitude 43 years, and his health is said to have broken down, though his good conduct is assigned as the reason of his pardon. He has certainly been a long time establishing his title to leniency.

A representative of the *Figaro* has again interviewed Mr. Kruger. The old man continues to harp upon the "horrors now being committed in South Africa," and to declare that "the Boer cause would justly be condemned by God if Boer soldiers had committed a twentieth part of the crimes committed by the English." He also talks of the "incontestible inhumanity of the British," and has the splendid assurance to affirm that, "the Boers were not the aggressors." One can not help speculating upon Mr. Kruger's idea of the condemnation of God if he thinks that the Boers have hitherto had the Almighty's approval. He retains his strange belief, or pretends to retain it, in the possibility of the Boers now obtaining from England what they could not obtain before the war broke out, their complete independence. His infatuation in that respect amounts almost to lunacy.

It is stated by the *Gaulois* that the import of the arrangement concluded between France and Morocco is as follows:—

(1) The recognition by the Sherrefian Court of accomplished facts in Southern Algeria; (2) the organization of a special police for frontier incidents; (3) abandonment of the Sahara by Morocco; (4) early opening of new regions to French trade; (5) access to the French oasis on the west side by the organization at Maghzen of the new tribes ceded to France; (6) the possibility of actively pushing forward the construction of the south-western railway under conditions which will diminish the expenses of the Budget.

SHOOTING.

The Yokohama Shooting Club held its regular monthly match at the grounds at Tsurumi on Sunday. The general match taking place in the morning ended with the following scores:—

	Points.
W. H. McGowan	44
S. Watanabe	39
F. Wada	35
A. Kingdon	35
W. Jarmain	34
M. Yano	33
G. Hood	32
G. Hewett	27

Mr. McGowan wins the Gold Medal, Watanabe and Wada taking the second and third prizes.

The second match ended with a tie at 19 points, for Messrs Yano, Hewett, and McGowan. In comparing the score as per club rules, Mr. Yano was awarded the Gold Medal, with the second and third prizes in above order.

The last contest, consisting of shooting live birds thrown up in pairs, resulted in Mr. McGowan winning the Gold Medal, Mr. Wada, second, and Mr. Yano third prizes.

DEATH OF PRESIDENT MCKINLEY.

THE world is much the poorer by the death of WILLIAM MCKINLEY, the twenty-fourth President of the United States of North America. From the time when the assassin's bullet struck him down at Buffalo on September 6th until the evening of September 12th, Hope told a flattering tale, the physicians in attendance all agreeing that the stricken man would recover from his wounds. But on Friday there came a sudden change for the worse; heroic measures were resorted to: everything that the most advanced medical science could devise and execute was no doubt done, but the most powerful stimulants proved unavailing and the bulletins which reached Japan on the 14th prepared us for the news which came to hand late on Saturday night, that the honoured and beloved President had succumbed to gangrene at 2.15 o'clock on the morning of that day. And so at the comparatively early age of 58 WILLIAM MCKINLEY joins the ranks of rulers of great nations who have been suddenly cut off by an assassin's hand in the plenitude of their bodily and intellectual faculties, while bravely sustaining the weighty responsibilities of their high office.

At such a time as this, when a great nation is plunged into universal grief, mourning the loss of one who, in every act of life, public and private, has shown the world an example of clean-living, broad-thinking, and clear straightforwardness of purpose as beautiful as any found in Anglo-Saxon annals, it would be an impertinence for an outsider to intrude. Britons, however, can not forget the wave upon wave of genuine sympathy which flowed from the land so lately governed by the dead President, at the time when Queen VICTORIA passed away. And so we ask leave to bring our tribute of respect and condolence to the bier of WILLIAM MCKINLEY and to join with reverence and sincerity in the sorrow and almost unutterable grief of the citizens of the United States at the tragic ending of so noble a life. To his countrymen and the world at large he leaves behind the rich fragrance of well-spent years, while he has yielded

..... his pure soul unto his Captain,
CHRIST,

Under whose colours he had fought so long.

The last words of the dying President are representative of the man: "Goodbye all, goodbye. It is God's way: His will be done."

THE CHINESE ENVOY.

WE can not but endorse the remarks of the *Kokumin Shinbun* with regard to the letter of the Emperor of CHINA to the Emperor of JAPAN and the speech delivered by Mr. NA TUNG when delivering the letter. The letter and the speech alike refer to the relations between Japan and China, relations which, owing to the propinquity of the two empires and their

common Asiatic origin, are described as indicating "mutual confidence and cordial friendship." Some allowance must of course be made for the obligations that courtesy imposes on the compilers of such a document, but the expressions, "mutual confidence and cordial friendship," can not be reduced to vanishing quantities by any allowances on that score. They are unequivocal expressions, and Japan is fully entitled to inquire whether her neighbour's conduct accords in any sense with these avowals. We think that the answer must be negative, and so does the *Kokumin*. If China has relations of "mutual confidence and cordial friendship" with any nation in the world, that nation is Russia. It was to Russia that she appealed for protection against Japan's requirements in 1895, and although she then found that she had indeed exchanged King Log for King Stork, it is to Russia that she still looks and it is towards Russia that she shows confidence and friendship. The shadow of the Great Northern Power is gradually and steadily stealing over Eastern Asia. It is already projected as far as the Yalu; it will soon be projected over Korea, and Japan will then live in its penumbra. Is China making any effort to defer this consummation? Is she not rather adopting the vain policy of trying to sate a growing appetite with luscious morsels. Her relations with Japan are not relations of "cordial friendship and mutual confidence," and it is a hollow mockery to pretend that they are. The Emperor of JAPAN's reply is couched in much soberer terms. "It behoves Us," says, HIS MAJESTY, "to express our belief that the friendly relations between the two countries will in the future become closer and closer." Whether they are very close at present the EMPEROR carefully avoids expressing any opinion; reticence not altogether usual in addressing an Envoy charged with a peaceful mission. And in the immediate context of even those guarded words, HIS MAJESTY adds:—"It is Our earnest wish that the great work of reform, which depends on your Sovereign, will soon be found in effective progress, and that the maintenance of permanent peace in Eastern Asia will be thereby secured." In effect, the EMPEROR reminds his Imperial correspondent that there can be no really cordial relations between the two nations unless China emerges from her bigoted conservatism and frankly enters the path of progress. We are not so sanguine as to suppose that HIS MAJESTY'S wholesome reminder will have much effect on China's malady, but it is satisfactory to find that, so far as Japan is concerned, China is not to be allowed to hide her erring head under a sand of barren protestations.

An attempt was made to wreck a train, by blocking the line with stones, about 3 miles from the Takekawa station on the 16th inst. A train left Tatsukawa on the afternoon of that day and on reaching the impediment the engine was derailed, but fortunately no injury to life or limb occurred.

GERMAN NOTES.

It appears that there was something improper about the manner in which the London *Finanz Chronik* obtained a copy of the new German Tariff Bill before its publication. Two Prussian officials are said to have been suspended for complicity in the affair.

The Centre Party in the Reichstag has apparently resolved to support the new Tariff Bill. That ought to secure the passing of the measure, for the Centre commands more than 100 votes. The Party is not prepared to vote for the Bill exactly as it stands, but will approve such an increase of the duties on agricultural produce as would accomplish the purpose of the measure. Russian journals show no disposition to become reconciled to the Bill. They advocate a war of tariffs if necessary, and urge that steps be taken to encourage Russian manufactures so as to render the country independent of Germany.

THE LATE PRESIDENT MCKINLEY.

PULPIT REFERENCES IN YOKOHAMA.

The sad death of President McKinley drew forth expressions of sorrow at Christ Church and Union Church, Yokohama, on Sunday morning. At the last mentioned place, prayers were offered for an afflicted nation and then the Pastor, the Rev. E. S. Booth, M.A., preached the following sermon:—

I will take for my text this morning the 14th verse of the 25th Psalm:—"The secret of the Lord is with them that fear him; and he will shew them his covenant."

All hearts are full of one thought this morning. You have doubtless all heard of the death of Mr. McKinley, President of the United States of America. The telegram is dated Shanghai, Sept. 14th, 8.50 p.m. It seems that a sudden change had taken place on Friday morning about 3 o'clock, when the physicians all gathered about his bed.

The new century is but a few months old, and in these few months the English-speaking peoples of the world have been twice brought to face a common sorrow. That gracious and noble lady, Queen Victoria, was in the providence of God, permitted to reign righteously through a long reign and passed away, or fell on sleep, naturally. The chief magistrate of that other great English-speaking people, while in the midst of a public function, meeting his suffrages as one man meets another, giving himself the opportunity of pressing the hands of his people; among them a dastardly felon comes and presents the right hand, carrying in his left a pistol wrapped in a handkerchief, and twice discharges his weapon into the bosom of one of God's chief magistrates among men. It is because of that circumstance and fact that I have taken this text this morning. I do not like to apologize, but I feel that it is due to you, since it was nearly 9 o'clock this morning when I got the sad news, and I hope you will pardon me if I do not do the subject justice. But I feel that I must speak out some of the thoughts which arise in my breast, this morning. "The secret of the Lord is with them that fear Him." There is but one mystery in this universe, and that is sin. With the righteous God there is no secret of righteousness, but why and wherefore evil has been permitted to enter in and darken this beautiful world, and damage the image of the Creator is the secret of God, the mystery of the ages. To them that fear Him the secret is revealed; it is through the fear of the Lord that man is let into the secrets of His will. Let us think of this thought just a moment: "The fear of the Lord." Three times in about a third of a century the American people have been thrown into the affliction of a deep sorrow through the assassin's hand. Had he who fired the fatal bullet that took Lincoln's life the fear of the Lord? Had he who skulked about the station and fired the deadly bullet into the body of Garfield the

fear of the Lord? And he who presented the hand of friendship to Mr. McKinley and with the other hand fired two bullets into his body, had he the fear of the Lord?

Rulers and magistrates are the implements of divine justice, law and order; they stand in God's place. Whatever we may say of the Divine right of kings, it is true, that they who are placed as rulers over a people have their persons sacred and inviolate, and why is it that there is a growing tendency in this so-called enlightened age when the sacred inviolability of the person and life of the chief magistrate of the people is being denied? Why is it? The first answer to that question I believe is the fact that the Jews of the churches of Christendom are so scarcely filled with men. Men are finding their mental and spiritual nourishment at the clubs, and in recreations, and anywhere and everywhere except in the House of God, with His Book as their guide. Is it to be wondered at that with men of influence and position in society thus turning their backs on God's House and God's Word, that there should be those in the lower stratum of society who think that they are doing an honorable thing if they put away the chief magistrates of the people? Anarchy has its root in infidelity and atheism. It is certainly a fact that the more noble and more righteous the ruler that sits on the throne the more conscientious he is to secure righteousness and justice, the more likely he is to become the target of the assassin's hand. Is there nothing to be done?

"The secret of the Lord is with them that fear him."

We cannot expect to deal with this great secret of the universe until we ourselves fear the Lord. That day must come when men shall leave their scoffing and their free-thinking, and shall come to fear the Lord. It is only then that that which is evil can be dealt with.

The Lord Jesus Christ came into this world for one purpose, and that one purpose was to meet sin—face to face and to destroy it. That purpose guided him through his whole life here upon earth. It led him to the cross? Yes, that was only a proof of the mysterious hold sin has upon the hearts of men, it was sin that hung him upon the cross. It was sin that scoffed upon him in his trial. It was sin that jeered upon him on the cross: but through all the jeers, through all the pain, he had but one purpose, and that one purpose was accomplished when he said, "It is finished." Nothing more could be done by evil, the power of evil was vanquished, it could only exert itself to a certain limit, and then it could do no more. The consequences of sin,—death and the grave,—were then conquered, and they both rendered up from their grip, the life that they could not hold, for that was the secret of God. My friends, the assassin has taken away the life of one who has been inspired by a high purpose in both his private and public life, and the world as well as the American people is poorer to-day because of Mr. McKinley's death, and mourns it. Yet there is an element in his death that enriches the world, his noble life; his noble example of Christian integrity, his exalted purpose in all his life will be a source of encouragement to the youth of the world in the years to come, and we praise God for that.

But now there is another portion of our text, "and he will show them his covenant." Now God has made a covenant with them that fear him. A promise. It was not a promise entered into hastily, it was not a promise that cannot be fulfilled, but a promise that will be gloriously fulfilled. God himself is the guarantor of his word and the guarantor of the fulfillment of this covenant. And what is this covenant? The redemption of Israel, and the taking of Israel out of all his troubles. The only reason that we cannot drop all the sorrows of this world, is because of sin. The only source of the sorrows of this world, is evil. Sin in its multitudinous forms and effects reveals this. In the covenant God has made sin shall be absolutely destroyed. The covenant will be shown to them that fear Him. Now, we know that there are millions of people in the United States and in Great Britain, and in all the dependencies of

Great Britain, who fear God, and the time is coming, we know not how or what terrible calamity will fall on these peoples, but the time will come when they that fear God will be as one man, and will cry as with one voice, and at that time the covenant will be revealed to them, and he who roams up and down this world as a "roaring lion" will be chained and cast into the bottomless pit. My friends, can not we be joined in this one fear, the fear of the Lord? Can we not be united with this high purpose before us? We have many ills in this community; and how many things there are that destroy the peace of home and of society; the peace of the individual, because evil stalks abroad, and why shall he be allowed to stalk abroad? Why do we who fear the Lord condone with all these forms of evil? Why do we as lovers of country and lovers of God condone with the anarchist. The United States of America boasts of its liberty, and of its freedom of speech, and of conscience, the liberty of the press: all these institutions are objects of pride to us. We open our doors to the down-trodden and poverty-stricken of the world, and they come to us, and in some instances they act towards us as the reptile, which the man found frozen, and out of compassion placed in his bosom, and when it had been warmed into vitality, it thrust its venomous fangs into the bosom that gave it warmth. Yes, my friends, there are other forms of evil, not simply anarchism and socialism; but also intemperance, and vice in many forms which are sapping the very life of society and undermining the home, undermining the best and dearest institutions that we have. Why do we condone these things? We have not that fear of the Lord which will reveal His Secrets to us, and which will help us make a successful fight against evil.

The time is coming when right-minded men and women can no longer sit still and look complacently on the things which they know are subversive of all justice in the Government, and peace in the home, and order in society. What policy should the commonwealths of the world pursue in order to rid them of the dangers that menace their very existence? Might not all who are known to be anarchists, or in sympathy with them, be banished to some distant island of the sea to dwell by themselves and rule themselves? That would, I suppose, be a possible way of dealing with the difficulty, but would it be God's way? "The secret of the Lord is with them that fear Him." "He will show them His covenant." God's way is not force, but love; moral influence. He would have these men and women who have the root of evil in them brought to a knowledge of His salvation and would cleanse them of all their unrighteousness through Jesus Christ. This is God's way, and we can do no good work successfully except it be in His way. We cannot improve upon His plan of salvation, however much we try. We shall only be anarchists ourselves if we attempt it. Let us hold fast to the eternal covenant which God has made. "Whosoever receiveth Him (Christ) He giveth power to become the son of God, even to as many as believe on his name." This is God's covenant. We shall be made partakers of His righteousness. We are to be made heirs of God, joint heirs with Christ. This is God's solution of the problem. This once realized in the experience of mankind, would destroy that mystery of mysteries. The God-fearing must look forward with hopeful expectation to the time when there shall be no more night, for God shall be the light thereof. The great and good man, who was not too great or too busy to take notice of a little child's congratulations upon his election to the presidency, and whom we mourn to-day, has passed into the daylight of God's presence. To him there is no longer any mystery.

CHRIST CHURCH.

The preacher at Christ Church on Sunday morning was the Rev. H. McE. Price. The reverend gentleman, on reaching the Pulpit, said:—

"Before beginning my sermon it may not be out of place for me to read a few lines from a Newspaper Extra which was handed to me as I came

into the Church....."Shanghai Sept. 14th President McKinley is dead." Having only just heard this distressing news, and having in common probably with most of you been encouraged to hope that a different issue was to be permitted, I shall not attempt to say more than a very few words on the subject.

A great man has been taken from the head of a great nation, and we can only bow in reverent wonder before the mysterious Providence that has allowed this to happen in such a way.

All Christendom, and more than Christendom, will unite in offering earnest sympathy to the bereaved widow and family, and to the bereaved nation. If one may on the spur of the moment offer a word of consolation, I venture to take it from one of the Psalms for this morning, the 77th. Under a sense of his distress the Psalmist asks, "Hath God forgotten to be gracious?" and he replies, "I will remember the years of the right hand of the most Highest. I will remember the works of the Lord, and call to mind Thy wonders of old time."

The nation so grievously bereaved, at this time has passed through times of great trial and can call to mind God's wonders and deliverances. May it be given to the nation, and especially those most closely touched by this bereavement to turn to God now again and to find "Him a very present help in trouble."

After Morning Prayer, the Organist, Mr. W. Karl Vincent, played the Dead March in *Saul*, the choir and congregation rising to their feet; after Evening Prayer, Chopin's Funeral March was given on the Organ, the choir and congregation again standing in their places.

AMERICAN ASIATIC ASSOCIATION OF JAPAN.

Yokohama, Sept. 16th, 1901.

The following copies of correspondence are published for the information of members:—

GEO. H. SCHMIDT,
Secretary.

[TELEGRAM.]

Yokohama, Sept. 9th, 1901.

President McKinley,

Buffalo.

American Asiatic Association, Japan, tenders sincere sympathy and prays for your recovery.

No. 612. United States Consul-General Yokohama, Japan,

Sept. 13th, 1901.

JOHN LINDSLEY, Esquire,
Vice-President of the
American Asiatic Association
Japan, Yokohama.

SIR,—It is my pleasant duty, under instruction from the Department of State, Washington, to convey to the officers and members of your Association an expression of sincere thanks for your kind telegram of sympathy, addressed to President McKinley.

I am, Sir, Yours, respectfully,

E. C. BELLWIS,
Consul-General.

[TELEGRAM.]

Yokohama, Sept. 16th, 1901.

Mrs. McKinley, Canton, Ohio.

American Asiatic Association, Japan, tenders heartfelt sympathy.

We have received the following for publication:—

[TELEGRAM TO MRS. MCKINLEY.]

Mrs. MCKINLEY, Washington.

Captain, officers, passengers irrespective of nationality steamship *Gaelic*, just arrived, offer heartfelt condolences upon your and the Nation's bereavement.

FINCH, Captain.

Yokohama, Sept. 17th, 1901.

FORMOSA.

The opening ceremony of the Tamsui line of the Formosan Railway will take place on the 20th inst.

Several Formosan barbarians attacked a house occupied by a family named Takayama, at Bunsampo, Formosa, early on the morning of the 9th inst. and cut off the heads of eight persons and then made their escape.

FIRES.

A big fire occurred at Mashiji-mura, Hagai-gori, Ishikawa Prefecture, on the afternoon of the 13th inst. Sixty houses were destroyed.

An explosion of firedamp occurred in the Kanada mine, Tagawa-gori, Fukuoka Prefecture, on the 13th inst. Two coolies were killed and two injured.

Fire broke out in a tobacco factory at Kago-shima on the afternoon of the 16th inst. and three buildings were destroyed. The loss is estimated at about *yen* 50,000.

Fire broke out in an engine room of the Aome Railway Company, at Aome-machi, Nishi Tamagori, Tokyo, shortly after 12 o'clock on the morning of the 16th inst., and one building was destroyed.

Fire broke out in a bath room of the Seiyoken Hotel at Unemecho, Kyobashi, Tokyo, shortly after noon on the 16th inst. and destroyed the bath room. The kitchen was also damaged. One man was injured.

By a fire which broke out on the 8th inst., at No. 414, Ning-po road, Shanghai, in a house occupied by the compradore of the Hongkong and Shanghai Bank, damage to the extent of Tls. 100,000 was done.

At 2.15 on Sunday morning, the Bluff Fire Brigade received a call from the Maples Hotel, No. 85. The men with a small manual engine, were quickly on the spot and found that a portion of the roof of one of the buildings of the Maples Hotel was on fire. With the assistance of the Bluff Police Brigade, and with the help of the inmates of the Hotel, they extinguished the fire in a few minutes. The Kiria Brewery Fire brigade, Engineer Thomson in charge, with their hose connected to the powerful steam pumps in the Brewery, were also promptly on the spot, but fortunately their aid was not required.

NEWS OF THE WEEK.

H.M.S. *Argonaut* left Nagasaki for Hongkong on the 16th inst.

The British Government has stricken the name of Earl Russell from the list of Berkshire magistrates.

The Osaka Shosen Kaisha steamer *Daikichi Maru*, 2,000 tons, built at the Osaka Iron Works, was launched on the 12th inst.

Owing to heavy rains, the Shichinoye-gawa, Aomori Prefecture, overflowed on the 13th inst. and fifty-six houses were flooded and two bridges washed away.

In the recent interport match between the Foochow and Shanghai Gun Clubs, the former won the cup by 5 points, grassing 72 birds against Shanghai's 67.

Katayama Heitaro, of Nakanoshima, Osaka, was arrested by the police on the 12th inst. charged with forging a cheque for *yen* 6,800 on the 100th National Bank in December, 1899.

The publication of the *Gumma Shinbun* was suspended by the authorities and the property of the paper seized in settlement of a claim for *yen* 1,000 for money lent and unpaid on the 13th inst.

Otagiri Seiga, living at Tomioka-Monzencho, Fukagawa, Tokyo, was arrested by the police on the 15th inst. charged with blackmailing a number of persons and obtaining from them some 300 *yen*.

Kato Seitaro, son of a manager of the transport company at Odenmachi, Tokyo, was arrested by the Asakusa police on the 13th inst. on a charge of having stolen several articles from the house of a watchman of the Nicorai Greek, at Surugadai, on the 8th inst.

Mr. Kawaji Juhei, of Shiga Prefecture, and Mr. Okamura Kimata, of Kumamoto Prefecture,

were elected members of the House of Peers on the 16th inst. being the highest tax-payers in that prefecture.

A woman named Nakai Miya, living at Hatchobori, Kyobashi, Tokyo, was arrested by the Police last month on a charge of kidnapping a young girl. The Tokyo Local Court sentenced her on the 16th inst. to two years' major imprisonment and 10 *yen* fine.

The memorial festival of Prince Kita Shirakawa will take place in Formosa on the 27th and 28th October. The Emperor will send a representative. Princess Kita Shirakawa Tomiko accompanied by her stewards, etc., will leave for Formosa about the 20th prox.

The funeral of the late Mr. Inouye Kan-ichi, a well-known newspaper writer, will take place in the Buddhist temple, known as Zuishoji, Shirokane, Tokyo, on the afternoon of the 15th inst. Deceased had been a long time ill at Fukai-mura, Kobe, and died on the 31st.

A story-teller named Shorin Hakuryu, returned to Japan at the end of last month. He left Japan for Europe and America via Korea, China, and Siberia in March, 1886, with only 27 *yen* of passage money to start with. He will deliver stories about his travels in a few days.

A robber named Kaneko Shigejiro, serving his time in Ichigaya jail, escaped while doing outside work at Kitaura-machi, Naito-shinjuku, on the afternoon of the 11th inst. After hiding for about an hour he ran to Toyama on the night of the same day, but was arrested by three detectives who were waiting for him.

The excellent band of the Italian flagship gave a most enjoyable open-air concert in the Bluff Gardens on Saturday afternoon which attracted a fair attendance of ladies and gentlemen. What a pity Yokohama cannot have more of such delights during the autumn months.

A firewood dealer named Tsukaguchi Yujiro, living at Ogicho Sanchome, Yokohama, was arrested by the Kotobukicho police on the 15th inst. charged with obtaining money from several houses on the pretence that it was for festival expenses. He was sentenced to 40 days in the lock-up at the station.

Upon the occasion of the tercentenary anniversary of the death of the Danish astronomer, Tycho Brahe, which occurs on September 21st, King Oscar of Sweden will give a great fete on the island of Sven, formerly the Danish site of Brahe's observatory. Danish royalties and many prominent persons are expected to take part in the celebration.

Nakayama Bunjiro and his son Kiichi, living at Namaita-mura, Inashiki-gori, Ibaraki Prefecture, attacked and murdered the former's cousin, named Hasumi Toragoro, in the same village on the night of the 14th inst. They afterwards threatened the cousin's wife, stole 10 *yen* from her and escaped. Both were arrested the following day.

The pick-up game of baseball on Saturday afternoon on the Cricket-ground, proved very interesting. Nominally the sides were "Boys" versus "Men," but where the age limit was drawn was not discernible. Up to the eighth innings the game was about even, but eventually the "Boys" won by 13 runs to 11. There was some good hitting and also smart fielding during the game.

The 39-raters had a race on Saturday afternoon over the No. 2 Course, 9 miles, on Club time. The start was at 2.15 p.m. and the finish was as follows:—

	Time Allowance.	Finish.
Mary	—	4.05.10
Kingfisher	—	4.10.50
Golden Hind	2.46	4.24.40
Spray	5.51	4.18.30
Huidee	—	—

Mary takes first and Kingfisher second prize.

Although India has spent £15,000,000 during the past three years for the relief of the famine

stricken a surplus of £6,337,000 has accumulated during the same period in the treasury. The balance sheet is said to be the most favourable since India passed under the British crown.

Takahashi Gendo, of Ishikawa-machi Ichome, Yokohama, employed as a secretary in the Yokohama Post and Telegraph Office, was arrested by the Kagacho police on the 16th inst. charged with stealing money from several registered letters since July last. The letters were found in his room.

By a land subsidence at the Donibristol colliery, in Perthshire, on August 27th ten men were entombed. A rescue party of four descended. Five of the miners were rescued on August 28th when the sides of the mine again collapsed, entombing two of the rescuers. These, with the first rescue party of four who have failed to return, make eleven in all whose fate is still doubtful.

Several Naval Officers of the gunnery training office, Yokosuka, were engaged in trial firing with shell at Meiji-mura, Kozagori, Kanagawa Prefecture, on the 13th inst. At half-past two o'clock in the afternoon a loaded shell missed the mark and fell on the Matsubayashi-mura's side. The officers made a search for the shell at once but failed to find it. The authorities are anxious lest some person may find the shell and explode it.

The German transport *Bahia* arrived at Nagasaki from Taku on Wednesday, the 11th inst., with 900 troops on board, homeward bound. On her way to Taku, the transport encountered a typhoon in the Chusan gulf, during which her lifeboats were washed away and other damages were inflicted. Repairs will be effected at Nagasaki, says the *Press*, and while these are being done, a number of the troops will be housed in the Public Hall.

A boy was run over and killed by an electric tram car between Odawara and Kodzu on the morning of the 14th inst. The boy's father and about 50 other persons attacked the conductor of the tram and severely beat him. The body of the boy was not removed for a long time and caused an obstruction on the line. Two of the Imperial Princesses, on their way from Hakone soon after arrived in a tram car, when the body of the boy was temporarily removed to allow the tram car to pass, but it was afterwards again laid on the line. What were the police doing?

Mr. W. Karl Vincent, Organist of Christ Church, Yokohama, will give an organ recital in aid of the Church Funds at 8.30 p.m. on Wednesday, September 25th. Tickets can be obtained from Messrs. Kelly and Walsh, Messrs. Lane, Crawford and Co., Messrs. Moutrie and Co., or from the ladies of the congregation. It is some years now since an organ recital was given in Yokohama, and as the instrument at Christ Church was recently completely overhauled a large congregation should be attracted.

Below are statistics prepared by the Formosan Colonial Office, showing the amount of the foreign trade of the island during August of this year, as compared with the figures for the corresponding period of last year:—

	This year.	Last year.	Decrease.
	Yen.	Yen.	Yen.
Exports.....	970,549	1,333,788	363,239
Imports.....	629,160	1,573,566	944,406
Total	1,599,709	2,907,354	1,307,645
Balance	341,389	239,778	—
Export of specie	28,116	128,601	100,485
Import	105,030	345,785	230,755
Balance	76,913	217,184	140,271

On Wednesday afternoon Mr. John W. Hall offered for sale by public auction the valuable property known as Lot No. 242, Bluff, containing as per title deed 537 *tsubo* of land, together with the commodious six roomed dwelling house, with servants' quarters, stables and carriage house thereon. The property belonged to Capt. Allen. Bidding commenced at *yen* 10,000 and eventually at *yen* 17,500 the lot was knocked down to Mr. E. J. Moss, on behalf of a client. No. 130 B, Yamashita-cho, Settlement, was then

put up. The bidding commenced at yen 5,000 but only reached yen 7,500, at which price the property was withdrawn.

The result of the attempt on the part of the Industrial Bank, for the first time, to obtain subscribers for loan bonds in Formosa, through an agency established there for that purpose, appears to be promising. It seems that the applications, apart from those directed to the head office, numbered 636,357 from Taihoku, 154 from Tainan, 67 from Keelung, and 57 from Taichu, up to the closing date (Sept. 2nd). If matters proceed at this rate, it is expected that there will be 2,000 applications representing yen 40,000 by the 15th.

England has spent \$35,000,000 for the improvement of Egypt since 1885, and is now planning the construction of costly reservoirs and irrigation works at the head of the Nile, which will secure abundance of water for the irrigation of Upper Egypt and the Soudan, as the dams at Assouan and Assiout are designed to do for Lower Egypt. The reservoirs to be formed at the headwaters of the Nile will also help navigation in the Blue Nile during the summer season. The new improvements have been planned by Sir William Garstin, who cleared the Nile of the sudd which impeded navigation, and Lord Cromer has given them his approval.

Following was the amount of Japanese currency in circulation at the end of August:—

Coins.	Amount.	Total for Year.
	Yen.	Yen.
Old gold.....	—	141,156,134
20 yen gold	—	37,220,000
10 " "	11,383,825	93,916,470
5 " "	—	838,320
1 yen silver	—	162,177,072
1 yen trade dollar	—	3,056,638
50 sen "	—	25,496,723
20 sen "	—	21,079,273
10 sen "	—	20,178,608
5 sen silver	—	2,526,710
5 sen nickel	—	8,664,848
2 sen copper.....	—	5,154,053
1 " "	—	4,881,741
5 rin copper.....	—	1,977,764
1 " "	—	44,491

Total	—	528,805,849

One of the steerage passengers on the *Hong-kong Maru*, says the *San Francisco Call* of August 27, is under the care of the ship's surgeon suffering from six knife wounds. Judging from the stories the steerage of this Japanese steamship is not a safe place to travel in. The firemen have been in the habit of using it as a lounging place, and resented the presence of passengers. Several of the latter were women, and when their husbands remonstrated with the firemen for coming into the room nearly naked they got angry and started to run amuck. The white officers attempted to stop the fracas and succeeded for a time. The row broke out again, however, and a Spanish steerage passenger was chased into the main saloon, where he fell and was stabbed six times in the back and thighs before the infuriated Japanese fireman could be seized and locked up. It is only a few weeks ago that the chief engineer of the *Nippon Maru* was beaten by his firemen, and he is still in the hospital. A Japanese chief engineer took the vessel out to San Francisco.

The production of *kombu* in Nemuro, Hokkaido, has so considerably increased during the past few years and so lucrative is the trade in it, that some of the dealers are tempted to prepare it coarsely and irregularly, in the hope of securing large profits, which crafty manner of trading on the part of a few is sure in the end to involve many others in serious losses. To put an end to this abuse and, further, to improve the manufacture, therefore, the local authorities after consulting with the Home Department, have decided to revise some of the regulations bearing upon the collection and preparation of *kombu*. The amount thus far gathered by the Nemuro guild this year is estimated approximately at 35,000-36,000 *koku*; but since the 20th of July, when gathering was resumed, the weather has been, for

the most part, very foggy, so that long cut *kombu* of the first quality has rarely been met with, the fishers getting only inferior qualities. The preparation of the product for the market is now well under way and export business will be in full swing by the end of this month at latest.

A murderous affair occurred at Nagoya on the 11th inst. A young man named Mizutani Yasujiro, aged 24, who had been employed by a harness-maker named Yamada Keitei, for some nine years, and until recently had been a steady hard-working man, about three months ago took to a profligate life. He was cautioned and advised by his parents and employers to amend his ways, but all in vain. Early on the 11th inst. he was dunned by a restaurant keeper for money he owed, and his employer's wife, overhearing the altercation, again remonstrated with him on his conduct. Mizutani then ran out of the house, but returned about noon, with a sword. With this weapon he attacked his employer, Keitei, stabbing him in the stomach, and fatally wounding him. He then killed his employer's wife, and second son, aged 16, who just then returned from school. Keitei's eldest daughter, aged 26, was next attacked and wounded in the shoulder. The murderer then rushed into another room and committed suicide by stabbing himself in the throat and stomach.

The Church has lost an eminent prelate in Dr. Brooke Foss Westcott, Bishop of Durham, who died on July 27th, aged seventy-six. He was the greatest theologian the Church of England has recently produced, a scholar who was respected even by German controversialists, and a man whose mental power impressed all with whom he came in contact. His first book, "An Introduction to the Study of the Gospels," was published when he was only twenty-five, and is still a textbook with serious theological students, and his "Cambridge Text" of the New Testament, which it took him with his great colleague, Dr. Hort, twenty-eight years to prepare, is accepted throughout the world as the most learned and suggestive. Though far from illiberal, he was very orthodox, and his defence of the authenticity of St. John's Gospel is the one on which all disputants on that side rely. As Bishop he was remarkable for his interest in social questions, his leaning being towards a Collectivism based on Christianity, and it was his judicious but sympathetic intervention which terminated the great miner's strike of 1892.

News comes from Australia of the finding on Bikar Island, a small uninhabited atoll of the Marshall group, of wreckage which is thought to indicate that the British ship *Manchester* came to grief there. Footprints and marks of two boats' keels on the sand and other signs make it seem probable that the captain and his wife and children and crew had been on the island, and, being unable to find water, had pushed off again. There were footprints of a woman and children plainly marked in the sand. Also there were found bodies of birds which had been sucked for blood to allay thirst. A small schooner came across these traces about three months ago, and as no sign has been found of the missing people since, it is supposed that they died of thirst before reaching inhabited islands. The body of one man was found in the scrub near the shore. Many cases of kerosene were scattered about the beach. The *Manchester*, Captain F. Clemens, left New York loaded with kerosene for Yokohama a year ago and has never been seen since. She was a four-masted steel ship of 2,851 tons.

We read that at present there are three separate projects each of which has for its purpose the establishment of a water power electricity company at Lake Biwa, in Omi Province, Shiga Prefecture. One is to be called the Biwa Lake Canal Joint Stock Company and is promoted by Mr. Matzō Asami and others; a second is the Seta River Water Power Electricity Joint Stock Company founded by Mr. Bumpai Takagi, Kyōto; and still another is the Uji River Water Power Electricity Joint Stock Company, of which the chief promoter is Mr. Matsuei Iwaya. All three have sent or are sending applications for charters to

the Government. In the belief that the competition among these enterprises would be likely to lead to abuses the local authorities endeavoured to induce the respective promoters to amalgamate their schemes and it is understood that their efforts have at length been successful. After some deliberation, the three companies have resolved to amalgamate, on condition that each shall enjoy perfectly equal rights in connection with the affairs of the Union Association to be established. Accordingly, a new application to the Home Minister for a charter will be forwarded under the name of the united enterprise.

As we all know stamp duties must be paid by affixing stamps to bonds, receipts, &c., but in the case of exchange bills, promissory notes, bill of lading, tickets exchangeable for goods transported, warehousing bonds, warehousing bonds pawnable, insurance policies, share certificates or debentures, the amount of stamp duties may be paid in cash to the Government which will then add the marks of the official tax stamps to the documents. Such transactions of affixing the official tax stamp has hitherto been undertaken by the Financial Department only but No. 10 Ordinance of the Financial Department issued on the 3rd August, 1901, has authorized the respective Revenue Administration Bureaux at Yokohama, Tokyo, Osaka, Kobe and Hakodate to conduct the transactions in its stead on and after the 1st October 1901. We understand that the Yokohama Revenue Administration Bureau will be in a position to accept such request of affixing the official tax stamps from the 1st October, 1901, as every arrangement is being made for the purpose and will at no distant future be completed.

LAW CASES.

Mrs. Frances D. Carroll, a citizen of Kentucky, U.S.A., and resident in Japan for nearly twelve years, has lodged a complaint at the Procurator's office in the Yokohama District Court, charging a boy named Wakahara Harukichi, employed in the restaurant above the Yokohama Station, and a policeman named Ishida Kumakichi, attached to the Isezakicho Police Station, with an aggravated assault upon her on August 2nd.

We learn that Mr. F. W. Horne, through his Counsel, Mr. Sato, has instituted a civil suit in the Yokohama Chiho Saibancho against Mr. W. S. Stone. Plaintiff alleges that on June 14th, 1900, defendant ordered through plaintiff's firm phonographs and accessories from England, it being agreed that defendant should receive 40 per cent. discount off cost price, freight and Customs duty to be paid by defendant. The goods arrived in December and defendant was notified. On January 3rd, defendant replied that he ordered six batteries with the phonographs, and that, as the batteries did not arrive, he could not take delivery. Plaintiff demands yen 679 as damages.

Bankruptcy proceedings *in re* Takase Saburo, wine merchant, of 56, Honcho-dori, Shichome, Yokohama, began in the Chiho Saibancho on Monday before Judge Mabuchi. Mr. Inouye Yayekichi, bankruptcy administrator, lodged an application for grace in the discharge of his obligation to his creditors, amounting to eight hundred thousand yen in all, including yen 22,600 to the Russo-Chinese Bank; yen 9,052.63 to Messrs. Paul Schramm & Co., No. 202; and yen 2,536 to Messrs. H. Ahrens & Co., No. 29, Yamashita-cho, Yokohama. Mr. Takase Saburo, petitioned for delay in the discharge of his obligations until February next year, to secured creditors, and until June the same year to those unsecured. Petitioner urged that in his commercial transactions heretofore he had never failed in his financial obligations, and his suspension of payment in the present instance was simply the result of the economic depression now prevailing. The foreign creditors consented to the petition of the applicant, but owing to the objection raised by the (Teikoku Shogyo) Imperial Commercial Bank, the meeting dispersed without arriving at any definite result.

AMERICAN TOPICS.

The man Winters who recently stole a quarter of a ton of gold bars in Vallejo has been sentenced to 15 years' imprisonment.

A company in Texas owning a million acres of forest land prohibits the felling of any tree in its domain of less than one foot in diameter.

Mr. Edwin Manning, the wealthiest man in Iowa, died at his home in Keosauqua on August 16, at the age of 86 years. His estate is valued at three millions.

President Loubet, of France, has conferred upon President W. R. Harper of the University of Chicago the decoration of the French order of the Legion of Honour.

Mexico has grown faster during the past decade than Canada. The Republic has a population of 13,570,545 and the Dominion has only 5,300,000. The territorial area of the latter is greater, however, than that of the United States.

As a result of the recent exposure of alleged frauds in the New York customs service several of the big wholesale dry-goods firms of Chicago have filed claims with the Board of Appraisers asking for sums aggregating hundreds of thousands of dollars as rebates.

Mr. David Nation, through his attorney, has brought suit for a divorce from his wife, Mrs. Carrie Nation, the temperance crusader. Mr. Nation, who is now visiting in Iberia, Ohio, alleges that his wife held him up to public ridicule, neglected her family duties and abandoned his home.

The *Daily Chronicle* has obtained from Lord Rothschild a denial of any connection with or knowledge of the reported American copper trust. My firm has no copper mines," he is reported, to have said, "and I never heard before of Senator Clark."

The Canadian Pacific and the Baltimore and Ohio railroads are considering the feasibility of using electric locomotives to overcome the high grades on their respective lines. The locomotives will weigh 120 tons, and, in the event of their adoption, will need 100-pound rails on the track where employed.

The Boston News Bureau makes the following comparison of the value of passenger and freight traffic on American railways in 1890 and 1900:

	1900.	1890.
Passenger revenue	\$323,715,639	\$260,786,453
Freight revenue	1,049,256,323	724,464,277
Passengers carried	576,865,230	492,430,865
Freight carried, tons ...	1,101,680,238	636,541,617

A libel has been filed in the United States district court at San Francisco against the British steamer *Lennox*, which while in the United States transport service was disabled at sea and towed into port by the steamer *Laqua*. The court is asked to award approximate salvage based on a valuation of \$60,000 for the *Laqua* and \$200,000 for the *Lennox*.

Work on six vessels for the United States navy and one for the United States army is delayed because of the present labour troubles in San Francisco. The Union Iron Works has contracts for six warships and two submarine torpedo boats. The most important of these war vessels is the battleship *Ohio*. She was launched a few months ago and the moment she took the water work ceased on her. The transport *Sherman* has been at the Union Iron Works for over six months.

It is stated that nearly everything in the line of fruits and vegetables, as well as foodstuffs and meats, are selling in Chicago at from 100 to 800 per cent. higher than a year ago. The most striking advances are noted in the price of cabbage, which is selling at \$8 per 100, against \$1 per 100 head a year ago. All meats are 3 to 6½ cents per pound higher now than they were a year ago, while fruits are two or three times dearer than last year. All cereals, with the exception of wheat, which is 3½ cents per bushel lower

than a year ago, now show advances, ranging from 8 cents per bushel in rye to 20 cents per bushel in corn, as compared with prices current a year ago.

Leaders in the lumber industry of Michigan, Wisconsin and Minnesota are predicting that it will be practically dead within the next ten years, owing to the exhaustion of the forests. Comparatively little of the immense forests which formerly covered the greater part of these three States is now standing, and the men who have denuded the timber lands there are arranging, if permitted, to perform the same office for the Pacific Coast States and Alaska.

At the close of the Grand Army encampment at Cleveland, O., this year, the women of Iowa will unveil a monument erected to the memory of Jennie Wade, the only woman who was killed in the battle of Gettysburg. Mrs. Georgia Wade McClellan of Denison, Ia., department secretary of the Woman's Relief Corps, is a sister of the dead heroine, and the monument is said to be as much a mark of appreciation of her work as it is a memorial of the service of the decedent to her country's cause.

Commander William Swift, commanding the gunboat *Yorktown*, has been ordered to relieve Commander Seaton Schroeder as Naval Governor of the Island of Guam. The *Yorktown* is now en route to Guam. The assignment of Commander Swift is temporary, pending the selection of a permanent Governor. It became necessary to detach Commander Schroeder from that duty prior to the expiration of the usual period of such assignments in order that he might return to the United States and testify before the Schley court of inquiry.

A town of 10,000 to be known as Lawton, has grown up just outside the limits of Fort Still, Oklahoma Territory, within a night. Following the close of the land lottery at El Reno thousands of home-seekers who drew blanks started for the three points picked out by the Federal Government for town-sites in the country—namely, Anadarko, Hobart and Lawton. A majority of the people favoured Lawton, which is twenty-five miles inland, and thousands camped in and about the proposed site waiting the proposed sale of lots on August 6th.

It is reported in Glasgow that Mr. J. R. Ellerman, of the Leyland line, has purchased the old established City line of fourteen steamers engaged in the East Indian trade, the price being nearly £1,000,000. Mr. Ellerman, according to rumour, is acting for Mr. J. P. Morgan and his associates. The City line of steamers is owned by George Smith & Sons, of Glasgow. The fleet, comprising fourteen vessels, has an aggregate tonnage of about 55,000 tons. With this addition and the two Johnson line steamers recently purchased, the Leyland fleet, which was formerly composed of fifty-eight vessels, with a tonnage of 246,146 tons, will have seventy-four vessels and a tonnage of over 301,146 tons.

The selection of Mr. John Barrett, formerly United States Minister to Siam, as Commissioner General to Asia and Australasia, has been approved by the Executive Committee of the Louisiana Purchase Exposition Company. The duties of the position are to interest the Governments and the people of Asia and Australasia in the Louisiana Purchase Exposition; that they may make exhibits and erect State buildings at the Exposition. The jurisdiction of the newly appointed Commissioner General extends over China, Siberia, Japan, Korea, Siam, Australia, New Zealand, Tasmania and the South Sea Islands. He will also visit the newly acquired possessions of the United States—the Philippines, Guam and Hawaii—to interest industrial agencies there in the Exposition.

In 1897 the production of cigarettes in the United States reached the enormous figure of 4,153,252,470. Within the last three years *Tobacco* says "1,476,629,098 cigarettes have been clipped from the record" of the output. Two causes are assigned for the decrease in the

consumption of the cigarette—one is the aggressive crusade that has been waged against it in the form of Federal, State and municipal legislation, accompanied by the active opposition of employers to its use by their employees, and the other is the suppression of competition through the combination of manufacturers. Each of these influences has doubtless been at work; but it is an established fact that the decrease in consumption during the past three years means "either that an equivalent of at least 200,000 smokers have ceased to use paper cigarettes, or a larger number are more moderate in their use."

The world's production of coal in 1900 is estimated to have been 650,000,000 tons. The leading producing countries are the United States, England, Germany, France and Belgium. The United States and England produced more than two-thirds of the total supply of the world's mines last year. The United States is credited with an output of 245,422,000 tons of 2,240 pounds, or 8 per cent. more than was produced in 1899 and 24 per cent. in excess of the output of 1898. The production of the United Kingdom for 1900 is placed at 225,181,000 long tons, compared with 220,095,000 tons for 1899. Germany, it is stated, is responsible for 109,225,000 metric tons (2,204 pounds) of the total output, against 101,640,000 tons in 1899. The output of French mines is put down as amounting to 32,587,000 metric tons, about 1 per cent. over the production of 1899 and 2.3 per cent. in excess of the output for 1898.

A United States Treasury statement recently issued gives details regarding the imports of gold at Pacific coast ports which are of more than ordinary interest. According to the statistics the receipts of gold at San Francisco and the Puget Sound and Alaskan ports during the year ending June 30th, 1901, amounted to \$45,923,289. It is to be observed that the gold output of the Klondike and other districts in the Canadian north-west is treated in the same way as Australian or other foreign specie. The figures show that in the year \$23,704,493 of gold came from Australia and the Orient to the Pacific cities of the Union, while the Klondike gold they received amounted to \$23,218,697, making a total of \$45,923,289, as compared with \$23,117,050 in the previous year. This large increase is made up of gains of \$14,438,562 in the Australian and \$8,367,077 in the Klondike gold. The total for the year is the largest on record, as the Pacific coast gold imports in twelve months ending June 30th, 1899, only reached an aggregate of \$42,889,000, although in that year the enormous sum of \$32,000,000 in specie was received from Australia.

CORRESPONDENCE.

LATTER-DAY NOTES.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In my last letter of 24th July which appeared in the *Japan Mail*, one passage in it is so mangled in printing that the thread of the argument becomes quite unintelligible.

Speaking of the act of reprisal I said:—"Such a punishment, however, is an act of war; it is not a judicial punishment."

After this passage what should follow, is this:—"But the punishment of the guilty by the Imperial Government is quite a different thing. The question for the allied Powers to decide, &c., &c."

What I said about the execution of the Provincial Treasurer of Paoing-fu should be added as a note to the above passage and reads as follows:—

"The execution of the Provincial Treasurer of Paoing-fu would be a legitimate act of reprisal. But the allied Powers gave no warning or notice; therefore the Chinese looked upon it as an act of bad faith and treachery. H.E. the Viceroy Liu's feelings on the execution at Paoing-fu were 哀念—pity and indignation."

Yours faithfully, KU HUNG-MING.

Wuchang, 4th Sept., 1901.

ANCESTOR-WORSHIP AND JAPANESE LAW.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Allow me to correct a curious mistake in the Monthly Summary of the Religious Press in your

issue of to-day, relating to my review in the *Aukum Shinbun* of Dr. Hozumi's "Ancestor-worship and Japanese Law." I am referred to as a Roman Catholic, a hasty conclusion, I suppose, from my quotation of a remark by l'Abbé Ignéne. I am a pupil and friend of the esteemed Roman Catholic missionary, but not a Roman Catholic myself.

By the by, there is another point in the Summary which, if left uncorrected, is likely to do injustice to Dr. Hozumi. I did not say "the term 'worship' used by Dr. Hozumi is a translation of 崇敬"; nor was there any occasion for my complaining of Dr. Hozumi's sanction of the translation (from Japanese into English). On the contrary, I think I made it quite clear that 崇敬 was my own translation (from English into Japanese) of the term "worship." In making that translation, I assumed that Dr. Hozumi used the term in its broadest sense, i.e. not necessarily in the same sense as the Christian worship of God.

Yours, etc.

MUYEN.

September 10th, 1901.

(We have to apologise for delay in publishing this letter.—E.D. J. M.)

THE HURDLE-RACE AT THE Y. C. & A. C. SPRING MEETING.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—After this year's athletic sports were concluded considerable discussion took place as to whether the record for the hurdle race should be allowed. I therefore determined to get a ruling on the subject and wrote to the editor of *The Field* as follows:—

If the winner of a hurdle race (120 yds.) knocks down the last six hurdles and finishes in record time would such record be allowed? Further, if he knocked down one hurdle would such record be allowed? What is the standard hurdle adopted in England as regards height and (a more important point) structure?"

The Field replies:—

"The supposition may be dismissed as impossible; but admitting that the case could arise it would be for the A.A.A. committee to consider it on its merits. They would take into account the nature of the obstacle, and would almost certainly disallow the record if they found that it was facilitated by their flimsy structure. Hurdles must be 3ft. 6in. in height, and have level top rails. There is no rule about their fixing and they are often made with feet to stand upon instead of being driven into the ground but it may be taken that the assumption is that they are not made any easier to negotiate than if they were properly fixed."

This, I should think, effectually disposes of the attempt to make this year's hurdle race a "record."

Yours faithfully,

Y. C. & A. C.

Yokohama, Sept. 16th, 1901.

JAPANESE RAILWAYS AND FOREIGN MORTGAGES.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In your issue of to-day in referring to the decision of the Minister of Communications that a railway may be mortgaged to a foreigner you insist on the necessity of permission being granted or a law passed so that foreigners can own land, if foreign capital is to be introduced into this country and loaned on mortgage.

I myself do not see what other rights a foreigner needs except what he can obtain through forming a company of two or more foreigners, said company being registered according to Japanese Law, and having the same rights and privileges as any Japanese Company except that it cannot practise law. Even were a foreign individual to have the right of owning land he would still be amenable to all the laws and regulations of this country, and I do not see where the value of your contention comes in. The only hardship is that no foreigner as an individual can own land, he must do so in partnership with some other person.

The real trouble in my mind is the too many laws and restrictions with regard to Railways in Japan. One for instance is that the Government has the right to buy any railway for which the Charter has not been given for a specific time, twenty-five years after the issue of the Charter, at a price arrived at either by the average value of the shares for the five years immediately before the date of purchase, or twenty times the average net profit for the five years before purchase. This right in my mind is fatal. I will give you an example of what I mean. Supposing a Railway with a paid up capital of three millions borrows three millions to complete the line, from abroad, and mortgages its property as security for the loan, and that in twenty-five years' time after the date of the Company's charter, and for the five years previous, the fifty yen shares of the company have been quoted at twenty yen, the Government would have the right to purchase property which had

cost six million yen, for say one million two hundred thousand yen, and thus the lender would be more than half the amount loaned out of pocket. Some people are of the opinion that the Government could not insist on its right without first satisfying the lender, but according to one of the best Japanese legal authorities the Government would be within its rights of forcing the sale on the lines suggested by me. I remain, Sir, Yours faithfully,

ONE INTERESTED.

September 14th, 1901.

EUROPEANS IN FORMOSA.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—On recently returning from a six months sojourn in the Chiang-hoa region, I came to know that there had been some writing to the newspapers about the Japanese treatment of foreigners in Formosa; and, as my residence here began thirty years ago, I hope it will not be considered unseemly for me to ask your kind insertion of a few remarks on the subject.

It may help to a better understanding of things to note that the foreign community in Formosa is mostly to be found in the two northern ports of Tamsui and Twatutia, the others being located at Tainan in the south, with the exception of two missionaries, whose station lies about eighty miles to the north of this.

Moreover, while the Mission staff at Tainan numbers fourteen adults when all together—sixteen including the two just referred to—their official and commercial fellow-residents number collectively only about five. Nor is the smallness of the latter class owing to oppressive measures being directed against them by our new rulers; because "the man in the street" knows that South Formosa business houses and those connected with them were steadily decreasing during many years before the Island was ceded to Japan.

With regard to the foreign community in the north, I am not myself aware that public complaints have ever come from it about anything like petty persecution on the part of the Japanese. On the contrary, residents there seem to feel fairly content with their surroundings; at least that was the impression produced on my mind when admitted to their kind hospitality on the occasion of my three visits within the past twelve months. I hope, too, it will not appear officious for me to add that last January they were much pleased at the Governor-General's recent gift of five hundred yen to their Photographic Club, and for his message that even the Emperor Himself had graciously expressed an interest in its work.

Of course, we English Presbyterians Missionaries in Formosa are better acquainted with what goes on further south; for thirty of our stations are scattered over Central Formosa and as far inland as Paw-lis-hia, while we have forty-three more between Kagi and the Tang-kang River, besides one on the East Coast and three in the Pescadores.

It need scarcely be added that our constant visitation of those stations brings us into direct contact with all classes of the people, and affords us exceptionally good opportunities of getting to know what is taking place. A glimpse of this is seen in the fact that during my recent stay in Chiang-hoa, I had to see to the registration of no fewer than fourteen deeds of Church property, a troublesome piece of work which could never have been put through had not the officials at the various District Offices acted in a most obliging and helpful way.

In looking, then, at the charges which recent anonymous writers have been bringing against the Japanese for their treatment of foreigners in Formosa, I should like to single out for comment one complete crucial statement from "An Occasional Correspondent" to the Hongkong *China Mail* of 23rd June. After attempting to establish a somewhat far-fetched connection between the Boxer programme in China, and such incidents as the intemperate language of a certain newspaper here which the Authorities suspended some weeks ago, this correspondent goes on to say—the italics being his own—"My object, however, is not to describe or protest against any specific display of anti-foreign feeling, as affecting any given individual or group of persons, but to attempt to show how, during the last three years, this feeling has been initiated, fostered, and intensified against all foreigners, and everything connected with them."

Now, before offering any remarks of my own on the question thus raised, I should like to quote a few words from published statements of two of my colleagues. Mr. Barclay has been associated with me here for twenty-six years, and what he says shows also how the suicidal conduct of the natives of Formosa, before they had any experience of Japanese rule, greatly increased the difficulties of the situation. He writes as follows:—"About five years ago, at the close of the war between China and Japan, the island of Formosa was given over by treaty to the

victors. The people of the island bitterly resented this action; and when, by order of the Emperor, all the mandarins left, they set up a republic of their own, and prepared to resist by force the coming of the Japanese. These latter sent at once a military force to the north end of the island, of which they took immediate possession. They then marched southward, fighting the people step by step, till at last their armies converged on Tainanfu. A day was already fixed for the bombardment of the city, which would certainly have resulted in great loss of life. But just at this moment the leaders of the movement fled, leaving the people helpless. There were then three members of our Mission in Tainanfu, and we were able so to mediate between the two parties that the city was peaceably occupied without loss of life on either side. It was fortunate for our Mission that we were able so to act, as it gained us the gratitude of both sides.

The chief point of interest to us here is as to how the changed state of affairs affects Formosa as a Mission field. And on this point I am glad to be able to speak. Both as regards the people and as regards the rulers, we stand in a better position than in the old Chinese days.

"When I went to Formosa twenty-five years ago, a common taunt against the missionaries was that we were there to take possession of the island. Now this has all been changed. The people have no feeling of loyalty to their present rulers, they have no desire to maintain the present state of affairs. On the contrary, the objection they make is that our country would not take possession of Formosa when the people all wished that we should. And not only are those prejudices removed, but, in contrast to the behaviour of the Japanese, the people have come to appreciate the kind disposition of the missionaries. In many cases, they are disposed to welcome rather than to resent the entrance of Christianity into their villages.

"So also in connection with our new rulers. They are a great improvement on the Chinese mandarins. The latter were, no doubt, required by law to tolerate Christianity, but they were ready to use underhand methods to hinder its successful propagation. The Japanese officials, on the other hand, even when not themselves Christians, know quite well that Christianity, as compared especially with Chinese heathenism, tends in the direction of civilization, good order, and enlightenment, the very objects which they are there to promote. Nor is this to them only a matter of theory. They have seen it exemplified in what they found in Formosa. When they took over the island, there were in all between 3,000 and 4,000 communicants [i.e. Church members] in it, besides a much larger number of adherents; And the Japanese officials, Christian and non-Christian, bear testimony to the fact that, wherever they found Christianity established and a Christian community existing, there the people were more honest, truthful, and law-abiding, than their heathen neighbours. Some of these officials are themselves Christians, and have become good friends and helpers. And those who are not themselves Christians, and might possibly regret to see Christianity making much progress among their fellow-countrymen in Japan proper, feel less jealousy as to its spread amongst their Chinese fellow-subjects. Especially, perhaps, have the results of the work carried on among the civilized aborigines of the island impressed them; as it has been, even from a worldly point of view, the salvation of those tribes, giving to them a greater manliness and independence.

"Of course, there are other elements in the situation less favourable to our work, which would require to be taken into account in a complete detailed view of the state of the case. But that the hopeful view taken above is on the whole a correct one, seems to be proved by the recent history of our Mission. Before the Japanese occupation, the number of adult baptisms was about one hundred or more annually. Three years ago, the number amounted to 156. Two years ago, the number rose to 241. Last year, the number was over 360. During three years the number of places for worship and of hearers and adherents also greatly increased. So that in South Formosa, the field for missionary labour is at present very hopeful."—*Economical Missionary Conference, New York, 1900, Vol. I, p. 533.*

The other testimony is from Dr. Anderson, who is in his twenty-third year of service as the respected medical man of our Mission; and who, like Mr. Barclay, is a thoroughly trustworthy witness on the matters he speaks about. He says when writing from Tainan last January:—"Interest here, as at home, is lately concentrated on the Boxer troubles in the North of China. Everything is quiet throughout the island, but there can be little doubt but that, had we still been under mandarin rule, the case would have been very different."

"The Japanese appear to be getting a better hold of Formosa of late. They are beginning to understand the people, and their rule is more temperate than formerly. They are consequently less disliked by the natives generally. Besides, the immigration from

Japan brings a better type of character than we had at first. The coarse coolie element no longer predominates, and it is noticeable that there are fewer Japanese in a state of intoxication to be seen upon the streets than was the case a year or two ago. All this bodes well for the future peace of the island, and for the harmonious relations of the two peoples.

"Some very decided benefits from the new rule are also apparent. For one thing, heathen bigotry on the part of the Chinese is not so intense, and public persecution of Christianity at least is practically a thing of the past. I suppose we would be free, so far as any fear of opposition from the people is concerned, to erect places of worship anywhere throughout the island.

"The *fung-shiu* superstition also received its death-blow when Formosa changed hands, and a proof of this, which must have appealed powerfully to the natives, was the piercing of the City wall lately for the railway between here and the south. In the old days, the idea of such a thing would have made Chinamen stand aghast in horror; now it is regarded, outwardly at least, as a matter of course. There is no doubt also that the Chinese generally are better off since the transfer of the island; for labour is more remunerative, and produce of all kinds obtains higher prices."—*The Monthly Messenger of the Presbyterian Church of England for March*, p. 73.

I hope I have not drawn too largely on the reader's patience by quoting these lengthy extracts. Some persons may think that much of what they contain is irrelevant here, but my point is this: that, if an extensive missionary work, covering two-thirds of the island, and administered by three times as many foreigners as those belonging to the mercantile class, is not only tolerated, but even encouraged, and this by officials who could easily put obstacles in the way, then I say that the position of "An Occasional Correspondent" in his statement of 22nd June is untenable, and that he cannot himself be regarded as a reliable guide in forming public opinion on the matters now under discussion.

The puzzle to me is that this self-appointed spokesman on our behalf should exert himself so much in ransacking for materials to build up a case against the officials of Formosa, and especially against its Chief Civilian, Dr. Goto; and, while I have no desire to be uncharitable, it will not cause much surprise for me to state that others besides myself are of opinion that this is certainly not the way in which English gentlemen usually act.

Further, I venture to say that the prospect which "An Occasional Correspondent" has had placed before him of moving "semi-public bodies like the Chamber of Commerce and the China Association," that they may impress his views on the British Government, does not concern the Japanese very much; and for this reason, that, besides being shrewd men of business, those connected with such bodies, like our own Mission Convener, the late Mr. Hugh M. Matheson of 3 Lombard Street, are also sensible men of honour who believe in both sides of the "Live and let live principle; and who therefore, deal very discriminatingly with the cases which are brought before them.

By the way, to some individuals it may have seemed as if the very foundations were beginning to shake when in his issue of 22nd June, the Editor of the *China Mail* "relying absolutely and confidently on the bona fides of our correspondent," promised to begin his agitation by printing the contents of certain mysteriously important documents which had come into his possession.

I humbly think, however, that "Our Correspondent" never rendered the Chief of the Civil Administration in Formosa more effective service than by getting some one to prepare those documents for publication; for let any man first carefully read even the version of Dr. Goto's words as given in the *China Mail* of 25th June *et seq.* and then compare it with, say, contributions of "Our Correspondent" for 23rd March and 22nd June. Readers themselves can follow out the contrast, my own one word about the matter being that, in the former set of documents, we see no trace of the sea-lawyer, or of any desire to further mere personal ends, but the working of a mind which is accustomed to grapple with large complex problems; so much so that whether we accept Dr. Goto's conclusions or reject them, few will deny that he states his case with consummate ability as well as with fairness, and exactly in the way which every lover of his own country would wish to do.

Why is it, then, that those who favour "the open door" and "spheres of influence" denounce so vehemently this public and calmly-reasoned advocacy of a Japanese scholar and diplomat for closer relations between China and Japan? I leave others to furnish the few plain answers which could be given to that question; only asking them to remember that honourable rivalry in trade, coupled with frank acknowledgment of all generally conceded national rights, is a maxim which has never received very much countenance from men like the British Philistine or Mr. Pecksniff.

But my letter has already got beyond ordinary limits and must be concluded with two remarks. (1) It is quite admitted that recent changes have wrought to the disadvantage of a very few well-to-do Europeans in South Formosa; such changes, for example, as the Camphor production having been taken under Government control, the Japanese supplanting our welcome but high-tariffed little steamer *Thales* by a mail steamer of their own, and the hopeful attempt now being made by them to monopolise the profits of the Sugar Trade. Surely, however, evolutions of this kind are but "the fortune of war" and should excite neither surprise nor ill-feeling in the mind of any right-thinking person. (2) My own belief is that a more sympathetic attitude would be shown towards the Formosa Administration by outsiders were it known how much they have done during the past three years for the betterment of all classes of the people. It is within my knowledge that millions of dollars have been spent on survey-work; road-making; trolley and railway lines; Postal, Telegraph, and Telephone stations; Military, Police, and Civil establishments; besides large Government outlays on Schools, Hospitals, and Lighthouses; as well as in providing a regular service of steamers round the Island and to the Pescadores.

And let it be observed that all this is but a harbinger of still greater progress in the near future; because I am convinced that Formosa will yet become a most valuable possession; and that, so far as my observation goes, the servants of the Government are, faithfully and without noise, striving to hasten the consummation. It is possible that some readers, who see nothing amiss in the irresponsible fault-finding of "An Occasional Correspondent" may regard this word of commendation as being in bad form. Still, there are times when, like the early Christians, "we cannot but speak of the things which we have seen and heard."

I am, &c.,

W. CAMPBELL.

Tainan, Formosa, August 28th, 1901.

THE PEACE PROTOCOL.

(FROM THE "OSTASIATISCHE LLOYD.")

FINAL PROTOCOL.

The Plenipotentiaries:—			
Of Germany:	His Ex.	A. Muny de	Schwarzenstein.
Of Austro Hungary:	"	Czikann de	Wahlhorn.
Of Belgium:	"	Mr. Joostens.	
Of Spain:	"	Mr. B. J. de Cologan.	
Of United States of America:	"	Mr. W. W. Rockhill.	
Of France:	"	Mr. P. Beau.	
Of Great Britain:	"	Sir Ernest Satow.	
Of Italy:	"	Marquis Salvago	Raggi.
Of Japan:	"	Mr. Jutaro Komura.	
Of Holland:	"	Mr. F. M. Knobel.	
Of Russia:	"	Mr. de Giers.	

Of China: His Highness I-Kuang, Prince of the first rank Ching, President of the Ministry of Foreign Affairs; and His Excellency Li Hung Chang, Count of the first rank—Tutor of the Heir Presumptive, Grand Secretary of Shun Ho Tien Hall, Minister of Commerce, Superintendent of Northern Ports, Governor-General of China;

have met in order to establish that China has announced her agreement to the satisfaction of the Powers, with the conditions which are set forth in the note of 22nd December, 1900, which were accepted as a whole by His Majesty the Emperor of China by an Edict of 27th December, 1900 (annex 1).

Art. I.—By an Imperial Edict of 9th June of this year (annex 2) Tsai Feng, Prince of first rank Chun, has been appointed Ambassador of H.M. the Emperor of China, and in this capacity has been commanded to express to H.M. the German Emperor the regret of H.M. the Emperor of China and the Chinese Government for the death of the German Ambassador, His Excellency Baron von Ketteler.

Prince Chun left Peking on the 13th July of this year to carry out the commission entrusted to him.

Art. II.—The Chinese Government has announced that it will erect, on the spot of the murder of His Excellency Baron von Ketteler, a Memorial Monument corresponding to the rank of the deceased, with an inscription in Latin, German, and Chinese, which shall express the regret of H.M. the Emperor of China for the murder done.

Their Excellencies the Chinese Plenipotentiaries have informed their Excellencies the German plenipotentiaries by a letter of 22nd July of this year (annex 3) that an arch will be erected across the entire breadth of the street on the spot mentioned and that the work was begun on the 25th June of this year.

Art. III.—Imperial Edicts of the 13th and 21st February, 1901 (annexes 4, 5 and 6) pronounce the following punishments upon the chief culprits for the

attacks and crimes which took place against the friendly governments and their subjects.

Tsai Yi, Prince Tuan, and Tsai San, Duke Fu Koo, have been condemned to death at the autumn session, and it is further determined that if the Emperor thinks their lives should be spared, they shall be imprisoned for life, with no possibility that the punishment shall ever be revoked.

Tsai Kin, Prince Chuan, Ying Min, President of the Censorship, and Chao Shu-chiao, President of the Ministry of Justice, shall be condemned to commit suicide; Yü Hsien, Governor of Shansi, Chi Hsien, President of the Court of Ceremony, Hsu Chien-yu, formerly Director in the Ministry of Justice, shall be condemned to death.

Degradation after death has been pronounced against Kang Yi, assistant member of the Grand Secretariat and President of the Ministry of the Interior, Hsü Tung, member of the Grand Secretariat, and Li Ping-heng, formerly Governor-General of Szechuan.

An Imperial Edict of 13th February, 1901 (annex 7), has re-instated after death in their titles and offices of honour, the President of the Ministry of Finance, Li Shan, the Director of the Ministry of the Interior, Hsü Ching-cheng, the Vice-Chancellor in the Grand Secretariat at Hienyuan, and the Director in the Court of Sacrifices, Yuan Chang, who were executed because they protested against the unheard of offences against international right which took place during the last year.

Prince Chuan committed suicide on the 21st Feb., 1901; Ying Min and Chao Shu-chiao on the 24th; Yü Hsien was executed on the 22nd February, 1901; Chi Hsien and Hsü Chien-yü on the 26th.

The General of Kansu, Tung Fu-hsian, has been deprived of his office by Imperial Edict of 13th February, 1901, until it shall be decided what final punishment shall be pronounced against him. Imperial Edicts of 20th April, 1901, and of have pronounced suitable punishments against Provincial authorities who confessedly have been guilty of crimes of murder during the course of last summer.

Art. II.—An Imperial edict which was published on (annex 8) has ordered the suspension of the official examinations during five years, in all provinces where foreigners were murdered or were subjected to harsh treatment.

Article III.—In order to make suitable amends for the murder of Mr. Sugiyama, Chancellor of the Japanese Legation, H.M. the Emperor of China, by an Imperial Edict of 18th June, 1901 (annex 9), has appointed the Vice-President of the Ministry of Finance, Na Tung, an Ambassador Extraordinary, and commanded him in particular to convey to H.M. the Emperor of Japan the regret of H.M. the Emperor of China and his Government for the murder of Mr. Sugiyama.

Art. IV.—The Chinese Government has undertaken to erect an expiatory monument in each of the international cemeteries which has been desecrated or in which grave monuments have been destroyed. To this end it has been arranged with the representatives of the Powers that the Legations concerned will indicate what is necessary for the erection of these monuments, with the undertaking on the part of China to bear all the costs, which are fixed at 10,000 taels for the Cemeteries in Peking and its neighbourhood, and 5,000 in the provinces. These sums have been paid, and the receipt is herewith acknowledged (annex 10).

Art. V.—China has agreed to forbid the importation of arms and ammunition as well as of all material exclusively employed for the manufacture of arms. An Imperial Edict was published on 27th August, 1901, (annex 11) which forbids such importations for two years.

Further Edicts can be promulgated in the future in order to extend this period every two years, in case the Powers deem it necessary.

Art. VI.—In an Imperial Edict of 20th May, 1901, H.M. the Emperor of China has undertaken to pay the Powers an indemnity of 450 millions Haikuan taels.

This sum represents the total of the indemnity for the States, societies, individuals and Chinese which are mentioned in Article 6 of the note of 22nd Dec.

(a.) These 450 million taels form a debt in gold in which the rate of the Haikuan Tael is calculated in the gold currency of each country in the following manner:—

1 Haikuan Tael=Mark	3.055
Austro-Hungarian Krone	3.595
Gold Dollar	0.742
Francs	3.750
Pound Sterling, Shanghai	3.000
Yen	1.407
Dutch Guilder	1.796
Gold Rouble	1.412

This sum in gold shall bear interest at the rate of 4 per cent. a year and the principal is to be reimbursed by China in thirty-nine years on the conditions indicated in the plan of amortisation annexed hereto (annex No. 13). The capital and interest will be

payable in gold or at the rate of exchange corresponding to the dates of the different payments.

The operation of the amortisation will commence on the 1st January, 1902, in order to end at the expiration of the year 1940. The amortisations will be payable annually, the first date of maturity being fixed as the 1st January, 1903.

The interest will be calculated to begin from the 1st July, 1901, but the Chinese Government will have the privilege of freeing itself in a period of three years, commencing on 1st January, 1902, of the arrears of the first half-year ending 31st December, 1901, on the condition, however, of paying interest at four per cent per annum on the sums of which the payment will have been thus deferred.

The interest will be payable half-yearly, the first maturity being fixed for the 1st July, 1902.

(b.) The service of the debt will be effected at Shanghai in the following manner:—

Each Power will be represented by a delegate in a commission of bankers, which will be charged with the collection of the amount of the interest and the amortisations, which will be paid by the Chinese authorities designated for that purpose, to divide this among those interested and to give a receipt.

(c.) The Chinese Government will remit to the doyen of the Diplomatic Corps at Peking a lump coupon which will be subsequently transformed into notes provided with the signatures of the delegates of the Chinese Government designated for that purpose. Each operation, and all those which are connected with the establishment of the titles, will be effected by the aforesaid commission conformably to the instructions which the Powers will send to their delegates.

(d.) The product of the resources set aside for the payment of the coupons will be paid monthly into the hands of the commission.

(e.) The resources set aside for the guarantee of the coupons are enumerated hereafter:—

1.—The balance of the revenues of the Imperial Maritime Customs after payment of the interest and the amortisation of the previous loans pledged on these revenues, augmented by the product of the raising to an effective five per cent of the actual tariff on maritime imports, including articles which have hitherto entered free, with the exception of foreign rice, cereals and flour, as well as gold and silver, coined or uncoined.

2.—The revenues of the native Customs administered in the open ports by the Imperial Maritime Customs.

3.—The total of the revenue of the gabelle, under reserve of the fraction previously set aside for other foreign loans.

The raising of the actual tariff on imports to an effective five per cent is consented to on the following conditions:—

The putting in operation of that increase will commence two months after the date of the signature of the present protocol, and there will be only exceptions for merchandise en route at the latest six days after that date.

1.—All the duties on importations levied ad valorem will be converted into specific duties as far as it is possible to do so and with the least delay. This conversion will be established as follows. The average value at the time of their disembarkation during the three years, 1897, 1898, 1899, will be taken as the basis of the valuation—that is to say, the value on the market, deduction being made of the import duties and the accessory expenses. Until the result of that conversion is known, the duties will be imposed ad valorem.

2.—The course of the Peiho and the Whangpoo will be improved with the financial participation of China.

Art. VII.—The Chinese Government has agreed that the quarter occupied by the Legations shall be considered as a quarter specially reserved to their usage and placed under their exclusive police, where the Chinese shall not have the right to reside, and which may be put into a state of defence. The limits of the quarter have been thus fixed on the plan annexed (annex No. 14):—

I. To the west, lines 1, 2, 3, 4, 5;

II. To the north, lines 5, 6, 7, 8, 9, 10;

III. To the east, Ketteler Street, lines 10, 11, 12;

IV.—To the south, lines 12—1; drawn along the foot of the exterior of the Tartar wall, in following the bastion.

By the protocol annexed to the letter of 16th January, 1901, China has recognised to each Power the right to retain a permanent guard in the said quarter for the defence of its Legation.

Art. VIII.—The Chinese Government has consented to have the Taku forts razed, and those which could prevent free communication between Peking and the sea. Dispositions have been taken to this effect.

Art. IX.—The Chinese Government has recognised to the Powers, by the protocol annexed to the letter of the 16th January, 1901, the right to occupy certain points to be determined by agreement between them, in order to maintain free communication between the

capital and the sea. The points occupied by the Powers are—Whangsun, Langfong, Yangton, Tientsin, Tsinliangcheng, Tangku, Lutai, Tangshan, Lanchow, Changli, Chinwangtao, Shanhaikuan.

Art. X.—The Chinese Government has engaged to post and publish during two years in all the towns of the district the following Imperial Edicts (annex No. 15):—

(a.) Edict of the 1st February, 1901, perpetually forbidding, under pain of death, to belong to an anti-foreign society.

(b.) Edict of containing the enumeration of the punishments which have been inflicted on the guilty.

(c.) Edict of suppressing the examinations in all the towns where foreigners have been massacred or have been subjected to harsh treatment.

(d.) Edict of 1st February, 1901, (annex No. 16), declaring that all the Governors-General, Governors and functionaries, provincial or local, are responsible for order in their districts and that in case of new anti-foreign troubles, or even of other infractions of the treaties, which are not immediately repressed, and of which those guilty shall not have been punished, these functionaries will be immediately revoked, and shall not be called to new functions nor receive new honours.

The posting of these Edicts is to be pursued progressively in the whole Empire.

Art. XI.—The Chinese Government has engaged to negotiate amendments judged useful by the Foreign Governments to the treaties of commerce and navigation, and other subjects touching commercial relations, with the view of facilitating these.

From now and in consequence of the stipulations inscribed in Article VI, on the subject of the indemnities, the Chinese Government has engaged to co-operate in the amelioration of the course of the rivers Peiho and Whangpoo, as set out below:—

(a.) The works of amelioration and of the navigability of the Whangpoo, commenced in 1898, with the co-operation of the Chinese Government, have been recommended under the direction of an international commission. As soon after as the administration of Tientsin shall have been remitted to the Chinese Government, that government may be represented in that commission, and shall pay each year a sum of sixty thousand Haikwan taels for upkeep of the works.

(b.) There is created a River Council charged with the direction and control of the works of the Whangpoo and of the amelioration of the course of the river.

This council is composed of members representing the interests of the Chinese Government and those of foreigners in the maritime commerce of Shanghai. The expense necessitated by the works and the general administration of the enterprise have been estimated at the sum of 460,000 Haikwan taels during the first twenty years. This sum will be furnished, half by the Chinese Government and half by the foreigners interested. The details of the stipulations in connection with the composition, the attributions and the revenues of the fluvial council are the subject of the annex (annex No. 17.)

Art. XII.—An Imperial Edict of 24th July, 1901 (annex No. 18), has reconstructed the Office of Foreign Affairs (Tsungli Yamen) in the direction indicated by the Powers, that is to say, has transformed it into a Ministry of Foreign Affairs (Wai-wu-pu), which takes rank before the other six Ministries of State; the same edict has named the principal members of this ministry.

An accord is equally established on the subject of the modification of the ceremonial of the Court relative to the reception of the foreign representatives, and has been the subject of several notes of the Chinese Plenipotentiaries named in a memorandum herewith annexed (annex No. 19).

Finally, it is expressly understood that, for the declarations above named and the documents attached emanating from the Foreign Plenipotentiaries, the French text is alone authentic.

The Chinese Government having thus conformed, to the satisfaction of the Powers, to the conditions enumerated in the aforesaid note of 22nd December, 1900, the Powers have acceded to the desire of China to see the situation created by the disorders of the summer of 1900 come to an end. In consequence the Foreign Plenipotentiaries have authorised the declaration, in the name of their Governments, that, with the exception of the Legation Guards mentioned in Article VII, the international troops will completely evacuate the town of Peking, the 1901, and, with the exception of the places mentioned in Article IX, will retire from the province of Chihli.

The present final protocol has been established in twelve identical copies and signed by all the plenipotentiaries of the contracting countries. A copy will be remitted to each of the Foreign plenipotentiaries and a copy will be remitted to the Chinese plenipotentiaries.

Peking, the Certified copy.

(Signed)—A. von Mumm, M. Crikann, Joostens,

B. J. Cologan, W. W. Rockhill, Beau, Ernest Satow, Salvago Raggi, Jintaro Komura, F. M. Knobel, M. de Giers.

Secretaries:—A. d'Anthouard, B. Pronosensky, Reginald Tower, G. Bohlen Halbard.

ANNEX NO. 17.

THE CONSERVANCY OF THE WHANGPOO.

I.—There is established at Shanghai a River Council (River Conservancy Board) for the river of Whangpoo.

II.—The Board shall have the double duty of acting as a medium for the rectification and improvement of the river way and as a medium of control.

III.—The jurisdiction of the Board shall extend from a line drawn from the lower limit of the Arsenal, of Kiangnan towards the mouth of the creek called "The Arsenal" to the Red Buoy in the Yangtsze.

IV.—The Board shall be constituted as follows:—

(a.)—The Taotai.

(b.)—The Commissioner of Customs.

(c.)—Two members elected by the Consular Body.

(d.)—Two members of the General Chamber of Commerce of Shanghai, elected by the Committee of that body.

(e.)—Two members representing the interests of shipping, elected by the Shipping Companies, Commercial Houses, and Merchants whose maritime traffic, for the total of the imports and exports from Shanghai to Woosung, or any other port on the Whangpoo, exceeds fifty thousand tons per annum.

(f.)—A member of the Municipal Council of the International Settlement.

(g.)—A member of the Municipal Council of the French Concession.

(h.)—A representative of each of the countries whose maritime traffic, for the total of imports and exports to Shanghai and Woosung, exceeds two hundred thousand tons per year.

The representatives will be designated by the Government of the countries in question.

V.—The ex-officio members shall perform their mandate as long as they occupy the post in virtue of which they form a part of the Board.

The representatives of the Municipal Council and of the Chamber of Commerce shall be elected for the period of one year. They will be immediately re-eligible.

The representatives of the Governments referred to in section (h) of Article IV, shall also be designated for the period of one year.

VI.—The mandate of the other members shall be for three years. They will be immediately re-eligible.

VII.—In case of a vacancy occurring in the course of a mandate, the successor of the retiring member will be designated for one year or three years according to the category to which he belongs.

VIII.—The Board shall name its President for one year, as well as its Vice-President, chosen from among the members. If there is not a majority for the election of the President, the Doyen of the Consular Body will be asked to give a casting vote.

IX.—In case of the absence of the President he shall be replaced by the Vice-President. If both are absent the members present shall designate from among themselves a President *ad hoc*.

X.—At all the meetings of the Board if there is an equality of votes that of the President shall be decisive.

XI.—The Board can only deliberate when four members are present.

XII.—The Board shall nominate the functionaries and employes whom it deems necessary for the execution of its work and shall fix their appointments, salaries and emoluments, and shall pay them from the funds at its disposal; it can issue regulations, regulate the duties of the personnel and dismiss them at pleasure.

XIII.—The Board shall draw up regulations to control the traffic, including the placing of mooring apparatus in the River, and the regulation of the mooring itself within the limits indicated in Article III, as well as in all the waterways such as the Soochow Creek and others traversing the French Concession or International Settlement at Shanghai and the foreign quarter at Woosung, as well as on all the creeks debouching on the River, as far as a distance of two English miles above their mouths.

XIV.—The Board has the right to expropriate the fixed mooring apparatus belonging to private individuals and to establish a system of public mooring apparatus in the River.

XV.—The authorisation of the Board is necessary for the execution of quays, jetties, as well as for the establishment of all pontoons or floating houses in the section mentioned in Article XIII. The Board may refuse this authorisation at its discretion.

XVI.—The Board has full power to remove all obstacles from the River or Creeks above mentioned, and to hold liable, should it be necessary, the persons responsible for the expenses which may result.

XVII.—The Board has control of all floats, buoys, leading beacons and luminous signals in the section of the River and Creeks mentioned in Article XIII, as well as of all apparatus established on land and

necessary for the safety of the River navigation with the exception of light-houses, which remain applicable to Article XXXII. of the Treaty of 1850 between Great Britain and China.

XXVIII.—The works of improvement and conservation of the Whangpoo shall be in their entirety under the technical direction of the Bureau, even if their execution necessitates operations beyond the limits of its jurisdiction. In this case the necessary orders shall be transmitted by the Chinese authority and executed with its consent.

XIX.—The Board shall receive and disburse all funds which are raised for the works, and shall take, in accord with the competent authority, all the measures necessary to assure the recovery of the taxes and the application of the regulations.

XX.—The Board shall nominate the harbour master and his staff. The service will exercise its action within the limits of the powers attributed to the Board in the part of the river indicated in Article XIII.

XXII.—The Board will have the direction and regulation of the pilotage service of Shanghai (Lower Yangtze Pilots). The certificates of pilots licensed for vessels sailing to Shanghai can only be delivered by the Board, which may dispose of them at its pleasure.

XXIII.—In case of breach of its regulations, the Board shall pursue the contraveners in the following manner: Foreigners before their respective Consuls or before their competent judicial authorities, Chinese or foreigners whose Government is not represented in China before the Mixed Court in presence of an assessor of non-Chinese nationality.

XXIV.—All actions raised against the Board shall be taken before the Court of Consuls of Shanghai. The Board shall be represented in the case by its secretary.

XXV.—The members of the Board and the persons employed by it shall not incur any personal responsibility from the fact of the votes or acts of the Board, contracts made or expenses incurred by the assembly when the said votes, acts, contracts and expenses concern either the elaboration or the application, under the authority or orders of the Board or of one of its dependent services, of the regulations emanating from the assembly in question.

XXVI.—In addition to the provisions contained in Article XIII. of the present annexe, the Board shall have the power to make all necessary rules and regulations within the limits of its authority and to fix fines for cases of breach thereof.

XXVII.—The rules and regulations referred to in Article XXVI. shall be submitted for the approval of the Consular Body, and if two months after the submission of the proposal the Consular Body has made no objection nor suggested any modification the proposal shall be considered as approved and fit for execution.

The Board shall have the right to acquire all land necessary for carrying out the improvement and the conservancy of the Whangpoo and to dispose of the said land. If in this connection it should be judged desirable to appropriate certain land, then the regulations laid down in Article VI. and the "Land Regulations for the Foreign Settlements of Shanghai, north of the Yangkingpang" shall be followed. In such cases the price shall be fixed by a commission composed of (1) one person chosen by the representative of the Government to which the owner is subject; (2) one person chosen by the Board; (3) one person chosen by the Doyen of the Consular Body.

XXIX.—Riparian owners shall have a preferential right to the purchase of all land formed in front of their properties by reclamations made for the improvement of the waterways in question. The prices for the acquisition of such land shall be fixed by a Commission constituted in the same manner as in Article XXVIII.

XXX.—The Revenues of the Board shall be composed of:—

(a.) An annual tax of one-tenth per centum (0.1 per cent.) on the assessed value of landed property built upon in the French Concession and in the International Settlement.

(b.) A similar tax on all property situated on the banks of the Whangpoo from a line starting from the lower limit of the Kiangnan Arsenal near the mouth of the so-called Arsenal creek to the spot where the Whangpoo falls into the Yangtze. The taxable value of these properties shall be fixed by the Commission mentioned in Article XXVIII.

(c.) A tax of 5 candareens a ton on every vessel of non-Chinese type and of a tonnage above 150 tons entering the ports of Shanghai, of Woosung, or any other port on the Whangpoo, or leaving.

Vessels of non-Chinese type of 150 tons or under shall pay one quarter of the above-mentioned tax. These taxes shall be leviable on each vessel once in four months only, without reference to the number of entrances and departures.

Vessels of non-Chinese type navigating on the Yangtze stopping at Woosung only to take their River papers shall be exempted from the above mentioned taxes on the condition that these vessels shall engage in no commercial transaction in going

and coming. But they shall have the liberty to supply themselves at Woosung with water and provisions.

(d.) A tax of one-tenth per centum (0.1 per cent.) on all merchandise declared at the Customs at Shanghai, at Woosung or at any other port on the Whangpoo.

(e.) an annual contribution by the Chinese Government equal to the contribution furnished by the various foreign interests.

XXXI.—The collection of the taxes mentioned in Article XXX shall be made through the medium of the following authorities:—

Tax (a.) by the respective Municipalities.

Tax (b.) by their respective Consuls from those whose Government is not represented in China.

Taxes (c.) and (d.) by the Imperial Maritime Customs.

XXXII.—If the whole of the annual revenues of the Board should not suffice for the payment of interest and amortisation of the Capital to be borrowed for the execution of the works, for the maintenance of works completed, and for the general service, the Board shall have the power to increase, in the same proportion, the various taxes on shipping, landed property, built upon or not, and on trade, to a figure sufficient to meet all recognised needs. This prospective increase shall be applied in the same proportions to the contribution of the Chinese Government, mentioned in Article XXX § e.

XXXIII.—The Board shall inform the Consular Body of Shanghai, in advance, of the need for the increase provided for in Article XXXII. Such increase shall not be applied until the Consular Body shall have approved it.

XXXIV.—The Board shall submit to the Consular Body of Shanghai within a period of six months after the closing of its annual accounts a detailed report on the general management and on the receipts and expenditure during the preceding twelve months. This Report shall be published.

XXXV.—If the statements of receipts and expenditure correctly kept and published show that there is a surplus of receipts over expenditure, the taxes mentioned in Article XXX. shall be proportionately reduced by common accord between the Consular Body of Shanghai and the River Board. This prospective reduction shall be applied in the same proportion to the contribution of the Chinese Government which is mentioned in Article XXX § e.

XXXVI.—On the expiration of a first term of three years the contracting parties to this agreement shall examine by common accord the provisions contained in the present annexe which it may be desirable to revise. A new revision may take place in the same manner every three years.

XXXVII.—Within the limits indicated in Article XIII. and subject to approval by the Consular Body of Shanghai, the Rules of the Board shall be in force for all foreigners.

MOVEMENTS OF MONEY DURING SEPTEMBER.

Statistics showing the movements of funds during September drawn up by the Bank of Japan, show that receipts amount to 8,297,024 yen, of which 7,883,524 yen consist of direct national taxes, and 43,500 yen of payments from various companies. As for outlays the total stands at 2,732,849 yen, of which 1,562,849 yen are to be distributed in the form of interest on public loan bonds, the remaining 1,170,000 yen being dividends of companies. Receipts thus exceed outlays by 5,564,175 yen. Receipts and outlays are subdivided:—

(a) Receipts in connection with direct national taxes, share capital of companies, and loan bonds:—

Taxes (for the first term) on wet and dry fields and rural house lots.....	Yen. 5,817,184
Income tax for a quarter of the year	2,066,340

Total.....	7,883,524
------------	-----------

Deposits for the eleventh issue of industrial debentures	100,000
--	---------

Liabilities of the Japan Spinning Company	313,500
---	---------

Total.....	413,500
------------	---------

Grand total	8,297,024
-------------------	-----------

(b) Interest on public loan bonds and dividends of the companies:—

Five per cent. interest on public loan bonds	1,562,849
Dividends of the Specie Bank	1,170,000

Grand total	2,732,849
-------------------	-----------

ZERMATT IN ACCIDENT TIME.

The recent fatal accident upon the Matterhorn lends a timely interest to this article from the *Pull Mall Gazette*:—

Day is declining and the shadows have fallen upon Zermatt, deep in the valley of the Visp. Up the little street a cortege of heavy-shod, tan-faced men, with ice-axes and ropes and ruck-sacks and all the laborious paraphernalia of the Alpinist, is wending its way in gloomy silence. The people are silent, too. At the hotels the great telescopes are all riveted upon the stupendous face of the Matterhorn, now pink in the last rays of the setting sun.

The procession is too large for a mere climbing party. There are half a dozen of the best guides available and as many porters. The Zermatt men are turning out in force. They are going to bring in the dead. There has been a catastrophe far up on those icy, treacherous slopes, and the news has just come. The streets are full of tourists discussing the affair in hushed tones. Melchior Anderegg's little low shop, where one hears all the climbing news, is full. At the Monte Rosa, the crowd of famous climbers sitting on the low wall ceases its talk of couloirs and arêtes and gendarmes and devilish pitches, and speculates as to how the thing happened. The guides were good; the climbers were good. Who fell, and how, and why?

Many such processions has Zermatt seen, year in, year out. Scarcely a season passes without the mountains exacting their toll of human sacrifice. Now it is the Dent Blanche, most difficult of summits; now the Rothhorn, now the Lyskamm, now the ever terrible Matterhorn. Time has not robbed the superb giant of Zermatt of its dangers. Its slopes are festooned with rope; the "mauvais pas" has been rendered easier by art; a veritable footpath exists for a great part of the eastern ascent; yet no power can give entire safety against a rash move, a treacherous hold, or a falling stone. The ledges may be covered with the debris of innumerable parties; eggshells and tins and empty bottle profane the face of the mountain. But the vulgarization of these sublime slopes is only the invitation to a sterner punishment. Where in the old days only the most skilled of climbers ventured, to-day the casual tourist is hauled and hoisted, sandwiched between indifferent guides. The Matterhorn has become a show—a thing for exploitation. And then from time to time the inevitable happens. Suddenly, without warning, the mountain claims its toll. It chooses alike the fool and the wise, the brave and the coward, the expert and the inexpert.

In the bare graveyard of the little church you can see the tombs of its first explorers. Croz sleeps there under a simple tombstone, with the music of the Visp to soothe his slumbers. Thirty-six years ago he fell with Hadow and Hudson and Lord Frederick Douglas of Mr. Whymper's party, and still there are ever-fresh flowers upon his grave. At Zermatt they regard the guide who dies doing his duty much as the soldier who has fallen in battle. Beside him rest two of his comrades; the third still lies on the awful precipices above the Matterhorn-gletscher and no one knows the place of his burial. Search was made for him time after time, but always with unsuccessful. The only witness of the fall from below still lives in Zermatt. He was then a boy, and he happened to be looking at the face of the mountain, when through that clear air he saw what he took to be a fall of stones, and ran in to tell Herr Seiler at the Monte Rosa. Two days later a solitary, shaken English Herr, with two guides, came down to the hotel, the sole survivors of a party of seven, and the story was the property of the world.

Since then there have been many additions to the tombs in the churchyard, while in the little plot of ground round the English church lie other victims of their love for the solitary heights. Here are the grave of Mr. Gabbett, who ended a short life of infinite promise on the Dent Blanche; of Mr. Blanche; of Mr. Borchardt, whom his comrades left lying at the point of death in a terrible snowstorm on the face of the Matterhorn; of Miss Sampson, killed by a falling stone in the Triftloch; of Mr. Lewis, who fell on the Lyskamm, but whose death is still something of a mystery. And up and down the Visp valley are more tombs—mostly of guides who have given their lives for their comrades. The victims of the great accident on the Dent Blanche rest, however, not in the little village of Evolena.

No one who was at Zermatt in 1899 will forget the sensation produced by that affair, in which Mr. Owen Glynn-Jones, one of the very finest of British rock-climbers, lost his life, with the guides Furrer, Zurbriggen, and Vuignier. There was no feat of gymnastic skill to which Mr. Jones was unequal, and he was accounted by the best guides of the valley better than themselves. What added to the grief felt by all at his loss were the cruel stories circulated by one or two of the baser Swiss papers to the effect that his rashness led him to attempt feats to which his skill was unequal.

As a matter of fact he is said by those who know, to have been asked by the guides who perished with him to make the particular ascent in which he was killed, as then they would be sure of fame as the best men in the canton. It was the guide Furrer who fell, carrying down with him Jones and Zurbriggen, and, a minute or two later, Vuignier. Then the rope broke, and Mr. Hill was left the sole survivor of the party—alone, on about the most difficult mountain of the Zermatt district.

One of the guides is said to have lost his nerve at the most critical moment, hence, perhaps, the fall. Mr. Hill, after the fearful shock of witnessing the death of his comrades, struggled over the mountain—how, no one knows, probably he least of all—and made his way down to the Zermatt glacier in a fainting condition from exhaustion and want of food. Near the Stafelalp, not far from Zermatt, he collapsed and slept for twelve hours, finally reaching Zermatt two days after the accident. At once a strong party of guides was collected and sent down the Visp valley by train to bring in the bodies. These were only recovered with immense difficulty, as they were embedded in ice at the foot of the precipices, and the rescue party ran the gravest peril from falling stones, which poured down among them while engaged in their sorrowful task.

Last year there was one serious accident on the Matterhorn, in which the guide Furrer—the name is a common one in the valley—was killed. With Mr. Sloggett and Gentinetta he was moving low down on the eastern side, in the long couloir or gully, just under a particularly steep patch of rock. The gully is safe enough in itself, but when the sun gets on the rock above, the patches of snow and ice melt, and loose stones, which are held in position by the ice, come down, starting great avalanches of rock and snow, sweeping all below them away. Such an avalanche struck the party, killing Furrer and severely injuring the other two climbers. This accident was thus a pure piece of bad luck, for stones are a danger which every mountaineer has to encounter. On some slopes, such as the face of the Ober Gabelhorn, the risk from them is very great, and during the afternoon the bombardment of stones is incessant.

It is interesting to analyze the accidents and to note how far want of skill is responsible for the deaths. On the Matterhorn there have been nine affairs in which there has been loss of life. The first and greatest of all was probably due to want of skill in one of the climbers, Mr. Hadow, who was young and inexperienced. The second fatality was due to the abandonment of a sick guide in a hut, 13,000 ft. above the sea, by his comrades; the third was due to pure carelessness, the climber having few nails in his boots; the fourth was caused by the weather, Mr. Borchardt being left by his party dying on the slope of the mountain; in the fifth case two young and inexperienced guides were killed with their "Herr," cause unknown; in the sixth J. A. Carrel died of exhaustion after bringing his party down to safety, through a terrible storm; in the seventh two young Zermatt men fell, after they had been noted to be going carelessly; the eighth case was that of Mr. Sloggett's party, where no want of care is to be imputed; in the ninth, and last, accident the guides were too few for a large party and the climbers were novices. Thus, while in climbing, as in war, skill does not absolutely remove the peril, it certainly minimizes it.

A LONG SWIM.

Dover, August 25.

Mr. Holbein, who yesterday, the anniversary of Captain Webb's swim from Dover to Calais, started from Cape Gris-Nez, between Boulogne-sur-Mer and Calais, in an attempt to swim to Dover, narrowly escaped drowning. He covered the course to a point within six miles of Dover and then collapsed, after having been in the water twelve hours and forty-six minutes. The tug which accompanied him took him from the water and brought him to Dover this morning. He was carried to a hotel in a semi-conscious state, and, subsequently, on the advice of his medical attendants, was removed to a hospital, where he lay for some time in a serious condition. It was found that his eye-sight had been badly affected by the salt water. To-night, however, he had recovered, and he announced his intention to renew the attempt.

His exploit was very remarkable, considering the roughness of the sea, and has established a record. He swam with a powerful stroke, alternately on his back and on his breast, making a good pace. The first six miles from Cape Gris-Nez were covered in two hours and twenty-five minutes. Much of the time he swam with his eyes closed, owing to the irritating effects of the salt water.

Instructions to Holbein were shouted through a megaphone, and powerful acetylene lamps were lighted to guide him. At the end of the sixth hour he was swimming well, but he began to complain of

an inquiry to his left hip, sustained on the rocks at Cape Gris-Nez, but not mentioned before.

After 11 o'clock he was once lost for five minutes, a big wave having swept over him. He kept going steadily, but after the tenth and eleventh hours a westerly tide drifted him much out of his course, and it was evident that the heavy seas were having a bad effect. During the twelfth hour his stroke weakened considerably and he seemed unable to grasp the directions given him. Twice he turned completely around. At 4.20 a.m. it was decided to take him out of water. He was turning like a top and hopelessly blind.

Allowing for his zigzag course, it is estimated that he swam sixteen miles. When he was taken from the water Dover was about five miles north-north-east. His next attempt he promises to make next year.

THE LEGATION AREA IN PEKING.

The Special Correspondent of *The Times* lately in China writes:—It is to be regretted that Mr. Walton did not shape his question in the House as to the Legation area to a somewhat different purpose by inquiring whether His Majesty's Government had considered what the effect of the conversion of the Legation area into an international cantonment was likely to be in the future on the relations between the different Legations themselves. Lord Cranborne chose to minimise in the most astounding fashion the friction between the different international contingents in Chihli. As I had ample opportunities of noting at the time the extreme anxiety to which these incidents were continually giving rise in responsible quarters, it seems inconceivable to me that the Powers should deliberately court the permanent introduction of the same disquieting features into the diplomatic quarter of Peking where half-a-dozen different nationalities will be cooped up, year in, year out, within an area of half-a-mile by three-quarters of a mile in the irritating atmosphere of Peking, condemned to a life of almost enforced idleness, and more or less cut off from all the ordinary occupations and ordinary amusements of a garrison town.

Another aspect of the question which would also repay inquiry is the methods by which the Powers have acquired this Legation area. The extension of the British Legation has been mainly achieved at the cost of the Chinese Crown by taking in the Imperial Carriage-park, the Hanlin, and other public buildings occupied by the Chinese troops during the siege, and no one can cavil at the retribution which has thus overtaken the Court, especially when the exemplary moderation Great Britain has displayed in the matter of the indemnity is taken into account. But there are other Powers whose local greed, as displayed in the annexation of private as well as public property within the Legation area, has been fully on a par with the exorbitant demands they have made with regard to the indemnity. Your Peking Correspondent dealt with this question at the time. But he may perhaps have felt himself somewhat hampered by the fact that he was himself a landowner within the confiscated area, having bought a plot of land before the troubles in order to build himself a house on it, and extended it by subsequent purchases. But no one who has had an opportunity of investigating as I did, on the spot the ruthless way in which private property was annexed on behalf of this or that Legation by the simple process of erecting a board stating that "This land belongs to the—Legation" can fail to endorse every word he wrote. Thanks mainly to the action of the British Minister, the conference finally agreed to include in the indemnity demands a modicum of compensation for the Chinese thus dispossessed—mostly, be it noted, Chinese who had always been on friendly terms with their foreign neighbours and had suffered cruelly for that friendliness during the Boxer reign of terror. The British Government and their representative in Peking, supported, I should add, on most occasions by the United States and Japan, have endeavoured as far as possible to mitigate the policy imposed by some of their more grasping Allies, and have only acquiesced in it reluctantly rather than imperil the so-called concert of the Powers.

TELEGRAMS.

(REUTER'S SERVICE TO THE "JAPAN MAIL.")

DEATH OF PRESIDENT MCKINLEY.

AN UNEXPECTED RELAPSE.

Shanghai, Sept. 14.

All the physicians gathered at the bedside of President McKinley at 3 o'clock on the morning of the 13th inst., authorised the announcement that the President was in a critical condition.

According to a later telegram the change in the President's condition was quite sudden.

The bulletin published at 3.50 on the same morning (13th) said that the President's condition occasions the gravest apprehension. The bowels, which had stopped the preceding evening, have now moved but the heart does not respond to the stimulation of strychnine, digitalis and other powerful drugs.

The President is conscious and calm.

THE PRESIDENT'S LAST HOURS.

Shanghai, September 15.

A telegram, delayed in transmission, says that President McKinley on the evening of the 13th was just holding on to life by the help of drugs, which were administered to sustain the action of the heart. Hope was then small.

The suddenness of the relapse caused general consternation in America and the markets for all securities were demoralized. A later bulletin gave more hopeful news.

THE END.

Shanghai, Sept. 14, 8.50 p.m.

President McKinley is dead.

THE SUCCESSION.

Shanghai, Sept. 15.

The Vice-President, the Hon. Theodore Roosevelt, is prepared to take the oath of office wherever he happens to hear the news of the demise of President McKinley.

The Cabinet has resigned in a body in order to give Mr. Roosevelt an opportunity to reconstruct the Ministry if he so desires.

MCKINLEY'S LAST WORDS.

President McKinley's last words were:—Goodbye all, goodbye. It is God's way. His will be done.

Death occurred at 2.15 a.m., the President having been unconscious since 7.50 o'clock the previous evening. The immediate cause of death is undetermined.

THE CAUSE OF DEATH.

Shanghai, September 16.

The autopsy report on the late President says that nothing could have arrested the spread of gangrene in the tissues, along the track of the bullet, which penetrated both walls of the stomach and tore the kidney.

LYING IN STATE IN WASHINGTON.

The body of Mr. McKinley lies in state at Washington.

THURSDAY A DAY OF MOURNING.

The late President McKinley will be interred at Canton, Ohio, on Thursday, which day President Roosevelt has proclaimed as a day of mourning and prayer.

MOURNING IN ENGLAND.

King Edward has ordered a week's mourning.

ROOSEVELT TAKES THE OATH.

The Hon. Theodore Roosevelt, after he had taken the oath of office as President of the United States of North America, declar-

ed that he will continue absolutely unaltered the policy of President McKinley which was for the prosperity and honour of the country.

BRITISH SYMPATHY.

The London Royal Exchange voluntarily suspended business on Saturday; the Glasgow and Liverpool Exchanges were also closed voluntarily.

ADMIRAL SEYMOUR'S WELCOME HOME.

Shanghai, Sept. 13.
The Corporation of Portsmouth have banquetted Admiral Seymour and the officers and men of the *Centurion*. Lord Selborne, First Lord of the Admiralty, was present.

THE CZAR AT DANTZIC.

The Czar boarded the *Hohenzollern* and made a tour of the German fleet. He afterwards visited the four warships but did not land.

SOUTH AFRICA.

The fight between Lord Methuen and General Delarey was severe. It lasted some hours. General Lemmer and Field-Cornet Joubert were killed. The British lost 15 killed and 30 wounded. Kruger's youngest son surrendered.

THE KAISER AND COUNT LAMSDORFF.

Shanghai, Sept. 14.
The Kaiser had a long interview yesterday with Count Lamsdorff, the Russian Minister of Foreign Affairs.

CANADA AND THE COLUMBIAN ACT.

The Government of the Dominion of Canada, at the instance of the Imperial Government, has disallowed the Act of the British Columbian Legislature establishing an educational test with a view to the exclusion of Chinese and Japanese, and forbidding their employment on certain public works.

PRESIDENT ROOSEVELT'S POLICY.

ANXIETY IN EUROPE AND AMERICA.

Shanghai, Sept. 17.
The probable policy of President Roosevelt is exciting the keenest curiosity, not untinged with apprehension, in Europe. His presidency is a blow to the Party leaders in the United States, who thought that they had relegated him to obscurity by appointing him Vice-President.

THE AMERICA CUP.

The first race for the America Cup has been postponed till the 1st of October.

AN OUTLINE OF ROOSEVELT'S PROBABLE POLICY.

Later.

At an informal meeting of Ministers and friends held yesterday, President Roosevelt favoured a more liberal and more extensive commercial reciprocity; he also favoured the encouragement of an American-owned and American-built merchant marine; the completion of the Isthmian canal; and the use of conciliatory methods and arbitration in foreign disputes.

MEMORIAL SERVICES IN ENGLAND.

Shanghai, Sept. 18.
Memorial services will be held on Thursday in Westminster Abbey and St. Paul's Cathedral in memory of President McKinley.

KAISER REVIEWS 50,000 TROOPS.

The Kaiser has reviewed 50,000 troops at Dantzig in the presence of Prince Chun.

PRESIDENT MCKINLEY'S MURDERER

The Grand Jury have brought in a true bill against Czolgorz. They have found him guilty of murder in the first degree.

UNITED STATES SECRETARY OF STATE.

Col. Hay has resigned the office of Secretary of State of the U.S., and it is reported that Mr. Elihu Root, Secretary of War, will succeed him.

PRESIDENT ROOSEVELT AND THE CABINET.

Shanghai, Sept. 19.
At a meeting of the Cabinet, President Roosevelt requested the members to retain their portfolios. In consequence of this request Mr. Hay has not resigned.

BRITISH NAVAL MANOEUVRES.

It is reported that the umpires at the Naval Manoeuvres conclude that Sir Gerald Noel's numerically superior fleet was annihilated by Admiral Wilson's smaller but swifter modern fleet.

THE BOER WAR.

A patrol of the Grenadier Guards has been captured near De Aar. Lieutenant Rebou and one man were killed and two men wounded.

THE CZAR AND PRESIDENT LOUBET.

The Czar and Czarina accompanied by President Loubet reviewed the fleet at Dunkirk.

DUKE AND DUCHESS OF CORNWALL IN CANADA.

The Duke and Duchess of Cornwall have arrived at Montreal.

(RECEIVED AT THE LEGATION OF FRANCE.)

CZAR AND KAISER.

Saigon, Sept. 13.
The Czar and the Emperor William have met at Dantzig. They greeted each other cordially.

FRENCH NEWS.

Saigon, Sept. 16.
A Ministerial decree convokes the electors of Annam and Tonkin for the 22nd of December to elect a delegate for the High Colonial Council.

Vice-President Roosevelt has taken the oath of office at Buffalo as President of the United States' Republic.

Emperor William declares that his interview with the Czar was very important and that it assures the peace of the world.

FRENCH NEWS.

Saigon, Sept. 18.
Count Lamsdorff has arrived in Paris. The Czar and the Czarina has left Kiel for Dankeque.

(RECEIVED AT THE WAR OFFICE.)

On the 17th instant the Japanese and American troops handed over the city of Peking to the Chinese. Prince Ching and many Chinese officials were present, and the Prince made a very courteous address.

(RECEIVED AT THE FOREIGN OFFICE.)

The Japanese Consul at Chemulpho reports that vessels arriving there from Newchwang, or *via* Newchwang, will be quarantined from the 12th instant.

According to a telegram from Bakan, Mr. Komura will reach Yokosuka on the 19th instant, at 7 a.m.

On the 20th instant Mr. Sone, Minister of State for Foreign Affairs, will entertain Mr. Na and his suite at the official residence in the Foreign Office.

On the 17th instant Mr. Na Tung sent to the Foreign Office for presentation to the Emperor a collection of the writings of cele-

brated Chinese authors and historians numbering 5,000 volumes.

(RECEIVED IN TOKYO.)

THE LATE PRESIDENT.

President McKinley's funeral takes place in Washington on the 17th instant.

(The Emperor of Japan despatched a warm message of sympathy to the family of the late President by telegram on the 15th instant. Mr. Takahira, Japanese Minister in Washington, will attend the obsequies as Japan's representative.)

(FROM OUR OWN CORRESPONDENT.)

H.M.S. "GOLIATH."

Kobe, Sept. 14.

H.M.S. *Goliath*, from Wei-hai-wei on Monday via Inland Sea, arrived here this afternoon. She stays about three weeks.

[NOTE.—The *Goliath* is a twin screw battle-ship of the 1st class, 12,000 tons displacement and 13,500 indicated horse power. She was commissioned for the China station by Captain Lewis E. Wintz at Sheerness on 27th March, 1900.]

(FROM THE "JIJI SHIMPO.")

OBJECTION TO SŌUL-FUSAN RAILWAY.

SŌul, Sept. 19.

Some objection in connection with the construction of the SŌul-Fusan Railway has been raised by the Korean Court circle, and it is feared that the work on the line will be retarded in consequence.

NEW LOAN.

There is an indication that the Korean Court has secretly borrowed about 1,000,000 *yen* from France lately.

(FROM THE "NORTH-CHINA DAILY NEWS.")

THE ASSIZES AT SINGAPORE.

Singapore, Sept. 10.

At the assizes here the Italian who stabbed the officer of the s.s. *Bruno* was convicted of causing grievous hurt under provocation, and sentenced to eighteen months' rigorous imprisonment.

The case of the robbery of notes from the Hongkong Bank was commenced to-day, with two counsel for the prosecution and five for the defence. The case is expected to last five days.

(FROM THE "OSTASIATISCHE LLOYD.")

NEWS FROM EUROPE.

Berlin, Sept. 9.

The late Vice-President of the Prussian Cabinet and for many years Minister of Finance, Dr. Johannes von Miquel, is dead, aged 72.

NEWS FROM THE NORTH.

Tsingtao, Sept. 19.

On Saturday the railway to Kaomi was opened with ceremony. The opening train, which left here on Saturday, returned last night to Tsingtao. The Chinese had decorated all the stations on the line. At Kiaochow the officials of the district were present. All Chinese Mandarins and officials, as well as the literati, were awaiting the arrival of the train at Kaomi.

Governor Yuan Shi-kai has issued orders to collect a poll tax of 30 cents per head throughout the province of Shantung, in order to provide his part of the money for the war indemnity.

(FROM THE "OSTASIATISCHE LLOYD.")

NEWS FROM EUROPE.

Berlin, Sept. 6.

Prince Ch'un has left Potsdam and has gone to Berlin. During the following week he will be a guest of H.M. the Emperor at the review of troops at Dantzig, preceding the Autumn Manoeuvres.

King Edward of England has arrived at Copenhagen.

Berlin, September 10.

The Czar arrived to-day off Neufahrwasser, near Danzig, where H.M. the Emperors then reviewed the German squadron.

The Czarina has arrived at Kiel.

Berlin, September 12.

H.R.H. Prince Henry of Prussia has arrived at Dantzig.

The Berlin Banks have underwritten 90 Million Roubles of Russian Railway Obligations.

The Czar has conferred upon the Chancellor Count Bilow the Order of St. Andreas.

It is reported from Paris that a Whitebook about

AMERICAN MAIL NEWS.

LIGHT ON THE PATE OF THE BOER LEADERS.

London, August 23.
A Pretoria dispatch gives some interesting statistics of Boer leaders. Of the members of the old Government Executive Council only Schalk-Burger and Reitz are in the field. General Joubert is dead, General Cronje is a prisoner and General Kock was killed. Out of twenty-seven members of the first Volksraad, thirteen are accounted for. Barnard, Labuschagne and Malan have been killed. To Sergeant Merritt of the Bedfordshire Regiment was awarded a medal for killing Malan, who was sniping at Magaliesburg in June. Merritt stalked him four miles before he succeeded in shooting him. Ibsen is dead. Wolmarans is a prisoner. Eight members of the first Volksraad have surrendered. About half of the members of the second Volksraad are accounted for. All the heads of the state departments are accounted for except Smuts. Three of them are in Europe, two are prisoners and fourteen have surrendered. The Judges are all accounted for. Seventy-five per cent. of the sub-heads of departments are accounted for.

INHERITED RICHES A BIG HANDICAP TO HAPPINESS.

New York, August 23.
A cable to the *Journal* from London says:—The *Week's End*, a publication of high character, prints the following statement made to its correspondent by William K. Vanderbilt:—
"My life was never destined to be quite happy. It was laid on lines which I could foresee almost from earliest childhood. It has left me with nothing to hope for, with nothing definite to seek or strive for. 'Is great wealth a big handicap to happiness, you ask? Inherited wealth, yes. It is certain death to ambition as cocaine is to morality. A man who makes money, no matter how much, finds certain happiness in its possession, for in the desire to increase his business he has constant use for it, but the man who inherits it has none of this.' The first satisfaction and the greatest, the building of the foundation of a fortune, is denied him. He must labor, if he does labor, simply to add to what may be an oversufficiency. I try to get all the fun I can out of life and I am quite pleased if other folks get something out of it also."

MILLIONAIRE TO ENTERTAIN NEGRO.

Lenox (Mass.), August 23.
Society is very much stirred over the invitation of Morris K. Jessup, the New York financier, to Booker T. Washington, the negro poet and orator, to visit him at his splendid summer home, Belvoir Terrace. Mr. and Mrs. Jessup have also announced the intention to give several dinners in Washington's honour during his stay with them. The invitations are not yet out, but it is expected that the best people in the summer colony will be asked to meet the coloured poet. There is little chance that colour prejudice will show itself. It is more likely that the action of the Jessups will set the fashion for other folk and open the doors of the best homes to Washington.

Jessup is recognized as a broad-minded man, and the stand he has taken against race prejudice has deepened respect for him among the thinking members of society here.

TWO OF ROOSEVELT'S CHILDREN IN HOSPITAL.

New York, August 23.
Vice-President Roosevelt's youngest child, Quentin, four years of age, is now in Roosevelt Hospital, as well as his sister Alice. The boy was operated upon Thursday by Dr. George E. Brewer, one of the visiting surgeons in the hospital. It is expected he will be well in a reasonable length of time. The Vice-President spent all this afternoon by the beds of his children.

Miss Alice Roosevelt, the Vice-President's eldest child, was operated upon a week ago Thursday. She had an abscess of the jaw, and the operation she underwent was very successful. It is said she will leave the hospital to-morrow.

MR. RHODES' BILL.

London, Aug. 16.
A question in the House of Commons, put by Mr. Swift MacNeil, drew from Mr. Brodrick the admission that a claim by the De Beers Mining company for expenses incurred during the siege of Kimberley amounting to £54,641 4s. od. had been referred to the military authorities in South Africa for instruction. The discussion disclosed the fact that the first statement presented by the company amounted to £300,000, and included among the items, £19 10s. for a wreath for a staff officer's grave, £70 for cable hire for a newspaper correspondent connected with the company, £788 in respect of employment of native runners to bring up newspapers to Mr. Rhodes from Modder river, and £25, being the expense incurred by Mr. Rhodes in getting a private letter sent to Mafeking.

BRITISH COURTS BUSY.

London, August 17.
The annual compendium of judicial statistics in England shows that the cases before the courts in recent years have borne an almost constant proportion to population, like the death rate. In 1899 there were more than 1,125,000 actions taken, making over 4 per cent. of the population and showing that the English is a veritable nation of litigants. The number of petitions for divorce was 645, and wives' petitions now almost equal those of husbands. Recent legislation has enabled the poorer classes to get judicial separations from police magistrates, who granted 6,533 of these separations during the past year.

The number of debtors imprisoned for contempt of court in refusing to pay the installments ordered reached 7,867. There were 5,356 petitions in bankruptcy with £9,395,351 total liabilities. A remarkable number of solicitors have been struck off the rolls for annexing their clients' money. It seems that still further stringency is needed, for in fifty bills of costs taxed by the officers of the high court of justice £555 was the average allowed, meaning that there was an attempt to extort over 100 per cent. above what was due.

"SHAMROCK" STRETCHES HER SAILS.

New York, August 20.
The *Shamrock II*, after a light-weather sail-stretching spin of six hours, returned to her moorings in Sandy Hook bay at 4.35 p.m. During the day five jib topsails were tried. The last one was a beautiful balloon of light white linen and silk. The *Shamrock II*, accompanied by the steam yacht *Edith*, sailed to a point about two miles east of the Sandy Hook lightship and turned back. It was almost a flat calm for three hours. Then a light breeze from the south-east came along, which gave the yacht a chance to manoeuvre. Sir Thomas Lipton, George L. Watson and G. B. Hayward were on board the challenger during her trial.

Sir Thomas Lipton said to-day that there was no foundation for the published report that he had said that he had been sold out in his previous attempt to win the America's cup by a member of his crew.

New York, August 24.
Professional betting men are beginning to show a keen interest in the coming international yacht race, and some men who are well known in the sporting world are inclined to give the long end to the *Shamrock*. One of the most prominent of those sporting men is quoted as saying that the men who make bets are disgusted with the trials of the American boats and that those with the bank rolls do not like the performances of the *Constitution*. He has expressed the opinion that even money bets on the race will prevail.

LATEST COMMERCIAL.

IMPORTS.

A fair amount of business has been done in yarns of 2/60's and 2/80's gassed, and with the assurance of a good rice harvest demand should brisk up shortly. Clearances already show improvement. In shirtings there has been some business done, more particularly for greys, while contracts for whites, delivery 1902, are already being arranged. Fancies and Woollens are expected to share in the revival, but a good many clearances will have to be effected ere this market resumes a healthy aspect.

COTTON PIECE GOODS.

	PER PIECE.

TOKUMIYA.

SHARE AND STOCK BROKER: OFFICIAL CLOSING QUOTATIONS OF TOKYO STOCK EXCHANGE.

September 18.

The market underwent a complete change. The uninterrupted rise for the last two weeks put the operators on the alert, and not a few began unloading.

yesterday. Just as this began a large purchase order for N.Y.K.'s was placed on the market, which rapidly strengthened its tone, the Tokyo Stock Exchange shares taking the lead in the upward movement, the Osaka market also rose in sympathy with the Tokyo market, the rise yesterday in the case of the former being *yen* 5. This morning the strong feeling manifested itself in all the quotations, the rise (morning market) being from 20 *sen* to 3.40 *yen* as in case of the "Tokubai" (Tokyo Stock Exchange share.) The unloading operations entirely ceased, but in the afternoon recommenced, with the result that prices fell.

BEAUTIFULSKIN

Soft White Hands

Luxuriant Hair

Produced by

CUTICURA SOAP.

MILLIONS OF WOMEN USE CUTICURA SOAP exclusively for preserving, purifying, and beautifying the skin, for cleansing the scalp of cruds, scales, and dandruff, and the stopping of falling hair, for softening, whitening, and soothing red, rough, and sore hands, in the form of baths for annoying irritations and chafings, or too free or offensive perspiration, in the form of washes for ulcerative weaknesses, and for many antiseptic purposes which readily suggest themselves to women and especially mothers, and for all the purposes of the toilet, bath, and nursery. No amount of persuasion can induce those who have once used it to use any other, especially for preserving and purifying the skin, scalp, and hair of infants and children. CUTICURA SOAP combines delicate emollient properties derived from CUTICURA, the great skin cure, with the purest of cleansing ingredients, and the most refreshing of flower odours. No other medicated soap ever compounded is to be compared with it for preserving, purifying, and beautifying the skin, scalp, hair, and hands. No other foreign or domestic toilet soap, however expensive, is to be compared with it for all the purposes of the toilet, bath, and nursery. Thus it combines, in ONE SOAP at ONE PRICE, the BEST skin and complexion soap, the BEST toilet and BEST baby soap in the world.

Complete External and Internal Treatment for Every Humour,

Consisting of CUTICURA SOAP, to cleanse the skin of cruds and scales and soften the thickened cuticle, CUTICURA Ointment, to instantly allay itching, inflammation, and irritation, and soothe and heal, and CUTICURA RESOLVENT, to end and cleanse the blood. A SINGLE SET is often sufficient to cure the severest humours, with loss of hair, when all else fails. Sold throughout the world. "All about the skin, scalp, and hair" post free, of Aust. Depot, R. TOWNS & CO., Sydney, N. S. W. So. African Depot, BENSON LTD., Cape Town. PORTER DRUG AND CHEM. CO., Sole Props., Boston, U. S. A.

No notice will be taken of anonymous correspondence. What is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, SEPTEMBER 28TH, 1901.

SUMMARY OF NEWS.

UP to the end of August, Hongkong's rainfall was 22 inches below the average.

THE death is announced of Mr. John Colville, Radical Member for North-East Lanarkshire.

THE laying of a submarine cable from Skagway to Juneau, Alaska, was completed on Aug. 22nd.

IT seems from Manila newspapers that there are many renegade Americans fighting on the side of the Filipinos.

THE British Consul-General at Marseilles reports that artificial is killing natural indigo in the French market.

M. LESSAR, the new Russian Minister to Peking, made the run from St. Peter-burg to Newchwang by rail in 15 days.

A VIOLENT earthquake was felt in various districts of Japan at half-past nine o'clock on the morning of the 19th inst.

MR. YAMADA TAKESHI, M.P., is very ill. Count Okuma sent a physician, and Mr. Asada Junko visited him on the 23rd inst.

NUMBERS of monks are leaving France owing to the Associations law, and are settling in England, especially in the Isle of Wight.

MR. ROCKHILL, late American *Chargé d'Affaires* in China, arrived at Nagasaki from Shanghai on the 23rd inst. and left for the east at once.

MESSRS. TAKI, Shiina, and Saito on the staff of the *Ibaraki Shimpō*, were arrested on the 21st inst. and at the same time a search was made of their houses.

MONDAY being the tenth day of Tishri, of the year 5,662, and the Day of Atonement, the great majority of the Jewish houses of business in Yokohama were closed.

HARD frost was experienced at Kuriyama-mura, Shioya-gori, Tochigi Prefecture, from the 17th to 23rd inst. and is expected to have done great damage to the crops.

A TELEGRAM to the *Osaka Mainichi* says that General Gribsky, Governor-General of the Amur district, has just been appointed Governor of the Province of Archangel.

KIHARA YOSHIKATA, an employe of the Imperial Educational Society, was arrested by the police on the 22nd inst. and charged with stealing 200 *yen* belonging to the Society.

A POLICE-CONSTABLE named Matsubara Masanobu was killed by a burglar whom he was trying to arrest at Matsuyama, early on the morning of the 23rd inst. The robber escaped.

A WOMAN named Ito Toki, living at Tamachi, Akasaka, Tokyo, was arrested by the Akasaka police on the 22nd inst. on a charge of obtaining money on three forged promissory notes.

A PHYSICIAN named Ishikawa Kamejuro, living at Shin Katamachi, Asakusa, Tokyo, committed suicide by poison early on the morning of the 19th inst. He is not expected to recover.

NAKANO JUKICHI, Seki Yenjiro, Yasui Takeji and two others, officers of the Mino Bank, Okayama, were arrested on the morning of the 22nd inst. on a charge of fraudulent bankruptcy.

KOMURO ICHIVEMON, living at Ryugomura, Nakagori, Ibaraki Prefecture, was murdered by another man named Sato Sanjiro during a quarrel on the 20th inst. The murderer was arrested at once.

A COOLIE named Moriguchi Tokujiro was working on a hill called Kamonyama, Yokohama, on the morning of the 22nd inst. when he was struck on the head by a mud cart and killed on the spot.

DON CARLOS PALANCA, the Captain China of Manila, died on the 3rd inst., and was buried at La Loma Cemetery on the following day. Deceased was a native of Amoy. His fortune is variously stated at \$1,000,000 to \$2,000,000.

NOTHING daunted, the enterprising owners of the wrecked *Sobraon* are now working away at their property under water with as much zest as when it still rested on the rocks, and it is understood that they are meeting with fair success.

A PRIEST named Hiruta Kojun, attached to a Buddhist temple known as Honryuji, at Matsuchiyama, Asakusa, Tokyo, attempted to commit suicide with a woman in a house of ill-fame, at Kyomachi, Yoshiwara, Tokyo, on the night of the 18th inst.

A boy named Takano Usaburo (16), employed by an alcohol dealer named Asahina Kanzo, at Onoyecho, Yokohama, was arrested by the Isezaki-cho police on the morning of the 19th inst. on a charge of attempting to obtain 200 *yen* on a forged cheque on the First National Bank.

A PORCELAIN dealer named Akahagi Naotaro, living at Kikugawacho, Honjo, Tokyo, was arrested by the Nihonbashi police on the 18th inst. on a charge of stealing 14,000 small tea-pots from a godown belonging to two porcelain shops at Hamacho and Koamicho, since April last.

A REMARKABLE decree has been issued by the Hungarian Minister of the Interior. In its terms it prohibits the employment of barmaids under 40 years of age. The reason mentioned is on the ground of morality. The proclamation, it is said, has caused consternation at Buda-Pesth, the capital, and other large towns.

AKUNE SANJI, a native of Kagoshima, formerly a police-constable in Tokyo, was arrested by the Isezaki-cho police on the 21st inst. charged with having forged the name of Yamamoto Yoshio, a student of Admiral Ito's, staying in a hotel at Onoyecho Gochome, Yokohama. He obtained several articles and money as a result.

MR. AKIYAMA RYOTARO, of the Yokohama Branch of the Occidental and Oriental Trading Company, fired a pistol at Yamano Kamejiro and Yamano Hikojiro at Kami Kawara-machi, Utsunomiya, early on the morning of the 22nd inst. Both were injured. Some dispute concerning the collection of a debt of 1,800 *yen*, was the origin of the affair.

A MAN entered a fish restaurant at Muramatsucho, Nihonbashi, Tokyo, on the night of the 20th inst. and after having eaten a meal was unable to pay the amount of the bill, 1.48 *yen*. He went out accompanied by a servant of the restaurant to obtain money but failed in the attempt. The servant wanted to appeal to the police and the man then jumped into the water from Ohashi. The body has not been found.

IT will interest local cricketers to know that Captain F. D. Markham, of the King's (Shropshire) Light Infantry, has just been seconded for service under the Foreign Office. Captain Markham, it is almost unnecessary to say, is one of the two survivors of the *Bokhara* disaster of October, 1892. Dr. J. A. Lawson and he were the only two passengers who escaped, and both were members of the Hongkong cricket team returning from Shanghai.

SUZUKI SHINKICHI, foster son of a wholesale charcoal dealer at Tajima-cho, Asakusa, Tokyo, attempted to commit suicide by *seppuku* in a hotel known as Tatsuokaro, at Tatsuoka-cho, Hongo, Tokyo, on the morning of the 23rd inst. He arrived at the hotel the previous night. When a maid servant entered the room the next morning she found the young man cutting his stomach with a small sword. She at once called for assistance and the would-be suicide was prevented from achieving his purpose.

KIMOTO TEISUZO, employed in a confectioner's shop at Inagawa-koji, Kanada, Tokyo, was robbed by a pickpocket of a bag containing 500 *yen* in paper notes and 380 *yen* in cheques while travelling by train between Hachioji and Iida-machi, on the 9th inst. He reported the matter to the Kojimachi police station at once. On the morning of the 22nd inst. a packet was received at the station through the post, and on the police opening it a bag was found with money, cheques and a letter of apology. The bag and money were returned to the owner at once.

THE EMPEROR AND MARQUIS ITO.

The Emperor presented to Marquis Ito, in connexion with His Excellency's trip to Europe and America, a gold watch and a brocade table-cover with the Imperial arms woven on it.

In the *Fiji Shimpō* there is a remarkable article, said to be a précis of the views entertained by two or three leading statesmen. The gist of the article is that Marquis Ito and Count Okuma are likely to come together in any political crisis, Marquis Yamagata standing alone. A coolness is alleged to have arisen between Marquis Ito and Marquis Yamagata from the time when the former handed over the Cabinet to Count Okuma and Count Itagaki. By way of reprisal Marquis Yamagata obtained the Emperor's sanction to organise a Cabinet after the resignation of the Okuma-Itagaki administration, and organized it with striking suddenness while Marquis Ito was on the eve of returning from his trip to China. Then again it is alleged that Marquis Ito condemned Marquis Yamagata's method of dealing with the Diet, and that the collision between the former and the House of Peers was the outcome of that difference of opinion, while finally Marquis Saionji would have been Marquis Ito's choice to head the present Ministry whereas Viscount Katsura was Marquis Yamagata's candidate. Marquis Ito is also said to have expressed a desire to consult Count Okuma in the event of any emergency. On the other hand, the *Fiji's* informants allege that though Count Okuma and Marquis Ito are close personal friends, the former is not altogether anxious for political association with the latter. On the contrary, Count Okuma inclines to prefer a combination with Marquis Yamagata, who, however, shows not the slightest disposition in that direction. The sum of it all is that Marquis Ito and Count Okuma will yet be found in the same camp, which forecast we (*Japan Mail*) would find credible enough if neither statesman had a party behind him.

THE WEALTH OF JAPAN.

The *Fiji Shimpō* has been for some months engaged in a most interesting investigation with the object of discovering how many people there are in Japan whose property amounts to five hundred thousand *yen* and upwards. Most exhaustive methods seem to have been pursued by our contemporary in collecting information, the assistance of bankers, local officials, registers, tax-collectors, and so on having been enlisted. Men who, though nominally owning large property are heavily in debt, have of course been excluded from the account, and in publishing the names the *Fiji* refrains from stating the amount of each person's possessions, the whole being grouped under the comprehensive heading of five-hundred-thousand-*yen* proprietors. The result of the investigation is that 441 names are placed upon the catalogue. Tokyo contains one-third of them, but, on the other hand, the 8 provinces of Kwantō, that is to say, the provinces about Tokyo, are distinguished by a paucity of wealthy men, which is easily accounted for by reflecting that large property-holders naturally repair to the capital. After Tokyo the towns, arranged in order of their numbers of wealthy men, stand thus:—Osaka, Kobe, Nagoya, Kyoto and Yokohama. It is somewhat unexpected to find Yokohama at the bottom of the list. These five towns

with Tokyo contain three-fourths of all the names on the list. Among the prefectures, Niigata and Nara head the catalogue, an unlooked for result, attributable probably to the great appreciation of value that forest lands in those prefectures have undergone since the construction of railways. Strange to say, Kiushiu, which has always been supposed to be one of the wealthiest districts in Japan, has few semi-millionaires, but the *Fiji* does not infer that Kiushiu is poor; its conclusion is that wealth is more generally distributed there. Chiugoku and Hokkaido, as might have been anticipated, are markedly deficient in rich men. Comparing these results with American statistics, it appears that whereas there are 3,828 persons in the United States credited with possessing a million gold dollars each and upwards, or, in other words, one millionaire for every twenty thousand inhabitants, supposing the population to be 75 millions, there is in Japan only one semi-millionaire for every hundred thousand inhabitants, taking the population at 45 millions. Reducing these figures to the same denomination (*yen*), it would appear that there are just ten times as many men of wealth in America as in Japan. But before accepting that conclusion a large correction is evidently necessary, since, although there may be only 3,828 millionaires in the States, there may be fifty or a hundred thousand quarter-millionaires. Obviously, since half a million *yen* is equal to only a quarter of a million dollars, no accurate comparison can be made until the number of quarter-millionaires in America is ascertained.

Concerning the occupations of the persons catalogued, it appears that merchants head the list, farmers come second and manufacturers bring up the rear. Evidently the manufacturing industry is in its infancy in Japan. Even in the case of merchants, land figures as their largest asset and shares stand next. It is noticeable that out of the 441 semi-millionaires, no fewer than 66, or one-seventh of the whole, are noblemen who do not pursue any trade or profession. A remarkable fact is that not more than one or two in every ten have amassed their wealth in one generation: the others have inherited a great part of it. This is just the opposite of the conditions prevailing in America, where seven or eight in every ten millionaires have made their money in their own lifetimes. There are, of course, some notable cases of quickly acquired wealth in Japan, as, for example, the Iwasaki family, Mr. Yasuda, Mr. Okura and Mr. Furukawa. But they are exceptions.

In Tokyo, as may well be supposed, Nihon-bashi is the wealthiest district; it has 38 names to its credit. Kojimachi is second with 18 names. Kyobashi comes next with 12. Azabu is third, with 11; Hongo, fourth with 10.

CHINESE AFFAIRS.

Saturday, Sept. 21.

In addition to the five thousand volumes sent by the Emperor of China to the Emperor of Japan by Mr. Na Tung, there are several vases of jade, of bronze, and of porcelain, all said to be of very beautiful workmanship. It is evident that the capture of Peking did not deprive the Chinese Court of the means of making handsome gifts.

Monday, Sept. 23.

Mr. Komura says, according to the *China*, that Viceroy Li is in an exceedingly enfeebled condition. His mind

remains as clear as ever but his body is very weak. Intervals of comparative health alternate with intervals of prostration, and the former are steadily growing fewer and shorter, the latter longer and more frequent. It is no wonder that rumours of his demise or imminent danger are constantly circulated. His illness is a great misfortune for China. Naturally he has become very irascible. On five occasions of discussion with Mr. Komura, the old man lost his temper, an incident which Mr. Komura would gladly have avoided had duty permitted.

Speaking of Manchuria, Mr. Komura said that according to information collected on the spot by a certain person, the total number of Russian troops in Manchuria is about forty thousand, but not more than one half of them are regulars, the rest being railway guards. Indeed the troops are all fully occupied guarding the line, and do not penetrate far into the interior. As to the future, it is to be observed that a large foreign force will from henceforth be stationed at various points in Chihli. Their presence there is not intended to be permanent. So soon as order is fully restored and the Court firmly re-established in Peking, the Chinese Government will doubtless raise the question of the withdrawal of these troops, and Russia's military evacuation of Manchuria will come upon the tapis simultaneously.

Wednesday, Sept. 25.

A curt telegram to the *Asahi Shimbun* announces that the Chinese Court has postponed its return to Peking until next spring. That would not necessarily mean that the project of return has become altogether problematical. There must be a great deal to do in connexion with preparations for the Court's return to a city which suffered as Peking did at the hands of the allies. But we ourselves have always doubted the restoration of Peking to its old position of Imperial Capital so long as Chihli is in foreign military occupation, and every postponement of the Sovereign's return strengthens the doubt. If China is in any degree maliciously disposed, she certainly has an unique opportunity offered to her, for if the Court now quietly decided to make its permanent abode at some other place, comparatively remote and inaccessible, leaving the "defensible quarter" in Peking to serve as a memento of the amiable trustfulness of foreign Powers, and the Legation Guards to entertain each other in a provincial town, a situation comically futile would be created.

A telegram from Peking to the *Fiji Shimpō* says that the Russian Government signified its disapproval successively of two or three names submitted to it by the Chinese Government in connexion with the nomination of a successor to Mr. Yang, the discoverer of a new diplomatic device. The telegram adds that it is not known whether Lo Feng-lo's was among the names thus rejected. That doubt need not occupy the public mind, we imagine. Unless Russia suspects that Mr. Lo has been converted to British policy by his residence in London, his appointment to the Legation in St. Petersburg would be heartily welcomed in that city. In this context may be mentioned another rumour, namely, that China has drafted a treaty with regard to the Manchurian question, and that her new Representative in St. Petersburg will be charged with the duty of negotiating it. That is very unlikely, we should think.

M. de Giers, hitherto Russian Representative in Peking, arrived in Kobe on the

afternoon of the 23rd by the *Dimitri Donskoi*. He was met in Kobe by the Russian Consul from Yokohama, who had gone south expressly for that purpose. M. de Giers landed the same afternoon and was to proceed to Tokyo after a brief delay.

Thursday, Sept. 26.

There is now talk of a Russian railway from Tashkend to Peking, bringing the Chinese capital into direct communication with Russia in Europe by way of Orenberg. Mr. Yugvitch, Chief Engineer of the Manchurian Railway, is said to have recommended the project. Another rumour is that Russia has come to an agreement with China for the building of a line from Kiakhta to Peking. The sum of the matter is that Russia is working to place herself in direct communication with Peking, with Port Arthur and with Söul, the last *via* Wiju. Her progress eastward is steady.

In this context we may quote a paragraph from the *Bourse Gazette*, which claims to represent the commercial interests of Russia:—"As a matter of fact, Russia expects nothing from Japan except renunciation of her designs on Korea. After Russia has employed colossal means in her civilizing mission in East Asia, she is in duty bound to guard the independence of the peninsula which lies in the path between Port Arthur and Vladivostok. But, in addition to Korea, there are large territories in Southern China, and numerous island groups south of Formosa, and in Russia nobody has ever denied the justification of Japan's ambition for territorial expansion." The line of reasoning adopted by this paragraph is ingenious. Because Russia has seized the Liaotung Peninsula, therefore she is entitled to the Korean. But, after all, what past masters in hypocrisy the Christian nations of the West are! Observe the *Bourse Gazette's* talk of the "colossal means" Russia has employed "in her civilizing mission in East Asia." What is Russia doing to civilize Korea? What is she doing there any how compared with what Japan is doing? And for what does the civilizing mission count in her march eastward? If this era has two characteristics eminently prominent above all others, they are racial prejudice and proneness to talk bunkum.

Friday, Sept. 27th.

In spite of the fact that no official intelligence has been received of the Chinese Court's alleged postponement of its return to Peking, telegrams continue to arrive in that sense. The *Asahi* publishes such a message. It is not accompanied by any explanation. Hitherto the Court has deemed it expedient, if not necessary, to offer some excuse for, or any rate to explain, its changes of plan, but apparently nothing of the kind is deemed essential any longer. Onlookers disposed to draw sinister inferences will doubtless attach a disquieting import to this show of *insouciance*, but it remains to be seen whether postponement is really contemplated. One point can not be over-looked, namely, that as the date originally fixed for the Court's departure from Hsian is now very near at hand, there must be many incidents which the most casual observer can construe as indications of adherence to programme or departure from it. A month ago newsmongers had a free hand for there were no means of either checking or confirming their statements. But the commotion preceding the Court's exit from Hsian and its entry into Peking must have commenced ere now, unless there is to be a postponement, and

consequently negative evidence assumes a value that it did not before possess. A series of postponements, or a "temporary" transfer of the Court to some other city would create a situation difficult for the Foreign Powers to deal with. Under any circumstances they could hardly undertake to force a place of residence upon the Emperor of China. His Majesty is entitled to freedom of domicile in at least as full a measure as the humblest of his subjects. There would be nothing for it but to follow him with the Legations and all their paraphernalia did he decide to take up his abode in some remote city. In that event, the defensible quarter in Peking and the foreign troops in Chili would assume a comical character. Truly if the Empress Dowager and the Emperor had a sense of humour stronger than their desire of peace and quiet there is an unique opportunity for them to play the most prodigious practical joke on record. But it is to be hoped that they have sufficient wisdom to count consequences. Their transfer of the capital to some other city at this juncture, after the allied Powers have been led to believe that Peking would again become the metropolis, and after extensive preparations have been made in obedience to that belief, would amount to an act of emphatically unfriendly bad faith, and would fix Russia's feet in Manchuria.

The *Chino Shimbun* considers it advisable to offer an explanation as to the posting of Japanese troops at Shanghai. It explains that there has hitherto been a force of Marines there, and what is now being done is merely to replace them by regular troops of the line. Japan has no ulterior object in taking this step. She merely seeks to preserve the balance of power. If Germany, France and England are posting troops in Shanghai, and if permanent barracks are being built for some of those troops, she considers that her own interests require some degree of military representation. The moment, however, that the other Powers withdraw their troops, she will hasten to follow their example.

With whatever eyes the events of the past two years in the Far East be viewed, the conclusion is forced upon us that Germany must bear the responsibility of having converted this part of the world into an armed camp. Kiao-chow was the beginning of all the trouble. Port Arthur followed as an almost inevitable consequence. Wei-hai-wei ensued, and the Boxers crowded the tableau. It was Germany, too, that set the example of pushing the balance-of-power principle to the extent of stationing troops in Shanghai. France followed her example and Japan brings up the rear. These events may all have been inscribed from time immemorial in that "omniscient plan," to which fatalists appeal. But their sequence has unmistakable significance in the eyes of common or garden mortals.

THE BANK DISPUTE.

Saturday, Sept. 21.

It appears that various attempts were made to effect an arrangement of the dispute between the Russo-Chinese Bank and the 13th Bank, and that after the failure of these attempts the President of the latter signified his intention of repudiating the act of the Bank's Kyoto Manager, Mr. Kondo Senkichi, on the ground that although the latter was actually officiating as Manager, he had not been registered in that capacity. The *Nichi Nichi Shimbun*

and the *Kokumin* both discuss the matter, and both agree that the plea put forward by the 130th Bank is inconsistent with all business ideas. In fact, if it were necessary for the public, before transacting any business with a bank, to ascertain exactly whether the official discharging the functions of Manager had been duly registered—to ascertain, in short, whether the Bank had taken proper steps in appointing its officials—business would become virtually impossible. The two journals insist that very great injury will be done to Japanese credit by pursuing such a plea, and they urge that a settlement be effected at once. Under any circumstances the incident will be found to have caused much injury to Japan's reputation. We ourselves can scarcely credit that the whole of the 130th Bank's case has been stated, but if there is any important point reserved, Mr. Matsumoto Jutaro, President of the Bank, ought to make it public as quickly as possible. Whether there is or is not such a point, however, the pettifogging manoeuvre of attempting to repudiate the Manager's action can not be condoned. Mr. Matsumoto claims that the endorsement of the note for 200,000 yen was made by the Manager of the Kyoto Branch without the knowledge of the head office, and for his—the Manager's—private benefit, and that the said Manager not being a duly registered official, had no competence to undertake such a responsibility without previously seeking authorization. But if that plea is sincere, it seems to us that it should have been advanced at once, and not in the sequel of attempts to arrange the affair by a measure of postponement. We may mention *en passant* that the interest paid by the Toyokawa Railway for the loan was 12.725 per cent., and that the Russo-Chinese Bank received 10.95 per cent.

Monday, Sept. 23.

Another Bank is said to be in the complication which is now attracting so much attention. It appears that the 22nd Bank also obtained from the Russo-Chinese Bank an advance of 30,000 yen on the strength of Mr. Kondo Senkichi's endorsement. But as the President of the 130th Bank has repudiated Mr. Kondo's action in the case of the railway loan guaranteed by the latter, Mr. Kondo's signature as representing the 130th Bank becomes valueless for the purposes of the 22nd Bank also. It is to be hoped that this wretched affair will soon be definitely disposed of by the law courts. If it turns out that, as the President of the 130th Bank claims, its Kyoto manager, Mr. Kondo, deliberately abused his position by endorsing a bill for the sake of his own private gain, the Bank has been placed in an unfortunate position by the dishonesty of its official, but there is no banking canon recognised by intelligent people that renders a bank's clients liable for losses inflicted on the bank by abuses of trust on the part of its officers. The 130th Bank had no manner of right to employ as its representative in Kyoto a man for whose acts it did not intend to assume responsibility, and still less has it any right to claim that because it failed in its own duty of registering its representative, such failure may be set up as a bar to the discharge of its duly contracted obligations. We regard this affair—supposing the facts to be accurately stated—as one of the most discreditable that has ever occurred in Japan.

KOREA.

Saturday, Sept. 21.

Mr. Komura called at Masampo on his way back to Japan, and saw there a plot of land which Prince Konoye has acquired for the purpose of building a villa. His comment on the Prince's acquisition is that, as the place commands a fine view, it is well suited for a villa. That comment recalls a question which we have heard discussed of late. Do the Japanese really love fine views? We confess that, for our own part, we should be disposed to describe them as a people eminently fond of natural beauties. The pictures of their artists seem to prove that such is the case, and so does the fact that there is hardly a region of Japan specially endowed with scenic riches where the people have not singled out the most remarkable aspects of nature and catalogued them numerically. Another proof is furnished by the attitude of the lower orders. A Japanese rustic, labourer or *jinrikisha*-coolie will pause to admire a prospect which an Occidental in a similar rank of life would pass unnoticed. There is certainly a small class of Japanese, the *chajin*, who hold that the view from the windows of a *cha-zashiki* should not be extensive, but should rather suggest nature in one of her homely and limited moods. That however, is not because the *chajin* does not love a fine prospect, but because an extensive and magnificent outlook is not adapted to the tenets of his peculiar cult. Mr. B. H. Chamberlain says that the Japanese love scenes not scenery. Some other foreign observers share his view. We have never met a Japanese that endorsed it.

There appears to be some complication connected with the building of the Seoul-Fusan Railway. The Korean Government is represented as desiring to have the gage altered from the medium to the narrow, and it is of course surmised that this requisition is prompted by Russia who wishes to make the gage uniform with that of her own Manchurian system. We really do not see why the Japanese should be solicitous about this matter. If any sinister purpose be connected with the adoption of the narrow gage, the choice might be expected to inure to Japan's advantage no less than to Russia's. From an economical point of view it is evidently desirable that the whole Korean system should be of the same gage, and though experience has proved that the medium gage is best, it is by no means certain that its technical advantages would outweigh the obvious utility of uniformity between the Manchurian and the Korean roads.

Monday, Sept. 23.

The efforts to have Lady On appointed Empress of Korea seem likely, after all, to be crowned with success. A telegram to the *Asahi* alleges that things point in that direction, and that an entertainment to be given by the Emperor to the Foreign Representatives on the 23rd instant, is believed to be for the purpose of introducing the new Empress.

The official opening of the work on the southern section of this line took place on the 21st instant. Few railways have been so much talked of on the eve of their construction. If all the paragraphs that have been written in newspapers about this road since its inception were joined together they would almost extend over the whole distance that the line is to cover.

Tuesday, Sept. 24.

Our readers are aware that Wolmi Island, which lies opposite to Chemulpho, was purchased some time ago by a Mr. Yoshikawa, who, however, has never been able to obtain possession of the property. As to the nature of his title nothing seems to be publicly known, but it does not seem to have been legally questioned. Finding it impossible to obtain official assistance for the purpose of ejecting the tenants, Mr. Yoshikawa finally took the law into his own hands. He hired a posse of coolies and proceeded to demolish the houses on the island, dealing with some 20 or 30 of them in that way. The inmates have of course lodged complaints in Seoul. Probably this is a case similar to those frequently recurring in Japan. There is nothing more difficult in this country than to obtain the removal of a tenant living on property which has changed hands. We have known instances of tenants who, after having received due notice from their landlord that the land had been sold and that they must move out by a certain day, have calmly continued in residence month after month, knowing that the new owner's only resource is to pull down their houses, a remedy from which he naturally shrinks.

Newspaper correspondence from Fusan, Korea, reports that the local Agency of the Standard Oil Company gave a banquet the other day to a large number of residents in the settlement by way of announcing its commencement of business. The construction of the company's godowns on Zersu-ai Island has already been completed, and Mr. Aekland has been sent over to act as manager of the office. Local dealers in petroleum, 47 in number, agreed to do business in accordance with the methods of the company. Consequently such mercantile power as may exist in connection with the trade in petroleum, which had hitherto exclusively belonged to the Japanese, and enabled them to carry on trade annually to the extent of 55,450 cases valued at ¥191,259 (according to statistics drawn up in 1900), has been wholly transferred to the hands of a foreign firm.

Thursday, Sept. 26.

A very vague telegram is published by the *Fiji Shimpō* to the effect that for some time, especially on the eve of the official inauguration of work, the Korean Government tried to place obstacles in the path of the Seoul-Fusan Railway scheme, but that their efforts proved unsuccessful and the future of the line is now assured. That is a very difficult story to believe considering that the Korean Court is a large shareholder in the line. Of course the suggestion intended to be conveyed is that hostile influence was exercised by Powers unfriendly to Japanese development in the peninsula.

Friday, Sept. 27th.

The Japanese Representative in Korea is working strenuously to procure the abolition of the veto upon the export of grain. It appears that there has been a misunderstanding. Mr. Hayashi understood that the Korean Government had promised to remove the veto at harvest time, whereas the Korean Government maintains that it merely promised to consider whether a date for removal could be fixed when the quality of the harvest had been ascertained. Apart from that difference of interpretation, the Japanese Legation holds that as harvest prospects no longer inspire any uneasiness, there is no reason why the veto should remain in force. They are said to be taking a very strong line, whereas the Koreans are doing what they can to evade the issue.

THE JAPANESE SQUADRON IN CHINA.

A correspondent of the *Nippon* tells a story too good to be absolutely false. It was expected, he said, that the fine squadron of new vessels which visited Korean waters recently would proceed to Vladivostock, but only two of the ships went there, the *Kasagi* and the *Iwate*, both first-class cruisers (9,500 tons). Care was taken to impart a friendly character to the visit of the ships, so much so that the officers declared their object to be the cementing of amity between their country and Russia. A brilliant entertainment was given for that purpose, no expense being spared, but the gravity of Japanese onlookers was severely taxed when they heard the Japanese marines singing, while the banquet was actually in progress, a war-song to the effect that having conquered the Chinese, their next duty was to tackle the Russians.

This correspondent describes Vladivostock manners and customs in terms which recall the old-fashioned ways of England and Ireland. The Russian idea of hospitality, he says, is to put a man under the table. Anything short of that is regarded as a failure. Thus a saying has become current among the Japanese in that part of the world that the real Russian sphere of influence is a wine party.

According to the same informant great progress has been made with the works on the line from Port Arthur to Harbin. The road would have been opened for traffic in the course of the current year had not the recent disastrous floods impeded operations. There has not been any inundation of such dimensions for many years. It is said to have exposed a grave engineering error in the construction of the Trans-Manchurian Railway, namely, that the bed of the line is too low, and that if traffic is to be maintained permanently, extensive works for the purpose of elevating the road will have to be undertaken.

MISSIONARIES IN CHINA.

Mr. Frederick Greenwood, writing in the *Nineteenth Century*, argues that the American and English Missions should agree not to allow women to proceed to any part of China inaccessible by ships. That is a position taken in these columns some years ago, but taken with considerable diffidence, for it seems plain to us that the missionaries alone are in a position to judge whether the good wrought by ladies in the interior outweighs the risks to which they are exposed. Probably the missionaries would answer in the affirmative were the question propounded to them, and indeed even without practical experience it is easy to see that Christianity can scarcely reach the female portion of the Chinese population without women missionaries.

Another point made by Mr. Greenwood is that "the hope and aim of the expedition to Peking was to strike a resounding blow of intimidation." That is an entirely new view. We have always supposed that the hope and aim of the expedition was to save the foreign community in Peking from massacre at the hands of the Chinese, and that the expedition set out with a force which many persons regarded as quite inadequate even for that humble purpose. There was no idea whatever of striking "a resounding blow of intimidation" when the expedition left Tientsin, whatever may have been the motive of the operations subsequent to the relief of the Legations.

JAPAN'S TRADE WITH RUSSIA.

A Japanese merchant of Nagasaki, Mr. Yezaki Yeizo, who has been engaged in the Russian trade for over 40 years, gives a most gloomy account of his experiences. His opinion, published by the *Nippon*, is that no opening whatever presents itself for a large commerce between Japan and Russia. The main difficulty is the Russian tariff. The rates are so onerous that a pair of cheap window curtains purchased in Japan for 10 *yen* must be sold for about 70 *yen* in Russia to show any profit. The Russians are fond of Japanese articles, but they know very little about them and are not prepared to pay such prices. There is a French firm in St. Petersburg which has a large spinning and weaving factory where raw silk imported from the East is manufactured into all sorts of goods. The tariff charges are thus eluded, and the goods can be placed on the market at prices defying competition. Mr. Yezaki says that the outcome of his own experience is that he has advertised Japanese productions on a small scale in Russia at a cost to himself of thirty or forty thousand *yen*. On the other hand, most of the houses of men in good social positions have museums, small or large, for it is not the Russian habit to display a quantity of things in their dwelling rooms: they prefer collecting them in a separate apartment. In nearly every one of these museums something of Japanese production is shown, whether purchased direct by the owner himself or through the medium of his friends. Instead, therefore, of sending goods to Russia for sale, the wisest plan for the Japanese is to afford all possible facilities to Russian visitors to make purchases in Japan.

THE SOBU RAILWAY QUESTION.

The Sobu Railway question appears to be assuming quite an important place in public attention. Our readers have already been informed of this matter. The Railway Company originally obtained a charter to extend their Chiba-Tokyo road from Honjo to Ryogoku by an overhead line, the Honjo station being found too remote and inconvenient. Deterred by the costliness of overhead construction, they are now endeavouring to obtain official permission to substitute an ordinary line. This alteration of plan has aroused vehement opposition among the inhabitants of the Honjo districts. They are agitating vehemently against it, and they seem likely to obtain the support of all the political parties. It is to be hoped that the Authorities will not make a sacrifice of public convenience and security to private interests, as would certainly be the case were the proposed alteration sanctioned. Meanwhile, one of the most regrettable features of the affair is that the *Fiji Shimpō* has allowed itself to be betrayed into the disgraceful methods of criticism adopted by the gutter press of Tokyo. It publishes a cartoon plainly suggesting that the Minister of Communications is influenced in this matter by the fact that his wife is a shareholder in the Kōbu Railway. The foreign public believed that the *Fiji Shimpō* was one of the very few Japanese journals incapable of descending to such miserable manoeuvres, but for once our contemporary seems to have been betrayed by its cartoonist.

THE NEW FOREIGN MINISTER.

The ceremony of conferring the portfolio of Foreign Affairs on Mr. Komura took place in the Palace at 10 a.m. on the 21st instant. At the same time Mr. Uchida was relieved of his duties as Vice-Minister and appointed to succeed Mr. Komura as Japanese Representative in Peking. Both Mr. Komura and Mr. Uchida speak English perfectly, which will be a great convenience to those that have relations with them in their new positions. Mr. Sone has been relieved of his temporary appointment as Minister of Foreign Affairs.

The *Fiji Shimpō* expresses great satisfaction at the assumption of the duties of Foreign Minister by Mr. Komura. It remarks that an unsatisfactory state of affairs existed before his return to Tokyo, for although Mr. Sone was nominally holder of the portfolio, Mr. Komura in Peking really exercised a species of control which necessarily could not be very effective. It is evident from the *Fiji's* writing that it has a very high opinion of Mr. Komura's abilities. That indeed seem to be the general opinion, for even the *Nippon* speaks in high terms of the new Minister, though that critical journal is of opinion that Mr. Komura will not be able to accomplish anything great, inasmuch as he is hampered by the nature of the Cabinet in which he serves, a Cabinet termed *Koken-zuki Naikaku* (a cabinet under guardianship). The *Nippon* appears to regard the Administration as a kind of stage upon which Ministers are always endeavouring to cut a conspicuous figure. The *Fiji*, with its usual sobriety, takes a practical view of the situation, and invites Mr. Komura's attention to Korea, which though not comparable to China in point of size, is really of not less importance to Japan than China is, being one of her most promising markets and a valuable retreat for her surplus population as well as an important source of supply. It is evidently our contemporary's conviction that things have not been proceeding quite satisfactorily for Japan in Korea during the past few months, and that a firm hand is needed to restore the situation. Mr. Komura certainly has very great advantages which do not receive at the hands of journalistic commentators quite so much attention as they deserve. It may be confidently said that no other official in Japan is so well acquainted with both Chinese and Korean affairs. He has served long in Peking and Seoul, and whatever there is to be known of importance about either country, he knows.

A QUESTION FOR AMERICANS.

An American correspondent sends us a newspaper account of the lynching of Henry Noles on August 25th, and accompanies it with the question "Is America a fit country in which to bring up a Christian family." Noles, a "coloured man," had shot the wife of a farmer and fired at one of her children, his only motive, so far as could be ascertained, being robbery. He was taken from jail by a mob and carried a distance of twelve miles to the scene of the assassination. Placed upon a stump and invited to make a statement, he said:—"Tell all my sisters and brothers to meet me in glory. I am going to make that my home. Tell my mother to meet me where parting will be no more." What followed was this:—

He was taken from the stump, carried to a tree near by, bound to the tree by chains and his body saturated with oil. At 1.45 p.m. a match was applied

and instantly the quivering body was enveloped in flames. Fence rails were piled about the burning body and soon life was extinct. The negro made no outcry at any time. There were no disorderly scenes about the burning body. At least 6000 people witnessed the horrible fate of the negro. Many remained until nightfall, augmenting the blaze until the body was entirely consumed. Then they departed for their homes quietly.

There is nothing to be said about the barbarity of such acts. The only feature calling for comment is that the negro in some parts of the United States has evidently ceased to be regarded as a human being. He is reckoned among animals and among noxious animals at that. It is impossible to imagine that a crowd of six thousand people, or one thousand people or even a hundred people would unanimously consent to the burning of a white man in the manner above described. It is impossible to conceive that they would consent to the burning even of a dog, or of a horse in such a manner. But they might consent to burn a rat, or a stoat or a wild cat, and it is obviously to such a category that they assign the negro. Everybody knows and understands that mobs collectively will do things from which the individuals composing the mob would shrink with horror. Each unit of the conclave contributes a part, small in itself but helping to make up a terrible aggregate. Therefore thinking persons do not estimate the moral condition of a nation by the acts that its mobs perpetrate. But no such explanation seems applicable to a lynching mob such as that which burned Henry Noles. Every man in the assemblage had full perception of the result of what was in hand. The roasting of a human being was the business they undertook, and it was carried through with grim deliberation. Only, they did not regard Henry Noles as a human being. They counted him a sort of reptile and were thus able to observe with equanimity his shocking sufferings. Racial prejudice can scarcely be carried any farther. Unfortunately, too, there is no evidence that the atrocity of these acts is beginning to be recognised in the districts where they are committed. In the case of Noles an appeal was made to the mob by the Attorney-General and others. The appeals were heard and then the mob proceeded to ignore them contemptuously.

THE JAPANESE MERCANTILE MARINE.

Statistics have been published in Tokyo showing the growth of the Japanese mercantile marine during the past three years. We take out the general results, leaving details for future publication:—

Year.	Steamers.	Tonnage.	Sail'g vessels.	Tonnage
1898	627	429,774	177	28,014
1899	679	470,530	1,485	105,710
1900	753	498,375	2,783	270,161
1901 (to 16 Sept.)	942	557,166	3,416	315,767

No comment is made on the extraordinary increase of sailing vessels. The whole record shows remarkable development, and seems to indicate that a great maritime future is before Japan, though the present liberal system of bounties renders it difficult to say how much of the increase is due to artificial fostering. A notable fact is that whereas the Japanese mercantile marine contained only one steamer of 5,000 tons or over in 1898, it has now 21 vessels of that size. The enterprise of the Nippon Yusen Kaisha is, of course, largely responsible for these satisfactory statistics. With regard to the equipage of these vessels the total crews number 15,327, among whom there are 314 foreigners.

SUDDEN DEATH OF MR. J. J. FRANCIS, K.C.

Mr. J. J. Francis, K.C., the leader of the Hongkong Bar, and well-known throughout the Far East for his forensic ability, died suddenly at the Grand Hotel, Yokohama, on Sunday morning. Mr. Francis, who had been in indifferent health for some time, came up to Japan recently in search of health. On Sunday morning he as usual had early morning tea and when his boy left the room to prepare his master's bath, was apparently quite well. On the servant's return he found Mr. Francis prone upon the floor in a fit. Dr. Wheeler was summoned and was quickly at the patient's side, but he was past all mortal aid, expiring of apoplexy shortly before eight o'clock.

Mr. Francis's life lends itself to romantic treatment. Arriving in Hongkong in 1859-60 with the Expeditionary Force sent out to China by Great Britain and France, he accompanied the Allies on the march to Peking. At the close of the war he returned to Hongkong and was appointed Sergeant in charge of the stores at Kowloon—the stores which afterwards were consumed in the great fire. Sergeant Francis' Irish wit and intellectual qualities soon won him friends and he left the army to serve articles with Mr. Gaskell, a local solicitor. Thence he went to England, "ate his dinners," passed his examinations, and returned to Hongkong as a barrister-at-law. His rise was rapid, and never a case of importance presented itself but Mr. Francis was engaged. Like many of his countrymen his forte was defence. For his services to the British Government in a case in which the Chinese authorities were concerned he received the honour of "silk" with its accompanying title of Q.C. (now K.C.). In regard to his municipal work in Hongkong the late King's Counsel will be best remembered for his admirable presidency of the Plague Commission in 1894; and the shabby reward meted out by the Government is fresh in the recollection of all residents. He was twice married and leaves a widow and one daughter, a young lady adopted by his first wife. The deceased was about 63 years of age.

The funeral of the late Mr. J. J. Francis, K.C., took place on Monday afternoon. A funeral mass was performed, the Rev. Father Pettier officiating, at the Roman Catholic Church, and the cortege thence proceeded to the foreign cemetery, where the final ceremony took place. The pall-bearers were Mr. A. M. Chalmers, H.B.M.'s Acting-Consul; Messrs. Jas. Walter, J. F. Lowder, E. Beart, D. Jackson, and E. M. Janion. Among the mourners were Sir John Carrington, ex-Chief Justice of Hongkong; Sir William Gary, members of the legal profession in Yokohama, and leading residents.

OFFICIAL APPOINTMENTS AND HONOURS.

It is now stated that Mr. Chinda, Japan's Representative in St. Petersburg, will be recalled for the purpose of assuming the post of Vice-Minister of Foreign Affairs in succession to Mr. Uchida who goes to Peking; that Mr. Kurino, Minister in Paris, who is now on leave of absence, will succeed Mr. Chinda in St. Petersburg and that Viscount Okabe will represent Japan in Paris. Mr. Uchida is expected to leave Tokyo for Peking on the 28th of October.

Mr. Komura has been honoured with the First Class Order of Merit.

Mr. Motono, Japanese Representative in Belgium, leaves Brussels for Japan on the 26th instant.

LAYING ON OF HANDS.

The complaint lodged by an American lady against a Japanese waiter and a policeman for assault, illustrates an experience which many of us have had, namely, that the lower orders in Japan, such as *jinrikisha*-drawers and servants in restaurants, are singularly prone to lay hands on foreigners. In the vast majority of cases—indeed we may almost say in every case without exception—the act is not inspired by any rude intention whatever. Yet it is undoubtedly a great rudeness, especially in Japan where such things are never done among the Japanese themselves. In the days when Japanese costume was worn by everybody, it would not have been thought extraordinary that a peasant or a coolie desiring to attract the attention of a superior, should take hold of the latter's sleeve. But to lay the hand on a man's arm would always have been deemed a rudeness, and no servant in a hotel or restaurant would dream of doing such a thing now-a-days to a Japanese guest. Yet he does it quite often where a foreigner is concerned. Are we to suppose that any rudeness is deliberately intended? Of course not. Intentional rudeness is a rare thing under any circumstances in Japan, and waiters in hotels or *jinrikisha* coolies are not so silly as to treat their guests and fares with deliberate discourtesy. It is with the foreigner himself that the habit originated. Quite commonly foreigners lay a hand upon the arm of a Japanese when they are addressing him, the sole intention being to show kindly familiarity. That custom has come to be regarded by many Japanese as a proper accompaniment of conversation, especially when it is desired to make plain a statement difficult of comprehension in a strange language, or to attract attention. We have seen the thing done many a time when there could not be any reasonable possibility of suspecting rude purpose. Yet it certainly suggests itself as a rudeness to the average foreigner, especially to a foreigner conversant with Japanese habits, and we strongly suspect that many a fracas between foreigners and Japanese had its origin in nothing more serious on the Japanese side than the laying on of a hand. In the case of the American lady mentioned above, the trouble began by her attempting to leave a restaurant without paying for lemonade which had been opened in compliance with her order, but which she had not drunk. A waiter laid hold of her dress to detain her, and thereafter all kinds of complications ensued. Of course the waiter was originally without the least intention of being rude, and truly it is difficult to see what course a waiter can follow except to obstruct the egress of a guest who attempts to go away without paying his or her debts. The guest is wrong in the first place and must be prepared for some unpleasant consequences. The point is, however, that this growing habit of laying hands upon foreigners where such a course would not be pursued with Japanese, should be abandoned as likely to cause wholly unintended trouble.

RELUCTANT TAX-PAYERS.

It is stated that several Yokohama firms still persist in refusing to pay municipal taxes for the second half of last year. The Local Authorities might easily have proceeded against them by the method that would be followed at once in the case of Japanese defaulters, namely, distraint. But there is much reluctance to resort to extreme

measures with regard to foreigners until all grounds for pleading the novelty of the situation have been removed. Matters had been allowed to drift for so long, however, that the Kanagawa officials thought it well to seek renewed instructions from the Foreign Office. They were advised still to pursue a conciliatory course and they are accordingly endeavouring to bring pressure on the defaulters through the latter's Consuls. Japanese journals mention the names of some of the defaulting firms, and it is evident that the amount of the tax can not be an obstacle to such houses. We are unable to comprehend the situation. The tax will have to be paid sooner or later, and the Japanese authorities have already shown great patience and consideration. It must be assumed that the defaulters believe themselves justified in refusing to pay, but surely their consuls do not support them?

MR. NA TUNG.

The Chinese Envoy seems to be busying himself at present with banking affairs. He has paid visits to the Bank of Japan and to the Specie Bank. He has also been invited to attend the Tokyo Bankers' meeting on the 25th instant. We read in Tokyo journals that the Envoy will leave Tokyo on the 2nd of October, and after visiting the Hongwan-ji in Kyoto, whither he has been specially invited, will continue his journey to Bakan.

The Chinese Envoy Extraordinary, Mr. Na Tung, with his suite, accompanied by some of the officers of the Shokin Ginko, paid a visit to the Kirin Brewery on Tuesday. His Excellency made a close inspection of the whole brewery, and both he and his staff expressed themselves as much interested in what they had seen as well as pleased with the reception accorded them.

His Excellency was entertained to a banquet by the Chinese community at noon.

Prince Konoye entertained Mr. Na Tung and his suite at the Maple Club on the 21st instant, in return for civility shown by Mr. Na to the Prince when the latter was in Peking. On the whole the Chinese Envoy seems to be having a fine time in Tokyo. He will have no reason to regret his visit.

Mr. Na Tung and suite were received in audience by the Crown Prince and Princess at the Palace on the afternoon of the 18th inst.

THE WEATHER.

It is remarked that Japan has seldom been so fortunate in the matter of weather as this year. Again and again there have been threats of typhoons, but all the depressions have been deflected sea-ward so that the country has escaped. A few days ago it seemed scarcely possible that this good fortune should continue, and when, on Friday, rain began to fall in fitful dashes after the manner it generally assumes on the outskirts of a cyclone, every one concluded that the evil day had at length come. But one night's heavy downpour on Friday, the 20th, was followed by a cloudy forenoon on Saturday, and before evening the sun was shining brightly in a clear sky. A few puffs of pleasant wind on Saturday night were all that Tokyo or Yokohama experienced of the storm which had reached as far as the Riukiu Islands before turning westward. The rain that fell on Friday night, instead of doing any damage, was most welcome after the long spell of dry weather that had preceded it.

ENGLAND AND CHINA.

Great Britain, according to a telegram published by the *Nichi Nichi Shinbun*, will not consent to an united conference for revising her commercial treaty with China, as provided by the Peace Protocol, but will insist on independent negotiation, for which purpose she is now collecting materials. That is a resolve with which observers of events during the past thirty years in the Far East must sympathise. The practical working of a combination in such matters is that England becomes the figure-head and all the other Powers, while taking full advantage of every concession she obtains, do not hesitate to obstruct her by giving prominence to their own much smaller interests. Some vivid object lessons of that nature were afforded by events in Japan in the old times. Powers which knew that the magnitude of Great Britain's interests compelled her to be circumspect, and that they might count upon her standing firm so long as there was any serious danger in moving, did not hesitate to bring odium upon her by representing her as the one obstruction to a liberal departure and depicting themselves as quite ready to step out if she did. It was a safe game. England is disposed to act in a friendly manner towards all States, but it must be confessed that very few of them reciprocate her mood. They all, or nearly all, show plainly that they would crush her if they could, and that there is no advantage which they are not prepared to take for the purpose of destroying her commercial supremacy. Truly it seems fatuous that she should unite for the purposes of a conference with friends who certainly prefer her injury to her profit. There is no reason why a commercial treaty with China should be negotiated by procedure different from that followed in the case of commercial treaties with all other countries. Besides, the most-favoured-nation clause renders combined negotiation quite unnecessary.

THE "MAN-KAN KO-KWAN" QUESTION.

The *Fiji Shimpō* has a strong article on the subject of the much talked-of exchange (*ko-kwan*) of Manchuria (*Man*) for Korea (*Kan*). The gist of its arguments is that no such proposition can be entertained for a moment. If Russia means, when she talks of exchange, that Korea is to be completely opened for the unimpeded pursuit of Japanese trade and industry, the answer is that Korea is already open for those purposes and that Russia is already pledged not to obstruct their pursuit. But of course Russia does not mean anything so simple. She means that Korea is to become a part of the Japanese empire, with one slight but significant exception, namely, a Russian naval port in the neighbourhood of Fusan to preserve communications between Vladivostok and Port Arthur. In short, Russia is to have all that she wants and then she consents to leave the remnant to Japan. Further, any attempt to carry out such an arrangement would immediately create complications between Japan and other Powers, which are not at all likely to consent to her absorption of the Korean peninsula. It would be necessary, too, that Japan should support Russia's tenure of Manchuria, using her army and navy for the purpose if necessary. No one need reflect long to see what that means or with what States it would embroil Japan. The *Fiji's* conclusion is that there is not the remotest occasion for any change of Japan's policy. Let all restrictions be removed from emigration to Korea and China

—that, we may mention, has already been done—and let it be declared that Japanese settlers in Korea shall be exempt from military service. Events may then be left to follow their own course, without any dangerous or unscrupulous covenants.

THE LATE PRESIDENT MCKINLEY.

On the 26th instant at 11 a.m. there was held in Holy Trinity Cathedral, Tsukiji, Tokyo, a service in memory of the late President McKinley. The Cathedral was filled to overflowing, but as care had been taken that the admissions should not exceed the seating capacity of the building, there was no inconvenient crowding. The arrangements, indeed, were excellent in all respects, every detail of the ceremony having evidently been thought out beforehand and fully provided for. The Emperor and Empress were represented by Their Imperial Highnesses Prince and Princess Kanin, who, arriving punctually, were conducted to their places by His Excellency the American Minister and Mrs. Buck. Their Imperial Highnesses had been preceded by all the Cabinet Ministers, the Foreign Chiefs de Mission and the staffs of the various Legations, and Consulates of Tokyo and Yokohama, and by a majority of the most prominent noblemen and officials in the capital, so that a considerable space on both sides of the Cathedral was filled with these distinguished personages. The chancel, draped in black and white, had sparse decoration of white flowers; drawn up on either wing under festoons of the Stars and Stripes stood lines of American Marines and Blue Jackets, and a large Japanese military guard of honour was marshalled outside. At a few minutes past eleven the clergymen and choristers moved up the aisle, headed by Bishop Awdry, representing Bishop John McKim, who was unfortunately absent; Rev. A. W. Cooke, preceptor; Rev. E. R. Woodman, vice-Dean; Rev. Geo. Wallace, who read the lessons; Rev. C. F. Sweet, who took the prayers, and the Rev. Dr. Imbrie, who delivered the memorial address; the Rt. Rev. Bishop Schereschewsky; Rev. A. W. Gring; Rev. James Chappell; Dr. Motoda; Rev. O. Ochiai; Rev. S. Sugiura; Rev. J. Togawa; Rev. Arthur Lloyd; Rev. A. F. King; The Venerable Archdeacon A. C. Shaw; Rev. L. B. Cholmondeley; Rev. W. P. Buncombe; Rev. J. M. Baldwin; and Rev. J. Robinson. Mr. W. Karl Vincent, organist of Christ Church, Yokohama, was at the organ, and the choir was augmented by many ladies from the former treaty port. The service commenced with the singing of "Rock of Ages." This hymn and subsequently "Nearer my God, to Thee" were finely rendered, a large number of the congregation taking part, so that the volume of sound attained impressive dimensions. The Reverend William Imbrie delivered the following Memorial Address, which was listened to by the large congregation with evident admiration:—

There is one here present with us who could speak of our dead with all the knowledge and affection of an old friend; but just because he was an old friend our Minister could not trust himself to speak. So it has fallen to me to say to you a few grave words. A few words and grave words. For there are times when any other words offend both the mind and the heart.

Forty years ago a sound was heard through all the land; a sound that penetrated every home; the sound of the guns of Sumter. At that time McKinley was a boy of seventeen, but to that summons he yielded prompt obedience. For gallantry on more than one field of battle he rose step by step to the rank of major; and when at last the four long years

of anguish were ended, he was one of that proud host of young men who with bronzed faces and scarred flags and bright bayonets came home in honour: their duty done.

On reaching home he chose for his career in life the profession of the law; and not many years had passed before he had won for himself a place and a name. An exception to the rule, a prophet is not without honour save in his own country, he was one whom his fellow citizens delighted to honour. Twice was he chosen Governor of his own state, the great state of Ohio; and in whatsoever place he was he did his duty, and the people trusted him. A member of the House of Representatives he was ever, and ever more and more, a leader among men. So great was the confidence of his party in him, that once and again he might have been President, before he was made President; but in each case he had given his word for another, and to him the honour of the Presidency was not worth the price of a stain upon his own honour; for he was a true man, as true as steel. At last after patient and magnanimous waiting he was called by the people to the chief magistracy of the nation; and then a second time he was chosen; as Grant and Lincoln and Washington.

The things for which McKinley will chiefly be remembered as a statesman are the stand he took upon the question of the tariff, and his stand regarding the extension of the national domain beyond the seas. Great questions both of them; but questions for other times and places than this time and this place. But if we may not now speak of him as a statesman, we may at least say a word about him as a man.

It is the common witness of all who came into his presence that they left him charmed by a dignity and courtesy that never failed. Personal enemies he had none; but it was the testimony of a strong political opponent: "No one can help loving him." The simplicity and sweetness and beauty of his family life; his devotion to his wife, for twenty years a constant invalid, and her deep love for him; are household words from the Narrows to the Golden Gate. Into that home two children came, only to leave it during childhood; and the story is that ever afterwards any child could take and lead him captive.

Had he humour? Yes, of a quiet, gentle sort; but he was a man grave rather than witty, and his humour was of the kind that heals without hurting or harming; for it was never mordant. Was the love of money a ruling passion with him? In a little town in Ohio, unknown to the world, saving as the place of his residence, he had a modest home that he loved; and but little else besides. Was he a man of tact? That is perhaps the first quality that most of those who knew him would name, were they asked to describe him; but it was a tact that went hand in hand with firmness; for he could be very firm, as firm as the granite hills of New Hampshire. Was he ever severe? Yes, once at least when some were ready to forbid a Negro boy—because he was a Negro boy—to enter a railway carriage and speak to him. Then he was severe of countenance and stern of speech.

McKinley was a man of the people, like Lincoln; and like Lincoln he believed in the people. He was sure that the heart of the nation was never far and never wilfully wrong; and no less sure that commonly the sober second thought of the nation was a judgment that would stand in history. To him too, as to Lincoln, there had been given the gift of the seer; it could never have been said of him, Ye can discern the face of the sky, but ye can not discern the signs of the times. Like Lincoln also, though he was a war President, he was himself a man of peace. It was only when he knew that war must come that he said, Let there be war. And last to hear the trumpet sounding to arms, he was the first to catch the bugle-call to peace.

But no account however brief, can be complete that fails to add one thing more. In this too he and Lincoln were alike. In the darkest hours of the war between the States, burdened with a crushing weight of responsibility and care, Lincoln believed in God. No mere force, no mere stream of tendency, no mere euphemism for fate, a slave without a master; a God that hears nothing, that sees nothing, that knows nothing, that cares nothing; but One whom he was accustomed reverently to speak of as the Living God. In that Living God, by whom kings rule, unto whom every man must render an account, who maketh the wrath of man to praise him, yet one that marks the fall of every sparrow from its nest; in that king eternal, immortal, invisible, who made the stars and hath unveiled his glory in the face of Jesus Christ; in that Living God, McKinley too believed. Among the streams that fed the river of his life was that crystal stream that flows from the eternal mountains. He believed in God; the God of whom Christ said, I ascend unto my Father and your Father; the God of whom Christ also said, when ye pray say, Father, our Father in heaven.

In that God the President believed. And so it was that when suddenly the golden bowl was broken, he calmly said, His will be done. Not in a good old

age, life's opportunities all ended; not stricken down by pestilence when ministering by the bedside of the dying; not on the field of honourable battle; but without cause, without reason, felled by the hand of an assassin. Nevertheless he said, calmly and with confidence said, "It is God's way; His will be done." Even so, Father, for so it seemed good in thy sight. He believed in God; the Living God.

The belief in a Living God is no new faith. To the ancient prophets of Israel it was the foundation truth of all; and if the heavens declared his glory, to them no less was every marked event in the national life His voice to the people bidding them consider their ways and be wise. Famine, pestilence, war, all proclaimed, The Lord is in His holy temple: let all the earth keep silence before Him.

It is easy to be too precise, too definite, in interpreting the ways of God; but to him who really believes in the Living God, the death of the President can not but suggest a call to serious thought. It is like the tolling of a bell at midnight. It says to the nation, Come and let us reason together. It bids it look within and answer; answer questions such as these:—

The old Puritan feared not man, but he did fear God. Is there no need in the nation for a revival of that old spirit of the Puritan? We are wont to assemble ourselves together for worship; but do we not in truth worship God and worship Mammon also? We have put an end to slavery; but have we yet done our full duty by the Negro? We are ready if needs be to defend our national rights and national interests. Why do we suffer thieves from among our ourselves to break in and steal our great cities? Is it because we are too busy or too comfortable to stop them? We are building up vast organizations of capital and of labour. Why are we so slow in learning how to adjust our differences in the spirit of Christ, which is the spirit of perfect justice? These are some of the things that we may think of; but there is one thing more that we *must* think of.

On the bell in Independence Hall, the bell that rang out loud and clear to all the colonies the signing of the Declaration, the words are cast: "Proclaim liberty throughout all the land." Let no hand ever dare to muffle that old bell. Come what may, never let America be guilty of the shame and crime and folly of putting Freedom into shackles. For Freedom is sacred. But there are other things also that are sacred. Life is sacred; and law is sacred. Therefore proclaim liberty throughout all the land; but proclaim this also to the congregations in the churches, teach it to the children in their schools and their school-books, see to it well in the halls of legislation, and enforce it in every court of justice: That liberty without law is not liberty but anarchy, and that anarchy is despotism; alike when it strikes down the Head of the nation and when it lynches the Negro.

But the grave of the President is not only a place for searchings of heart; no less is it a place where all of us—north and south and east and west—are bound together by a cord not easily broken. It is true that there is nothing that so binds together a nation as a great national danger, a great national struggle, a great national triumph. The flag in peril; the flag in battle; the flag victorious. These are the things that stir the hearts of a nation and make all one. England knows to-day that that is true; and all of England's children. But the draped flag; the flag in sorrow; that too constraineth us. In the presence of that flag we are bound together as the children of one mother, and that mother pale and robed in the garments of mourning. But that is not all. To-day in the presence of that draped flag, all the world is kin to us. On the grave of the President there lies a wreath of flowers laid there by the Emperor of this nation; and from all the nations of Europe there have come like tokens of kindly sympathy. From England and Holland and Belgium; from France and Germany and Russia; from Austria and Switzerland and Italy and Portugal; and from Spain. Wreaths of flowers; words of condolence; little things. Like the silent grasp of a hand; like a tremor on the lip not quite hidden; like the trace of a tear that has been wiped away. Little things, but little things long to be remembered; little things, but little things in the day of grief and indignation.

Standing again beside a new grave, once more the old words come stealing across the mind: We do all fade as a leaf; our lives pass like the swift ships; we spend our years as a tale that is told; Death reigns. Man hopes and longs for immortality. Not the immortality of the rivulet that is forever lost in the infinite ocean; but the immortality of the spirit conscious and personal. He thinks he was not made to die. What then is death? Is it the end, or may it be but the beginning? Can there be a blessed immortality beyond the grave? Plato could not tell? Confucius could not tell? The Sphinx was silent. To that question there is one who hath given an answer of peace. Jesus Christ said: "I am the Light of the world; I am the Resurrec-

tion and the Life; he that believeth in me shall never die; because I live ye shall live also." When he had overcome the sharpness of death he opened the kingdom of heaven to all believers. Words that through all the Christian ages have floated like sweet incense, have rolled like a strain of triumphant music, through all the aisles and arches of the Universal Church. The gospel has brought life and immortality to light.

No wonder then that Paul said, even when his eyes were turned to behold all the power and splendor of Imperial Rome, I am not ashamed of the gospel of Christ.

Among the special prayers offered up at the close of the service was one for the assassin and his fellow-thinkers:—

Almighty God, whose blessed Son Jesus Christ did pray for His murderers, Father forgive them, and did accept the conversion of a sinner upon the Cross. Look down with compassion on him whose evil deed hath this day brought us to sorrow. Grant unto him, and to all his associates and accomplices, the spirit of true contrition and repentance; and do thou destroy all the works of the Devil, through Jesus Christ Our Lord.—Amen.

The conception of this petition was worthy of Christianity. Prayers were also said for "the widow and kinsmen of him whom we mourn," and for "Theodore Roosevelt, President of the United States, and all others in authority." Bishop Awdry pronounced the Benediction at a few minutes past twelve o'clock, the service having lasted a little more than an hour, and having been a significant evidence of the sympathy felt by all nations with America in her sorrow.

Preaching at Christ Church, Yokohama, on Sunday morning, the Rt. Rev. Wm. Awdry, D.D., Bishop of South Tokyo, made reference to the lamented death of President McKinley. The Bishop said:—

This day fortnight we were startled by hearing of the attack on President McKinley. Last Sunday, as our hopes had been raised in the interval, we were hardly less startled to hear of his death. While we sympathize with a great nation,—great already in many traits of national character and promising to be greater yet,—let us not forget the personal aspects of the event.

There are two points in the Prayer for the "Church Militant" at which I propose to make short pauses, that we may silently offer up the words with a special meaning and earnestness on this occasion. The first is when we ask God to "comfort...those who are in sorrow"; and the second when we "Bless His holy Name for all His servants departed this life in His faith and fear."

For, as on all hands we hear that President McKinley's domestic life was an example of what such a life should be, also we learn that he *lived* in the faith and fear of God; and that he *died* in that faith and fear his own last words bear witness.

There are a few thoughts connected with the subject which I can but suggest, but have no time to follow out.

1. Observe that in these days of free profession of unbelief great leaders and rulers of the nations are Christians still, and endeavour to frame their lives according to their faith. Such was Queen Victoria, who succeeded to her hereditary throne, and such was President McKinley who was raised to power by a nation's voice. And as faith in Christ, so also moral and domestic virtue was unpretending yet conspicuous in both.

2. Next we may notice with great pleasure the stability of the Constitution of the United States under this ordeal. If last year on the throne of Italy the son succeeded to his murdered Father's place without a voice of opposition, so and with even less dislocation of public business the wheels of State in America moved forward under its new President the next day after his predecessor's death; and the anarchist's crime was absolutely fruitless for his purposes.

3. Hence we see the more clearly the unreasoning madness of anarchism. One might have supposed that in America at least it could have no place. One's first thought on receiving tidings of the deed was not of an anarchist but of a disappointed applicant for office; but it was not so.

4. This madness of anarchism seems to have its source in certain types of national character, fostered by vague national discontent, and aggravated by past and sometimes by present oppression or extreme poverty. The number of those in whom this passion for anarchy grows to criminal dimensions is relatively very small except in two or three places, but as one man is sufficient to perpetrate an assassination, and

that man has thrown off all restraints of duty and reason before he gives himself to such a deed, it must always be impossible to prevent such crimes by mere repression. The man who does the deed is prepared to die for it;—yes, and he will take the risk of that barbarous parody of justice which is called lynching.

5. Hence it follows, that as neither his own high character, nor the freedom of political institutions under which he holds his office, will lessen the danger to a man in high position, nor will the obvious inefficiency of the deed for its professed purpose, nor even the consequences to the perpetrator, deter him from his act; though the act must be punished, yet it is not to severity, much less to a return to savagery, but to the amelioration of the conditions political, social, and personal of those classes and nations among whom anarchists are bred, that we must look for any reduction of incentives to such crimes. By increasing not danger in crime but contentment with life, the ranks of anarchism may be thinned, and the lives of rulers ultimately made less perilous.

6. Yet meanwhile laws *must* be strengthened, especially by international understandings. Within these two or three years we have seen the actual assassination not only of such a ruler as the Shah of Persia, but of an Empress of Austria, a King of Italy, and a President of the United States, besides other unsuccessful attempts on those in the highest place, and attempts successful and unsuccessful on those a grade or two lower in office. More than this. No record is more startling than that of three Presidents of the United States, all good men, out of a total of six or seven, thus murdered within forty years. We thank God that no good man will let himself be held back from office by this terrible record; but let us also pray for His guidance, and for patient effort to remove the predisposing causes of such crimes from the face of the earth.

BRITISH INTERESTS IN TURKEY.

Here is an interesting paragraph from the last annual report of the Constantinople Chamber of Commerce:—

I dwell at such length last year on the causes of the decline of British trade, which causes remain the same from year to year, said Sir J. W. Whittall in his presidential address to the Constantinople Chamber of Commerce, that I scarcely deem it necessary to expatiate at any length on them again. Since last year I have travelled in the out-ports of Turkey, which are served by the subventioned lines of steamers of our various foreign opponents, and I have seen with my own eyes the benefits to their trades accruing to them through these direct communications. Great Britain subventioned lines of steamers for the sole purpose of mail carrying; our foreign opponents go a step further, and subvention their lines for the carrying of their goods also. It follows as a matter of course that their trade gets the benefit, and it is simply a calculation of £ s. d. whether this system pays them or not; I myself believe it does pay them handsomely, and as regards Turkey, the more the charges for landing, shipping, transiting, &c., goods at the great ports which unsubventioned British steamers can alone cultivate, are piled up, as they are being piled up from year to year, the more will our foreign opponents' direct trade with the smaller ports be stimulated to the detriment of our own; there can be no two opinions on this point.

As regards the third cause which I gave last year for the decline of British trade, viz., the unremitting efforts made by our opponents to get contracts and concessions for their subjects, the position is the same as it was; in fact, British men of enterprise and capitalists are as handicapped as ever. The opposition in Turkish official circles to conceding anything to British subjects is as great as it ever was, and I see no present prospect of this being overcome, unless His Majesty's Government puts its foot down and shows its earnestness in the protection or promotion of its capitalists' and its traders' interests. Certainly representations are at times made to the Turks, but not being sufficiently supported by the Foreign Office, the Turkish officials, knowing this as well as we do, do not attach much importance to them.

THE CHARTERED BANK.

The Yokohama agency of the Chartered Bank of India, Australia and China received on Thursday telegraphic advice from the London Office to the effect that at the approaching meeting of shareholders of this Bank the Directors will recommend a dividend for the half-year ended the 30th June last at the rate of 10 per cent. per annum free of Income Tax.

THE PROGRESSISTS.

The Progressists appear to be suffering from divided views. Their Council was recently called upon to discuss a bill introduced by Mr. Moriya Konosuke, proposing that the Party should adopt the following platform:—(1) Protection in trade matters; (2) the borrowing of money at a low rate of interest abroad on the security of the railways, and its employment to redeem the consolidated bonds; (3) the establishment of a system for encouraging a spirit of saving; (4) the suspension of public works requiring an issue of bonds; and (5) the cessation of any attempts to sell high-interest bonds abroad, and of the policy of borrowing large sums from the Bank of Japan. The reading of this bill led to a vehement discussion, the chief interest of which was to show that nothing like unanimity of opinion prevails in the ranks of the Party. Mr. Kato Masanosuke opposed the bill in uncompromising terms, and Mr. Oishi Masami opposed both the bill and Mr. Kato. Moreover these speakers dropped several remarks which revealed that the Party is in a somewhat disorganized and impecunious condition, and that the introduction of such bills as that of Mr. Moriya are devices to galvanise it into vitality. We may mention that Mr. Komuchi Tomotsune declared incidentally that the question of preserving China's integrity was out of date. It really would be interesting to know what the programme of the Progressists is at this juncture. The once great and powerful Party seems to have sunk into a state of moral inanition.

FRENCH NOTES.

The construction of a railway from Kayes to the Niger by French engineers seems likely to become an accomplished fact. The distance is 190 miles, and a survey by Capt. Bèjot pronounces the task easy.

The French Minister of Public Works has ordered the railway companies to attach to all trains going 150 miles or upwards two carriages marked "défense de fumer." Apparently people in France obey such notices.

The following is a concise statement of the grievances which nearly involved a quarrel between France and Turkey—it is taken from the *Temps*:—"The claims of our compatriots which have caused the intervention of the French Government are three in number. Two concern sums due in reimbursement of money advanced for the construction of railways. One alone of these credits amounts, with unpaid interest, to nearly 45,000,000f. The third claim is made by the company of the Constantinople quays and docks, of which both the *personnel* and the capital are French. This company, after having constructed important public works, finds itself so treated at present that it is unable to begin the operations for the purpose of which it was created. The Ottoman Government has manifested the intention of redeeming the concession, but no understanding has been arrived at as to the conditions of the purchase. Without entering into details it is enough to say that the company can neither carry on its work nor be redeemed, and that it is important, therefore, to put an end to this state of things, which has lasted now for three years. Such are the grounds for the attitude of the French Government." The concession of the Constantinople quays was granted to M. Granet, Postmaster-General in the Freycinet-Constans Ministry at Paris. According to

the terms of the concession, it was stipulated that the Turkish Government should have the right of purchasing the concession after the lapse of ten years. The time elapsed early in July.

Captain Witsch obtained very substantial damages from the editor and publisher of the *Aurore* for libel arising out of the Dreyfus affair. The Court awarded him twenty-five thousand francs. A few judgments of that nature would be immensely serviceable in Japan. Japanese editors would begin to take an interest in their miscellaneous columns if the contents were liable to cost ten thousand *yen*.

There is to be a monthly service of steamers from Dunkirk to Hai-fong *via* Havre, Panillae, Marseilles, Suez, Colombo, Singapore and Saigon. Six new vessels have been built for the line and they will be run by the Chargeurs Réunis Company.

The French revenue continues to decline. The figure for July was 9 million francs below the estimate and 20 millions below the collection for July of last year. The principal decreases were in transfer duties, sugar and state monopolies.

The Navy Committee of the Chamber of Deputies appointed a sub-committee, some time ago, to examine and report upon the feasibility of a canal from the Bay of Biscay to the Mediterranean. The sub-committee visited the canals at Manchester, Ems and Kiel and inspected the harbour arrangements at London, Southampton, Liverpool, Rotterdam, Bremen and Hamburg, and came to the conclusion that the proposed canal is quite feasible.

Captain de Monthrison, a French expert of some standing, has conducted a series of tests for the purpose of determining the quality of rifles used in Europe. The standard adopted had been approved by a number of other experts. Results very unpleasant for England were obtained. The Dutch and Roumanian rifles, both of the Mannlicher type, tied for the first position. The Spanish rifle came third, the Italian fifth, the Russian sixth, the German eighth, the Turkish ninth, the French (Lebel) tenth, and the Lee-Metford twelfth. There were only three worse rifles than the British among the whole number tested, and it is evident from the place assigned to the French weapon that there was no partiality on the part of the examining officer. We wish that the Japanese rifle had been among the number tested.

NOTES ON CURRENT EVENTS.

There is a possibility that competition may be introduced into the field of telegraphy between the West and the Far East, which would indeed be a boon. It is expected that the United States Congress will pass, next session, the bill for a cable from San Francisco to the Philippines *via* Hawaii, and the Hongkong Chamber of Commerce has suggested the advisability of extending the cable to the Asiatic coast, an example which the Shanghai Chamber is expected to follow. It would then be possible to telegraph to New York from China or Japan at about one-fifth of the present rate from those countries to London, and as the tariff is very cheap between New York and London, the advantages of the proposed Pacific cable are obvious. The only thing to be feared is that were the cable laid as suggested, its owners would pool with the existing companies, and

the last state of the merchant might be worse than the first.

The *Yomiuri Shimbun* points out that, according to official communications which have passed between Japan and other Powers, a foreign subject or citizen might combine with his wife or child to form a juridical person, and in that capacity might become a land-owner in Japan. Such being the case, it seems absurd to withhold from individuals a privilege which they can already enjoy by a simple manoeuvre. The *Yomiuri* does not apply the converse of the argument, namely, that if the foreigner can already enjoy the privilege in practice, there is no reason why he should agitate for it in theory. Doubtless our contemporary sees that there are two answers to that: first, that the average foreigner does not care to essay the manoeuvre of forming vague juridical persons, of whose real competence in the sight of the law he still entertains some doubts; and secondly, that the agitation has now been transferred from the foreign side to that of the Japanese. The latter are beginning to perceive that these restrictions inure to their own disadvantage, and that a more liberal policy is essential in the interests of Japan's material progress.

There has been a somewhat serious disturbance in Yokosuka. It appears that a sailor of the *Yakumo* who had been riotous in a brothel, was arrested in compliance with the latter's complaint, and was carried off by a party of gendarmes in spite of a resolute attempt made by his comrades to rescue him. The men determined to be avenged, and on the night of the 17th, when a great number of blue-jackets obtained leave to go ashore in commemoration of the anniversary of the battle of the Yalu, three hundred of them invaded the brothel whence the complaint had been lodged, and proceeded to wreck the place. They were driven off by the gendarmes and by a battalion of troops specially called out for the purpose. Several persons were injured, and one gendarme is not expected to survive his wounds.

Baron Kodama, Minister of War, is credited with the intention of seeking to introduce various measures of reorganization, the gist of which is to establish a clear line of demarcation between the civil and the military duties of the Department. One feature of the programme is to separate the Head Quarters Staff, the Tokyo Defences, and the Eastern, Western and Central Sections from the War Department and place them under an independent office, presided over by an officer on the active list. The War Department then would be concerned solely with non-combatant functions, and might be placed under a civilian official.

The bailiffs paid a visit to the Shinagawa Wool Weaving Factory on the 20th instant. It appears that this concern had been borrowing money and obtaining raw materials on credit from several foreign firms in Yokohama, when the bad times struck it last year and it fell into ever-increasing difficulties. Repeated failures to meet its engagements finally compelled its creditors to take conclusive action, and Messrs. Findlay, Richardson and Company obtained an order to attach the property of the concern.

The officials of the Department of Communications, Japanese and Foreign, have presented to the Prince Imperial a table telephone of peculiarly fine construction. This is a wedding gift. It comes rather late, but the making of it has been a work of

great labour, many of the best artists of Japan having been engaged on the decoration. Un no Shomin did the metal chiselling; Ishikawa Komei, the ivory carving, and Umezawa Riushin the lacquering. It is said to be an object of great beauty, which we can well believe if such experts were engaged upon it.

Japanese newspapers interest themselves at present in the question of torpedo-destroyers against battle-ships. Sixteen or seventeen destroyers can be built, they say, for the price of one battle-ship, whereas seven or eight of the small craft can tackle the big one. That is a calculation involving a great deal of hypothesis, we imagine, but our contemporaries affirm it with much confidence. They further allege that although the battle-ship is powerful on the high seas, there is nothing like a destroyer for coast service, its speed and handiness compensating largely for its want of strength. Western Powers, they say, are beginning to take these facts into serious consideration. Russia has 43 destroyers on the stocks, and England, who already possesses 89, is building 24. Japan has 11 and 3 are under construction for her. Much attention is being paid to this matter in connexion with the third period of the naval expansion programme.

The Mormon missionaries have finally submitted their application for permission to preach and teach in Japan, and to enjoy the privileges extended to other religious bodies. It is stated that their application contains a solemn declaration in the sense that plural marriages are no longer sanctioned by their creed and that the doctrine of plural marriage will not be taught by them in Japan. Under those circumstances we presume that the Authorities will grant the application.

Mr. Playfair has opened his Consulate in Shimonoeki. It is presumed, however, that His Britannic Majesty's Government have not yet committed themselves to any definite choice as between Bakan and Moji. The new Consulate may be regarded as tentative. Doubtless the relative claims of the two places have been carefully weighed, but the Moji folks are very confident that time will vindicate the justice of their contention.

A great deal is made by certain journals of an intention attributed to the Minister of State for Finance. For reasons of economy the Minister is disposed to abolish the Educational Inspectors, who now perform their duties in the capital and the provinces. These Inspectors are not a very old institution. They had their origin in the days when Viscount Inouye Ki held the portfolio of Education. At that time special officials for the purpose were appointed in the Education Department only, the work of inspection in the provinces being entrusted to prefectural councillors. Subsequently, under Count Kabayama's régime, provincial inspectors also were nominated, and the system has come to be regarded as essentially useful. There is consequently some agitation against the project for abolishing the office, and Mr. Kikuchi, Minister of State for Education, has to endure much interviewing and criticism.

Field-Marshal Marquis Oyama has been induced to abandon for the moment his intention of resigning the position of *Sambo Socho*. This change is said to be due, not to any alteration in the Field-Marshal's wish to be relieved, but to the fact that great difficulty is experienced in finding a succes-

sor. Marquis Yamagata declines, and there is some obstacle in the case of either Prince Komatsu or General Nozu.

Quite an interesting record was achieved at the last cricket match in Yokohama, when the Mosquito Club had their first innings. They played twelve strong, and the whole eleven wickets were bowled, five falling to Mr. White and six to Mr. Lammet. Not one man succumbed to any of the secondary incidents of the game, catching, stumping or running out. We do not remember such an innings anywhere else.

Count Okuma is suffering from indisposition. The trouble is not serious, but it is attended with fever and some pain, and the physicians have ordered rest for the present.

It is alleged that at its last meeting the Cabinet came to an agreement about next year's Budget in the sense that a reduction of about 20 per cent. shall be made all round. There had been, it is said, certain differences of opinion, but they have been compounded. This understanding does not extend, however, to all the *post-bellum* undertakings.

It is stated that the Directors of the Nippon Yusen Kaisha are projecting a considerable extension of their Chinese lines. The coasting trade of Japan does not offer any marked prospect of growth, and the best opportunities at present discernible seem to be in the direction of the trade with North China and in Chinese waters. It was for the purpose of making investigations preliminary to this project that Mr. Kato, Vice-President of the Company, recently proceeded to China and Korea, where he is now travelling.

The President of the French Republic has performed a very graceful act. He has sent to Baroness Yamaguchi a gold medal in commemoration of her kind attention to the wounded French officers and soldiers in the military hospital at Hiroshima. It must be confessed that the French have lost no opportunity of signifying their gratitude for the attention received by their soldiers at Hiroshima. The French Admiral's speech at Kobe on the occasion of the memorial service for the officers and men who perished at the sinking of the *Canavon*, was an eloquent exposition of French feeling about these matters.

General Soboleff has written a brochure entitled the "Probability of a Russian Campaign against India." The General professes to believe that England has for years been intriguing in Europe against Russia, and threatens that if she does not mend her ways, "Russia will soon be compelled, with sorrow in her heart, to invade India." We apprehend that there would be a great deal of sorrow in Russia's heart after she had tried that experiment, though the bellicose General seems to regard the project as quite possible. He declares that the campaign in India will be an unusually easy one for Russia and that "in less than ten years she will add 450 million inhabitants to her empire." Russian general officers are allowed, we presume, to write brochures of that kind. Some critics, indeed, are disposed to regard them as *ballons d'essai*. But that is a sensational view. Russia undoubtedly has an immense military establishment, but when it came to moving an army across Asia and placing half a million of men in fighting line on the Indian frontier, the strain on her resources would be unendurable. She does

not require to sound public opinion on such a subject.

A friend sends us the following, accompanying it with the pregnant comment *tôdai moto kurashi*:-

The Mikado of Japan is a man of much energy and endurance, and is constantly smoking cigarettes. He is fond of outdoor sports, and has warmly encouraged the introduction of football into Japan. He is a hunter and fisherman of no mean reputation and is a good shot with a rifle. His devotion to lawn tennis is marked, and he is clever as a wielder of the racket.

The Emperor will be amused by this summary of his pastimes. His Majesty smoking a cigarette and playing lawn tennis is a picture we have yet to see. *Tit-Bits* is responsible for the paragraph.

The *finmin* publishes figures representing the state of Japan's debt at present. They are as follows:-

	Yen.
Old Bonds	4,608,544
Commutation Bonds	25,428,650
Naval Bonds	8,796,600
Consolidated	168,693,600
War Bonds	116,581,435
Railway Bonds	34,042,700
Industrial Bonds	122,681,300
Hokkaido Railway	3,419,950
Formosa Railway	2,111,400
Kinsatsu Exchange Bonds	22,000,000
Formosa Public Works Bonds	6,200,000
Temporary Loans	12,000,000
Total	526,664,194

The French Admiral on this station, attended by several members of his Staff, will be presented to the Emperor by His Excellency M. Dubail on the 28th instant.

Dr. Mayeda, of the Fifth Division, who distinguished himself greatly by his management of medical and sanitary affairs in the Chili campaign, and who has now resumed his military duties at Hiroshima, visited Tokyo recently to present his official report of the events of the campaign. The occasion was seized by the members of the Army Medical Association to invite the distinguished officer to the Army Club at Kudan, where a party of over 80 persons assembled to receive him. The President of the Association spoke some words of welcome, and was followed by Dr. Koike, Chief of the Medical Affairs Bureau, who addressed Dr. Mayeda on behalf of the members of the Association throughout the empire. Dr. Mayeda replied and his speech was much applauded.

Tokyo journals speak of the probable removal of all restrictions upon the travel of Japanese subjects to China and Korea. These restrictions were imposed at a time when the privilege of free travel had been abused to the disadvantage of Japan and to the detriment of public peace. They were abolished at one time and again imposed in a limited degree. It will be welcome news should the Government now feel justified in allowing its people to come and go without let or hindrance.

Mr. Thomas Beaumont Hohler succeeds Mr. Cheetham as Second Secretary of the British Legation in Tokyo.

The works at Maizuru are said to have made great progress lately. All the Admiralty buildings will be finished this month, and it is expected that the official opening of the place as a naval station will take place at the beginning of October.

It is alleged that the Chinese plenipotentiaries have been endeavouring to induce the Powers to restore Tientsin and hand over the civil Government to Chinese officials,

but that the reply of the Powers has been, in effect, "let us talk of these matters eighteen months hence." All are apparently agreed that the transfer of the city with the contingent possibility of its renewed fortification would be a hazardous experiment.

Mr. Rockhill arrived at Kobe on the 25th instant by the *Kobe Maru* and proceeded to Kyoto, where he will spend two or three days before continuing his journey to Tokyo. It is said to be Mr. Rockhill's intention to sail for the United States by the *Empress of Japan* on the 4th prox.

GERMAN NOTES.

The German merchant is becoming ubiquitous. Even in Sierra Leone he is beginning to make a substantial show. It is true that gin and rum are the articles in which his trade with that remote region shows most development, but the Governor, Sir C. A. King-Harman, in his annual report of 1900, makes these comments:—In regard to the importation of cotton goods from other countries, the report says Germany is gradually getting a large sale for prints owing to the fact that German firms are far more liberal than are those in England, *i.e.*, in sending out a larger assortment of patterns, using better dyes, and their patterns in consequence being better printed, neater, and more varied in design. German firms are, as elsewhere, considered to be obliging. It appears most of the cloth is made in England, but it is sent to Germany to dye, and the German Government act very liberally towards their merchants in regard to rebate of duty on their importing a certain quantity of cloth to be afterwards exported for trade purposes, and this naturally helps the German firms in supplying goods at a reasonable price. In the matter of cutlery our English firms cannot compete with Germany. It appears that the English market will not supply the cheap class of goods required for the West Coast trade. Possibly, says the report, the English firms cannot do so owing to the fact that labour is cheaper on the Continent. It is impossible even for the most optimistic to doubt the mass of evidence that has been accumulated in support of the contention that the German merchant is more versatile and more obliging than his English competitor.

In spite of the Kaiser's keen interest in Turkish affairs, and in spite of the fact that there is a steady increase in the number of German commission agents and traders settling in Turkey, German exports to that country are not in a flourishing condition. In 1893, they amounted to £2,204,891 in value, and in 1899 they stood at £1,628,400.

It seems probable that the Canadian Government will give Germany a preferential tariff as it has done with England. The Representative of Canada in Antwerp denies that there was ever any intention on Canada's part to damage German imports by its tariff, and expresses the opinion that the present strained commercial relations between Canada and Germany will soon yield to negotiations.

The Kaiser has sent an autograph letter to the Emperor of Japan with reference to the recent campaign in Chili, and the document will be delivered to the Emperor by Count Arco Valley on the 27th instant. Nothing has yet been made known about the contents of the letter, but we presume that it is one of those courteous utterances

for which the German Sovereign has become famous. *Appropos* of this a remark may be made about the hostile criticisms attributed to the German Conservatives in connexion with His Majesty's bestowal of a high Order on Prince Chun. To us, and we imagine that we rightly interpret the sentiment of most Englishmen, the Kaiser's act seems not only graceful but wise. His demeanour towards the Chinese Envoy was stern and unrelenting up to the moment of the transmission of the apology, but that ceremony concluded, and the amende having been accepted, His Majesty dismissed the unpleasant event from Germany's relations with China and held out the hand of friendship. It appears to us that such is the manner in which gentlemen habitually treat apologies.

The Kaiser has conferred the First Class Order of the Red Eagle upon Baron Kodama, Minister of State for War.

Much more space than is usually occupied by German news in British journals was filled on August 6th and 7th with descriptions of the grief caused by the death of the Empress Frederick and with appreciations of her character and career. There are Germans who speak in slighting, if not absolutely opprobrious, terms of Her Majesty's moral life, their opinions on that score being probably influenced more or less by the fact that Her Majesty was English, everything English being cordially detested at present by many Germans. But there is not the smallest sign of such disparagement in the journalistic notices published in Germany. No note of discord makes itself audible in their chorus of sorrow. "Her sufferings and the patient uncomplaining heroism with which she bore them" silence even those that once took pleasure in calumniating her as the "English Princess." England, of course, remembers her only as the "Princess Royal," who by her sweetness of disposition and her graces of manner won much affection before she left her native land. As for the French press it has surprised Europe by the warmth and earnestness of its sympathy and esteem. "One and all," says *The Times* Paris correspondent, "the French journalists display sincere emotion. This is not due merely to the sympathy felt for one who shared their antipathy to the Iron Chancellor. It is not to be explained entirely by the sense of human pity aroused by the spectacle of a life so crowded with care and suffering and moral and physical torture. It is due also to the fact that she was the wife and the widow of the only German who during the terrible days of the war escaped in French hearts that natural and universal hatred which inevitably surrounded everything German. That her husband was a man of peace is one of the facts of contemporary history most indelibly rooted in French minds. They have never forgotten that he refused to bombard Paris, and when the other day the memoirs of Busch were published the portions that would seem to have made the strongest impression upon them were the numerous proofs therein that their judgment on the Crown Prince Frederick was exact and that the English Princess, whom Bismarck had disdainfully called the disciple of Gladstone, was the worthy helpmate of her noble husband."

The *Cologne Gazette* speaks of Count von Waldersee's success in carrying to a conclusion the enterprise which had been "initiated" before his arrival by the march to Peking and the relief of the Legations. That is a remarkable choice of words. It makes no reference whatever to the capture of Tientsin and the relief of the foreign settlement at

that place, which were not the least arduous operations of the campaign, and it sets the punitive expeditions above even the storming of Peking and the arduous march thither, though the expeditions scarcely involved anything from first to last but demonstrations of force and burnings of villages. The Rhenish organ gives the Field-Marshal much credit for tact in dealing with the Foreign Diplomats and Generals, but we can not discern much tact in its own summary of the Chili campaign.

It appears that the new German Tariff is destined to cause much international friction. Russian statesmen threaten to stop the annual migration of some 150,000 Russian agricultural labourers who visit Germany at harvest time. The Agrarian organs of Germany reply that they no longer need these immigrants since the industrial depression has caused large numbers of workmen to return from the western to the eastern provinces of Prussia, and the *Cologne Gazette* urges that since the Agrarians make that admission, the Prussian Government ought now to prohibit the constant immigration from Russian Poland which constitutes a national danger to Germany.

In an article published subsequently to that mentioned above, the *Cologne Gazette* gives a much juster estimate of the Chinese complication and of Count von Waldersee's share in settling it. After noting that the Field Marshal was not responsible for circumstances which rendered military operations on a large scale impossible, and after recognising the absence of any real resistance on the part of the Chinese army subsequently to the fall of Peking, it commends the distinguished officer for the tact and skill displayed by him in a difficult situation, and it justly doubts whether many other Generals could have so successfully manipulated a situation bristling with embarrassments.

The remains of the late Baron von Ketteler have been transported to Germany and interred at the home of the deceased in Westphalia.

CRICKET.

V.C. AND A.C. VERSUS MOSQUITO YACHT CLUB.

The torrential rain of Friday night continued to fall till a late hour on Saturday morning and at one time it was thought advisable to postpone the match arranged between the V.C. and A.C. and the Mosquito Yacht Club, and an express to that effect was circulated. But as the day wore on the heavens cleared and by noon the sun was streaming down from a deep blue sky. Play therefore became possible, though naturally the wicket to start with was all in the bowlers' favour, but improving every hour. With the dilatoriness which has become a strong characteristic of certain local cricketers, players sauntered down to the ground, and it was not possible to start the match until 35 minutes past the advertised time: even then a departure had to be made from the arranged batting order owing to late arrivals. The Club put in their opponents first, and on the wet wicket had little difficulty in disposing of the doughty sailor-men, budding Commodores and Skippers of first-raters mostly getting out with a modest 0. All were retired for 26. This total the Club had little difficulty in passing, and when 101 was reached the Captain, Mr. F. E. White, declared the innings closed. In their second venture the Mosquitos did even worse than in the first, their score only totalling 19 when the last wicket fell. During the early part of the play the sun was very trying, and the damp heat arising from the field proved most oppressive. A band was in attendance, but very few ladies put in an

appearance—a circumstance much to be deplored—only five, we believe, partaking of the Club's hospitality at tea-time. Mrs. Bathgate presided at the tea-table.

THE GAME.

At five minutes past two, Messrs. Firth and Brady went out to bat, facing the bowling of White and Lammert, Duff being at his old place behind the wicket. Firth opened with a single off White's first ball, but Brady made nothing of the rest of the over, defending his stumps with a discretion that drew the ironical applause of the crowd at the Pavilion. Lammert's second ball found Firth l.b.w., and the batter retired—1-1-1. Wheeler filled the vacancy, and tipped Lammert for a couple with the last ball of the over. Brady continued on the strictly defensive and a maiden over resulted. In the next over Wheeler sent Lammert to the fence for 3. In White's succeeding over Brady retired clean-bowled without breaking his duck—7-2-0. Wilkinson now joined Wheeler, only to go under to the first ball sent down to him by White—7-3-0. On Townsend going in to bat, Wheeler got Lammert away for a single but the rest of the over added nothing further to the score. With the opening ball of the next, Wheeler made a boundary off White and ten was hoisted on the telegraph. A single by the same batter was followed by a couple of byes, and then Wheeler lost his partner to a neat ball from White, who was in capital form—15-4-0. The Captain of the Mosquitos, F. J. Hall, next went out, only to retire after a couple of overs, Lammert finding his off stump—16-5-0. The incoming bat was Pumfrett, but his stay was limited to the delivery of one ball from Lammert—16-6-0. Six batsmen had thus been disposed of within thirty minutes, and five o's decorated the score sheet. Deacon opened with a single off Lammert, but the next two overs were maidens. After another single by Deacon, White upset Wheeler's wickets, and the only "old salt" who made any stand against the bowling during the match retired—18-7-11. The vacancy was filled by Crowe who began with a single off White; the next ball Deacon retired, White disturbing his bails—19-8-2. White's analysis now showed 5 wickets for 8 runs. At ten minutes to 3 o'clock Philip went in to bat and at once lifted White right over the fence for five; whereat the applause rang out and the Mosquitos took heart of grace. But the rejoicing was short lived, for the first ball of Lammert's over disposed of Philip—24-9-5. Taverner next walked out to the wicket and retired at short order, first ball—24-10-0. The last man in was MacVicar; he saw a couple of byes scored, and then Lammert sent him back to the Pavilion and the innings closed—26-11-0. Play had not lasted an hour. Lammert's performance with the leather was very meritorious. Score:—

Play recommenced at 3.15 p.m., the Club sending out H. W. Kilby and O. Strome; the bowlers being Townsend and Firth. Kilby's stay, to the surprise of everybody, was short. Firth's second ball disturbing his bails—0-1-0. Fradgley then partnered Strome, and sent away his second ball for a single. In the next over he lifted the ball across the fence for five. Strome, a few moments later, growing too venturesome, was run out—6-2-0. Bugbird, the new-comer, began his score with a single. Then with singles the tally mounted, and 10 was hoisted. Bugbird, with his score at 8, was smartly held by Wheeler off Townsend—16-3-8.

Then Stuart partnered Fradgley, who soon after was caught at the wicket by Hall—16-4-7. With singles and one couple by Libeaud, off Firth, the score was raised to 20 by a quarter to four o'clock. Five minutes later Libeaud, who had been playing with great caution, succumbed to Firth, clean-bowled—24-5-7. A single by Edwards and another by Stuart brought the scores level at seven minutes to four o'clock. With the opening ball of the next over Firth sent Stuart back to the Pavilion—26-6-2. The bowlers were still having the best of the play. Firth having taken 3 wickets for eight runs and Townsend 3 for 17. Maitland partnered Edwards and the game grew more interesting, the latter hitting out freely, so that the score soon reached 30. Edwards first four hits producing 1, 2, 3, 3. Maitland was also in a slogging mood: he opened with a single and then drove Townsend for 2. Forty was next hoisted, and then Maitland made his first 3 off Townsend: an over later he punished Firth in similar fashion. At five minutes past four the half century was reached, and runs being obtained freely, a change in bowlers was made, Wheeler relieving Townsend, and Pumfrett changing places with Firth. Still the runs came by 2's and 3's, and 60 saw no change in the partnership. A couple of 4's by Maitland and 3 by Edwards brought 70 on to the telegraph-board, and it was not long before 80 and then 90 went up, runs coming fast from both batsmen. Brady then relieved Pumfrett with the leather and his first ball was snicked by Edwards for one, bringing the score to 100. It was now 26 minutes past four. With the last ball of his first and only over Brady scattered Edwards' stumps—101-7-42. The partnership had produced 75, and Edwards' score reads—1, 2, 3, 3, 2, 1, 2, 1, 2, 1, 1, 3, 3, 2, 4, 3, 3, 1, 2, 1, 1. The innings was here declared closed. Maitland's score reads—1, 2, 3, 3, 1, 2, 2, 4, 4, 3, 1, 3, 2. Score:—

At a quarter to five the Mosquito Yacht Club went in for their second and even more disastrous innings, Deacon and Crowe facing their former opponents White and Lammert. Deacon skied White's sixth ball and was held by Kilby near the fence. Crowe, who was now joined by Pumfrett was the first to score, making a single off White; Pumfrett made one off the succeeding ball. Then Crowe was given out l.b.w. to White—2-2-1. Philip partnered Pumfrett only to be caught and bowled by Lammert with his third ball—5-3-0. The next man to go was Pumfrett, caught at the wicket by Duff—5-4-4.

On Wilkinson joining Wheeler, a couple of byes were scored, mainly through careless work in the field; then Wheeler was caught in the slips by Libeaud—5-5-0. Townsend was the next man in and opened with a single; his partner a moment later made a couple; and then two singles by Townsend off Lammert brought the score at last to 10. The partnership was not to last long however, and at 13 a separation was effected, Townsend going under to White—13-6-4. Firth joined Wilkinson but the fielding and bowling was very good and a succession of maidens went down upon the score-sheet. At last Firth cut Lammert for a couple and made a single off the next ball. In the next over he made a single off White, and his partner only just succeed-

ed in getting home in time, so smartly was the leather fielded. At the next over Fradgley relieved Lammert at bowling and Firth made a single off him, but his last ball of the over found Wilkinson's wickets—19-7-2. The whole ground was now in shadow and the wicket was playing truer than at any time during the afternoon. Maitland took over the bowling from White when MacVicar joined Firth, and sent down a maiden over. MacVicar was caught next over in the slips by Maitland before he had broken his duck—19-8-0. Firth was the next to go, being caught off Maitland by Lammert—19-9-6. Taverner's stay was short, being held by Crawford, off Maitland's third ball to him—19-10-0. Then F. J. Hall went out, last man, joining Brady. He was bowled first ball by Maitland—19-11-0. Maitland thus took three wickets with four balls. Score:—

BACHELORS VERSUS BENEDICTS.

Advantage was taken on Tuesday of the Japanese National Holiday to play the first all-day match which the Y. C. and A. C. have arranged this season. It was an ideal day for cricket, though the sun was very strong up till lunch-time. The afternoon was cloudy, however, but the light remained good till the end of play. Winning the toss, the Bachelors preferred to bat, and the wisdom of their choice was amply illustrated, as the scores show: Bachelors, 103, Benedicts 45. But then the Benedicts had among their team many veterans who have not played, for years, and all things considered the younger men should have made a better showing; but most of them were over-careful, afraid to strike out, and small scores naturally resulted. Duff made the top score and gave an excellent exhibition all through; setting an example which the youngsters might follow with advantage to themselves and the benefit of cricket locally. Many more ladies than turned up on Saturday patronised the match, and for their edification the band played a capital selection from the "San Toy" airs. Titin took place on the ground, being elaborately served by the Maples Hotel, and at the close the President of the Club, Mr. J. P. Mollison, toasted the Bachelors. Mr. F. E. White, in reply, said that if the Heads of Firms would only raise the juniors' salaries to a figure commensurate with their abilities and the responsibilities of the married state, he knew that many of his team would soon leave the ranks. As it was, he could only ask them to rise and drink the time-honoured toast on such occasions, "The Married State and Respectability"—(laughter and cheers). The teams were then photographed.

THE GAME.

Punctuality is never a very strong characteristic of the Y. C. and A. C., so it was not surprising that the first ball in the match was trundled by Maitland at 25 minutes past 11. One run, by S. Wheeler, was the result of the first over. A leg bye, a single by Firth, and another by Wheeler proved the outcome of Townsend's first essay, the wicket playing true but fast. A maiden by Maitland and one by Townsend followed. Wheeler cut Maitland for a single with the opening ball of the next over; and Firth drove him to the off for three. Singles by Firth and Wheeler

were made off Townsend in the next over and 10 was hoisted. After another maiden by Maitland, Firth succumbed to the first ball of Townsend's over—10-1-5. White, the new-comer, made nothing of the rest of the over, and had the mortification of losing his partner, caught at the wicket by Mollison, with the first ball from Maitland—10-2-4. The vacancy was filled by H. W. Kilby, who treated Maitland's swift deliveries with great discretion. Two maiden overs, making five in succession, went down upon the score-sheet, and then White broke his duck by making a single off Townsend. After a maiden over, Kilby cut Townsend for one; and White also made one before the over closed. White punished Maitland for 3, two balls later, and with the last delivery of the over Kilby drove him for 4. At five minutes to twelve o'clock 20 was hoisted. Following a maiden by Townsend and another by Maitland, Kilby sent Townsend to the off for one just as twelve o'clock struck. At this point Edwards relieved Maitland at the bowling. His second ball was sent away by White for 3, but nothing more was scored off him. Three by White off Townsend was made with the opening delivery; then Kilby snicked him for a single and the over closed. Edwards' first ball produced a leg-bye to the fence for 2 and 30 went up. Two deliveries later Kilby made 3 off Edwards; after which White got him away for one. Another change in bowlers took place, Clarke relieving Townsend. His fourth ball was driven by White for two. A maiden over by Edwards followed, then singles were made by White and Kilby, off Clarke, the next ball being sent to the fence by White for 3. The batsmen were taking no risks, and the play to on-lookers was rather tame. At 41, Bugbird went on to bowl, replacing Clarke. Kilby tipped him for 2 with the fourth ball of the over. A minute later the partnership was broken, for with the score at 10, Mollison caught White at the wicket—43-3-10. Moss joined Kilby and opened with a couple off Edwards. A wide by Bugbird was the next item of interest. This was succeeded by two maiden overs. Kilby made a single off Bugbird, and Moss had a narrow squeak of being thrown out through over-eagerness. Runs were coming mostly by singles, when Moss hit Edwards to leg for 3, shortly after 50 had been hoisted. Then Townsend went on to bowl again, in place of Bugbird, and had a single made off him by Kilby in the course of the over. A pretty stroke by Moss drove the last ball of Edwards' over to the Pavilion fence for 4. A 3 by Kilby to leg, off Townsend, was followed by a single by Moss, who, however, with the first ball of Edward's next over was given out l.b.w.—62-4-12. Wilkinson supplied the vacancy and played the over out. An adjournment was then made for tiffin, the clock marking 10 minutes to one.

Play was resumed at 2 o'clock, Kilby and Wilkinson returning to the wickets, facing Townsend and Maitland, Mollison being still behind the wickets. Kilby made a single off the first ball sent down. Wilkinson began his score with one neatly snicked to leg, but with the last ball of the next over, Maitland found this batsman's wickets—64-5-1. Fradgley partnered Kilby, who at once made a single off Townsend, and the new comer followed suit next ball. A boundary by Kilby with the fifth delivery, made the over expensive. Seventy went up after a single by Kilby off Maitland, and he followed this with another single off Townsend, but this batsman was still playing very carefully. Fradgley pursued similar tactics and the score rose slowly. At twenty minutes past two Fradgley put up a ball from Townsend which Stuart held at long on—75-6-4. Duff, the new-comer, opened with a 4 to the fence off Maitland; the next ball he punished for 3, and 80 went up on the board. Townsend's over produced a single by Kilby. Another maiden by Maitland and then Abbey went on to bowl in place of Townsend. Duff made a single off his second ball, and Kilby ventured a run with the fourth, a hazardous attempt which fortunately came off. Abbey began his next over with a leg-bye which cost 2, but nothing further resulted. A drive to the Pavilion by Duff, off Maitland, was the best hit of the next over. Next Abbey was lifted over the fence by

Duff for 5 and 90 was put on the telegraph. A change in bowling now took place, Edwards relieving Maitland. Kilby made a couple to leg off his second ball, and repeated the stroke with the next delivery. Bugbird then took over the leather from Abbey and Duff made a leg hit for 3 off his first ball: 100 was hoisted. The next ball Kilby retired, clean bowled—100-7-37.

Lammert began with some free hits producing nothing, but with the last ball of the over made a single. The next over was enlivened with singles by both batsmen. Duff was not afraid of the bowling and by 2's and singles pulled up the score to 120. Slowly this total rose until Duff by lifting Bugbird across the fence brought the figures to 130. In the following over the same player drove Maitland to the Settlement fence for 4; to be followed by 3 off the same bowler a second later. Another single by Lammert saw the end of his career, however, Stuart holding him next ball at long on, off Townsend—140-8-5. Brady then partnered Duff, and was given a life by Stuart, long stop, who had the sun directly in his eyes; two runs resulted. After a single by Duff, Brady got Townsend away for one, and Duff followed this by another single off the same bowler. After some more runs by Duff, Brady was caught by Townsend off Maitland—148-9-4. Strome partnered Duff, and runs still came freely, the older player hitting out vigorously: 150 was telegraphed, of which Duff had made 50. Strome made his opening run off Maitland. A miss by Dodds prolonged Duff's life next over, but with the first ball of Maitland's over, Duff retired, being held by P. B. Clarke—159-10-55. Pollard went to the wicket only to be sent back first ball, run out—159-11-0. The last man in was Pumfrett and he opened with 3 off Maitland; then he got a single, but with the fourth ball of the over the bowler disturbed his stumps—163-12-4. It was now 3.25 p.m. Score:—

The Benedicts went in to bat at 20 minutes to four, Crawford and Stuart facing the bowling of White and Fradgley. Crawford began with a single off White but the next ball found Stuart's wickets—1-1-0. Clarke filled the vacancy and made 4 first ball; then Crawford succumbed to a swift ball from Fradgley—1-2-1. Edwards partnered Clarke and began with a single, which Clarke followed with a couple off the same bowler. Clarke's stay was destined to be very short, however, a clean pitched ball finding his off stumps—8-3-6. So far the married men had made a disastrous showing, the long innings in the field evidently telling seriously. The next of the contingent to go was Edwards; Duff smartly stumping him—8-4-1. Bugbird, who followed, retired first ball, c. and b. White—8-5-0. To stop the terrible "rot," Dr. Wheeler put on the pads and partnered Townsend. His appearance was the signal for a round of applause, and this was renewed when his first six balls from Fradgley were successfully negotiated. Townsend skied a ball from White, but the field were nowhere near it, and the run was saved. In the next over the same player made a single off Fradgley, and at the change scored one off White. Things were getting quiet again when Townsend made 3 off Fradgley; and then the

Doctor broke his duck with a neat little snick to leg. Another single was made by Townsend, and then Dr. Wheeler retired clean bowled—17-6-1. At a quarter past four, E. W. Maitland went in to bat and began with a single off Fradgley's last ball. After this matters grew slow again, the batsmen treating the bowling with care, until Townsend managed to get Fradgley away for 3 to the scorers' box and 20 went up. A maiden by White was followed by an over from Fradgley which produced a single, made by Townsend. Then in White's next over he caught and bowled Townsend with his fifth ball—27-7-14. Dodds took his place, and Maitland in the following over made a single, to be followed with one from Dodds, both off Fradgley. Lammert relieved Fradgley with the leather and Maitland sent him away for a first ball; he followed this with another 2 to the off, and 30 went up. One more couple by Maitland and the over finished. With White's second ball, Dodds was held at the wicket by Duff—32-8-1. The Captain of the team, J. P. Mollison, was the incoming bat. After another maiden by White—his fourth in succession—Maitland drove Lammert across the field for 4, but next ball this batsman retired, l.b.w.—63-9-11. Healing partnered Mollison and Brady relieved White at the trundling. With his fourth ball Brady found Mollison's off stump—63-10-0. At this point Lammert went off, and Pumfrett took the bowling for a while. Abbey, getting Brady away to leg for one, broke his duck just at five o'clock; then Healing made a single off him. Next over another single by Healing was scored, after which Abbey made one, and Healing 4 off Pumfrett and 40 was signalled. A single off Brady by Abbey was all that was made in the next over. With the first ball of the following over Abbey was bowled by Pumfrett—45-11-3. The last man to go in was Thwaites and he was caught by Kilby off Pumfrett's second ball to him—45-12-0; Healing carrying out his bat for 6. The match concluded at 10 minutes past 5 o'clock. Score:—

THE ATTACK ON PRESIDENT MCKINLEY.

Papers to hand by the C. P. R. steamer contain accounts of the attack upon President McKinley at Buffalo. It appears that the assassin perpetrated his cowardly deed a few moments after 4 p.m. while the President was holding a public reception in the great Temple of Music on the Pan-American grounds of the Buffalo Exposition. We cull the following account:—

It was just after the daily organ recitals in the splendid temple of music, that the dastardly attempt was made. Planned with all the diabolical ingenuity and finesse of which Anarchy and Nihilism are capable, the would-be assassin carried out the work without a hitch, and should his design fail, and the President survive, only to Divine Providence can be attributed the beneficent result.

The President, through well guarded by United States Secret Service detectives, was fully exposed to such an attack as occurred. He stood at the edge of the raised dais, upon which stands the great pipe-organ, at the east side of the magnificent structure. Throngs of people crowded in at the various entrances, to gaze upon their well-beloved Executive, perchance to clasp his hand and then fight their way out in the good-natured mob that every minute swelled and multiplied at the points of ingress.

The President was in a cheerful mood, and was

enjoying to the full, the hearty evidences of good-will which everywhere met his gaze. Upon his right stood Mr. John G. Milburn of Buffalo, President of the Pan-American Exposition, chatting with the President and introducing to him the special persons of note who approached. Upon the President's left stood Mr. Cortelyou.

It was shortly after 4 p.m., when one of the throng which surrounded the Presidential Party, a medium-sized man, of ordinary appearance, and plainly dressed in black, approached, as if to greet the President. Both Secretary Cortelyou and President Milburn noticed that one of the man's hands was swathed in a bandage or handkerchief. The reports of the bystanders differ as to which hand. He worked his way and the stream of people to the edge of the dais until he was within two feet of the President.

President McKinley smiled, bowed, and extended his hand in that spirit of geniality the American people so well know, when suddenly the sharp crack of a revolver rang out, loud and clear, above the hum of voices and shuffling of myriad feet, and the vibrating waves of applause, that ever and anon swept here and there over the assemblage. There was an instant of almost complete silence, like the hush that follows a clap of thunder, or the momentary silence that ensues after the discharge of a bomb-shell. The President stood stock-still, a look of hesitancy, almost of bewilderment, on his face, then he retreated a step, while a pallor began to steal over his features.

The multitude, only partially aware that something serious had happened, paused in the silence of surprise, while necks were craned, and all eyes turned as once, toward the rostrum, where a great tragedy was being enacted. Then came a commotion. With the leap of a tiger, three men threw themselves forward as with one impulse, and sprang toward the would-be assassin. Two of them were United States Secret Service men who were on the outlook and whose duty it was to guard against just such a calamity as had here befallen the President of the nation. The third was a bystander, a negro, who had only an instant previously grasped in his dusky palm, the hand of the President.

As one man, the trio hurled themselves upon the President's assailant. In a twinkling, he was borne to the ground, his weapon wrested from his grasp, and strong arms pinioned his arms.

Then the multitude which thronged the edifice, began to come to a realising sense of the awfulness of the scene of which they had been unwilling witnesses. A murmur arose, spread and swelled to a hum of confusion, then grew to a babel of sounds, and later to a pandemonium of noises.

The crowds that a moment before had stood mute and motionless in bewildered ignorance of the enormity of the thing, now, with a single impulse, surged forward toward the stage of the horrid drama, while a hoarse cry swelled up from a thousand throats, and a thousand men charged forward to lay hands upon the perpetrator of the dastardly crime.

For a moment the confusion was terrible. The crowd surged forward, regardless of consequences. Men shouted and fought; women screamed, and children cried. Some of those nearest the doors fled from the edifice, in fear of a stampede, while hundreds of others from the outside struggled blindly forward, in the effort to penetrate the crowded building, and solve the mystery of the excitement and pain, which every moment grew and swelled within the congested interior of the palatial edifice.

Inside, on the slightly-raised dais, was enacted within those few feverish moments, a tragedy, so dramatic in character, so thrilling in its intensity, that few who looked on will ever be able to give a succinct account of what really did transpire.

Even the actors, who were playing the principal roles, came out of it with blanched faces, trembling limbs and beating hearts, while their brains throbbled with a tumult of conflicting emotions, which left behind only a chaotic jumble of impressions, which could not be clarified into a lucid narrative of the events as they really transpired.

But of the multitude which witnessed or bore a part in the scene of turmoil and turbulence, there was but one mind which seemed to retain its equilibrium, one hand which remained steady, one eye which gazed with unflinching calmness, and one voice which retained its even tenor and faltered not at the most critical juncture. They were the mind and the hand and the eye and the voice of President McKinley.

After the first shock of the assassin's shots, he retreated a step, then, as the detectives leaped on his assailant, he turned, walked steadily to a chair, and seated himself, at the same time removing his hat, and bowing his head in his hands. In an instant, Secretary Cortelyou and President Milburn were at his side. His waistcoat was hurriedly opened, the President meanwhile admonishing those about him to remain calm, and telling them not to be alarmed.

"But you are wounded," cried his Secretary; "let me examine."

"No, I think not. I am not badly hurt, I assure you," said the President.

Nevertheless, his outer garments were rapidly loosened, and, when a tracking stream of crimson was seen to wind its way down his breast, spreading its tell-tale stain over the white surface of linen, their worst fears were confirmed. The President was removed to the home of Mr. Milburn at 7:25 p.m.

Later in the evening a bulletin was given out stating that while the President's condition was serious the wounds were not necessarily fatal. A special doctor of stomach troubles who saw the President, said he did not believe the injuries would cause death. At 9 p.m., the following statement was given out:—

The President was shot about 4 o'clock. One bullet struck him on the upper portion of the breast-bone glancing and not penetrating; the second penetrated the abdomen five inches below the left nipple, and one and one half inches to the left of the medial line. The abdomen was opened through the line of the bullet-wound. It was found that the bullet had penetrated the stomach. The opening in the front wall of the stomach was carefully closed with silk sutures, after which a search was made for a hole in the back wall of the stomach. This was found and also closed in the same way. The further course of the bullet could not be discovered, although a careful search was made. The abdominal wound was closed without drainage. No injury to the intestines or other abdominal organs was discovered.

The patient stood the operation well. The pulse is of good quality, with a rate of 130. The condition at the conclusion of the operation was gratifying. The result cannot be foretold. His present condition justifies hope of recovery.

The following bulletin was issued by the President's physicians at 10:40 p.m.:—

"The President is rallying satisfactorily, and is now resting comfortably. Temperature, 100.4 degrees; pulse, 134; respiration, 24."

Another at 1 a.m., said:—

"The President is free from pain and resting well. Temperature, 100.2; pulse, 129; respiration, 24."

Meanwhile investigations had been made as to the President's assailant and it was found that his name was Leon Czolgoz, that he was born in Detroit and that he had come from Cleveland where, he declared, he had been selected to kill Mr. McKinley. In co sequence of information furnished by the Buffalo police six men were arrested in Chicago the same night on suspicion of being concerned in the plot. Three more alleged anarchists were seized in Chicago the following day.

The President's medical attendants continued on the 7th to speak hopefully of the case, and to aid them in their treatment an X-ray apparatus was procured. We reproduce the following bulletins issued on this date:—

"6:30 p.m.—There is no change for the worse since the last bulletin. Pulse, 130; temperature, 102.5 degrees; respiration, 24."

"9:30 p.m.—Conditions continue much the same. The President responds well to medication. Pulse, 132; temperature, 102.5; respiration, 25. All temperatures reported are taken in the rectum. The physicians in attendance wish to say that they are too busily engaged to reply to private telegrams."

At midnight the condition of the President was stated to be unchanged.

Messages of sympathy were sent from all quarters of the world, King Edward forwarding a telegram from Copenhagen, where the news had reached him. We read that:—

With the exception of the physicians and attendants, Mrs. McKinley was the only person who crossed the threshold. The President asked to see her, and his physicians did not have the heart to refuse his request. She was there but a few minutes, seated at his bed-side, as he in his devotion to her in her illness, had so often done at hers. Mrs. McKinley had been warned not to talk, and the President and his wife exchanged only a few words, but the pressure of their hands doubtless spoke volumes. It was only when he asked her to be brave for both their sakes that she faltered and almost broke down. With choking throat and brimming eyes, she promised with a bow of her head. Almost immediately thereafter she was led from the room by Dr. Rixey.

Mrs. McKinley, throughout this trying ordeal, has shown remarkable fortitude. She has been mistress of herself and her sorrow, and has been as calm and self-possessed as the President himself, for throughout it all the President has been cooler than those about him.

The scene at the time of the shooting is thus described by an eye witness:—

"I stood about two feet from the President and saw Czolgoz approach him. The latter had his right hand drawn up close to his breast, and a white linen handkerchief wrapped about it bore the appearance of a bandage. He extended his left hand and I am quite sure that the President thought that he was injured, for he leaned forward and looked at him in a sympathetic way. When directly in front of the President Czolgoz threw his right hand forward and fired. I saw the flash and smoke, followed by the report, and heard the second shot. Instantly John Parker, the coloured man, and Secret Agent Fox were upon Czolgoz, and bore over. Czolgoz still retained a hold on his revolver, and seemed to be trying to get his left arm free to fire again."

The President did not fall. He raised his right hand and felt his breast but seemed to be maintaining his upright position only by a wonderful effort. I am sure that he did not speak at that moment. He gazed fixedly at his assassin, with a look which I cannot describe, but which I shall never forget, and in a moment reeled back into the arms of Secretary Cortelyou.

Czolgoz's revolver had by that time been knocked out of his hand, and some one had picked up the handkerchief, which lay at his feet. Czolgoz was picked up, forced back, and again knocked down.

Mr. Cortelyou and Mr. Milburn supported the President and led him to a chair, I heard him ask that the news be kept from his wife, and a moment later, when Secretary Cortelyou asked him if he felt much pain, he said:—

"This wound hurts very much."

He seemed to be fairly easy, as he rested in the chair and some of the fading colour came back to his face. He reached his right hand inside of his shirt, and when he withdrew it his fingers were tipped with blood. He paled again at the sight of the blood, and I think he fainted.

Senator Azprou, the Mexican Minister, broke through the crowd, and, rushing up to the President, cried:—

"My God, Mr. President, are you shot?"

The Minister seemed about to throw himself at the feet of the President but was restrained. The President's answer came very slowly, and in a halting, subdued voice, he said:—

"Yes, I believe I am."

The President was attracted by the scuffle of the officers, who were dragging the would-be murderer away, but he did not speak. His head rested on the arm of Mr. Milburn and seemed only partially conscious. His courage was superb, and while he was conscious he was master of the pain which he suffered. When the ambulance came, and a stretcher was brought in, he started forward, and partially regained his feet unassisted. I heard not a word from the assailant of the President. He was struck down the moment he fired the second shot, and if he did speak, it was probably in an exclamation at the very rough treatment he was receiving.

All the London newspapers published on Sept. 27th long accounts from Buffalo, describing the attempt upon President McKinley's life; despatches from abroad regarding the reception of the news, which excited renewed and anxious discussions of the means to prevent Anarchist outrages, and the urgent need of the addition of greater police precautions than ever in the republics and the freest countries.

The *Daily Telegraph* said editorially: "It is with the profoundest regret that the world learns to-day that another distinguished name is added to the shamefully long list of rulers who have fallen victims to the insensate wickedness of the assassin. The most unfeigned and heartfelt sympathy will go forth from every family in Christendom to Mrs. McKinley in this, her hour of deepest affliction and trial. Americans will acquit us of all suspicion of insincerity when we claim that the blow will be felt with equal severity in Great Britain as in the United States."

The *Daily News* says: "This ghastly outrage by which a grave, upright governor of men perishes, as Lincoln and Garfield perished, in the execution of his duty, comes home to the hearts of Englishmen with inexpressible poignancy. We are proud of America, and an act like this, which plunges the Republic into bitter grief, reminds us as nothing else can do, that we are members of the same household of bone, flesh of their flesh. The death of no public man, outside of this country, could affect us like the death of the American President."

While denouncing in the strongest terms the madness of Anarchistic crimes, the *Daily News* said it thinks the growth of the Trust system is a perpetual danger to the American Commonwealth.

The London *Times* printed on Sept. 4th a despatch from Copenhagen which asserted that the remarkable coolness of the people in regard to the Czar's visit continued. This is declared to be undoubtedly due to the Finnish question, Finland being regarded as a part of Greater Scandinavia.

THE LAST HOURS OF PRESIDENT Mc'KINLEY.

The following telegrams are translated by the *Nagasaki Press* from the *Vostochny Vestnik*:—

Buffalo, Sept. 13.

Notwithstanding the favourable condition of the President during the past few days, a change for the worse occurred this afternoon.

At 8.30 p.m. the following bulletin was issued:—The condition of the President is not very good. His food is not digested properly, and the bowels cannot be moved. His pulse is satisfactory; the appearance of the wound good; sleep quiet; temperature 100.2; pulse 128.

At midnight the following bulletin was issued:—The favourable symptoms of the President's condition since the last bulletin was issued have changed for the better. Pulse 120, temperature 100.2.

September 14.

A bulletin issued at 2.50 a.m., signed by the six physicians in attendance, reads as follows:—The President's condition has become more serious and gives cause for apprehension. The intestines perform their functions, but the heart is not reacting sufficiently to the stimulants administered. The President is fully conscious; his body is warm; the pulse faint but regular. Temperature 100.38; pulse 126; breathing 20.1.

At 4 a.m. several physicians came out of the sick chamber, and stated that the President was somewhat better than he had been an hour previous, and that an improvement was noticeable. They had not given up hope.

At 4.35 a.m. another bulletin stated that the improvement noticed at four o'clock was insignificant. The President's private secretary has just left the sick-room and states that the patient is resting slightly. Four physicians are in attendance.

At 10 a.m. the following bulletin was issued relating to the decided turn for the worse in the President:—At 3 a.m. his strength declined; the change was noticed to have begun yesterday afternoon, the digestive organs ceasing to perform their functions when nourishment became absolutely necessary. On account of the nourishment, which during the past few days has been administered artificially, failing to obtain the desired effect, nourishment by natural process was resorted to. Apparently the stomach was not sufficiently capable of receiving food, although the beef-tea administered proved beneficial on two occasions, and it was only then that great apprehension began to be felt. The pulse was very high, showing 126, and the temperature 100.2. The weak action of the heart was increasing to a threatening extent, and the President's condition was becoming continually worse.

About midnight the President's condition became still more critical. Calomel and digitalis were administered. At 5 a.m. the President lost consciousness, and the end appeared near. Once more the patient was given digitalis and strychnine, and, as a final remedy, a solution of salt was injected, but without immediate results. All present are agreed that the patient's condition is very critical.

1 p.m.—Owing to the strong decomposition of the muculent film, the President is not able to retain the food, which is being given artificially. A complete failure of strength may occur at any moment. The physicians are of the opinion that if the President survives the night, there will be fresh hope. The physicians are not able to determine the exact cause which led to the decided change in the heart's action.

Another bulletin was issued at 2.30 p.m.:—The President feels better than he did this morning; his condition at the present moment gives hope that he will continue to improve. His condition generally is much better than at this time yesterday. Pulse 126, temperature 99.4.

3.45 p.m.—The physicians are of opinion that the crisis will probably arrive to-night, but there are still hopes of saving the patient.

At 5 p.m. it was given out that the President was slowly dying.

At 5.35 p.m. the President's private secretary came out and stated as follows:—From the opinions of the physicians attending the President the latter's condition has become very serious. He is now suffering from a great decline of strength. He is given oxygen to enable him to breathe, and he is reacting but little on the stimulants that are given him. Pulse shows 125, breathing 40.

At 5.45 p.m. the wife and relatives of the President were called to his bedside, his condition being hopeless.

At 6.30 p.m. it was reported that the oxygen had ceased to produce any effect on the patient.

At 7 p.m. all the relatives, members of Cabinet and Senate, and personal friends present bade their last "Good-bye" to the President. They were assembled in the drawing-room and were admitted into the sick chamber one by one.

At 7.25 p.m. the President fell into a state of unconsciousness, which lasted till 7.50 p.m., when by the aid of restoratives he became conscious again, and requested that his wife be admitted. Mrs. McKinley immediately came in.

At 8.35 p.m. it was reported that great throngs of people were collecting on the streets surrounding the police-station where the assassin Czolgorz is locked up. No one, however, is admitted near it, and numerous strong detachments of police keep guard around the building. Two regiments are kept ready to appear on the scene at a few minutes' notice in case the crowd should attempt to storm the police station.

At 9.27 p.m. it was learned that consciousness had left the President entirely, and that during his easiest moments he was consoling his wife.

At 9.35 Dr. Mintel reports that a paleness has begun to steal over the features of the President and that his body is becoming cold, but that he will probably live until about 2 a.m. The pulse can hardly be felt.

At 9.53 p.m. the use of oxygen was stopped for some time. Before consciousness left the President entirely, he turned to his wife and said "Farewell." A few other words were also uttered in a low voice, and those standing near him discerned them as "My God, to Thee."

At 10.30 p.m. all the portions of the President's body became cold, and he had been in a state of unconsciousness for more than two hours.

At 11.07 p.m. Dr. Barney declared that the President could live but a few hours.

September 15.

At 2 a.m. the physicians declared that the President was dead.

NEWS OF THE WEEK.

Captain Tokizawa arrived at Nagasaki on the 24th inst. from Manila.

A porter was killed by a train at Mito station on the night of the 24th inst.

Lieut.-Colonel Okubo Noriaki, of the Engineers, died on the morning of 21st inst.

The Japanese war-vessel *Saiven* left Sasebo for Nimsen on the afternoon of the 21st inst.

The Japanese standing squadron (*Izumo*, *Hatsuse*, and *Asahi*) arrived at Yokosuka on the 23rd inst.

Mr. Kato Masayoshi, Vice-President of the Nippon Yusen Kaisha, left Fusan for Japan on the 23rd inst.

The *Empress of China* made a rapid clearance from Yokohama on Tuesday, but she only stayed one hour at Kobe—a record.

Prince Komatsu, President of the Japan Red Cross Society, left Tokyo for Akita, on the morning of the 24th inst. by train.

News has reached London that the Venerable William Pelham Burn, Archdeacon of Norfolk, has been killed in the Tyrol.

Lieutenant-General Kelly-Kenny has been appointed Adjutant General of the British Forces, in succession to Sir Evelyn Wood.

Turkey has ordered the construction of four light-houses in the Red Sea, namely, at Dschebal-zubeir, Abnail, Mascha and Oschebaltir.

While a train on the Nippon Railway was on the way to Omiya on the 23rd inst. someone fired a gun and broke the glass of a window.

The cause of the late arrival of the *Empress of China* on Monday was her standing by to furnish food and water to a disabled American transport with 600 troops, which she spoke on the passage over.

Mr. Kato Masayoshi, Vice-President of the Nippon Yusen Kaisha, and party, arrived at Nagasaki on the 24th inst. from Fusan, and was to leave for South China the following day by the *Empress of China*.

Matsuda Seihei, of Okayama Prefecture, who succeeded in getting a passage to America as a stowaway on board the *Hongkong Maru*, was prevented from landing by the San Francisco custom house officials and was returned to Japan.

On his arrival the Yokohama harbour police arrested him and sent him on the 22nd inst. to the Court for trial.

A temple keeper at Shinaishi-machi, Karitagori, Miyagi Prefecture, was murdered on the 25th inst. by a young priest employed in the temple.

The *Birmingham Daily Post* on Sept. 2nd said that King Edward is likely to confer a Dukedom on Lord Salisbury at the time of His Majesty's coronation.

The battleship *Exmouth*, 14,000 tons, was launched at Birkenhead, on August 31, and the cruiser *Bodford*, 9,800 tons, was launched at Glasgow the same day.

The Osaka Shosen Kaisha steamer *Taiti Maru* made a successful trial trip in Nagasaki bay on the morning of the 25th inst. She will leave for Shanghai shortly.

Noguchi Tei, a mad woman, living at Okabemura Ozato-gori, Saitama Prefecture, cut the throat of her blind son, Wakichi, on the night of the 21st inst. She then took her own life.

An armed burglar entered a house occupied by Mr. Hoshino Heibei, President of the Urawa Bank, at Urawamachi, Saitama, on the night of the 25th inst. and stole several articles valued at yen 101.

A Constantinople despatch of Sept. 5th stated that brigands had carried off an American lady, engaged in missionary work, and a lady companion, in the district of Djumbala, Vilayet of Salonika.

A despatch to a news agency from Copenhagen on Sept. 2nd said that the new Danish Ministry had decided to accept the United States' offer of 16,000,000 kroner (about \$1,000,000) for the Danish West Indies.

Aoki Sakuzo, living at Urawa-machi, Saitama Prefecture, and his wife Hana, were arrested by the Urawa police on the 25th inst. and charged with killing children whom they had taken in to nurse.

The first number of a magazine called the *Keizai Jiho* (*Economist*) will be published in Tokyo on the 5th proximo. It will be published twice a month, and is to be edited by Messrs. Kurihara Ryuichi and Sakurai Shunsho.

A Victoria correspondent writing on Sept. 3rd said the torpedo-boat destroyers *Virago* and *Sparrowhawk* had been ordered to China, and complaints were being made that this will tend to weaken the Northern Pacific squadron too much.

Tanazuna Sankichi, living at Setagaya-mura, Yeburagori, Tokyo, was arrested by the police a few days ago in a house of ill fame at Hachioji on a charge of having stolen 56 piculs of rice from a shop at Ishiki-machi, Fukagawa and from other houses, on the 18th inst.

A man named Hozumi Kaoru (20), living at Misakicho, Kanla, Tokyo, was arrested by the police on the 22nd inst. charged with stealing articles valued at yen 2,000 from several houses since April last. The articles were pawned in 20 different shops.

A postal deliverer named Kamiya Fukujifo, of Ibaraki Prefecture, employed in the Yokohama Post and Telegraph Office, was arrested by the Isezakicho Police on the 22nd inst. charged with the non-delivery of over 50 letters and with hiding them in his house since February last.

Jake Gandaur, the Canadian, who held the world's single-scull rowing championship, was defeated on Sept. 6th by George Towns, a native of Australia, who in 1899 wrested the championship of England from W. A. Barry. The match was rowed at Rat Portage, Ont., Canada.

Says a London telegram of Sept. 3rd:—Lord Francis Hope, husband of May Yohe, the actress, now in the Orient with Putnam Bradlee Strong, has instructed his attorneys to

take immediate proceedings to obtain a divorce. This information was made public through a letter to the *Express* from Messrs. Madison, solicitors to Lord Francis Hope.

Mr. Watanabe Sentaro, proprietor of the *Ryo-u Nichi Nichi Shinbun*, of Yamagata, was robbed of a gold watch and silk kimono, while staying at an hotel near Ueno station on the night of the 23rd inst. He reported the matter to the Shitaya police station at once. Some guests of hotel are suspected.

Murata Koma, living at Matsunagacho, Kanda, Tokyo, attempted to commit suicide by drowning early on the morning of the 24th inst. A police-constable on duty near the French Hatoba, Yokohama, heard a woman's scream and ran to the spot, arriving just as she was sinking. He rescued her with the help of another man.

A court-martial has been held in connection with the recent loss of the torpedo-boat-destroyer *Viper*, off the coast of Alderney during the recent naval manoeuvres. Lieutenant Speke, who was on watch duty on the *Viper* at the time of the accident, was reprimanded by the court, who found that he had made a miscalculation, and also that he had not adopted sufficient precautions.

Ota Seiki, formerly an interpreter to the Nippon Yusen Kaisha and to the Imperial Hotel, was arrested by the Asakusa Police on the 24th inst. charged with having stolen several articles valued at over yen 500 from boarding houses and schools in Tokyo since January last.

The *jinrikisha* coolies near Shimbashi station have lately been very obstructive, and on the 24th inst. the Shiba police arrested over 50 of them. As a result of their examination one coolie was confined in the lock-up for four days, while twenty received three days' detention.

It was stated on authority by the Pretoria correspondent of the London *Daily Telegraph* on Sept. 6th that Lord Kitchener was not going home, but would finish the task assigned him in South Africa. General Lyttelton replaces General Hilyard, who has gone on leave.

The Paris *Liberte* on Sept. 5th said it learned that negotiations for a revision of the Customs tariff of France and Russia were proceeding, and that probably a treaty will be signed during the Czar's stay in France. The Russian duties on French wines will be considerably diminished, while France will make concessions in the case of Russian petroleum.

A priest named Fukuda Kenko, living in a Buddhist temple known as the Konoji, Inada-mura, Tachibanagori, Kanagawa prefecture, and his wife Tsune, hanged themselves from the roof of the kitchen, on the 22nd inst. They acted with deliberation, standing on tubs to adjust the ropes, after which they kicked the tubs away. The couple left two letters.

The investigation into the facts concerning the loss of the C. P. N. steamer *Islander*, which foundered in Stephen's Passage (B.C.) after striking an ice floe in the early morning of August 15th, was commenced at the Court House, Victoria, on Sept. 5th, before the Commissioner, Capt. Gaudin, Agent of Marine, and his assessors, Capt. J. G. Cox and Capt. J. A. Thompson, Inspector of Steam Boilers.

Saigon papers record a sad affair, the result of a buffalo running amok in the village of Phu-my. The furious animal in its wild career knocked over many Annamites, and then entered a garden belonging to a French lady, Mme. Assé. Her daughter, hearing the noise, went into the garden to ascertain the cause, and was at once charged, gored repeatedly, and trampled upon, dying a minute or two afterwards from her frightful injuries. The animal was immediately shot by the neighbours.

Lovers of good music will be glad to hear that at the beginning of next month a grand instrumental and vocal concert will be given at the

Public Hall by the Pianist Signor Carlo Gentile and his sister Miss Elena Gentile. Vocal selections will be given by Miss Alele Mastropasqua. All the performers are artists from the Conservatories of Naples and Milan, and it is safe to say that they will win a high place among musical circles in Yokohama.

We regret to have to record that, in the face of the precedent set nearly forty years ago, it was decided by a small majority at the extraordinary general meeting of the Race Club held at the Grand Stand last evening, not to allow officers of the international garrison to enter and race ponies at the forthcoming meeting. We did not think it possible that any sporting club in Shanghai could come to such an inhospitable and unsportsmanlike decision.—*N. C. Daily News*.

An extraordinary general meeting of the shareholders of the Maples Hotel Company, Limited, was held at No. 85, Bluff, on Saturday afternoon, for the purpose of considering the report of the liquidators, and matters ancillary thereto. There were present Messrs. C. Glahn, P. B. Clarke, E. P. Bishop, A. W. Read, J. E. de Becker, and Sato Hakuai. Mr. de Becker was appointed to the chair. Mr. Clarke moved that, as the nature of the business before the meeting was of no public interest, the press should be excluded. The motion was seconded by Mr. Sato and carried unanimously.

Below are figures showing the amounts of the principal exports and imports during the first half of September:—

	Quantity.	Value.
Exports—		Yen.
Raw silk.....	350,808 <i>kin</i>	3,185,024
Tea.....	1,026,280 ..	258,750
Cotton thread.....	30,000 ..	9,400
Habutae.....	61,232 <i>kin</i>	1,404,889
Imports—		
Rice.....	18,312 bags	66,785
Cotton.....	2,350 <i>bin</i>	184,140
Cotton thread.....	324,700 ..	273,228
Sugar.....	14,756 bags	1,107,645

In view of the coming into force of the Sugar Consumption Tax Law on and after October 1st, 1901, a Branch Taxation Office has been established in the compound of the Custom House at Yokohama to give facilities to traders who take delivery of imported sugar. The necessary forms can be obtained at any time at the office where the usual Customs forms are sold. We further understand that this Branch Office has nothing to do with general taxation matters, but deals only with matters connected with the Sugar Consumption Tax Law.

Mr. James Galloway Weir, M.P., arrived on Monday in Yokohama by the *Empress of China*, accompanied by Mrs. Weir, Mrs. McDonald, M.D., and her husband, Dr. McDonald. Mr. Weir is the Radical member for Ross and Cromartyshire, in the House of Commons, having represented that constituency since 1892. He has also represented East Islington, on the London County Council, and was formerly a member of the Scottish Corporation. He is now on a tour round the world. Some two years ago Mr. Weir made a trip through Russia, but this is his first visit to Canada and the Orient.

Mr. James Caldwell, M.P., for Mid-Lanarkshire, Scotland, accompanied by Miss Caldwell, was among the passengers on the *Empress* liner on Monday. Mr. Caldwell has been a Radical in politics since 1894. In 1895 he defeated Mr. C. K. Mackenzie, Conservative, by the narrow majority of 71 in a poll of over 8,000 votes. Mr. Caldwell is a member of the General Council of the Glasgow University, and formerly represented the St. Rollox Division of Glasgow in the House of Commons.

A Tokyo paper remarks that though there are not lacking signs to show a more easy and favourable feeling in commercial circles, the situation of some banks betrays far from creditable conduct on their part during the past year. A list is given of those institutions which have been

brought into court either on account of insolvency or because of disputes with clients, from which it appears that the Aikoku Bank is being sued by Miss Takayama; the Mito Commercial Bank by Mr. Karasawa; the Tsuda Bank by Mr. Matsuzawa; the Ninety-fifth Bank by Mr. Fujita; the Tokyo Meiji Bank by the Hokkaido Colonial Bank; the Tokyo Commercial Bank by Mr. Iida.

Yamaguchi Kunimatsu, of Fukui Prefecture, employed in a diary at Kita Shinagawa, Tokyo, was arrested by the police on the night of the 23rd inst. and charged with stealing 30 yen belonging to his employers.

The obsequies of the late Prince Henri of Orleans took place at Saigon on the 29th ultimo. A great function was held in the cathedral, which was elaborately decorated, the pontifical mass being read by Monsignor Mossard. All the clergy were present. M. Luiggi, Comte de Châtillon, represented the family of the late Prince. M. Donner, Governor General, General Dodds, and all the leading officials, civil and military, attended as private mourners. Messrs. Capus and Simon eulogised the deceased. The coffin, covered by a tricolour, was taken on board the *Océanien*. The body is accompanied to France by M. Luiggi.

Professor Nordenskjöld, whose death was reported from Stockholm last month, was one of the most indefatigable of Arctic explorers in his day, and may be termed the Nansen of the last generation. He performed more than one feat which still remains unique in Polar work. Perhaps his greatest achievement was the discovery of the North-East Passage. He was the first to sail out of Atlantic waters into the estuary of the Yenisei, and he demonstrated the commercial value of this adventure in the following year by introducing the first shipload of seal-borne merchandise into Siberia. And in 1878 he crowned his mastery of this coast by taking the *Fega* round Cape Tchelynskin to Japan; for which he received an appropriate reward, being appointed a Commander of the Swedish Order of the "North Star."

By the *Empress of China* returned to Japan Mr. John R. Mott, M.A. (Yale), the Secretary of the World's Student Christian Federation, who has been called the statesman leader of the Young Men's Christian Association. He is making a four months' tour of Japan, China and India, and will stay in this country about four weeks. During a previous visit here in 1897 he assisted in the organization of the Student Young Men's Christian Association Union of Japan, and his present visit will be devoted to developing it and the sister Union of City Associations. The chief features of his work will be evangelistic meetings for students in Sendai, Tokyo, Kyoto, Osaka and Kumamoto, and a notable gathering of students, professors, pastors, and others connected with Christian work among students, at Tokyo on October 3-6. Mr. Mott is accompanied by his secretary, Mr. Burton St. John, and by Mr. and Mrs. George Gleason, who have come to enter Association work in Osaka and Kobe.

A sad fatality is reported from Nikko. Mr. Masuda Sozaburo, son of Mr. Masuda Kyotoku, Director of the Meiji Life Insurance Company, left the Capital for Nikko accompanied by two friends on the afternoon of the 13th inst. They reached Chusenji the following day and put up at the Tsutaya Hotel. The young man, who was an amateur painter of some distinction, expressed a desire to see the neighbouring water-falls by moonlight, and that evening he and one friend went out to view the Kegon waterfall. During the walk Mr. Masuda was missed by his friend, and as he did not return to the hotel by the morning his father was telegraphed for. On the morning of the 15th a traveller found a body at the foot of the Kegon fall and reported the matter to the police. The body on being taken up proved to be that of the unfortunate man. The head and limbs were injured as if they had been in contact with a rock. It is thought that the deceased fell over the fall accidentally.

AMERICAN TOPICS.

When Congress meets next December a resolution passed by the Hawaiian legislature asking Congress to put a duty on coffee growers of Hawaii, will be presented to it.

United States Judge Estee has rendered a decision in which he declares that all the Chinese born in the Hawaiian Islands are American citizens, no matter what government they were born under.

Marie Josephine Eastwick, of Philadelphia, who is well connected and reputed to be wealthy, was arraigned in the Guildhall Police Court, London, on Sept. 2nd, charged with having forged a railway certificate to the value of £100,000. Sensational evidence was presented. The case lasted throughout the day and accused was remanded to Sept. 9th.

A new elevated railway system operated by electricity is to be introduced in New York. The car will be cigar-shaped, running upon a central rail on an elevated structure. Two outer rails on the under side of the latter will carry the electricity. It is claimed for the system that the cars may be operated with perfect safety at 200 miles per hour, at one-fourth the cost of operating the elevated roads.

There are thirteen girl tellers in the Royal Trust Bank, one of Chicago's biggest financial institutions. They are only women tellers in business and they fill situations that men usually hold simply because they set all the laws of their sex at naught and never tell a secret. In addition to their golden silence they have the merit of never going out the night before and leaning over the desk of a co-worker in the morning to tell about it.

Statistics indicate that the United States consumes more sugar than any other nation, or approximately one-quarter of the whole of the world's product. The conditions of soil, climate and other advantages are quite as good in the United States, and especially in Colorado, Nebraska and Illinois, for the development of the beet as in any of the countries of Europe or Asia. The world's production and consumption of sugar is now about 8,250,000 tons per annum, two-thirds of which is produced from beet and only one-third from cane, while the normal consumption is estimated as increasing at the rate of 250,000 tons yearly.

According to a recent estimate of the Fish Commission, the annual catch of frogs in the United States amounts to two millions, for which the hunters get \$100,000 and the consumers pay not less than \$150,000. The total consumption of frogs' legs in that country is five times what it is in France. As there has been a decrease in the supply from Lake Erie and Northern New York, attempts are being made at artificial incubation. A frog farm in the Trent River basin in Ontario is larger than any on the other side of the line, but there are extensive frog farms in Indiana and Illinois, and there are smaller ones in New York State and Missouri.

While passing through Danville (Ill.) with a load of cattle, William Richmond, a millionaire ranch owner, of Tombstone (Ariz.), stopped at the Junction Restaurant to buy a sandwich, and fell in love with Lizzie Shultz, a Danville girl, who had charge of the lunch counter. He was captivated not only by the prettiness of the face, but by the excellence of her sandwiches, which he said were the best he ever tasted. After disposing of his cattle, Richmond went back, proposed and was accepted, presenting his fiancée with a cheque for £2,000 for her trousseau. The newly-married couple have now started for a honeymoon in Australia.

There are at the present time 5,383 public, society, and school libraries in the United States having 1,000 volumes or more. This is an increase of 1,375 libraries since the beginning of 1896. These 5,383 libraries contain no less than 44,591,851 books, an increase of more than

11,500,000 volumes in five years, or nearly 35 per cent. There is one library for every 15,118 inhabitants of the United States. In 1891 there were forty-one volumes to every 100 of the population; in 1896 the number had increased to forty-seven, while in 1900 it had grown to fifty-nine volumes. The general libraries number 1,979; there are 1,725 school and 689 college libraries. That these institutions are largely patronized is shown by the fact that during the year ending July 1, 1901, 2,405 libraries issued for home use 48,410,128 volumes.

Mr. William Jennings Bryan, rumour says, will probably move his paper, the *Commoner*, to Chicago and make that city his home. Efforts have been made without success to trace the rumour to its source, but some of the leading Democrats in Chicago have known of it for some time past, and are ready to sanction the project and bid the *Commoner* godspeed. They point out the obvious advantages Mr. Bryan would derive from it and predict a great future for his newspaper, though they hesitate to express any hope of any political advancement for its proprietor. Rumour credits Mr. Bryan with the intention of taking political root in the windy city with the hope of succeeding Mayor Harrison in the Mayoralty. But the Harrison men shake their heads dubiously when that part of the plan is mentioned and intimate that Mr. Bryan stands more chance of the Presidency than of that.

The seventeenth annual report of the United States civil service commission is out, and shows that this body is proceeding with its work at least to its own satisfaction. During the past year 46,763 persons were examined, of whom 35,025 passed. Of the number who passed, 34,473 were for original appointments to the service, of which number 9,889 were appointed, the largest number ever appointed to the classified service through examination in any single year. The commission plumes itself on the constantly increasing number of persons who are obtaining appointments in the government service through examination, and also that an exceedingly small number of those so appointed have been removed for any cause. The record shows that the people appointed in this manner, with few exceptions, are thoroughly competent for the work to which they have been assigned. Over 98 per cent of them have received absolute appointments at the end of their probationary period of service.

A preliminary statement exhibiting the operations of the U.S. Pension Bureau during the last fiscal year has been given to the press by Commissioner H. Clay Evans. It embodies a sufficiently striking showing. On the basis of the figures given, the number of pensioners on the rolls exceeds that for any preceding year, so that in this respect the year recorded the high-water mark in the history of the Pension Bureau. The increase has not been due to the casualties arising from the war with Spain, for there has been a constant increase during the dozen years ending with 1901, with the exception of the years 1899 and 1900. The number of pensioners on the rolls on June 30, 1890, was 537,944. By June 30, 1896, the number had increased to 970,678. At the end of June, 1898, the number had increased to 993,714. The following two years the total fell somewhat below this, but it was exceeded again at the end of fiscal year ending June 30, 1901, when the number of pensioners on the rolls was 997,735, a gain of 4,206 for the year. The appropriation for the payment of pensions during the fiscal year was \$144,000,000, of which amount there was expended the sum of \$138,531,483.84, leaving a balance of \$5,468,516.16.

Perhaps the most gratifying statistics that have thus far been issued by the United States Census Office are those dealing with the subject of mortality. There was, according to the figures given, a decline of nearly 10 per cent. in the decade from 1890 to 1900. The decrease in the registration area is of 1.3 per 1,000 inhabitants, but the reduction as measured by statistics from 341 registration cities of 8,000 population and upward, compared with like figures from 271 re-

gistration cities of 5,000 and upward in 1890, amounts to 2.4 per 1,000 population. This however, is not all. The average age at death increased from 31.1 years in 1890 to 35.2 years in 1900. Particular instances of longevity are numerous, as witness the fact that about 165,000 deaths last year were of persons over seventy years of age, while 2,721 deaths were of persons of ninety-five years of age and over. An indication of increased longevity is found in the circumstance that, while there has been an increase in the death rate in diseases occurring generally at advanced ages, there has been decrease in the rates due to diseases which are most frequent in the early years of life. One of the most noteworthy decreases in the list of particular diseases is a falling of 54.9 per 100,000 in deaths from consumption during the decade. As might be expected, much of the gain in viability is attributed to improvements in local sanitation and health regulations.

A syndicate, composed mostly of Pittsburgers, headed by Mr. Charles A. Painter, of Pittsburg, has just succeeded in effecting a combination of 96 per cent. of the laundry machinery manufacturing plants of the United States. Mr. Thomas A. Selz, late President of the National Laundrymen's Association, who secured the options for the Syndicate, said that 98 per cent. will be secured within a short time.

In 1842 the U.S. Government issued a carefully prepared map of the Niagara Falls territory, writes a correspondent in the *Baltimore Herald*. In 1891 it issued a second or comparative map, by which it was shown that the falls had receded 204 feet. Though it is claimed that the river is comparatively young, scientists insist that it must have taken at least 7000 years for it to recede from the commencement of the precipice at Lake Ontario. Still others claim that that 7,000 years is too low an estimate, but a regular system of records is now kept by both the English and the American governments, so we shall be able to know more accurately the work of this turbulent waterway.

It was stated in Pittsburg on Sept. 3rd that all the bituminous coal mining companies of Pennsylvania, Ohio, Indiana, Illinois, West Virginia and Kentucky are to be consolidated into one great corporation by the J. P. Morgan syndicate. The enormous proportions of this corporation can hardly be realized. The fact that the Pittsburg Coal Company, with its capital of \$64,000,000, and the Monongahela River Consolidated Coal and Coke Company, with its capital of \$30,000,000 are to be included in the greater consolidation, bring the matter strongly before Pittsburg coal operators. These two corporations practically control all the output in the Pittsburg district and extend their operations well down toward West Virginia in two directions.

EX-Governor Levi P. Morton of New York, who is spending the summer at Virginia Water, on the edge of Windsor forest, will leave one of his daughters behind him when he sails for America. The engagement is thus announced of Miss Helen Morton to Count Boson de Perigord, second son of the Duc de Talleyrand and Sagan. The marriage will take place in the autumn and probably in London, rather than Paris or New York. Count Boson de Perigord has served his time in the French army. He lives at Paris and has estates in Germany and Algeria, and is about 34 years old. His brother, who is heir to the title of Duc de Talleyrand, Perigord and Sagan, is 42 years old and unmarried. The family is one of the oldest in France, dating back nearly to the time of Charlemagne.

An interesting work on the British trans-Pacific cable, which is to be the longest ever laid, has been received at the U.S. State Department from the Consular Agent at Norfolk Island, under date of June 20. The report states that on the passage across to Norfolk Island from Brisbane, Australia, soundings were taken every ten miles by the British cable steamer *Britannia*, which is being used to mark out a track for the cable. About a hundred miles from the coast an obstruc-

tion was met in the shape of a range of submarine mountains lying directly in the track, and a deviation to the south had to be made in order to clear it. The greatest depth obtained was 2,800 fathoms. It has been decided to land the cable at Anson Bay, on the west side of Norfolk Island. Anson Bay is six miles from Kingston Settlement, and a cable house is to be built close in to the shore. Norfolk Island will be one of the most important stations, as all messages to Australia and New Zealand will converge there to be repeated.

In a recent number of the *North American Review* a well-known writer sets forth that there are only two periods in the history of the money metals that can be compared to the present, and to which we may look for any experimental light upon the subject. One of these was the period following the discovery of America and the exploitation of the treasures of Mexico and Peru, and the other the period following the discoveries in California and Australia. In the period of 150 years following the discovery of America the depreciation of the metals was about two-thirds of their value; that is, in 1650 a given amount of gold or silver bought only about one-third as much as in 1500. The result naturally was extreme confusion in affairs, great suffering among wage earners and embarrassment to all whose income were fixed in terms of money. The "poor laws" of Queen Elizabeth's time have been attributed to the distress caused by the rise of food without equivalent compensation to the wage earning class. The quarrel of Charles I with Parliament was undoubtedly aggravated by the necessity for new taxes to overcome the declining value of the revenues, and some historians hold that it was the deadly money question, the bane of politicians in all ages, that cost him his head. Gold was discovered in California in 1848 and in Australia in 1851, and by 1852 these new fields were producing together over \$100,000,000 a year. The first sign of the influx of the new gold into Europe was seen in the holdings of the Bank of England. They went up from about \$40,000,000 in 1847 to \$110,000,000 in June, 1853. To get this idle money into use the bank reduced its regular rate of discount to 2 per cent., and the market rate for a considerable time was reported at 1½ per cent. The belief that the new supplies of gold would effect a permanent reduction at this rate of interest was so general that Mr. Gladstone, then Chancellor of the Exchequer, proposed in Parliament a scheme to refund the consols below 3 per cent. and fixed the rate on exchequer bills at 1½ per cent.

President Roosevelt when visiting Chicago in September was asked to deliver a lay sermon at Trinity Dutch Reformed Church. In the course of his remarks he said:—

I shall not attempt to preach doctrine. This is to be simply a lay sermon. For my text I have taken a passage that always impressed me forcibly. It is, "Be ye doers of the word, not hearers only."

One of the most abhorrent traits of character a man can possess, in my estimation, is hypocrisy. We all have met men who go about clothing themselves in scriptural teachings, yet whose conduct toward their fellowmen shows that they do not live up to the teaching, "Love thy neighbour as thyself." The great thing in this world for us to be doers. Of course, to be doers we must be hearers. That is, we must go to church and study the Bible, but our duty does not end there. We should give a helping hand to others by spreading the word of Christ. It is well enough to tell a man what he ought to do, but this must be supplemented by some demonstration of application.

In your business and work, if you let Christianity stop when you leave the church door, there is not much righteousness in you. The man who carries Christianity into his everyday work stands a better chance of making a success of life than one who does not.

Every man should strive to do justice to himself, but in doing so he should not forget the right of his neighbour. He should be sure that he is in the right, and then stand squarely on the path. If there is any moving to be done, let the other fellow do it. This applies to nations as well as to individuals.

We have all seen the type of man who is spoken of as his own worst enemy. I have no patience with him. Often he is a worse enemy to others. A manly man—and that is what we all ought to be—must have strength and power and perseverance. It is the trials of life that test the stuff a man or woman

is made of, and the one who is strong, fearless and courageous to do right is the ideal.

On this question of our neighbour let me say that no one ought to submit to being imposed upon, but before you act always stop to consider the rights of others before standing up for your own. The only true way to help a man is to aid him in helping himself. All of us stumble many times during a lifetime and the duty of man to his neighbour is to help him to his feet that he may help himself. You can help a man successfully, but you can't carry him successfully. If you rob a man of his self-respect, take away his sturdy, self-reliant manhood, no good you can do will make amends.

ORGAN RECITAL IN YOKOHAMA.

The first organ recital given in the new Christ Church, Yokohama, took place on Wednesday evening, and the organist, Mr. W. Karl Vincent, is to be congratulated upon the success achieved. Of course there can be no blinking the fact that the organ has seen its best days, and its long disuse while the Church was rebuilding together with the terrible effects of the moisture-saturated atmosphere of Eastern Japan have also combined to impair its powers. Still, all these things taken into consideration, enough remains of a once fine instrument to illustrate the great abilities of Mr. Vincent as an organist and an interpreter of the higher phases of devotional music. Wednesday's programme, as became an initial essay, was not too ambitious, and every item was pleasingly given. The mixed choir of male and female voices rendered the Anthem with charming taste while Mr. Somerton's selections gave evidence of meritorious work. We look forward to the next recital at Christ Church, especially if Mr. Vincent can see his way clear to introduce some music for the violin and cello: this would materially lighten and brighten his programme and might lead the way for other instruments later on. Programme:—

(a) "Processional March".....	Neukomm
Organ... (b) "Fugue C minor".....	Bach
(c) "Toccata".....	Dubois
Vocal Solo... "The Holy Shrine".....	Neukomm
Organ... "Dramatic Fantasia".....	Neukomm
Anthem... "Saviour breathe an evening blessing".....	Shinn
(d) "Träumerei".....	Schumann
Organ... (e) "Hercules".....	Debussy
(f) "Prelude to 'Lohengrin'".....	Wagner
Recit. and Air... "Lord, God of Abraham".....	Mendelssohn
Organ... "Tempo di Marcia".....	Raff
(From 5th Symphony.)	

We should mention that the proceeds go to the Church Fund, which, judging by the large congregation, should materially benefit.

FIRES.

Fire broke out in a tobacco shop at Kotohira-cho, Shiba, Tokyo, on the evening of the 18th inst. Six houses were burnt to the ground, and three damaged.

A fire occurred at Kisai-machi, Kita-Saitama-gori, Saitama Prefecture, on the afternoon of the 17th inst. Nine houses were destroyed and three damaged; one woman was badly injured.

Fire broke out in a confectioner's shop occupied by Nakamura Shintaro, at Matsukage-cho Nichome, shortly after two o'clock on Monday. Two houses were destroyed and two damaged.

Another fire occurred about half-past four the same morning in a carpenter's house, near the Yokohama railway station. One building was burnt.

A conflagration broke out in the Niigata Nippo Office, at Tori Sanbanchō, Furumachi, Niigata Prefecture, on the afternoon of the 18th inst. and spread with great rapidity. One hundred and twelve houses were destroyed and sixteen damaged.

Fire broke out at Koshijino-mura, Shimo Hosaku-gori, Ishikawa Prefecture, on the afternoon of the 13th inst. Seventy-one houses were destroyed and one damaged, besides fifteen godowns, and ten store houses. Six junks were also burnt. The inhabitants of the village are all

poor persons and are now receiving relief from the authorities.

Fire, started by an incendiary, broke out in a house at Minami Igamachi, Yotsuya, Tokyo, at one o'clock on the morning of the 25th inst. Heavy rain was falling at the time, but nevertheless twenty-three houses were destroyed and three damaged.

Fire occurred in a house occupied by Wada Naosaku, at Hamacho, Aomori, shortly after twelve o'clock on the afternoon of the 18th inst. Fifteen houses were destroyed and two damaged; a police station, a telegraph post, and an electric light post were damaged. One man was injured. The letters in the post office were saved.

LOCAL LAW CASES.

In the Yokohama Chihō Saibansho on Friday before Judge Kano, evidence was given in the case brought by Mr. F. W. Horne to recover yen 679.01 from Mr. W. S. Stone, the value of certain phonographs and accessories ordered through plaintiff by defendant. Mr. W. S. Gray deposed to the order being given but he could not say whether defendant ordered electric batteries as well. This is the point in dispute. The case was then adjourned.

On Thursday in the Yokohama Chihō Saibansho, Liu Chang-tung sued Sugiura Magosuke to recover yen 210. On Feb. 13th, the Chinaman was living at No. 156, Settlement, when a fire broke out and burnt down the house. The debris was put up to auction by Messrs. Eyton and Pratt and defendant became the purchaser. When removing the ruins he came across a cash box containing ten yen notes to the value of yen 210. Defendant claimed that he was entitled to the find as he purchased the debris at auction. Mr. John Eyton was called as a witness. He said he sold the ruins of the house by order of the insurance agents. As the money was not insured with the house defendant had no right to it. The hearing was adjourned.

The Yokohama Chihō Saibansho on Thursday continued the hearing of the case in which Messrs. Bavier and Co. seek to recover yen 3,735.39 from Kozeki Seinosuke of Bentendori, principal and interest of a loan dating from Sept. 29th, 1900. Two witnesses gave evidence as to the deposit of various Japanese securities and the value of them on November 2nd last year, and then the case was adjourned.

The case of E. W. Maitland v. Tokuda Tasaburo, in which the plaintiff sues for yen 2,718.97 damages alleged to have been caused by the carelessness of defendant, was resumed on Friday in the Kobe Chihō Saibansho. The action arose over the sinking on April 24th, 1900, of a lighter loaded with cotton yarn. Some evidence was led and the case was again adjourned.

An action by Tsutsui Zentaro against Messrs. Havener and Yaneberg came up on adjournment in the Kobe Chihō Saibansho on Friday last. The amount in dispute included charter money and cost of ballast in connection with the charter of a schooner by the defendants. Plaintiff stated that he had proposed to refer the matter to arbitration as stipulated by the charter party, but defendant denied this. Judgment on the point was reserved for Sept. 28th.

Three actions against Mr. John F. Wagen, a Swiss merchant of No. 168, Yokohama, were decided on Monday in the Yokohama Chihō Saibansho. In each case judgment was given against the defendant by default, execution to be granted on deposit of varying sums of money. In one instance yen 636.69 with interest at 6 per cent. from October, 1899, was claimed; in another yen 312.097 with interest at 7 per cent. from August, 1899, and in the third yen 710.84 with interest at 6 per cent. from February, 1899.

The hearing was resumed in the Yokohama Chihō Saibansho on Monday of the action brought by Mr. Franklin Nelson Upton, of Nagasaki, against Messrs. H. Ahrens & Co., No. 29, Yama-

shitacho, Yokohama. Plaintiff claimed from defendants payment of yen 742.96 as remuneration, damages, temporary loans, etc. Mr. C. D. Moss, No. 103, Bluff, was examined as a witness as to the usage between foreign firms and their employees and said that in the event of there being a contract its terms should be observed, but when there was no contract it was customary to give one month's notice or one month's pay. The case was again adjourned.

In the Yokohama Chiho Saibansho on Wednesday, the hearing was resumed of the action by Messrs. Lowder and Akiyama against Mr. M. N. Goblai, claiming yen 263.44. The defendant pleaded that he was only able to pay yen 40 or yen 50 instead of the whole sum, which was due as a fee for services to obtain payment of a promissory note. The case was adjourned.

The hearing was resumed in the Yokohama Chiho Saibansho on Wednesday of the case instituted by Mr. Tanaka, of Tokyo, against Messrs. Mendel-on Bros. The plaintiff claimed yen 1,000 damages owing to the delay in arrival of a quantity of manure ordered through defendants, and yen 1,200 paid to defendants to bind the contract. An employe of the plaintiff gave evidence, after which the case was adjourned.

In the Yokohama Chiho Saibansho on Thursday the hearing was resumed of an action by M. Loine, of Lyons, France, against Mr. J. F. Wagen, claiming payment of yen 650.121. Judgement was reserved.

The libel action brought by Mr. J. H. Ranger against Mr. P. B. Clarke, of the Maples Hotel, claiming yen 50,000 damages, has been withdrawn from court, the parties having arrived at a settlement.

In the Yokohama Chiho Saibansho on Thursday, before Judge Yasuda, the hearing was resumed of the suit brought by Mr. John H. Jewett, of Messrs. Bavier & Co., against Mr. Ozeki Katsunosuke, of Bentendori Shichome, claiming yen 3,500 and yen 235.39 interest. Two clerks from the Specie Bank gave evidence as to the value of Sanshi Bank shares, which defendant placed in the hands of plaintiff as security for a loan, and which they said was about yen 30 per share on or about Nov. 2nd last year. A document by defendant asking postponement of repayment of the loan was produced and the case was adjourned.

THE "AMERICA" CUP CONTEST.

Recent papers via Canada, afford us a clearer view than we had previously enjoyed of the circumstances under which it was decided to select *Columbia* to defend the *America* Cup against *Shamrock II*. We had known, of course, that *Constitution*, the new American yacht, had not established that degree of superiority over *Columbia*, the previous defender, that was hoped of her, but it now appears that she was dropped with such suddenness as strongly betokened the disappointment felt about her. After two long months of hard preliminary racing during which each boat had defeated the other eight times *Constitution* and *Columbia* went out to Brunton's Reef lightship (R.L.) on Aug. 31st for the first of the series of trial races to determine which should be the defender of the *America* Cup. Both left the harbour in the very pink of condition. A seven knot breeze blew from the southeast. The yachts were to be sent over a 15 mile windward and leeward course, under the regular *America* Cup conditions with a time limit of 5½ hours. The following were the official times:—*Columbia*, start, 11.41.15. Finish, 3.02.08. Elapsed time, 3.20.53. *Constitution*, start, 11.42.00. Finish, 3.06.01. Elapsed time, 3.24.01. *Columbia* won by 3 minutes 8 seconds, elapsed time, and 4 minutes, 19 seconds corrected time. *Constitution* allowed *Columbia* 1 minute and 11 seconds.

The second trial race was sailed on Sept. 2nd but the yachts for lack of wind were unable to finish within the time limit of 5½ hours, being called off at 6.30 p.m. when they were two miles

to the eastward of Benton's Reef Lightship, *Columbia* leading by a quarter of a mile. We give the following particulars:—

The course was triangular, ten nautical miles to a leg, the first being a beat to windward, east by south, the second, a reach with the wind about abeam, and the third a run before the wind, hauled to make it another stretch, with the wind abeam, until the race was declared off.

After crossing the line, at exactly the same moment with the *Constitution* on the windward leg, the *Columbia* worked out and getting her wind free forged ahead. The *Constitution* tacked off-shore and shortly after the *Columbia* followed, going to windward and passing her. From then on to the windward mark, it was found that the *Columbia* had gained four minutes and 55 seconds, the worst beating the *Constitution* has yet received. On the second leg, the wind fell very light and the *Constitution*, bringing it up with her, gained slightly. After rounding the second mark, four minutes and 30 seconds behind, the *Constitution* carried up about all the wind and passed her rival. The breeze came again and the *Columbia* once more shot ahead. Shortly after the race was called off, with the *Columbia* well in the lead.

The official time table was as follows:—*Constitution*—Start 1.00.06, first mark 3.16.03, second mark 4.55.10 (did not finish.)

Columbia—Start 1.00.06, first mark 3.11.08, second mark, 4.50.40 (did not finish.)

But the Cup Challenger Committee of the New York Yacht Club decided not to send the two yachts out on Sept. 3rd as had been originally intended. There were two reasons, the first being the probability of a day without any wind, the second that Mr. Duncan wished to overhaul the *Constitution* thoroughly. So surprised are all connected with the *Constitution*, said a correspondent, at the unsatisfactory showing she has been making since she was hauled out for cleaning at Bristol, that a diver was engaged on Sept. 3rd to examine her bottom for obstructions to her speed. He spent a couple of hours under water, and reported that he could discover nothing amiss. Natt Herreshoff spent several hours on board the *Constitution*, altering her trim. The new mainsail, which was bent at Bristol when the boat was overhauled for these trial races, was unbent, and the old mainsail, which she carried when she first came out, was substituted. "The Cup Committee" it was added "does not wish to select the defender in a hurry. It wishes to have the question of superiority settled definitely. Therefore a race every day this week will in all probability be sailed."

Apparently, however, the Cup Committee had to make up their mind more promptly than was anticipated. Sept. 4th was a dead calm, so far as we can gather from the reports, and the yachts did not go out. On Sept. 5th it was announced that the Committee had selected *Columbia*. It is understood that a condition of the acceptance of *Constitution* by the syndicate for whom she was built by the Herreshoffs was that she should be ten minutes faster over the course than *Columbia*, and as she has failed to fulfil this condition the yacht may be thrown on the designers' and builders' hands. Meanwhile *Independence*, whose owner's futile attempts to assert his vessel's claims to defend the Cup had evoked some ridicule was being broken up at Boston.

There was large betting on the contest. On the 3rd, two days before the selection of *Columbia*, but when it must have been apparent that she would be the Cup defender, a bet of \$400,000 gold was arranged, as already mentioned in this journal. Mr. Walter Kingsley of London put up on behalf of a syndicate \$150,000 against \$250,000 provided by a group of Pittsburg capitalists, the latter giving those odds against *Shamrock II*, taking the Cup, and the same English syndicate later bet \$8,000 to \$10,000 with another party of American enthusiasts.

On Sept 3rd, with her owner, designer, builder, manager and sailmaker on board, *Shamrock II*, sailed her seventh trial off Sandy Hook and the Highlands of Navesink. Although at times there was not more than a three-knot breeze, at no time did the yacht act sluggishly. We read that she slipped through the water at a good rate of speed under the influence of her great mainsail and other sails. The water was smooth, but even

when pressed to a speed of nine knots the yacht made a small wave at the bow and left an absolutely clean wake.

While there was a disposition in many quarters to consider that the decision to race *Columbia* for the Cup in some way bettered the chances of *Shamrock II*, the *Yachtsman* (London) said:—

Why the fears of our cousins should be excited, or the hopes of Sir Thomas Lipton's friends be raised, by the turn of events, is not very easy to see. Of course if the *Columbia* had consistently beaten the *Constitution* all through the season, we should know that Herreshoff had improved on his design; but the fact that this is not proved to be the case, indicates that the old design is perfect. It simply shows that the *Columbia* is a very difficult boat to beat, and any one who has seen her will be quite prepared to admit that fact. Of one thing we are quite certain, and that is that the chances are in favour of the defender, though the *Shamrock* may make a close fight for the Cup.

The personal popularity of Sir Thomas Lipton has certainly not waned in the United States. He was the guest of honour at a dinner at the Coleman House, Ashbury Park, N.J., on Sept. 7th, given by ex-Mayor E. P. Benjamin of Allentown. In the course of a speech Sir Thomas said:—

"I can't say what will be my success this time in my attempt to lift the cup. I am hopeful, however, that we shall win. I think, though, that the American lease on the famous bit of old silver ought to expire, or at least they might permit us to transfer it, if only for a short time, so the old folks at home can get a squint at the cup. I am indifferent as to whether the *Shamrock* shall meet the *Columbia* or the *Constitution*, but I want her to meet the best American boat, and then, if the *Shamrock* is the better of the two, of course I want her to win."

"If I don't lift the cup this time, I believe I shall come back again, be an American, and have my next boat built in this country."

Sir Thomas was warmly applauded as he sat down.

Mr. Benjamin then said:—

"I propose this toast:—'Good luck to the *Shamrock*.'"

A hush fell over the diners. Sir Thomas was embarrassed, and the toast was drunk in silence. Miles M. O'Brien, president of the board of education, was the next speaker. He administered a rebuke to Mr. Benjamin, saying:—

"I fear that our host, in his enthusiasm for his boyhood friend, forgot himself when he proposed the toast 'Success to the *Shamrock*.' I for one think we can drink no better toast than the sentiment expressed by Sir Thomas, and that is, 'May the best boat win.'"

When Mr. O'Brien sat down, the hall rang with applause, which was joined in by Sir Thomas and his English friends.

A crowd had gathered outside the hotel. It cheered Sir Thomas so persistently that he approached an open window and thanked those on the outside for their expressions of goodwill.

CORRESPONDENCE.

RIFLES.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The article headed "Rifles," which appeared in your issue of to-day, is so interesting in its way, that it cannot be left without being commented upon.

As a son of a nation where rifle-shooting is more practised and promoted than in any other country, and wherefrom numerous good inventions in the technique of rifles have originated, I should like to ask Captain de Mauthrison, whether he ever tried to find out why the Swiss show up so well at every international target-shooting match, at which the use of the respective army rifles and revolvers is a condition. A good eye and a steady hand would be of little use if the weapon was not first class too!

Furthermore, I should like to point out that Austria's latest army rifle is an excellent specimen, and much appreciated for its good qualities by continental who interest themselves, and have experience in, rifle shooting.

The Austrian and Swiss model, our "French expert" puts, very likely, among "the three worse rifles," if he has taken them into consideration at all.

The new Japanese army rifle would no doubt have found a good place in his qualifications, but, in my humble opinion, it leaves much to be desired in regard to its mechanism as well as in its accuracy, and cannot be compared with the best European models.

Yours truly,

M. S.

Yokohama, September 26th, 1901.

LYNCHING.

In a recent issue we published an account of the latest case of lynching in the United States as forwarded by an American correspondent. It is pleasant to be able now to supplement the account with the following record which shows that public opinion in the States is awakening to the necessity of putting an end to these outrages:—

On Thursday of last week in Asheville, Ala., a mob of 400 men tried to lynch a negro who had just been sentenced to death after "one of the swiftest and fairest trials ever witnessed," as the despatches from Asheville declare, and after a strong appeal from the father of the negro's victim to let the law take its course. Sheriff North and twenty-eight deputies defended the court-house against the mob, and after considerable firing on both sides the mob retired with the loss of its two leaders, two brothers who "had been in town since Monday trying to stir up the trouble." One of the brothers was killed and the other desperately wounded. A driving rain helped to dampen the mob's ardour, and while they were considering a second attack the prisoner was hurried out by a rear door and taken safely to Birmingham. In Tuscaloosa, Ala., on August 15, Sheriff Kyle, after being surprised and overpowered by a mob of fifty men bent on lynching a negro prisoner, secured a shotgun by a ruse and drove the entire mob out of the jail. On the same night a mob of 300 men tried to take a negro from the jail at Charlotte, N.C., but "on a show of strength by the guards," says the press despatch, "they finally dispersed." The next night a mob in Sardis, Miss., gathered to lynch a negro who was in jail there. Sheriff Mitchell, however, had secured a company of militia from Governor Longino, and the company stood guard all night "while the mob howled and howled on the outside." The despatch adds the interesting information that "this is the first time in Mississippi that the militia has rescued a negro from would-be lynchers," and the governor, it says, "extended his congratulations to the company." Sheriff Fly, of Gonzales, Texas, recently dispersed a similar mob who wanted to lynch a Mexican. "I value my honour as an officer and a man more than life itself," he declared, as he stood with revolver in hand, and the mob retired. "Nerve staggers a mob," says the Houston *Post*, commenting on the sheriff's action. Sheriff J. H. Dukes, of Orangeburg, S.C., gave another illustration of the same spirit two or three weeks ago when the governor of the State, fearing that a negro in Sheriff Dukes' jail might be lynched, asked the sheriff if he did not think it would be wise to remove the prisoner to a safer place. The sheriff, it is reported, replied that he had the prisoner in jail, and that the jail was made for the purpose of confining criminals, and he went on to say that if extreme measures became necessary he would promptly resort to them, and "if some people get hurt it will be their own fault." When this declaration became known, the lynching talk died out. In the neighbouring State of Georgia, Sheriff Joseph Merrill, a few days before Sheriff Dukes' experience, faced a lynching mob with equal courage shown by the other officers mentioned above, and with equal success. In Lebanon, Ky., on Friday of last week, Officer Brent opened fire on a lynching mob that was battering in the jail doors, and the mob took to their heels before anybody was hit. "It is evident," remarks the Salt Lake *Herald*, "that the repugnance which the calmer element in the South must always have felt for such atrocities has, by the frequency with which crimes of this nature are committed, been aroused to a pitch where active steps will be taken to stem the tide of brutality, which, while it shows no good effect in restraining the blacks, is debauching and brutalizing the whites."

A RE-ACTION.

The revolt against the use of advertisements in literature seems to be making headway in America. The New York *Nation* has a scathing article on the subject, entitled, "Every Author His Own Press Agent." After pointing out that the author is nearly as much to blame as the publisher for the undignified methods now used to catch the eye of the reading public, the *Nation* traces the history of the change very amusingly:

The change in the attitude of the author is illustrated by a little incident which occurred in London in 1858—a prehistoric age, as far as the art of advertising is concerned. Edmund Yates then wrote, for a periodical called *Town Talk*, a short account of Thackeray's personal appearance and his literary successes. To be sure, the sketch was not wholly flattering, but so much the better, for no one

could then accuse it of being simply a puff. What was Thackeray's proper course under the circumstances? No enlightened man in this year of grace 1901 will hesitate for a moment to say that he should have clipped the article and sent it with his own photograph to his publishers, Bradbury and Evans. They should have ordered immediately five hundred proof-slips and mailed one to each newspaper in the United Kingdom, with some such circular as this:

SIR,—Since we advertise freely in your columns, you will probably wish to reprint in whole or in part, with proper credit to *Town Talk*, the enclosed sketch of Mr. Thackeray, whose popular novel, *The Virginians*, we are now publishing in monthly parts at 1s. each. The sale of this work is, as you doubtless know, absolutely unprecedented in the book trade. If you can use a cut we shall be happy to send you, carriage prepaid, an excellent electrolyte portrait of Mr. Thackeray. [Was this before the days of electrolytes?] Trusting you will do your best for us, and will send us a marked copy, we remain, your obedient servants, "BRADBURY AND EVANS."

Incredible as it may seem, however, nothing of the kind happened. Thackeray did not even offer Mr. Yates an autograph copy of *The Virginians*. Instead, he demanded that Mr. Yates should apologise for printing facts about the colour of his hair and his manner of speech, learned in the privacy of the Garrick Club, of which both were members. Evidently Thackeray was labouring under the delusion that an author is a member of a learned profession, bound by some such fantastic code as that of reputable doctors and lawyers. It is conceivable that if he had seen on every bill-board the legend, "Read *The Virginians*! A Great Historical Novel! Incidents of the French and Indian War! Brilliant Characterisation of George Washington!" he would have felt as horrified as the President of the New York Academy of Medicine if he saw his name on a poster in every street-car with the advice, "Go to Dr. — for Appendicitis! Operations While You Wait!" But we have left Thackeray's benighted notions far behind us.

PERPETUAL LEASES.

Regulations with reference to rights of perpetual leases having been issued, we give below translations of the same, reproducing also for the sake of clearness the Law as passed by the Diet in March last:

LAW RELATING TO RIGHTS OF PERPETUAL LEASES.

Art. I.—A right of perpetual lease created in favour of foreigners or foreign juridical persons by a title deed of perpetual lease issued by the Government, shall be a *ius in rem*, and the provisions of the Civil Code relating to ownership shall be correspondingly applicable thereto.

A right of perpetual lease may be the object of other rights in accordance with the provisions of the Civil Code.

The provisions of the two preceding paragraphs shall not apply in cases otherwise regulated by the title-deed, treaties, laws or ordinances.

Art. II.—When a transfer or transmission of a right of perpetual lease takes place, such transfer or transmission can not be set up against third parties unless the fact has been recorded on the title-deed by the local authorities within whose jurisdiction the land is situated.

Art. III.—The registration tax shall not be imposed on the registration of a right of perpetual lease itself nor on the registration of rights having as their object a right of perpetual lease.

Art. IV.—Special provisions may be enacted by Imperial Ordinance with reference to the registration of a right of perpetual lease, or the registration of rights having as their object a right of perpetual lease, or the registration of buildings erected on land held under a perpetual lease.

SUPPLEMENTARY REGULATIONS.

Art. V.—This Law shall take effect from the day of its promulgation.

Art. VI.—The provisions of Article 45 of the Law relating to the Operation of the Civil Code shall be abolished from the day of operation of this Law.

Art. VII.—A right of perpetual lease or a right having as its object a right of perpetual lease, which has been respectively registered, prior to the operation of this law, as a superficies, or as a right having as its object a superficies, shall have the same validity as a right of perpetual lease or as a right having as its object a right of perpetual lease, duly registered as such.

IMPERIAL ORDINANCE.

We hereby sanction the Regulations relating to rights of perpetual lease and order the same to be promulgated.

Imperial Sign Manual,
Great Seal.

September 20th, 34th year of Meiji.

Countersigned:

Baron UTSUMI TADAKATSU,
Minister of State for Home Affairs.
Kiyoura KIKIGA,
Minister of State for Justice.
Sone ARASUKI,
Minister of State for Foreign Affairs.

IMPERIAL ORDINANCE No. 178.

Art. 1.—When an application for entry in the title-deed of a transfer or transmission of a right of perpetual lease or any notice relating to a right of perpetual lease has been received at the Local Government Office within whose jurisdiction the land leased in perpetuity is situated, notice thereof shall be given without delay to the Registry Office having jurisdiction over the locality in which the land is situated.

In giving notice (to the Registry Office) of a transfer or transmission of a perpetual lease, a copy of the title-deed shall be sent together with the notice; but when notice to be given relates to a right of perpetual lease in respect of which notice has already been given, it is not necessary that a copy of the title-deed should accompany the notice. In this case the designation of the land leased in perpetuity, the names, nationalities and domicile of the parties concerned, the cause of the transfer or transmission of the right, and its date should be given in the notice.

Art. 2.—For the land leased in perpetuity and the buildings erected thereon, special Registry Books shall be opened and kept at the respective Registry Offices.

Art. 3.—The Registry Books shall be of two kinds, one for land leased in perpetuity and the other for buildings erected on land leased in perpetuity.

Art. 4.—Each folio of the Registry Book for Land leased in perpetuity shall be divided into a registry number column, a caption space and five sections, marked A, B, C, D, E. The caption space shall contain a designation column and a designation number column. Each of the five sections shall contain a fact column and a rank number column.

In the registry number column shall be entered the order in which each piece of land leased in perpetuity has first been registered in the Registry Book.

In the designation column, land leased in perpetuity shall be designated, and alterations of the same shall be entered. In the designation number column shall be entered the order in which a matter registered in the designation column has been entered.

In the fact column of section A shall be entered matters relating to a right of perpetual lease.

In the fact column of section B shall be entered matters relating to superficies, emphyteusis, and other rights having these rights as their object.

In the fact column of section C shall be entered matters relating to servitudes.

In the fact column of section D shall be entered matters relating to preferential rights, pledges and mortgages.

In the fact column of section E shall be entered matters relating to leases.

In the rank number column shall be entered the order in which a matter registered in the fact column has been entered.

Art. 5.—Each folio of the Registry Book for Buildings erected on Land leased in Perpetuity shall be divided into a registry number column, a caption space and four sections marked A, B, C, D. The caption space shall contain a designation column and a designation number column. Each of the four sections shall contain a fact column and a rank number column.

In the registry number column shall be entered the order in which a building has first been registered in the Registry Book.

In the designation column the building and accessory building shall be designated, and alterations of the same shall be entered. In the designation number column shall be entered the order in which a matter registered in the designation column has been entered.

In the fact column of section A shall be entered matters relating to ownership.

In the fact column of section B shall be entered matters relating to servitudes.

In the fact column of section C shall be entered matters relating to preferential rights, pledges and mortgages.

In the fact column of section D shall be entered matters relating to leases.

In the rank number column shall be entered the order in which a matter registered in the fact column has been entered.

Art. 6.—When an application is made for the registration of a right having as its object a right of perpetual lease which has not been registered, the application must be accompanied by documents proving the right of perpetual lease.

Art. 7.—When a Registry Office has received a notice of the transfer or transmission of a right of perpetual lease, registration of such transfer or transmission shall be made *ex officio* by the Registry

Office whether such right of perpetual lease has already been registered or has remained unregistered.

When, in case a Registry Office is notified of a receipt at the Local Government Office of a notice relating to a right of perpetual lease, the notice is of such a character as to necessitate alteration in the register, such alteration shall be registered *ex officio*.

When an application is made for the registration of a subsidiary right having as its object an unregistered right of perpetual lease, the right of perpetual lease itself must be registered *ex officio*.

Art. 8.—Registration made at a foreign Consulate in respect of land leased in perpetuity or buildings erected thereon before the date fixed in the Imperial Ordinance, No. 251 of the 32nd year of Meiji, shall have the same value as registration made under this Ordinance, in so far as the Registry Book or copy thereof has been delivered by the foreign Consulate to the Registry Office.

Art. 9.—In case registration is to be made after the operation of this Ordinance in respect to an immovable which has been registered in accordance with Imperial Ordinance, No. 329 of the 32nd year of Meiji, the registration made in the old Registry Book shall be transferred to the Registry Book kept under this Ordinance in the following manner:

In the Registration Number Column of the folio of the new Registry Book shall be entered a new number following the order in which registrations are being made in the same Registry Book, and the registration number appearing in the old Registry Book shall be entered on the left side of the new number. In the designation column of the new Registry Book shall be entered the designation of the immovable appearing in the old Registry Book, and registration made in the old Registry Book shall be transferred to the rank number column and fact column of the corresponding section in the new Registry Book. The folio of the Registry Book, from which registration has thus been transferred, shall then be closed.

The provisions of the foregoing paragraph shall be correspondingly applicable to cases where registration is to be made after the operation of this Ordinance, in respect to an immovable which has been registered at a foreign Consulate.

Art. 10.—In making registration in accordance with the provisions of the preceding Article a right of perpetual lease shall be entered as a right of perpetual lease even though it has been registered under a different name.

Art. 11.—If in registering a subsidiary right having as its object either a right of perpetual lease or the ownership of buildings erected on a piece of land leased in perpetuity, the right to be registered does not correspond to the provisions of Article 4 or 5, it shall be registered in that section of the folio of the Registry Book in which rights most similar to it are to be registered.

Art. 12.—In respect to matters not provided for in this Ordinance the provisions of the Law of Registration of Immovables shall apply correspondingly.

SUPPLEMENTARY REGULATIONS.

Art. 13.—This Ordinance shall take effect from the day of its promulgation.

Art. 14.—Imperial Ordinance No. 329 of the 32nd year of Meiji (1899) is hereby repealed.

IMPERIAL ORDINANCE.

We hereby sanction the Regulations relating to cases of acquisition by Japanese subjects or Japanese juridical persons of rights of perpetual lease created in favour of foreigners or foreign juridical persons by title-deeds of perpetual lease issued by the Government, and order the same to be promulgated.

Imperial Sign Manual,
Great Seal.

September 20th, 34th year of Meiji.

BARON UTSUMI TADAKATSU,
Minister of State for Home Affairs.
KIYOURA KEIGO,
Minister of State for Justice.
SONE ARASUKE,
Minister of State for Foreign Affairs.

IMPERIAL ORDINANCE, No. 179.

Art. 1.—When a Japanese subject or a Japanese juridical person has acquired a right of perpetual lease created in favour of a foreigner or foreign juridical person by a title-deed of perpetual lease issued by the Government, the acquirer shall without delay present the title-deed of perpetual lease to the Local Government Office within whose jurisdiction the land is situated and ask for cancellation of the title-deed.

A Japanese subject or a Japanese juridical person for whom the title-deed of perpetual lease has been cancelled in accordance with the provisions of the preceding paragraph shall acquire the ownership of the land concerned.

Art. 2.—When a title-deed of perpetual lease has been cancelled for a Japanese subject or a Japanese juridical person in accordance with the first paragraph of the preceding Article the Local Government

Office shall notify the fact to the Registry Office within whose jurisdiction the land is situated.

Art. 3.—If, in the case provided for in Article 1, there should be a third party having a right which has as its object a right of perpetual lease, that right of the third party shall continue to exist as a right having as its object the ownership of the land.

SUPPLEMENTARY REGULATIONS.

Art. 4.—This Ordinance shall take effect from the day of its promulgation.

Art. 5.—Imperial Ordinance No. 333 of the 32nd year of Meiji (1899) is hereby repealed.

Art. 6.—A right of perpetual lease created in favour of a foreigner or foreign juridical person by a title-deed of perpetual lease issued by the Government which has been acquired by a Japanese juridical person before the operation of this Ordinance, shall continue to exist as a right of perpetual lease except in cases where the right of ownership has been registered in respect of the land in question. This, however, shall not prevent the acquisition of ownership in accordance with Article 1.

DEPARTMENTAL ORDINANCE NO. 15 OF THE DEPARTMENT OF JUSTICE.

The undersigned Minister of State for Justice prescribes the following procedure in regard to the registration of land leased in perpetuity and of buildings erected thereon.

KIYOURA KEIGO,
Minister of State for Justice.

September 21st, 34th year of Meiji.

Art. 1.—In regard to the registration of land leased in perpetuity or of buildings erected thereon, the provisions of the Regulations for the Enforcement of the Law of Registration of Immovables shall correspondingly apply, unless otherwise provided for in this Ordinance.

Art. 2.—Registry Books for Land leased in Perpetuity and for Buildings erected on Land leased in Perpetuity shall be prepared in the Chihō Saibansho in the form respectively prescribed in Schedule A and Schedule B.

Art. 3.—Copies of the Registry Book of foreign Consulates and their translations shall be kept in the Registry Office.

Art. 4.—When a document accompanying an application for registration is written in a foreign language, the applicant shall supplement it with a Japanese translation.

Art. 5.—In transferring registrations made at foreign Consulates to the Registry Books their transcription shall be made in accordance with Japanese translations.

When a registration made at a foreign Consulate has been transferred to the Registry Book, the number of the volume and the folio of the Registry Books to which it has been transcribed, the registration number and the date, shall be recorded in the copy of the Registry Book of foreign Consulates and also in its translation, and the Registry Officer shall affix his seal.

Art. 6.—When the Local Government Office has notified the Registry Office of the cancellation of a title-deed of perpetual lease in accordance with Article 2 of Imperial Ordinance No. 179 of the 34th year of Meiji, the Registry Officer shall close the folio concerned in the Registry Book for Land leased in Perpetuity.

When, in the case provided for in the preceding paragraph, there are registrations of subsidiary rights having as their object a right of perpetual lease, the Registry Officer shall record in the designation column the fact that the title-deed has been cancelled. When registration of cancellation has been made in respect of all registrations relating to those subsidiary rights, or when registrations relating to subsidiary rights have been transferred to the ordinary Registry Book in making registration for the preservation of ownership, then the Registry Officer shall close the folio concerned in the Registry Book for land leased in perpetuity.

Art. 7.—When upon receipt of notice mentioned in the first paragraph of the preceding Article there are registrations relating to buildings erected on land leased in perpetuity the Registry Officer shall transfer those registrations to the ordinary Registry Book and shall close the folio concerned in the Register Book in which those registrations appeared.

SUPPLEMENTARY REGULATIONS.

Art. 8.—This Ordinance shall take effect from the day of its promulgation.

Art. 9.—Departmental Ordinance No. 41 of the Department of Justice, of the 32nd year of Meiji, prescribing procedure in regard to the registration of immovables which are the objects of rights of foreigners or foreign juridical persons, is hereby repealed.

SCHEDULE A.

N.B.—This Schedule also gives the forms for Sections B (Servitudes), C (Preferential Rights, Pledges and Mortgages), and D (Leases) which are the same as for Section A.

DEPARTMENTAL ORDINANCE NO. 16, OF THE DEPARTMENT OF JUSTICE.

As regards the fees to be levied upon an application for a copy of or for an extract from the Registry Books for Land leased in Perpetuity or for Buildings erected thereon, or upon an inspection of the Registry Books or documents accessory thereto, the provisions of Departmental Ordinance No. 14, of the Department of Justice, of the 32nd year of Meiji (1899) shall correspondingly apply.

This Ordinance shall take effect from the day of its promulgation.

Departmental Ordinance No. 42, of the Department of Justice, of the 32nd year of Meiji (1899) is hereby repealed.

KIYOURA KEIGO.

Minister of State for Justice.

September 21st, the 34th year of Meiji (1901).

DEPARTMENTAL ORDINANCE NO. 17, OF THE DEPARTMENT OF JUSTICE.

The following Amendments are introduced into the Regulations relating to the enforcement of the Law of Registration of Immovables, issued as Departmental Ordinance No. 11, of the Department of Justice, of the 32nd year of Meiji.

KIKOURA KEICHI,
Minister of State for Justice.

September 21st, the 34th year of Meiji (1901.)

The following Article is inserted after Article 46:—
Art. 46, B.—In applying for registration for the preservation of ownership in cases where ownership has been acquired by a Japanese subject or a Japanese juridical person in accordance with paragraph 2 of Article 1 of Imperial Ordinance No. 179, of the 34th year of Meiji (1901), the fact that ownership has been acquired through the cancellation of title-deed of perpetual lease must be stated in the letter of application.

The following two Articles are inserted after Article 71:—

Art. 71, B.—When upon receipt of application mentioned in Article 46 B, there are in a folio of Registry Book for Land leased in perpetuity registrations of subsidiary rights having as their object a right of perpetual lease, and such registrations have not yet been cancelled, then the Registry Officer shall transfer those registrations of subsidiary rights to the ordinary Registry Book after he has completed the registration of the ownership in the same Book.

Article 71, C.—In transferring to the ordinary Registry Book registration relating to subsidiary rights in accordance with the provisions of the preceding Article, or in transferring to the ordinary Registry Book registration relating to buildings erected on land leased in perpetuity, the Registry Officer shall enter in the Registration Number Column of the folio of the ordinary Registry Book a new number following the order in which registrations are being made in that Book. He shall then enter on the left side of that number the Registry Number appearing in the Registry Book from which it has been transcribed.

In the case provided for in the preceding paragraph the Registry Officer shall record at the end of registration transcribed in the designation column and the fact column, the folio, the volume and the title of the Registry Book from which the foregoing registration has been transcribed. He shall also enter the date of the transcription and affix his seal.

SUPPLEMENTARY REGULATION.

This Ordinance shall take effect from the day of its promulgation.

DEPARTMENTAL ORDINANCE NO. 24, OF THE DEPARTMENT FOR HOME AFFAIRS.

When a Japanese subject or a Japanese juridical person, who was acquired a right of perpetual lease created in favour of a foreigner or foreign juridical person by a title-deed of perpetual lease issued by the Government, has obtained the cancellation of such title-deed according to Article 1 of Imperial Ordinance No. 179, of the 34th year of Meiji (1901), and has thus acquired ownership of the land concerned, the Local Government Office must notify the fact without delay to the Taxation Office having jurisdiction over the place where the land is situated.

BARON UTSUMI TADAKATSU,
Minister of State for Home Affairs.

September 25th, the 34th year of Meiji (1901).

INSTRUCTION NO. 34, OF THE DEPARTMENT FOR FINANCE.

To the Revenue Administration Bureaux (those at Hakodate, Sapporo, Nemuro and Nawa, excepted).

Upon receipt of notice prescribed by the Departmental Ordinance No. 24, of the Department for Home Affairs, of the 34th year of Meiji, the Taxation Office shall make all necessary entries in the cadastre (Tochi-Daicho) in respect of the land to which the notice refers.

SONE ARASUKÉ,

Minister of State for Finance.

Sept. 25th, 34th year of Meiji (1901).

DELAYED TELEGRAMS.

We have received the following from the Yokohama Foreign Chamber of Commerce for publication:—

The Yokohama Foreign Chamber having received complaints in regard to delay in the delivery of International Telegrams, entered into correspondence with the Japanese Authorities and the Great Northern Telegraph Company in Nagasaki and Shanghai, with the result that a delay was discovered to be due to the fact that at Vladivostok the office of the Russian Administration was closed to private telegrams at 10 p.m., local time, the accumulation during the night being sent off the next morning after 7 a.m. These messages arrived at Nagasaki in heavy batches

during that period of the day when the local lines were most congested, thus causing delay in Japan as well as at Vladivostok. As the local Authorities were unable to remedy this state of affairs, the Yokohama Chamber put itself in communication with the London Chamber of Commerce, pointing out that the delay in delivery caused inconvenience to the senders of messages as well as to the receivers. The London Chamber promptly took the matter up and addressed the Great Northern on the subject at head-quarters, conveying the information furnished by the Yokohama Chamber. In August last the Yokohama Chamber received, under cover of a letter from the London Chamber, the following from Mr. F. C. C. Nielsen, the Great Northern Company's representative in England:—

"In further reply to your favour of the 19th instant, I have been directed to inform you that the delay complained of will be investigated, and if it be found that it is due to accumulation of traffic at Vladivostok, the Company will do its best to remedy matters with the assistance of the Russian Government Administration.

"As far as the Company is concerned no difficulties will arise, as our station at Vladivostok is kept open during the night, at all events for Government telegrams."

Through the same medium the Yokohama Chamber has just received the following from Mr. Nielsen:—

"In continuation of my letter of 29th June last, I beg to say that I have been further directed to inform you that my Company, having examined the conditions under which telegrams are transmitted at Vladivostok, have now arranged that all telegrams to Japan—both Government and private—which arrive at Vladivostok during the night shall be transmitted immediately on receipt."

It will thus be seen that the communities in Japan are indebted both to the London Chamber for its prompt action and to Mr. Nielsen for his courtesy in dealing with this important matter at once.

CENTRAL EUROPEAN COMPLICATIONS.

A London telegram of Aug. 30th said:—The Roumanian Premier, M. SUTIZA, recently visited Vienna, where he had long conferences with Count Goluchowski, the Austro-Hungarian Minister of Foreign Affairs, on the situation in the Balkans. He conferred with General von Beck, chief of the Austro-Hungarian general staff.

Immediately after this visit, articles appeared in the semi-official Hungarian papers—articles believed in some quarters to be inspired by Count Goluchowski, warmly protesting against Russia's intrigues in the Balkans.

These protests were based on rumours that Russia was massing troops on the Roumanian frontier and sending torpedo-boats into the Kilia, an arm of the Danube; and they plainly warned Russia that unless she faithfully adhered to the Austro-Russian agreement of 1897, to preserve the status quo in the Balkans, Austria "will resume her liberty of action."

The idea underlying this warning appears to be that Russia, having attained her objects in Eastern Asia, is now ready to pursue similar aims in the Balkans. One Berlin paper has gone so far as to describe the agreement of 1897 as "an instrument to keep Austria quiet while Russia is engaged in Manchuria."

SAILING RACES.

On Saturday afternoon sailing races were arranged for the Cruising Class and the 21 raters. The former started at 2 p.m., over the Kawasaki Course, 14 miles. The result was as follows:—

	Allowance.	Finish.	Corrected.
	m.s.	h.m.s.	h.m.s.
<i>Asagao</i>	22.07	5.02.10	4.40.10
<i>Sorprise</i>	11.26	5.22.00	4.42.00
<i>Seacraft</i>	—	4.47.45	4.47.45
<i>Daimyo</i>	4.00	4.53.10	4.53.10

Asagao takes first prize, the "Formosa Cup" and *Sorprise* second prize.

The 21 raters started at 2.15 p.m. over the No. 3 Course, 10 miles. The result was:—

	Allowance.	Finish.	Corrected.
	m.s.	h.m.s.	h.m.s.
<i>Vixen</i>	5.00	4.31.32	4.31.30
<i>Edna</i>	—	4.31.40	4.31.40
<i>Molly</i>	14.00	4.54.30	4.40.30
<i>Daisy May</i>	14.00	5.10.30	4.56.30

Vixen takes first, *Edna* second, and *Molly* third prize.

BOERS SHOOT PRISONERS.

A dispatch from Lord Kitchener dated Pretoria, August 25, said:

"Sworn evidence has been brought to my notice by Elliott that on June 6, Lieutenant Mair of the New South Wales Artillery and Privates Harvey and Blunt were shot down after surrendering at Graspan near Reitz. I have forwarded to Steyn and Botha copies of these statements."

The War Office has telegraphed to Lord Kitchener as follows:—

"We understand you have not yet received satisfactory assurances respecting the murder of our wounded at Vlakfontein. In view of the occurrences referred to in your telegram of August 25, we are of the opinion that you should notify by proclamation that the members of any commando by which such an outrage is committed, who may be captured and after trial proved to have been present on such occasion, will be held guilty, whether they actually committed the deed or not; that the leader of the commando will be sentenced to death and that the other members will be punished with death or less, according to the degree of complicity."

TELEGRAMS.

(REUTER'S SERVICE TO THE "JAPAN MAIL.")

SERIOUS NEWS FROM SOUTH AFRICA.

Shanghai, September 20.

The Natal Volunteers have been called out in view of an expected raid. Boer prisoners to the number of 2,000 are at Durban awaiting transportation. A portion of them have embarked for India.

The Boers under Botha entrapped and attacked three companies of Mounted Infantry, with three guns, under Major Gough, in South Utrecht. There was severe fighting; the guns were captured. Capt. Mildmay, of the King's Rifles, and Lieut. Blewitt, of the Rifle Brigade, with 14 men were killed; five officers and 25 men were wounded; five officers and 150 men were taken prisoners. Major Gough escaped.

General French reports that the Boers in the south, hemmed in by a British column, rushed a squadron of the 17th Lancers at Elands-river-pool, killing three officers and 20 men, and wounding one officer and 30 men.

ANOTHER TURBINE DESTROYER LOST.

MANY MEN DROWNED.

The turbine-destroyer *Cobra*, while on a trial trip in the North Sea, ran on a rock and sank. There are 12 survivors, and it is feared that 80 have perished.

THE CZAR.

The Czar visited the grand manoeuvres of the French Army at Rheims.

PRESIDENT MCKINLEY'S FUNERAL.

Shanghai, Sept. 21.

The remains of the late President McKinley were interred at Canton, O., in the presence of 70,000 people. Simultaneous memorial services, in token of sympathy, were held throughout the world.

ANOTHER SURPRISE IN SOUTH AFRICA.

Two guns escorted by a company of Mounted Infantry were surrounded and captured by a superior Boer force at Vlakfontein. Lieutenant Barry was killed.

THE FIGHT AT ELANDS RIVER-POORT.

The casualty list at Elands-riverpoort was 33 killed and 35 wounded.

PRINCE CHUN DECORATED.

The Kaiser has conferred upon Prince Chun the Order of the Grand Cross of the Red Eagle.

THE COMMERCE OF CHINA.

Shanghai, September 22.

Sir James Mackay sails for China on the 10th October to conduct commercial negotiations with China provided for under the protocol. He will be assisted by Mr. Henry Cockburn, Chinese Secretary of the British Legation at Peking; and Mr. C. J. Dudgeon of Shanghai.

FRANCE AND RUSSIA.

The Czar was present at the review of four Army Corps at Rheims. It was a brilliant and memorable spectacle. Luncheon followed at which President Loubet and the Czar emphasized more than ever the friendship and alliance of France and Russia.

HOLLAND AND THE BOERS.

Mr. Van Lynden, the Dutch Foreign Minister, will introduce the Boers appeal for arbitration at the next sitting of Parliament.

THE CZAR.

Shanghai, Sept. 23.

The Czar has left France.

BOTH A ON THE MOVE.

General Botha, with a force of 1,500 men, is moving eastward from Ermelo into Zululand.

CAPTURE OF COMMANDOS.

Colonel Williams has captured nearly the whole of Kock's commando.

Benson has captured the Carolina commando.

THE VLAKFONTEIN LOSSES.

Our losses at Vlakfontein were: 6 killed, 23 wounded, and 103 captured.

THE POLITICAL OUTLOOK.

Shanghai, Sept. 24.

The Times' Paris correspondent says that the topics of conversation between the Czar, President Loubet, and the Premiers concerned the Far East, the strained relations between France and Turkey, and Armenian affairs. Russia intends to co-operate with all her strength to secure the success of all French enterprises in the Far East.

THE LOSS OF THE "COBRA."

It transpires that the *Cobra* sank in seven fathoms of water. There is no rock thereabouts and it is inferred that she simply broke in two.

[NOTE.—A telegram to the German journal at Shanghai says the *Cobra* sank in consequence of an explosion. The *Cobra* was built by Armstrongs. She was a 400-ton boat, and half a knot faster than the equally ill-fated *Viper*.—Ed. J.M.]

NEW RUSSIAN LOAN.

Shanghai, Sept. 25.

It is stated in Paris that a favourable opportunity only is awaited for the public announcement of a fresh Russian loan.

TRANSPACIFIC CABLE.

An American company has been formed to lay a cable from California to the Philippines via Honolulu.

THE BOERS IN NATAL.

The raiding force of the Boers in Natal appears to be returning in an easterly and north-easterly direction.

FOUND GUILTY OF MURDER.

The assassin of President McKinley has been found guilty of murder, and will be sentenced on Thursday.

BOTH A INACTIVE.

Shanghai, Sept. 26.

Botha is inactive since South's reverse. The Buffalo and Tugela rivers are flooded, preventing any serious invasion of Natal.

THE CUP RACES.

Shamrock allows *Columbia* 43 seconds.

BOER LEADERS BANISHED.

Sentence of permanent banishment has been promulgated in Pretoria on ten Boer leaders captured since September 15th.

CAPE TOWN GUARDS ON ACTIVE SERVICE.

A detachment of the Town Guards at Cape Town has gone on active service.

PRINCE CHUN.

Prince Chun will embark for China on October 1st.

(RECEIVED AT THE LEGATION OF FRANCE.)

FRENCH NEWS.

Saigon, Sept. 18.

Monsieur Loubet and M.M. Waldeck-Rousseau and Delcasse have started for Dunkirk.

Saigon, September 20.

President Loubet visited the Emperor and Empress of Russia and with them reviewed the squadron. The Sovereigns and M. Loubet landed amid acclamations.

At luncheon M. Loubet welcomed the Czar and Czarina. The Czar replied, expressing the pleasure it gave him to return to the midst of a friendly and allied nation.

After a night passed at Compiegne, the Emperor and Empress went to Rheims to be present at the last day of the grand manoeuvres. They visited the Hotel-de-ville and the Cathedral. The Czar expressed satisfaction with the quality of the French Army.

THE CZAR'S VISIT.

Saigon, Sept. 23.

There has been a gala fete at Compiegne. A review of 19,000 men took place at Betheny. M. Loubet, in proposing the health of the Imperial Russian family and of the friendly and allied country, declared that this alliance promotes solutions of justice and humanity and contributes powerfully to the maintenance of peace, which also it guarantees for the future. The Czar, in returning thanks for himself and the Empress, affirmed a new sanction of the close union of the two pacific nations, causing their rights to be respected without interfering with the rights of others. The Emperor proposed the health of the nation "amie et allice," of the Army and of the President.

The Czar and the Czarina left Betheny yesterday for Denmark. They gave several proofs of sympathy to the members of the Government. The Emperor expressed a hope of returning soon to France.

PRINCE CHUN.

The Emperor William has conferred on Prince Chun the grand cross of the Red Eagle.

(RECEIVED IN TOKYO.)

FLOODS IN MANCHURIA.

A telegram from the Japanese Consul in Newchwang, dated the 21st, says that there are floods in the regions south of Mukden, but that the crops are little injured and that trade is not expected to suffer much.

THE PEACE PROTOCOL.

The Peace Protocol, now at the Japanese Legation in Peking, will be brought to Japan by Mr. Secretary Tei.

THE SOUL-FUSAN RAILWAY.

The official opening of work on the Soul-Fusan Railway took place without hitch on the 21st instant.

THE MANCHURIAN RAILWAY.

The section of the Manchurian Railway

between Port Arthur and Kai-yuen was opened to traffic in the beginning of the 8th month of the Russian calendar.

THE CHINESE COURT.

The report about a postponement of the Court's return to Peking seems to be groundless. No such news has yet been officially received.

THE FOREIGN TROOPS WITHDRAWING.

The withdrawal of the troops from Peking has doubtless been completed. Yuan's forces were to replace them within a week, and will probably do so about the 29th inst.

IMPROVING THE PEIHO.

The Japanese Chargé d'Affaires in Peking telegraphs that the Chinese Government has issued orders to the effect that the increased tax, of which the proceeds are to be devoted to the improvement of the Peiho, shall be collected from the 1st of October.

JAPANESE IN CHINA AND KOREA.

The Japanese Foreign Office has issued instructions to the Governors of Prefectures to the effect that in future all possible facilities shall be given to Japanese subjects desiring to visit China or Korea.

(FROM THE "N.-C. DAILY NEWS.")

THE BANK NOTE ROBBERY AT SINGAPORE.

Singapore, September 16.

The Hongkong Bank note robbery case was resumed to-day, the fourth day of the case, there having been no sitting on Friday, a jurymen being ill. The case for the prosecution is still proceeding.

THE SYMPATHY OF HONGKONG.

Hongkong, Sept. 17.

The Legislative Council has been convened to-day to pass a vote of sympathy with the United States in the loss of President McKinley.

PLAGUE IN HONGKONG.

There was one fatal European case of plague here on Saturday.

[NOTE.—The European who died of the plague on the 14th was Master S. W. B. Ford, the eleven-year-old son of Superintendent Ford of the Hongkong Police.—Ed.]

(FROM THE "OSTASIATISCHE LLOYD.")

NEWS FROM EUROPE.

Berlin, Sept. 14.

H. M. the Emperor expressed himself in a speech made in Dantzig much satisfied about the visit of the Czar. He stated that the peace of Europe was secured for many years to come.

The *North German Gazette* publishes a very sympathetic article in memoriam of President McKinley, mentioning the deep grief which has been caused to the American people by the national misfortune which has befallen it.

It is reported from Breslau that Director Schostag, the director of a large shipping company of that city, has committed suicide, having embezzled 4.4 million Marks (£220,000).

NEWS FROM THE NORTH.

Peking, Sept. 14.

The new Russian Minister M. Lessar has arrived here.

Peking, September 15.

The new German Post Office was opened to-day with suitable ceremonies. The German Minister, Baron Mumm, gave three cheers for the Emperor, Councillor Puche reviewed the history of the German postal service abroad. During the ceremony the German military band, which had come from Tientsin, played several pieces. A banquet in the Legation, which was intended to follow the opening of the Post Office, and a garden-party in the afternoon had to be abandoned, as meanwhile the news of the death of President McKinley had reached Peking.

Tsingtao, Sept. 16.

The Governor of Shantung, Yuan Shikai, has demanded from the German Government at Tsingtao, that the German troops, stationed outside the German colony in the Province of Shantung, for protection of the railway-building, shall now be withdrawn. The situation is rather serious. The German Government of Tsingtao does not wish to offend Governor Yuan Shih-kai, but on the other hand the Government is far from being willing to comply with Yuan Shih-kai's wishes. Governor Truppel left to-day with the S.S. *Künigsberg* for the north, in order to consult with the German Minister, Baron Mumm, at Peking.

[As far as we know, one company of the third Marines is stationed with two Maxims at Kaomi and in the city of Kiaochow where barracks have been built for them, and a detachment of about forty cavalry is at present either at Kaomi or even a little further west on the railway.—Ed.]

NEWS FROM EUROPE.

Berlin, Sept. 16.

H.R.H. Prince Henry of Prussia has been promoted to be Admiral of the Fleet.

Prince Chun was present at the parade in Dantzig to-day.

The strike of the steel-workmen in the United States of America has come to an end.

The manager of the Gewerbe Bank at Heilbronn has been arrested, being charged with defalcation of three million marks.

Peking, Sept. 17.

The Chinese troops have arrived here to-day in good condition. The Forbidden City was turned over by the Japanese and Americans with suitable ceremonies to the Chinese officials.

Bishop Anzer has arrived here and will remain a short time only in order to consult on different questions with the German Minister.

(FROM THE "VOSTOCHY VESTNIK.")

A TURKEY-BRITISH INCIDENT.

Constantinople, Sept. 8.

The Turkish Porte has been notified that the commander of a British man-of-war refused to permit the Turkish corvette *Shih* to enter Kueita Bay, in the Persian Gulf. The Porte informed the British Foreign Office, stating that the conduct of the British commander was contrary to the friendly relations existing between both countries and protested against it.

From other sources, it is reported that the British commander would not permit the landing of Turkish troops by the corvette at Kueita Bay, fearing that this might cause a disturbance in that place.

The presence of Turkish troops at Kueita was desired by the Bassorah Wali.

PRINCE CHUN AND THE KAISER.

THE EMPEROR'S SPEECH.

The Emperor William's reception of the Chinese mission of expiation, headed by Prince Chun, which took place on Sept 4th at Potsdam, was marked, according to telegrams in Canadian papers, with all the severity consistent with an audience nominally friendly. The Chinese Imperial envoy, on entering the palace, was not accorded a salute by the Garde du Corps. The Emperor William received him seated. The buttons and epaulettes of His Majesty's white uniform were enveloped in crepe. Prince Chun bowed thrice on entering and leaving. The Emperor William remained seated during the reading of the Chinese address. Afterwards, however, he relaxed his stern demeanor, and welcomed the envoy courteously, and subsequently, accompanied by his adjutant, called upon Prince Chun at the Orangery. Later in the evening, the Emperor, Prince Chun, and a dozen members of the expiatory mission took tea on the island in the Spree.

The following is the text of the letter presented by Prince Chun to the Emperor William:—

"The Great Emperor of the Chinese Empire to His Majesty, the great German Emperor, Greeting.

"Ever since the empires have been mutually represented by permanent legations, we have stood uninterrupted in friendly relationship with one another, especially since the visit of Prince Henry, whom I had the privilege of receiving frequently and treating with on intimate terms. Unfortunately, in the fifth month of last year, the Boxers rebelliously penetrated into Peking, and the soldiers joined them. The result was the murder of Your Majesty's Minister, Baron von Ketteler, a man who, as he occupied his post at Peking, paid careful attention to the interests of our countries, and to whom we are bound to pay our special acknowledgments. We regret most deeply that Baron von Ketteler met so terrible an end. The fact that we were not in a position to take due protective measures was painful to our sense of responsibility. It was this feeling of responsibility which prompted us to erect a monument on the spot, as a sign that the crime should not remain unexpiated. Further, we have sent to Germany with this letter, the Imperial Prince, Tsun Tsai Sung, heading a special mission. Prince Tsun, our own brother, will assure Your Majesty how deeply the events of the past year have grieved us, and how deeply feelings of penitence and shame still animate us. Your Majesty sent your troops from a far distance, put down the Boxers' rebellion, and restored peace, for the welfare of our nation. We have, therefore, commanded Prince Tsun to express personally to Your Majesty our thanks for your efforts in promoting peace. We cherish the hope that Your Majesty's indignation will be replaced by the old friendship. That the relations between our empires will be even more extensive and of a more intimate and beneficial character than hitherto, is our firm assurance."

Prince Chun, in delivering the letter, said: "I am in a position to assure Your Majesty, that the Emperor, my most gracious master, stood aloof from these complications, which brought misfortune upon China, and loss and sorrow upon Germany. Nevertheless, in accordance with the custom of thousands of years, the Emperor of China has taken the blame on his own sacred person. I have, therefore, the task of expressing to Your Majesty the most cordial feelings of the Emperor, my illustrious master, toward Your Imperial Majesty, and the whole Imperial Family. I hope the passing cloud will only intensify the succeeding sunshine and mutual friendship of the two great empires when they understand the value of each other better."

The Emperor William in reply, said: "It is no joyous or festive occasion, nor the fulfilment of a simple act of courtesy which brings Your Imperial Highness to me; but a deeply melancholy and very serious event. My Minister to the Court of the Emperor of China has been slain in the Capital of China by the murderous weapons of Chinese soldiers, acting under superior command—an unheard of crime, which is branded as infamous by internal law and the usages of all nations. From the mouth of Your Imperial Highness, I have just received an expression of the deep regret of the Emperor of China. I readily believe that your Imperial brother personally stood aloof from this crime, and the subsequent acts of violence against the inviolable legations and peaceful foreigners. All the greater the guilt resting on his advisers and Government. The latter must not delude themselves with the belief that they are able to obtain atonement and pardon for their guilt by this expiatory mission alone. They will be judged by their future conduct in accordance with the laws of nations. If the Emperor of China conducts the Government of

his great Empire henceforth strictly in the spirit of these prescriptions then will his hopes be fulfilled, and the results of the complications of the past year will be overcome, and between Germany and China, as formerly, peaceful and friendly relations will again prevail. In the sincere wish that this may be so, I bid Your Imperial Highness welcome."

Hair 55 Inches Long Grown by Cuticura.

MISS B—, of L—, sends us through our British Agents, Messrs. F. NEWBERRY & SONS, 27 and 28, Charterhouse Square, London, E. C., a strand of soft, glossy hair cut from her own head and measuring fifty-five inches in length,

of which the annexed drawing is a photographic fac-simile. She attributes her magnificent head of hair to frequent shampoos with CUTICURA SOAP, followed by light dressings of CUTICURA gently rubbed into the scalp. Previous to the use of CUTICURA, her hair was dry, thin, and lifeless, and came out in handfuls to such an extent that she feared she would lose soon it.

This is but one of many remarkable cases of the preservation and restoration of the hair in seemingly hopeless cases by warm shampoos with CUTICURA SOAP, followed by light dressings of CUTICURA, purest of emollient skin cures. This treatment at once stops falling hair, clears the scalp of crusts, scales, and dandruff, soothes irritated, itching surfaces, stimulates the hair follicles, supplies the roots with energy and nourishment, and makes the hair grow on a clean, sweet, wholesome, healthy scalp, when all else fails.

MILLIONS OF WOMEN use CUTICURA SOAP exclusively for preserving, purifying, and beautifying the skin, for cleansing the scalp of crusts, scales, and dandruff, and the stopping of falling hair, for softening, whitening, and soothing red, rough, and sore hands, and for all the purposes of the toilet, bath, and nursery.

Complete External and Internal Treatment for Every Humour,

Consisting of CUTICURA SOAP, to cleanse the skin of crusts and scales and soften the thickened cuticle, CUTICURA Ointment, to instantly allay itching, inflammation, and irritation, and soothe and heal, and CUTICURA RESOLVENT, to cool and cleanse the blood. A SINGLE SET is often sufficient to cure the most torturing, disfiguring, and humiliating skin, scalp, and blood humours, with loss of hair, when all else fails. Sold throughout the world. Aust. Depot: R. TOWNS & CO., Sydney, N. S. W. So. African Depot: LEXSON LTD., Cape Town. "All about the Skin, Scalp, and Hair," free. POTTER DRUG AND CHEM. CO., Sole Props., CUTICURA REMEDIES, Boston, U. S. A.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. What is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, OCTOBER 5TH, 1901.

MARRIAGE.

On October 2nd, at H.B.M. Legation, Tokyo, and at St. Andrew's Church, Shiba, Tokyo, by the Venerable Archdeacon A. C. Shaw, M.A., Chaplain to H.M. Legation, assisted by the Rev. A. F. King, M.A., EDWARD THOMAS FREDERICK CROWE, of H.B.M. Consular Service, Japan, to FLEANOR, youngest daughter of the late William Hyde Lay, H.M. Consul, Chefoo.

SUMMARY OF NEWS.

MR. HENRY STAN, of Kobe, was naturalized in Japan on the 28th ult.

THE first frost of the season is reported at Mori-

oka, Yonezawa, and Hakodate on the morning of the 27th ult.

MR. UGAI IKUJIRO, formerly M.P., for Niigata Prefecture, died on the 27th ult.

THE first snow of the present autumn fell on Fuji on the afternoon of the 26th ult.

THE Emperor has presented *yen* 2,000 to the funds of the Female Normal School.

MR. MOTONO ICHIRO, Japanese Minister to Belgium, left Europe on the 26th ult. for Japan.

THE Hachoji Stock Exchange was ordered by the authorities to dissolve on the 30th Sept.

A VIOLENT earthquake was felt at Tainan, Taichu, and Taipheh, Formosa, on the 27th ult. at 11.21 a.m.

A PROLONGED earthquake was felt in Yokohama at 24 minutes past seven o'clock on Monday evening.

MR. NAKARASHI, President of the Osaka Shosen Kaisha, arrived at Nagasaki on the 27th ult. from Keelung on his way to Osaka.

WE learn that the Organ Recital at Christ Church was so successful financially that *yen* 217.80 was realised for the Church Fund.

MR. TANAKA SHOZO, M.P., accompanied by ten residents of Ashio, visited the Home and Financial Departments on the 26th ult.

MR. ASAKA SEIBUN, living at Kayacho, Shitaya, Tokyo, was robbed of a gold and silver *tsuba* and *menuki* valued at over 1,000 *yen* on the night of 27th ult.

THE Osaka Shosen Kaisha steamer *Tairi Maru* which ran on a sand bank in the Yangtze some months ago, was floated on the 28th Sept. She left for Shanghai the following day.

BARON IWASAKI HISAYA, who has been travelling in Europe and America, left London by the *Kumano Maru* on the 26th ult., and is expected to arrive at Kobe in November next.

Six goods cars were derailed between Kikitsu and Okusu on the Kyushu Railway on the afternoon of the 27th ult. Some damage was caused to the freight but no lives were lost.

THE Tokyo Telephone Office while excavating some days ago at Hirokoji, Uyeno found several dolls which had been buried during the great fire of the 3rd year of Meiryaku (1657).

THE Tokyo City Office has contributed *yen* 1,000 towards the funds of the Charity Association at Fukagawa, Tokyo, in connection with a scheme to greatly extend the scope of the society.

THE Government Printing Office has commencing printing a 3 *sen* carmine postage stamp and a 5 *sen* stamp, both memorials of the building of a Shrine to Prince Kitashirakawa in Formosa.

DURING a festival at Shibayamura, Toyotamagori, Tokyo, on Saturday a fracas arose because a farmer defeated a soldier in a wrestling contest. Irritated by the non-success of their comrade some soldiers among the spectators drew

their side-arms and in the disturbance that ensued several persons were injured. The soldiers escaped before the police arrived.

AN engine boiler exploded in the Midori Coal Mine belonging to Mr. Nakanishi Shichitaro, at Yenzagori, Fukuoka Prefecture, on the night of the 26th ult. Seven men were killed and ten injured.

THE British sailing ship *County of Haddington*, 1,865 tons, which left New York for Shanghai on the 2nd February and has not since been heard of, is now quoted in Marine Insurance circles at 90 guineas premium.

THE death recently took place in Singapore of Mrs. Carlotta de Miranda at the ripe age of 82 years. The deceased lady arrived in Singapore from Macao in 1825, never leaving the Colony since, so that her residence there counted 76 years.

M. CAMILLE PELLETAN, the official reporter on the Ministry of Marine's budget, doubts the efficacy of the French submarine boats, and says that the feats of the *Gustave Zede* and the other submarine boats would be impossible in time of war.

A COOLIE named Sakurai Jukichi, living at Nishi Tobemachi, Yokohama, was arrested by the Isezakicho police on the afternoon of the 27th ult., charged with assaulting a former employer, Onuki Hirokichi, at Kita Nakadori, Yokohama.

ISOYA TASHIRO, of Kanagawa, and Kono Kokyo, of Tokyo, were arrested by the Kotobukicho police on the night of the 27th ult. in a house of ill-fame at Yairakuchō, Yokohama, on a charge of having stolen several articles from hotels in Tokyo.

YAMANAKA TAKAICHI, of Yehime Prefecture, attempted to commit suicide by means of poison in a house of ill-fame at Yoshiwara on the 27th ult. He spent over 1,000 *yen* during the past few months. With 150 *yen* received from his father on the 10th ult. he went to Osaka and returned to Tokyo on the 27th. He had only 15 *sen* in his purse.

KAKINUMA KINZABURO, employed in a house at Sagacho, Fukagawa, Tokyo, was arrested by the Honjo police on the evening of the 27th ult. on a charge of having stolen *yen* 250 belonging to his employers on the 24th ult., and having spent the same in a house of ill-fame at Susaki. He had been convicted of stealing on sixteen previous occasions.

A YOUNG man named Nakamura Sakuji, living at Sashigaya-cho, Koishikawa, Tokyo, while under the influence of sake on the night of the 27th ult. was walking near the railway at Ichigaya. He remarked to a friend that he would stop the train and jumping on the line stood before the train. The engineer stopped the train at once but too late to avoid the unfortunate man, who was injured on the head, face, and foot.

A STEAMER which arrived at Hammerfest on Aug. 29th, after having successfully landed the Baldwin-Zeigler Arctic expedition at Camp Zeigler on Alger Island, spoke the Russian ice breaking steamer *Ermak* three weeks previously. Admiral Makaroff, the originator of the idea to reach the pole with the *Ermak*, said his experience had convinced him that it was impossible to force a way through Polar ice. The admiral was then homeward bound. The *Freije* landed the Baldwin-Zeigler party in lat. 80.24 N., and long. 55 E.

CHINESE AFFAIRS.

Saturday, Sept. 28.

The Japanese military force for Shanghai arrived at that place on the 24th instant by the *Sakura Maru* and landed at 1 p.m. on the Yusen Kaisha hatoba. There was a large concourse of people to witness the landing. The troops proceeded at once to the quarters hitherto occupied by the Marines, who are to embark in the same vessel for return to Japan.

Monday, Sept. 30.

Mr. Na Tung, the Chinese Envoy, who is now staying at the Imperial Hotel, is said to have received a telegram sent from Tientsin on the evening of the 25th, to the effect that the illness of Viceroy Li has assumed a serious aspect. Newspapers publishing this news add that Mr. Na does not interpret the message to mean that Li is actually in a dangerous condition.

The gist of a speech delivered by Mr. Komura at a meeting of the Nippon Club on the evening of the 27th instant in the *Kazoku Kaikan*, was that Japanese observations of Chinese affairs are very superficial. He observed that not even the actual conditions in Peking could be ascertained from the writings of Japanese, for while some described it as a beautiful and impressive city—which it certainly is not—others spoke of it as a place where a drive through the streets is a dangerous matter, so terrible are the holes and ruts—which of course is an absurd exaggeration. If even Peking is so inaccurately observed, what must be the case with the huge empire of China. The fact is, Mr. Komura thinks, that all the really valuable books about China in recent times have been written by foreigners, a humiliating circumstance when it is considered how great Japan's material interests in China are.

It is curious to observe how completely the expression "Shanghai Liar" has become proverbial in the West. An American journal, speaking of the Colombia-Venezuela affair, writes:—

The trouble between Colombia and Venezuela is an affair about which no experienced person cares to make any comment. The correspondents who supply us with South American news are close relatives of the "Shanghai liar" and little reliance can be placed upon dispatches in regard to the trouble. Caracas newspapers dated since "war" broke out contain nothing in regard to this alleged event, and while there is no doubt that hostilities of some sort are in progress, the isthmus, our only interest, is in no danger of being blocked, and soon the "war" will pass out of sight as so many of its kind have done before.

Tuesday, Oct. 1.

A telegram to the *Asahi* says that the Chinese Government, being engaged chiefly with the Shinking problem has, for the moment, put the Manchurian question on the shelf. This is a very obscure piece of intelligence. Shinking being a part of Manchuria, the fate of the former can not be separated from the fate of the latter, and we are not aware that any special question relating to Shinking is on the tapis.

The Chinese troops that have entered Peking in succession to the foreign forces are said to be behaving well and to be showing an unwonted spirit of discipline.

It is alleged that preparations have now been completed for the return of the Imperial Court to Peking. A few days will suffice to determine whether the Court really intends to return this year, for if it does not leave Hsian in October, it certainly will not set out in November or December.

Major-General Song, a principal official of Fuhkien province, has arrived at Nagasaki for the purpose of attending the Japanese military manoeuvres in Tochigi Prefecture.

Thursday, Oct. 3.

The latest news about the Chinese Court is that it will really set out without fail on the 6th instant and proceed direct to Peking. It is at least a consolation to know that we shall soon be done with contradictory rumours on this important subject. In three days more the question will be finally answered, the 6th of October, namely, the 24th day of the 8th month according to the Chinese calendar, having been the time fixed some months ago. In connexion with this matter we notice that, according to a Shanghai contemporary, "large sums of money destined for the use of the Empress Dowager—consisting of tribute from certain Viceroys and Governors who owed their respective advancements in official life and wealth to her—whilst en route for Peking in anticipation of the Court's return there, have been stopped by special edict at Tschou, on the borders of Chihli and Shantung. The money is to be taken to K'ai-feng, Honan, to await the disposition of the Empress Dowager. The sums in question aggregate Tls. 6,000,000."

The *North-China Daily News* persists in prefixing to the name of Mr. Na Tung the epithet "ex-Boxer." Does the Envoy deserve that distinction or is it given to him on the strength of idle rumour? He was welcomed in Japan and treated while here in a manner which certainly did not suggest that the Japanese believed him to have been connected with the Boxer rising, and he showed himself during his stay in this country a man of liberal and intelligent views. If he is an "ex-Boxer" he manages to hide his anti-foreign proclivities most successfully.

Friday, Oct. 4.

The *Asahi* has a telegram saying that Viceroy Chang Chih-tung has asked Mr. Odagiri, Japanese Consul in Shanghai, whether any Japanese business man would be willing to take over the cotton weaving factories at Wu-chang which were established some years ago under the auspices of the Viceroy. These factories are said to be splendidly equipped, but it appears that the authorities have never succeeded in procuring a staff of good officials or in getting properly trained workmen. It has therefore occurred to the Viceroy that the best method of keeping the factories going and avoiding the loss they now entail would be to lease them to a Japanese. Mr. Odagiri has communicated the matter to Tokyo, where inquiries are being made.

Mr. Odagiri seems to be a very able official. His work throughout the recent embroglio in China was most useful, for he succeeded in establishing close relations with the Yangtze Viceroys and was thus able to become a valuable medium of communication between them and the Japanese Government. How much influence the Japanese Government was able to exercise through these Viceroys and how greatly that influence contributed to such success as was ultimately achieved, will probably remain among the unwritten pages of history.

A telegram received in Tokyo says that Russia has asked China for a concession to build a railway from a point on her present Trans-Asian line to Maimaichin on the Mongolian frontier. Russia's railway activity in Asia is very striking, especially when one

comes to consider the provenance of the money. She seems to be constantly obliged to have recourse to the French exchequer for the purposes of her home finances, yet she spends immense sums abroad on railways which are not likely to give any adequate return for many years to come. Her energy is certainly very admirable. The man at the front in her case never remains idle for a moment. Every agent, military or diplomatic, that she has abroad, seems to devote his untiring energies to the one business of extending her empire.

KOREA.

Saturday, Sept. 28.

A telegram from Sôul alleges that the Imperial proclamation issued on the 20th instant with respect to Lady Om does not mean that she is elevated to the rank of Empress, as was recently announced, but that preparations are to be made with that object, and that the ceremony will be performed on a lucky day now near at hand. Another telegram says, however, that it is an error to speak of the lady's elevation to an Imperial position. What has happened is that she has received a step of official promotion which is something altogether different from being made Empress. We believe the latter telegram to be correct.

The alleged construction does not properly attach to the directions recently issued from the Foreign Office to the Governors of Prefectures, with regard to removing all obstructions to the voyages of Japanese subjects to China or Korea. The fact is that for some time past such obstructions should not have existed. But it appears that some of the Governors have been enforcing without discrimination the regulations generally applicable to Japanese emigrants, and have been including people bound for China and Korea in the same category with people bound for America and Australia. What has now been done is merely to enjoin the desirability of making a distinction.

Last year the Japanese Representative in Sôul urged the advisability of erecting light-houses along the Korean coast, and offered Japan's assistance in carrying out the work. Korea replied that she intended to do it herself. But of course she did not do it. Russia has now taken up the matter, not in the sense of proposing to build the light-houses herself, but only in the rôle of an adviser that such a measure should not be neglected any longer. Korea's reply is not reported. Were she frank she would doubtless answer that she has no money.

Monday, Sept. 30.

There have been very heavy rains at Yuensan, resulting in the inundation of the settlement and the destruction of some bridges. No serious damage was caused, however. It is stated that only once since Yuensan became an open port have such heavy rains fallen, namely, in 1886.

Tuesday, Oct. 1.

A curious story comes from Korea. It is to the effect that Major-General Wogack, whose presence in Sôul has been already reported, is strongly urging the Korean Government to fortify the coasts of the peninsula. The Major-General indicates as places specially demanding such a measure of defence, Chinghai Bay, Masampho, Koje Island, the Nanhai (southern) district, Deer Island (Cholyong) and Chinnam. Should Korea be unable to provide the necessary

funds — and certainly she is unable —, then the Major-General is said to have declared that Russia would induce France to lend money without interest. We do not think that any implicit reliance is to be placed in this story, but it certainly furnishes an amusing illustration of Far-Eastern notions as to the manner in which Russia is supposed to be exploiting France. To be able to thrust one's hand into a friend's pocket whenever funds are needed for the prosecution of a design of one's own is quite an ideal state of affairs, and that seems to be the interpretation put upon Russia's position with regard to France in Eastern Asia.

Wednesday, Oct. 2.

The Directors of the Sôul-Fusan Railway have placed upon the market a second instalment of shares, numbering three hundred thousand and representing 15 million *yen*. A meeting was held at the Tokyo Imperial Hotel on the 30th ultimo for the purpose of making a statement. Baron Shibusawa, President of the Railway, addressed the meeting. He said that the necessity for building this line had been recognised immediately after the China-Japan War, and the Government had granted special facilities to the projectors. Out of the total of five hundred thousand shares, representing a capital of twenty-five million *yen*, the Authorities had agreed that the Company might be constituted so soon as a hundred thousand shares were taken up; that only one-tenth of the face value of the shares need be subscribed at the outset; that the company might borrow to the extent of ten times the paid up capital, and that the Treasury would guarantee six per cent. interest on all the money invested. On such conditions the line could scarcely fail to become an accomplished fact, and every patriotic Japanese ought to subscribe to it. The foreign trade of Korea now amounts to 16 or 17 million *yen* annually, and the great bulk of it is in Japanese hands. Considering that fact, and considering also that the Sôul-Fusan Railway might one day become the terminal section of the Trans-Siberian and Trans-Manchurian Railways, its prospects must be admitted to be very bright. After Baron Shibusawa's powerful speech, Baron Ozaki Saburo, who had recently returned from Korea, described the ceremony at the official opening of work on the line, and the meeting broke up after partaking of a cold collation.

The progress of this enterprise will be watched with great interest. The first call upon the shares now placed on the market will be only fifteen hundred thousand *yen*. Already the Company has placed a hundred thousand shares and collected a million *yen*, but that sum must have been nearly if not altogether exhausted by this time. It is upon the success of the second issue of shares that the company's future depends. Baron Shibusawa is too clever a financier to have associated himself with any prospect of failure, but if he can to-day obtain fifteen or twenty million *yen* from his countrymen at 6 per cent. interest he will have achieved a feat.

Thursday, Oct. 3.

It is a pity that some economical purse-tender can not be appointed with plenipotentiary authority to manage Korea's finances. She is in a perpetual state of impecuniosity. The five hundred thousand *yen* that she recently borrowed from the First National Bank of Japan has already been expended, it is said. The recent celebrations in commemora-

tion of the Emperor's fiftieth birthday have left a further deficit, for though levies that should have been ample were imposed, a great part of them was stopped *en route*. The memory of the money that might have been obtained some time ago from the Yunnan Syndicate has faded, the rice speculation of Li Yong-ik has ended disastrously, and the proceeds of the new arrangement about ginseng have all been absorbed in removing and repairing imperial palaces. What is to be done now to raise the wind no one seems to know, but whatever it is more or less political commotion will ensue in the Far East. If Korea could be put out of the way, how greatly the peace and tranquillity of Asia would be promoted.

THE TOKYO BARRISTERS AND JUDICIAL REFORM.

Monday, Sept. 30.

A majority of the Tokyo Barristers have decided, in reply to an inquiry addressed to them by the Minister of State for Justice, that there is no occasion for a radical alteration of the Criminal Code. They condemn some of the proposed changes as too sweeping, for example, the discretionary power given to judges and the increased punishments to be inflicted in the case of recidivists. With regard to the Code of Criminal Procedure, they object to the projected increase of the functions assigned to public procurators with a corresponding decrease of the functions of examining magistrates, and they also object to entrusting to the criminal police such large duties in the matter of collecting evidence, their opinion being that abuses are inseparable from such a system. Concerning the great question of allowing counsel to accused persons in the preliminary stage, the barristers not only approve the idea but also complain that the reform is not sufficiently drastic, inasmuch as counsel are not to be suffered to attend during the questioning of an accused person by the examining magistrate. Another point made by the barristers relates to the assignment of counsel at public expense. The present system is that the Court provides counsel for an undetended prisoner charged with a major crime—i.e. a crime punishable by imprisonment for 6 years or over—, but leaves the accused to provide counsel for himself in the case of minor offences. The drafters of the revised code recommend that the Court should not be required to provide counsel unless the imputed crime involves a penalty of imprisonment for life or capital punishment. The barristers strenuously denounce this change.

Tuesday, Oct. 1.

We have already given a brief synopsis of the views adopted by the Committee of the Tokyo Barristers with regard to the Government's proposal for a radical reform of the Criminal Code and the Code of Criminal Procedure, and we have explained that the Committee decided in a sense hostile to any sweeping changes at the present time, though they advocated the project of allowing the assistance of counsel to persons undergoing preliminary examination, and urged that even fuller use of counsel under such circumstances should be permitted. It now appears that when this decision of the Committee was submitted to the Tokyo Barristers Association in full conclave on the 28th ultimo, it encountered determined opposition from the younger barristers, who were all in favour of radical alterations. Journalistic reports indicate that the scene was

most animated, and that great excitement prevailed. Propositions and counter-propositions were advanced, and it was finally decided that the Committee should be invited to compile another report, which decision being regarded by the junior barristers as a triumph for their side, they marked the conclusion of the meeting with shouts of *banzai*.

A "CHINESE" LADY EDUCATOR.

Miss Fan, a teacher at the *Daido Jogakko* of Yokohama—which school, as many of our readers doubtless know, was established by Chinese subjects for the instruction of Chinese women—delivered an address at the meeting of the Women's Educational Society in Tokyo on the 30th of September. This was the first instance of a Chinese lady's appearance before the society. Miss Fan spoke with great *aplomb* and in well chosen language. The pith of her discourse was an expression of regret that the condition of the Chinese woman was what it is. From the time when a Chinese girl's intelligence begins to expand, she is taught mainly the duty of obedience and submission to the other sex. Already she has been subjected to the torture of feet binding in order that she may develop personal attractions to captivate her tyrants, and never throughout the whole of her life does she taste the sweets of real freedom. The only hope of raising her to a higher plane seems to lie in education. Miss Fan asserted that Japanese women had much in common with her own countrywomen from that point of view, and that they should sympathise with her in her endeavours. They themselves had already made considerable progress towards a better state of things, and they would surely hold out a helping hand to their struggling sisters in China. She had been obliged to suffer many taunts and reproaches for the line she had adopted, had been called unwomanly and a violator of sacred traditions. But these things did not move her when she reflected that in no part of the world was the condition of women so deplorable as in China. The address is spoken of in laudatory terms by Tokyo journals, and seems to have produced an excellent impression on Miss Fan's audience.

THE BUDGET.

It is alleged—though we can not vouch for the truth of the statement—that the Cabinet, while expunging all new works from the estimates for next year, will preserve the *Seiko-jo* (steel foundry) proposed by the last Cabinet but rejected by the Upper House, and will even devote to its construction a sum of a million *yen* over and above that set down in the Budget for 1901-2. Further, that the establishment of two new universities, one in Sendai and one in Kiushiu, has been negatived on the ground of want of funds, but that, on the other hand, the educational inspectors will not be abolished, the only change with regard to them being that they will be placed under the control of the prefectural authorities. There will also be an extensive reconstruction of the system of collegiate courts and in its sequel the salaries of judicial officials will be increased to the extent of 20 or 30 per cent. Finally, all enterprises requiring the issue of new bonds will be suspended, and only the continuing works which can not be stopped without heavy loss will be prosecuted, funds for the purpose being provided out of the revenue.

THE VENEZUELA AND COLOMBIA AFFAIR.

A telegram to the *Jiji Shimpō* from London says that a severe battle has taken place between the troops of Colombia and Venezuela, with the result that the Venezuelans were badly defeated, losing 600 men in killed and wounded, among the latter being a brother of President Castro. If this news prove correct, it would seem that fortune has followed the lead of justice, for all accounts agree that President Castro is the aggressor; that he aims at becoming the central figure in Latin American politics, and that he has a direct interest in overthrowing the present Government of Colombia. The general belief is that he has been uniformly supporting the Colombian revolutionist General Uribe-Uribe, whereas, on the other hand, it has not been proved by any means that the Venezuelan revolution under General Garberos has had either moral or material aid from the Colombian Government. President Castro is said to have counted on the support of Ecuador and Nicaragua, but he has apparently been disappointed in that respect and has felt himself constrained to take the field alone, the alternative being a dangerous growth of disaffection among his own people who have long regarded him with distrust. We can not clearly identify the place mentioned in the telegram as the scene of the battle: transliteration has obscured the original. But it appears to be the Goajira Peninsula, which projects from the north of Venezuela into the Caribbean Sea. If so it would seem either that the Colombians were seeking to strike at Caracas by a circuitous route on the north, or that the Venezuelans marched into Colombia via the Peninsula. The latest news prior to the receipt of this telegram, showed President Castro with his headquarters, and ten thousand men at San Cristobel, which is near the middle of the boundary line between Colombia and Venezuela, and it was expected that if war commenced, the fighting would all be in the neighbourhood of that place. It may be mentioned here that from 1819 to 1829 the three republics of Venezuela, Ecuador and Colombia were one State under the name of Colombia, but that they subsequently separated for reasons which had no validity so far as their politics and social or racial problems are concerned.

GARDEN PARTY AT THE BRITISH LEGATION.

A garden party was given by Mr. and Mrs. Beethom Whitehead at the British Legation in Tokyo on the 2nd instant to celebrate the wedding of Mr. Crowe and Miss Lay, which took place the same afternoon. Mrs. Whitehead was prevented by indisposition from receiving her guests, and the honours were done by Mrs. Churchill. The guests were very numerous, including a large number of the leading British residents of Yokohama, for whose convenience special railway arrangements had been made. Of course the feature of the party was the departure of the bride and bridegroom, who drove away at a few minutes before five o'clock amid a shower of rice and a chorus of heartily expressed good wishes. The day being beautiful, the grounds of the Legation looking most picturesque, an excellent British naval band performing, and the hospitality leaving nothing to be desired, the success of the party was signal.

MR. KATO ON FINANCE.

Mr. Kato Takaaki, speaking at the last meeting of the Bankers' Club, said that he did not approve either of carrying on the post-bellum works by means of loans raised abroad on any terms, or of suspending them altogether rather than raise such loans. He advocated a middle course, namely continuing such of the works as could be paid for with funds easily obtained, but extending the period for their completion so as to bring the yearly outlays within the limit of available resources. He denounced the idea of selling five-per-cent bonds abroad at any such figure as 90, which was said to be the Cabinet's idea. Considering that Japan's five-per-cent bonds are quoted at par on the London market, it would inflict heavy and unjust loss on their holders to suddenly issue a new batch of the same bonds at a greatly reduced figure. Of course there could be no difficulty in getting 50 millions, or 100 millions, of yen in the Occident if sufficiently tempting terms were offered. But on the whole Mr. Kato does not think that the time is suited for selling bonds abroad. Great injury had been done by Viscount Watanabe's declaration that unless his plans were adopted Japan would become bankrupt, and not a few other incidents had helped to strengthen the unfavourable impression. Japan had better try to be self-supplying for the moment. To enter the market as a borrower would help to lower foreign estimates of her condition. He did not believe that it was impossible to get money at home, and he would offer terms sufficiently tempting to attract it.

Baron Shibusawa, replying to Mr. Kato, said that while it was not to be pretended that Japanese banks could not do something towards taking up a domestic loan, they were not prepared to accept the whole responsibility.

ADMINISTRATIVE AND FINANCIAL REFORM.

It appears from statements in Tokyo journals that the present Cabinet does not consider itself called upon to propose any very extensive scheme of administrative and financial reform by the time the Diet meets, whatever it may do at a later period. Five months of preparation can not possibly suffice for elaborating a drastic and far-reaching measure. The main objects contemplated, therefore, will be a sufficient increase of the salaries paid to junior officials in the upper ranks and to all officials of *hannin* grade, as well as to judges and public procurators. There will not, however, be any addition to the budgetary expenditures for that purpose. It is considered possible to effect in the outlays of the various Departments sufficient economies to provide the necessary funds, a certain sum being also obtained by reducing the present staff of officials. But there will not be any sweeping changes, or any such wholesale abolitions and reconstructions as the general public seem to imagine.

Such is the gist of the intention attributed to the Cabinet. Coming down to figures, the statement is that economies to the extent of 3½ millions yen can be achieved, and that the sum appropriated for increasing salaries will be a million.

There is a disposition in certain journalistic quarters to assail the Cabinet in connexion with the dimensions of this scheme, which is described as a mouse born of a mountain in travail. But it appears to

us that these critical journals are themselves responsible for the labour of the mountain. They talked themselves into the belief that big things were coming, and they alone are to blame for the contrast between results and expectations.

THE BANK TROUBLE.

Various expressions of opinion—seven in all—from anonymous banking authorities are published by the *Shogyo Shimpō*. Not one of them defends the action of the 130th Bank. They say that the Russo-Chinese Bank is not very popular but that in this matter public sympathy is with it. At the same time, they assert that some of the methods of compromise proposed suggest doubts as to the entire *bona fides* of the transaction. One of these bankers asserts that if the Russo-Chinese Bank repeats its threat of closing its Kobe branch unless this matter is settled satisfactorily, the public will conclude that it seeks to support its case by the aid of coercion, and will lose confidence in it.

Meanwhile it is confidently asserted that the trouble is on the verge of settlement. Mr. Koyama, President of the Bankers' Union of Osaka, has laboured diligently to bring about an arrangement, and his efforts have been ably seconded by Mr. Yokoyama Magoichiro, President of the Toyokawa Railway, who drew the original bill. The opinion in business circles being entirely in favour of the Russo-Chinese Bank, the 130th Bank has yielded to the pressure brought to bear on it, and will pay 150,000 yen out of the 200,000, the remaining fifty thousand being furnished by the Toyokawa Railway. So soon as the affair is settled, Mr. Yamamoto, President of the 130th Bank, will resign. Such, so far as we can gather, seems to be the present project. It is stated in some quarters, however, that things have not gone quite so far as the above outlines suggest, but that, at any rate, the 130th Bank will have to yield to public opinion.

The trouble between the 130th Bank and the Russo-Chinese Bank not having been amicably settled up to the 2nd instant, which date had been fixed for the first judicial hearing of the matter, the case was opened in the Osaka Chihō Saibansho on that day. Some surprises resulted. In the first place, counsel for the plaintiff—the Russo-Chinese Bank—applied for alteration of the procedure from that followed with regard to bills of exchange to that followed with regard to ordinary notes of hand. Such a change would be very disadvantageous for the Russo-Chinese Bank, inasmuch as it would remove the trial from the summary methods pursued in the case of current commercial obligations to the domain of ordinary civil processes with all their contingent delays. The reason for the application soon became apparent. It appeared that the phraseology of endorsement employed by the 130th Bank had been such as to remove the document effectually from the category of ordinary bills of exchange. The endorsement declared the money payable to *Ro-Shin Shiten On-chiu* (some one in the Russo-Chinese Branch), and refrained altogether from indicating the place of payment. Thus the bill failed to comply with the form prescribed by law, and it became impossible for the Russo-Chinese Bank to expect that a law Court would treat it as a bill of exchange.

The significance of this is that it seems to indicate a deliberately fraudulent intent on the part of the person endorsing the bill.

No one conversant with the rudimentary rules of drafting could have been inadvertently betrayed into such glaringly insufficient phraseology. Thus the action of the agent of the 130th Bank becomes additionally questionable. The officials of the Russo-Chinese Bank also can not be acquitted of carelessness since they accepted a document so strangely defective. In fact the affair grows more and more inexplicable. Nothing is clear except that the effect produced upon the public will be one of bewilderment and loss of confidence. We can only hope that this last phase of the incident may prove to be less shady than the reports published by Japanese journals imply.

It is not to be inferred that the attempts to effect a settlement of this matter out of court have finally failed. They are still in progress, and may be brought to a satisfactory issue before the 9th instant, which is the day fixed for the resumed hearing of the case. Japanese journals allege that the delay is caused by indecision on the part of Mr. Yuan, of the Russo-Chinese Bank, who neither refused nor acceded to the request of the mediator, Mr. Koyama, to suspend legal proceedings pending an amicable arrangement. But it is difficult to see how any blame can justly be laid on Mr. Yuan's shoulders. Whatever adjustments are required, should be effected on the Japanese side. Mr. Koyama's reputation is such that we can not suppose him a party to any project contemplating an abatement of the Russo-Chinese Bank's legitimate claims.

DELAYS OF THE LAW.

The *Jiji Shimpō* has an article complaining of the delays of the law. It says that foreigners have now become convinced that there is no solid ground for their old apprehensions as to the probable partiality of Japanese tribunals where different nationalities are concerned, but that, on the other hand, there is much dissatisfaction on account of the great delays of the law. Our contemporary refers to the assassins of Mr. Hoshi Toru and President McKinley. The former was not brought to trial until 80 days had elapsed from the time of the crime; the latter was condemned on the 21st day. One may be disposed to imagine that the official positions of the victims had something to do with this, but the *Jiji* rejects any such explanation. We think that our contemporary was ill-advised to select the United States for purposes of comparison, for it is a constant complaint there that murderers contrive to postpone the execution of their sentences for immense periods, sometimes years, by taking advantage of all the by-paths of the legal labyrinth. But as to the general fact of great delay in Japan, there can be no doubt. It has come to be recognised by men of business that even a compromise involving a heavy sacrifice is preferable to carrying a case into court, since the loss of interest on the sum in dispute pending a decision annuls all the advantages of a favourable verdict. We have personal knowledge of one case in which suit for trespass was brought in July, 1900, the damages being laid at 16 *yen*. An appeal from the decision of the tribunal of first instant in this paltry matter still awaits hearing. No doubt things will be facilitated by the proposed reforms as to recasting the collegiate courts, but the fact seems to be that the number of Japanese judges is insufficient.

SATSUMA FAIENCE.

The recent exhibition of "furnaced wares" at Uyeno in Tokyo showed that the Satsuma potters have made a new departure. They now produce faience with designs pierced *à jour* in a manner that is at once very beautiful and extraordinarily delicate. Satsuma keramists were never remarkable for such work in former times. It belonged almost solely to the province of the Hirado potters, and they used it solely in a subsidiary role, as for the tops of censers or some trivial part of an alcove statuette. But what the potters have now conceived is pierced decoration constituting the sole ornamentation of a specimen. One is disposed to think that translucent porcelain should be a more natural and much better medium for work of this kind, since faience does not lend itself so readily to the production of sharp edges and clearly chiselled contours. But there can not be a moment's hesitation in choosing between the results of the process in the two materials, faience and porcelain. The former shows softness and grace which can not possibly be obtained with the latter. Chinese keramists understood this well. All their exquisite modelling in relief was done with soft-paste porcelain, and everybody who has had an opportunity of examining their masterpieces in that line can not have failed to appreciate their charm. Chiselling in relief and chiselling *à jour* are different operations, of course, but the decorative features of both are similar, and the quality of ware that lends itself to an admirable result in the case of the one is equally essential for the other. The new Satsuma work is not described exhaustively as decoration *à jour*. Much of it is chiselling in the round, a wholly new departure. One can scarcely speak too highly of the delightful effect produced. It is quite an extraordinary feat of technical skill, possible only in a country where expert labour is satisfied with a very small reward. An interesting fact connected with this new departure is that it was inaugurated by Chin Jukan, a descendant of one of the Korean potters who were brought from the peninsula by Hideyoshi's generals in the sixteenth century. A number of them settled in Satsuma, where their descendants though they have married and intermarried with Japanese, still remain a separate community, retaining in several cases their original Korean names. The well known Higuchi family, whose present representative has attracted much attention by his remarkable reproductions of the Chinese "grains-of-rice" decoration—more than a reproduction, for Higuchi's work has beauties that the Chinese never achieved—is of Korean origin. Chin Jukan showed at the Uyeno Exhibition a vase in the new style to which the Judges very properly awarded a high prize and which was one of the most charming specimens of ceramic work we have ever seen.

ANGLO-JAPANESE READERS.

Mr. Walter Denning has just published the first of a series of Anglo-Japanese Readers. The author's idea in undertaking this work is not merely to furnish to beginners a useful aid to learning English, but also to help them to translate Japanese thoughts into English, which is, of course, the first essential of linguistic capacity. To that end Mr. Denning has chosen his materials entirely from Japanese and Chinese sources, thus bringing together a number of stories which have been thoroughly familiar to the

people of this country for centuries and which will doubtless be welcome in an English form. It appears to us to be a capital plan. A Reader compiled on such lines should be specially attractive to the Japanese and should assist them much more than a book containing foreign matter with which they have no previous acquaintance. The book has interest even for foreigners, since it contains anecdotes and household traditions that help to illustrate the basis of Japanese morality. As for the literary part of the undertaking, it seems to be very well done, the language chosen being simple and direct and the construction of the sentences regular and syntactical. We observe two small slips to which the author will be pleased to have his attention drawn. One is on page 19, where it is said that "the punishment of crime is the sole function of the State," instead of "the function of the State solely;" and the other is on page 88 where "the *Shōgun* Ashikaga" is spoken of, the intention probably being to refer to the *Shōgun* Ashikaga Yashihide.

ENGLAND AND GERMANY.

A wire from London says that at the recent meeting between the Czar and the Kaiser at Dantzig, the exact limitations of the Anglo-German Agreement were defined, and that the Emperor William declared that Germany had no objection to Russia's occupation of Manchuria. It appears to be in conformity with ordinary principles of justice that one party to an agreement should not undertake to interpret it to an outsider without consulting the other party, especially when the interpretation is in direct conflict with the latter's declared understanding of the document. England says that the Agreement was not intended to confer any special rights on Germany in the Yangtze Valley, still less to exclude Manchuria from Chinese territory. Germany says that both things were intended, and German newspapers have shown a disposition to exult over the diplomatic victory gained by their statesmen in persuading England to sign a convention which was to carry a significance quite undecipherable from its language. If German statesmen did that, they have no reason to be proud. We confess ourselves quite unable to decipher this puzzle. The language of the document may be open to dispute, though to ordinary readers it presents no ambiguity. But no German can honestly pretend to think that in signing it England was animated by the purpose which Germany now claims to have understood. No German can really think, first, that, a document explicitly intended to guarantee the integrity of Chinese territory was really intended to leave Germany in full possession of illegal privileges in Shantung, to admit her to England's sphere of influence unreservedly, to assign a large portion of China's territory to Russia, and to secure no *quid pro quo* whatever for England. It is not an act of good faith, not an act consistent with the dignity of a great European Power, to construe an agreement in a sense which could not possibly have been intended by the other party to it, and we can not but think that German journals have misrepresented German statesmen in this matter.

Mr. Uchida, newly appointed Minister to China, who is about to leave Japan for his post toward the end of the month, will be entertained on the Oct. 3rd by Viscount Katsura, the Premier, at an evening party.

MR. NA.

The Chinese Envoy left Tokyo for Nikko on Friday the 27th instant and returned to the capital the following evening. He and his suite were entertained at dinner by Mr. Komura, Minister of State for Foreign Affairs, on the 29th instant.

Yesterday (Sunday) the Envoy proceeded to the Palace for a farewell audience. He is to leave Nagasaki on the 6th proximo and proceed direct to Tientsin, not calling at Shanghai.

The *Fiji Shimpō* publishes a telegram to the effect that *The Times* eulogizes the reply made by the Emperor of Japan to the Chinese Envoy, finding it wise from a political point of view and useful in its indications.

Mr. Na Tung was evidently well chosen for his mission to Japan so far as capacity for saying pleasant things is concerned. He has been making himself very agreeable since his apologetic functions were discharged. It is his declared opinion that Japan's progress must be described as astonishing, and that whereas China formerly stood before her in the field of civilization, the places of the two empires have now been reversed. That he admits, is a disgraceful fact from China's point of view, whatever explanations she may find to console herself. Mr. Na further believes that although there is much talk of Japanese impetuosity and of the necessity of obtaining money from abroad, the development of her resources and the operation of her recuperative power will soon place her above the reach of inconvenience in that respect.

The question of conferring an order upon Mr. Na Tung is said to be under official consideration. If it is decided in the affirmative, the newspapers say that the order will probably be the third class of the Rising Sun.

The Emperor has conferred the First Class Order of the Rising Sun on Mr. Na Tung and orders varying from the Third to the Fourth Class on members of his suite. This is something very different from the rumour journalistically circulated that Mr. Na was to receive the Third class of the Sacred Treasure.

Mr. Na Tung, left for China by the 7.25 a.m. train on Oct. 1st. Mr. Komura, Minister of Foreign Affairs, and many other distinguished personages saw him off at Shimbashi Station.

FEMALE EDUCATION.

Miss Hughes, formerly Principal of the Normal College at Cambridge, who is now on a visit to Japan, was entertained by the faculty of the Female University of Tokyo on the 28th ultimo. Fragmentary reports of a speech made by her are given by Japanese newspapers. We gather from them that Miss Hughes strongly approves of the higher education of women and that she advocates the pursuit of that system by the Japanese. She herself is certainly a remarkable example of its success. But she has doubtless observed that what she advises already finds many propagandists in this country, too ardent propagandists, perhaps. The women of Japan seem to see in education a means of raising themselves to the position which has long been denied to them in society, a position of comparative equality with the strong sex. Under the influence of that spur they are already working with more energy than is altogether prudent, and we observe with satisfaction that Miss Hughes,

in her speech at the *Joshi Daigaku*, urged the necessity of paying attention to physique before everything.

BOER METHODS.

There is a paragraph in the *The Times* which deserves reproduction. Some folks labour under the extraordinary delusion that Boer women and children were placed by the British in refuge camps and kept on half rations in order that their sufferings might compel their husbands, brothers and sons to surrender. No one having even a rudimentary knowledge of Englishmen, their thoughts, and their ways, could believe such a story. Here, however, is what the Boers are said to be doing:—

A well-informed correspondent writes to us from the Sutherland district, Cape Colony:—On July 5, 1901, a party of Boers, among them nine local rebels, went to a farm, Zand Kraal, about 30 miles north-east of Sutherland Town, where Mr. Perlman keeps a trading store, and looted the place entirely. From authentic reports received by the Commandant, Captain H. Scott Harden, C.D.F., it has been ascertained that those rebels, after taking everything they could from the store and smashing all they could not remove, sjamboked (a sjambok is a whip made of hide) Mr. and Mrs. Perlman most brutally and flogged the natives. One unfortunate native girl who was about to be confined was thrashed so unmercifully that she gave birth to a child under the lash. The behaviour of these rebels was most cruel and barbarous. Marais, a Boer of the late Orange Free State, was the leader of this party. After finishing their infamous work on this farm they went to a farm, Baylaan's Drift, a short distance from Zand Kraal, where they were entertained by the owner, and sjamboked another girl most shamefully. The reason these barbarians give for thrashing the native men and women is that they impart information against them to the British. This appears to be the course adopted by the commandos now raiding this colony. The above cruelty was carried out by men who have all their lives been in touch with civilization and have received some education, one of the worst of them being enlightened enough to have held the position of a Field Cornet in this district under the British Government, and who joined the rebels about January last. On a British patrol going out on the 16th to bring in Mr. and Mrs. Perlman a party of Boers, said to be about 50 in number, held up a white flag to entice our men from the kopjes, where they had taken cover, after four of their number had been wounded, but fortunately their treachery was discovered and our men drove them off.

THE MORMON APPLICATION.

The application of the Mormons for permission to establish themselves in Japan and propagate their creed has been rejected by the Governor of Kanagawa. It does not follow, however, that permission will not be ultimately given, for this rejection is said to be based not on radical objections but on the failure of the applicants to comply with the forms required by law. We have had several letters on the subject, and all our correspondents agree in thinking that the introduction of Mormonism into this country would be a great misfortune, not because of the question of plural marriages, but because of many other points in the doctrine taught. It is to be assumed that the matter will receive earnest attention at the hands of the Authorities.

GERMAN NOTES.

It is often stated that all the good things in the world have been snapped up and that nothing substantial remains for a Power like Germany which enters the field at the eleventh hour. But there are many opportunities which do not present themselves to superficial observers, and the German scheme of a railway to Baghdad appears to be one of them. Russia regards the construction of such a railway with considerable uneasiness, as it would impair her prestige in the East

and would drive her agricultural produce from the markets of central Europe and the Balkan Peninsula. The *Novoe Vremya* declares that the railway would injure England also. It says:—

"By facilitating Germany's success in this enterprise, England has sacrificed her own interests with the object of dealing Russia a heavy blow; for if, on the one hand, the construction of the Baghdad railway is likely to have the effect of barring Russia from all access to Southern Persia and India, it will, on the other hand, open to German commercial competition those Asiatic markets where the English have been paramount up to the present, and where this competition, as powerful as it is active, will not fail to do them serious harm before long. In the East economic influence is closely allied with political influence, and, consequently, when they have conquered Asiatic Turkey and Southern Persia from the commercial point of view, the Germans will strengthen their political influence there also; and then, when a railway has been built across the South of Persia and Baluchistan, they will commence to advance towards India. This would not leave Great Britain any more tranquil than would an approach of Russia towards that country, for Germany might perhaps begin to realize her dreams of world policy at Great Britain's expense. We do not conceal the fact that the Near East has an enormous importance for us, and that it is indispensable for us in the accomplishment of our historic task; and, as Great Britain knows that perfectly well, it is strange that she did not weigh all the *pros* and *cons* when she entered into a bargain with the Germans with regard to the Baghdad railway."

The Russian organ then goes on to enumerate what it describes as "the vast and precious exclusive advantages in Samoa and China which Germany managed to secure when she made an agreement with England concerning the railway." It concludes:—"If, instead of making such a pact, so disadvantageous to herself, with Germany, Great Britain had decided to grant to Russia alone the first half of what she has given to the Germans, the oft-discussed possibility of an Anglo-Russian understanding might have acquired a real basis, inasmuch as it is perfectly true—as Lord Salisbury has often said, but as British politicians often make the mistake of ignoring or forgetting—that there is quite enough room in Asia for both Great Britain and Russia."

Germany is profoundly excited about the condemnation of a sergeant on the charge of murdering a captain. The sergeant was acquitted by the first court martial that tried him, but on being arraigned before a court martial of second instance he was found guilty and condemned to be executed. That a man should be twice placed in jeopardy of his life is contrary to all English ideas of justice, but that is not the point which evokes most condemnation in Germany: it is the insufficient nature of the evidence. There was not a single item of testimony that really tended to fix the guilt definitely on the accused. The main point relied on by the prosecution was the impossibility of discovering any one else who could have committed the crime.

The Kaiser has caused to be manufactured a magnificent centre piece, an *épergne*, after a design by His Majesty himself. It is for presentation to King Edward. The work is thus described:—

In the centre is an enormous silver gilt bottle-shaped top-piece, one metre in height, with a diameter of 70 centimetres, made after the model of the famous *épergne* of King Frederick the First in the Royal Palace. Round the centre-piece, between chased laurel wreaths, runs a circlet with the inscription in English:—"Emperor William II. to King Edward VII." On both sides of the circlet are heads of lions with rings in their jaws to serve as handles. The base of the centre-piece is beautifully decorated with chased and embossed work, representing acanthus and laurel leaves and festoons as is also the stopper of the decanter, which represents the King's Crown. The centre-piece stands upon a wooden socle adorned with silver-gilt rosettes. The entire piece lies between a curious arrangement of corbels shaped grotesquely with embossed floral ornamentation. Each corbel is of gilded bronze differently cut and ornamented. In the centre of each corbel is a cartouch, upon which are alternately engraved the monogram and arms of King Edward, over which is the Royal Crown. It is stated that since the 13th century no such exquisite and artistic workmanship has been seen in Berlin.

One of the German journals has denied that Count von Waldersee used the words which have evoked so much unfavourable comment:—"Other names have lost their lustre; the German name has mounted high." But the telegraph agency which circulated the original report of the Field Marshal's speech strenuously denies that there can have been any mistake, since the reporter—"an expert short-hand writer and trustworthy reporter"—stood so close to the Field Marshal during the speech that any mistake was out of the question. The *Vossische Zeitung*, commenting on the incident, says that Count von Waldersee "can, when he so desires, prevent all discussion of his person and his intentions: he need only refrain at last from talking—if, indeed, it is possible for him to do so."

An American cartoon represents Germany and Uncle Sam standing on opposite sides of the water. Germany has just discharged a tariff boomerang which, having circled harmlessly round Uncle Sam's head, is returning direct into Germany's face. It seems, none the less, that the new German tariff bill is pretty sure to become law.

The idea of a colonial army does not find any favour in Germany, and doubts are expressed as to whether such a project was ever seriously entertained by the authorities.

When King Edward went to Wilhelmshöhe on the 23rd of August he was met at the station by the Emperor wearing the uniform of a British Admiral. The King remained only 3 hours at Wilhelmshöhe, returning to Homburg at 4 in the afternoon.

The greatest excitement continues to prevail in Germany about the judgment of the Court martial of second instance on the case of the shooting of Captain von Krosigk. Not one newspaper has endorsed the finding of the tribunal. Moreover, a member of the police force has made a declaration which goes to show that the murder was committed not by Sergeant Marten but by a non-commissioned officer who, shortly afterwards, left the regiment to take part in the expedition to China. The policeman was formerly a soldier in the same regiment. It is further alleged that all the members of the court martial have petitioned the Emperor to commute the death penalty into one of imprisonment. [It appears that Captain Von Krosigk was a terrible martinet and that he rendered the service almost intolerable to those placed under his command. The *Cologne Gazette* has taken up this last development with great energy. It demands that the greatest watchfulness should be displayed in order that the authorities may be able to get rid of officers who "by their exaggerated smartness, their capricious tempers and their excessive severity deprive soldiers of all enthusiasm." The Rhenish organ declares that "such officers should be ruthlessly expelled from the army, no matter what their names and their families may be, and whatever excellent military qualities they may otherwise possess." The *Times*' Berlin correspondent, recounting these facts, adds:—"The Rhenish organ deserves the greatest credit for its courage in taking up this question. Cases of ill-treatment of soldiers by officers, more especially by non-commissioned officers, are continually being brought before the military Courts. It has, however, hitherto been left to the *Vorwärts* and other Democratic journals to demand that energetic steps should be taken to prevent and to punish such offences. To admit

the necessity for greater energy and watchfulness in this matter is in no way derogatory to the dignity of the Prussian or other German armies. No impartial observer would refuse to admit that, although such offences are committed, they only occur in isolated cases. Discipline in Germany is strict, but it is not cruel; and, as a rule, the best relations exist between officers and men."

SAVINGS IN ENGLAND AND AMERICA.

"There are some interesting figures in the postal blue book for 1900 just issued by the English Government. The most striking are those showing the surplus earnings of the British postal service, which amount to the sum of \$16,296,765, after deducting a deficit in the telegraph department of more than \$3,000,000. This department deficit indicates that every thing is not so lovely in England as advocates of public ownership expected. By way of comparison the figures showing deposits in the postal savings bank are important. The total deposits during the year were \$202,582,180 and the total due depositors at the end of the year was \$677,748,255. Take the statement of the New York savings banks up to July 1st of this year. The aggregate deposits in these banks was \$987,000,000, an increase of about \$65,500,000 during the year. For the twelve-month the total deposits were \$276,000,000, as against \$264,000,000 for the year before. It must be remembered that these figures are for one State only out of the entire forty-five, while those of the English Post-master-general are for the entire United Kingdom. In view of occasional agitations in America for the adoption of a postal savings bank system these figures are significant reasons," says the *Chicago Post*. "They show that the people of this country have abundant confidence in existing banking arrangements, and that, despite the comparatively low rate of interest paid and the inducements offered for small investments, they still adhere to the savings banks as the best methods of safeguarding and increasing their accumulations."

FRENCH NOTES.

Imperialism does not flourish in France at present. There is a marked split in the ranks of the Imperialists, one section, under M. de Cassagnac, declaring that Prince Victor must be either a candidate for the empire or nothing at all, the other section, headed by Prince Victor himself, avowing that they are ready to bow to a *plébiscite*.

In spite of all predictions to the contrary, the regulations for the enforcement of the Associations Law are not of such a nature as to cause any serious conflict between the French Government and the Vatican. It is admitted that the regulations do not materially aggravate the provisions of the Law, and that they are pretty much what must have been expected. Such a law can not be carried out without some trespass on the rights of the individual.

It seems that France was left in ignorance of a probable visit from the Czar until His Majesty's coming was fully assured. The announcement created much joy, all the keener because the Czar did not visit the Exhibition last year. His Majesty's failure to do so caused great chagrin at the time, and was openly attributed by the Government's foes to the pretence that he had a repugnance to be seen in company with M.

Miller and General André. The initiative of the present visit came from M. Loubet, and although he received an assurance six months ago of the Czar's intention, he avoided making the fact public. Much circumspection was also exercised to conceal any definite information as to the dates of the Czar's movements.

A Reuter's telegram spoke recently of sixteen thousand French troops having been reviewed near Rheims, but, as a matter of fact, the force collected there for purposes of review was nearer 150,000.

We have been told that one result of the Czar's visit to France was a promise on His Majesty's part to support strenuously French aspirations in Southern China, but the French themselves regarded the visit, when it was first announced, as merely a confirmation of the dual alliance which has objects "as pacific as those of the Dreibund itself."

DEATH OF VISCOUNT SHISHIDO.

The death is announced of Viscount Shishido, whose name was much before the public in the early years of the Meiji era, when he held various high posts. His last appointment as an active official was in 1879 when he represented his country at the Chinese Court. Viscount Shishido was a member of the Upper House and a Peer of the "Golden Pheasant Chamber." He was in his 71st year at the time of his death.

NOTES ON CURRENT EVENTS.

The Emperor has been pleased to confer on Dr. Scriba the Second Class Order of the Sacred Treasure.

The Minister of State for Communications has declined to sanction the much discussed change of an overhead into an ordinary line of railway between Ryogoku and Honjo. Several allusions to this subject have been made in our columns, and the only further comment now suggesting itself is that the various newspapers which occupied themselves attacking the Government and accusing officials of corruption on the hypothesis that they intended to sanction a ground road, must look pretty foolish.

Vice-Admiral Togo, hitherto commander-in-chief of the Standing Squadron, has been appointed to the command of the Maizuru Naval Station, and will be succeeded by Vice-Admiral Tsunoda in the command of the Standing Squadron. A great number of appointments to the Maizuru station are also announced by the *Official Gazette*.

The Department of Agriculture has issued an instruction to the Governors of prefectures with respect to the enforcement of the game laws. This is a subject which has been repeatedly discussed by foreign local journals. What is the use, they have asked, of issuing licenses and interdicting the capture of game in the close season if no attempt is made to check sales of game in the open market? It is impossible for the police to prevent poaching, but it is quite possible for them to superintend the markets in the principal cities. So long as snipe and pheasants find ready purchasers and willing salesmen out of season, so long will they be trapped and otherwise slaughtered in defiance of the game laws. It appears that representations in that sense having been made to the Government, the Department of Agriculture and Commerce has finally taken steps to

instruct local authorities that some steps must be adopted to prevent the sale of game in the close season.

One result of the appeal made by the peasants arraigned last year on a charge of riot, is that judicial officials are to visit the Ashiwo Mine, in order to make a direct inspection of the damage which the peasants allege they have suffered. This action on the part of the Appeal Court is viewed with great satisfaction, as there is a feeling among the people that the inspectors hitherto despatched were more or less prejudiced.

The Department of Education is to send 27 students to Europe and America for purposes of education next year. The distribution is to be: to Germany 11; to Germany, England and France, 2; to Germany and England 3; to Germany and Belgium, 3; to Germany and France, 2; to England, 2; to England, Belgium and France, 1; to Russia, 1; to America, 1 (a lady); to Germany, France and Switzerland, 1.

The continued fine weather has still further improved the prospect of the rice crop. It will be remembered that according to the calculations of the Department of Agriculture and Commerce, made a week before the 210th day, the crop was expected to be 36,294,249 *koku*, being 6.9 per cent. more than last year's yield and 10.6 per cent. above the average. The same Department has now received returns indicating that the crop will amount to 37,055,886 *koku*. Naturally the market price of rice is falling, though it is still abnormally high in consequence of shortage of stocks.

Prince Konoye thinks that there ought to be a great opening for Japanese working engineers in connexion with the various industrial enterprises which foreigners are starting in China. The idea sounds good, but are there many Japanese experts of that class whose knowledge of English, French or German is sufficiently accurate to warrant their employment by foreigners in China? We doubt it.

The Minister of Home Affairs, addressing a meeting of police officials, congratulated them on the fact that everything had moved smoothly since the revised treaties went into operation. The comment was timely. There have been two years to try the experiment, and the result is total absence of anything to confirm the pessimistic predictions that used to be so freely uttered by the opponents of revision. We are all living peacefully and comfortably, and if the visits of the tax collector could be eliminated from the day's incidents, we should be happier than we were in the old days, since we can reside where we please and go where we please without asking any one's leave.

It is stated that the Siamese Representatives in Tokyo, who recently returned to Bangkok, will not resume his duties in the Japanese capital, and that he will probably be succeeded by the present Secretary of the Siamese Legation in Paris.

Mr. Taki Kwatei, the celebrated artist, died at Kamakura on the night of the 28th ultimo, in his 72nd year. He was the son of a farmer residing in the outskirts of Tokyo, and his education was received partly from masters of the Shijo School and partly from Chinese painters in Nagasaki. He excelled in the delineation of birds and flowers, and many of his master-pieces remain in the possession of private individuals. He gained many prizes and medals at ex-

hibitions, and he leaves several pupils, some of whom have already become famous.

M. de Giers, who is now on a visit to Japan, left Tokyo for Nikko on the 29th instant, whence he is to return to-day, and will proceed at once to Kyoto to rejoin his family, who are staying in that city. After a sojourn of 4 or 5 days in Kyoto, M. de Giers is to resume his journey to Russia.

The new Chinese Minister to Japan, Mr. Tsai Kin, is to leave Shanghai for Peking on the 2nd instant, and having received his credentials he will at once set out for Japan, arriving in Tokyo about the end of October.

Count Okuma's illness seems to have been more serious than was at first supposed. There were signs of the inflammation spreading to the lungs. Happily that danger is no longer apprehended and recovery is confidently anticipated though the process may be slow.

According to the *Asahi Shimbun* the message conveyed to the Emperor of Japan from the Emperor of Germany by Count Arco Valley, on the occasion of handing the Kaiser's commemorative letter to His Majesty, was to the effect that the Emperor of Germany profoundly admires the courage, loyalty, and discipline of the Japanese army.

Heavy rains and consequent inundations are now the only source of apprehension in Japan. A high barometer prevails throughout the northern regions of the main island, and a comparatively low barometer in the south, and until equilibrium of pressure is restored, sunshine is not likely to return.

Special autumn manœuvres are to be held by the Second and the Eighth Divisions—the Sendai and Aomori garrisons—commencing from the 6th of November and continuing until the 9th. On the 10th there will be a grand review and march past in the presence of the Emperor. It is expected that some fifteen thousand troops will be engaged.

The 1st of October was the day fixed for the official opening of the naval station at Maizuru. Attention has been drawn to this station by European journals as though it was some new undertaking having special significance, but the fact is that the advisability of having a naval station there was recognised as far back as 1886, at which time steps were taken to procure the necessary ground. The work was not actually commenced, indeed, until 10 years later, but though the Diet was asked for an appropriation simultaneously with the passing of the *post-bellum* programme, Maizuru did not really belong to that programme. According to the original plan, the works should have been finished by the end of 1900, but owing to various impediments there has been a delay of nine months.

It was reported in one of our recent issues that the Goto Woollen Factory in the Shinagawa suburb of Tokyo, having contracted debts to the aggregate amount of 2,800,000 *yen*, was likely to be closed in consequence of the demand of Messrs. Findlay, Richardson and Company and Messrs. Illies and Company of Yokohama. The latest news is that the factory will continue its operations, and that its profits will be devoted wholly to paying off the debts. The process will be effected by means of tenders. Thus, if a profit of ten thousand *yen* has to be dealt with, the creditors will bid for the money, which will go to the highest bidder, the

amount of his bid being deducted from the total debt. This appears to us to be a novel method of liquidation. We should think that any one who has confidence in the factory will hold on quietly and refrain from taking any eager share in the tendering.

The *Tokyo Asahi* publishes a strange rumour to the effect that a pirate ship has sailed from Kelung in Formosa under the command of Mr. Okamura, formerly a staff officer in the Army and, until this escapade, head of the branch office of the Okura firm. He is accompanied by about ten Japanese, among them being a former naval officer and some gendarmes and sub-officers of the Navy. One story is that Okumura's intention is to kill the Chinese section of the crew when the junk gets to sea, but the whole tale seems to be quite untrustworthy, though one realizes how possible such an enterprise would be if any men were foolish enough to undertake it.

Various sums have been granted by the Emperor to the families of the officers and men of the Navy who died of wounds or disease in the Chinese Campaign and to thirty-five who were severely wounded. Among the number are Captain Hattori, who perished at the assault of the Taku forts. Apparently Captain Hattori was not married, for the gratuity, 2,040 *yen*, goes to his sister. Another name is that of Captain Suga, to whose parents His Majesty grants a sum of 1,200 *yen*.

Baron Kaneko has been chosen to represent the Kojimachi district of Tokyo in the City Assembly, in succession to the late Mr. Hoshi Toru. This is the choice of the highest tax-payers. The decision rested virtually with the Nippon Yusen Kaisha.

Count Okuma's illness has now ceased to cause uneasiness but it is understood that his complete recovery will be a matter of some time. His Excellency has received innumerable visits of condolence.

There has been a rise of ten shillings in Japanese five-per-cent. bonds on the London market. It is certainly interesting that whereas these securities are now quoted above par in London the Japanese Authorities have been unable to dispose of a small number, amounting to only five millions sterling, in New York even at a considerable discount. There is plenty of money in America, but there are also plenty of opportunities to employ it, and the probability is that an American citizen prefers a four-per-cent. investment at home where he knows all about his security and is able to watch the progress of his investment closely, to a five-per-cent. investment in Japan where everything is strange to him. The fact is that putting money into Far-Eastern securities presents itself to the European and American investor in the light of casting his bread upon the waters. He doesn't know when or in what form it will come back to him.

The *Official Gazette* announces the exchange of Ratifications of the Argentine Commercial Treaty and publishes the Treaty. This compact was negotiated by the late Mr. Hoshi Toru when Japanese Representative in Washington.

Li Hung-chang last week, said the *Peking and Tientsin Times* of Sept. 21st received 700,000 rounds of Mauser ammunition in Peking, and immediately forwarded the same to Gen. Ma.

FRANCE AND RUSSIA.

SOME Japanese observers are evidently growing anxious about the effect that may be produced in the Far East by the relations between France and Russia. They think that if Russia has agreed to assist French enterprise in China in every way in her power, there must be some *quid pro quo* on France's part, and that an indication as to its nature may be gathered from the recent activity of French agents in Korea. But it is not improbable, of course, that the news sent by Reuter about a fresh Russian loan in Paris may explain the *quid pro quo*, in great part, at any rate. Undoubtedly the alliance between France and Russia has become so close that neither country is likely to be found working independently of the other in any part of the world, except perhaps, in such regions of central Asia as lie beyond the range of European political influence and are therefore a free hunting ground for Russian enterprise. There is no longer any possibility of imagining that if the doings of either nation in the Far East provoked the interference of a third Power, the latter would fail to find itself confronted by a solid union of the two former. Many thoughtful Frenchmen must be perplexed to understand how their country's interests are promoted by these incidents and arrangements. France has never derived from colonizing operations or from possessions beyond the sea profit such as would warrant her in paying vast sums for Russia's assistance in founding colonies or acquiring possessions. If she is to give hundreds of millions of francs for the extremely shadowy benefit of Russia's potential aid in South China, she seems to be making a very bad bargain. France has a cool business head though her heart is emotional. She has probably said to herself that the calls made upon her purse by St. Petersburg in the past were compensated by the security which the alliance guarantees in Europe. But if the field of operations is to be extended beyond Europe, if the French have to disburse vast sums for the sake of obtaining Russia's applause as they carry the tri-colour into regions where there is little to be gained but a reputation for restlessness, the cool business brain will begin to work, and Paris will be found less and less responsive to St. Petersburg's proposals. The worst of lending money to an inpecunious friend is that he inevitably resents the kindness at last by becoming an enemy. Nature seems to have made a wise dispensation that the role of borrower shall not eventuate happily under any circumstances outside the sphere of commerce and industry. We have all had a common experience in the loss of friends who made themselves our debtors.

ments, they fell away either through resentment at being asked to pay, or through shame at not being able to pay, or through consciousness of the contempt that their *laches* could not fail to provoke even in the most generous mind. It will be so with France and Russia. The ties that bind them in apparent affection to-day can not long survive the strain to which Russia's pecuniary exigencies are exposing them. But in the meantime the question naturally presents itself, against whom and for what purposes is their alliance to be extended to the Far East, supposing that it is to be so extended. In her operations in Southern China France finds no rival in the field except England, and Great Britain's opposition is not to be apprehended so long as her lawful interests are not imperilled. President LOUBET and M. DELCASSÉ know well that while France maintains the calm, dignified and unaggressive attitude hitherto shown by her in the Far East, she is more likely to receive British support than to encounter British opposition in the prosecution of her legitimate aims. Yet there is no concealing the fact that England is France's sole rival in Southern China, and that if Russia's assistance is to be utilized in that region, it must be utilized against England. On the other hand, if France's assistance is to be utilized by Russia in Northern China, it must be utilized against England and Japan, for Germany has explicitly declared that she will not stretch out a finger to preserve Manchuria from being added to the Russian empire, and if Manchuria's fate does not stir the pulses of the Berlin statesmen, then most assuredly Korea's will leave them unmoved. These are not prophetic utterances in any sense. They are the reflections inevitably suggested by recent developments and recent telegrams. Possibly the snapping of the golden cord that binds France and Russia together may upset all contingent calculations.

THE QUESTION OF FOREIGN CAPITAL.

IT appears that Baron SHIBUSAWA's remarks in connexion with Mr. KATO TAKAAKI's speech at the Bankers' Club were not quite correctly reported. What the Baron said was that although not prepared to declare the impossibility of a domestic loan being taken up by the Japanese Banks, neither was he in a position to affirm the possibility of such a measure. He went on to say that as the question was of great moment for the country, and as some of the points raised by Mr. KATO in the course of his speech had not been fully thought out by him—the Baron—and his friends, it seemed desirable that the whole problem should be taken into serious consideration

with us in watching this matter with keen interest. Evidently an opinion is growing in financial circles that a domestic loan of moderate amount might be raised without great difficulty if a judicious course were followed and if the conditions were made sufficiently favourable. During the last few months the condition of the money market in Japan is said to have considerably improved, and that fact is doubtless responsible in some degree for the growth of the view we have here recorded. At all events it would be erroneous to accept as incontrovertible the opinion expressed in many quarters and echoed journalistically with such insistence, namely, that a domestic loan would be impossible except on terms too onerous to be seriously contemplated. We have always been disposed to think, for our own part, that one of the chief causes of Japan's present suffering is the wholesale fixing of large sums of floating capital that has been going on throughout almost the whole of the *Meiji* period. Until the Chinese indemnity was received, Japan worked entirely with her own capital, building her railways, buying her ships, equipping her army, and spending her money in many different ways. Other countries have sought foreign assistance for such purposes, but Japan declined to have recourse to outside money markets. Her reasons need not be discussed here. The important point is that she has reached a stage where her progress appears to be temporarily checked for want of capital, and it is difficult to avoid the conviction that if she now adopted the course of fixing further portions of such capital as still remain to her, the general embarrassment would be accentuated. On the other hand, however, we have to set the plain fact that the time appears to be highly unfavourable for a foreign loan. Japan's credit is not good at present. Europeans and Americans are in a distrustful mood. They believe, to use a vulgar expression, that she has bitten off more than she can swallow, and, moreover, various incidents have conspired to produce a very evil impression as to the commercial and financial morality of Japanese individuals. Altogether "things Japanese" are not in favour, and it is beyond question that if this country could contrive to adhere to the lines of its *post-bellum* programme, in other words, to carry out without further recourse to foreign aid the enterprises planned in 1896, it would gain much in foreign estimation. Thus the issues to be considered are whether the country's interests would be better consulted by fixing a further quantity of its available capital or by forcing upon the foreign market a loan which can not be obtained without accepting terms onerous and at the same time calculated to injure the financial

It is a problem of the greatest gravity, and we can not but think it fortunate that Mr. Kato has raised his influential voice against the unwisdom of indiscriminating appeals to the foreign market.

PERPETUAL LEASES.

WHEN the Diet last March passed a law providing for the registration of perpetual leases as such, it seemed to many people that the law might have been promulgated at once, and indeed that it ought to be promulgated at once in view of the embarrassing delay that had already taken place with regard to this question. But now that the regulations for the operation of the law are before the public, there is no difficulty in understanding that a considerable time was needed for their elaboration. They are very precise and very clear, nor does there seem to be any possibility of misapprehension in putting them into practice.

One of the points which have doubtless been examined with interest is the language of the law and its appended regulations with reference to buildings erected on lands held under perpetual lease. Many eyes have probably scrutinized the text in order to discover whether it contains anything suggesting that the framers of the law and of the regulations contemplated abandonment of the claim set up by the Japanese Government in the matter of house tax. It is evident that care was taken to avoid anything of the kind. Registration of a right of perpetual lease or of any derivative right is exempted from the payment of a fee. But nothing whatever is said about buildings in that context and the omission is significant. The Japanese Government's original contention was that although land is conventionally guaranteed against any tax other than the rent mentioned in the lease, it is not guaranteed against a charge for registration, since such a charge is essentially different from a tax, being in fact a fee taken for a service rendered. Therefore when it was decided that the fee should be dispensed with, special legislation became necessary. By parity of reasoning, if the Japanese Government considered that houses standing on leased land should be exempted from the payment of registration fee, it would have legislated in that sense. Its omission to do so shows that no such exemption will be granted in the case of houses or other buildings. Land may henceforth be registered without charge, but not so the buildings that stand upon it. They are regarded independently, and thus indirectly information is furnished that the house tax is not to be abandoned. There is no reason why it should be, indeed. To claim that there is, amounts to claiming that when the perpetual leases were origin-

ally granted, the "property" covered by them included something which had no existence at the time, namely, houses not yet erected.

The regulations provide that when a Japanese subject acquires land which is held under a perpetual lease he can become owner of the land by getting the title-deed canceled. He is bound, indeed, to take that step, inasmuch as the laws do not recognise a perpetual lease held by a Japanese subject. This point has been made a basis of complaint by some foreigners. They allege that the value of a perpetual lease is depreciated by such a restriction since the market for it is narrowed. If such an allegation has any validity, it follows that a perpetual lease is more valuable than a title of ownership. The foreign land-holder will scarcely be prepared to make any assertion in that sense. He maintains, rightly or wrongly, that the charge imposed upon land by the provisions of a perpetual lease is higher than the taxes to which it would be liable under a title of ownership, and of course the corollary is that a title of ownership should command a better price in the market than a title of perpetual lease. Hence the value of land is enhanced, not impaired, by the possibility of changing the form of tenure from perpetual lease to ownership.

THE SALE OF BONDS ABROAD.

Thursday, Oct. 3.

IT is now alleged that a syndicate for the purchase of 50 million *yen* worth of Japanese five-per-cent. bonds has been formed in New York and that the transaction may be considered complete. The rate of sale is said to be 90 *yen*, but whether that amount includes commission to the syndicate is not known. Apparently it does not include it. Apparently the syndicate will have to sell the bonds at 92 or 93 in order to recoup itself. Of course this transaction is not viewed with unalloyed satisfaction in Japan. Compared with the fact that the five per cents are selling in the home market for 87, it seems a matter for congratulation that 90 should be obtained for them in America. But quotations in the Japanese market are virtually nominal. An attempt to purchase a million *yen* worth of bonds would immediately rush up the price to 92 or 93, and as for selling ten or twenty millions without seriously depreciating the quotation, every one knows that the thing would be quite impossible. In London the Japanese five per cents are quoted at £103, contrasted with which figure the rate just obtained in New York appears very unsatisfactory. But the four per cents are quoted at only £76, which means that the two classes of securities must be differentiated by some special considerations. The *Fiji Shimpō* explains the matter by saying that whereas the

four per cents. are actually on the market, the Specie Bank having a considerable quantity for sale and being always prepared to sell them, the five per cents. are held by investors and do not find their way to the market except on rare occasions and in very small quantities. Conceding the truth of that explanation, however, it is still evident that if four-per-cent. bonds of the Japanese Government can be sold for 76 in London, five-per-cent. bonds should sell for 95, and, allowing for commission, the Treasury should have obtained 93 in New York. There remains the doubt, however, whether an additional issue of even five millions sterling in London might not cause a fall in the quotation now ruling. That will presently be evident. Meanwhile the only comment to be made is that if the Treasury deemed it essential to procure money for prosecuting its *post-bellum* undertakings in spite of the unfavourable condition of the market, an expensive transaction was inevitable. Count MATSUKATA managed to obtain 86 for a hundred millions worth of 4 per cents in London, whereas only 90 has now been obtained for 50 millions of 5 per cents in New York. Certainly the time was not propitious.

Tokyo newspapers allege that the co-operation of the United States Government was obtained in this transaction. The late President McKinley was approached by Mr. TAKAHIRA and his consent was readily secured. The tragedy that ensued was thought likely to suspend the proceedings, but that apprehension did not prove well founded. From the same source we learn that Marquis Iro was asked to sign the agreement when he reached New York. For none of these particulars do we vouch.

Friday, Oct. 4.

It has now been ascertained that the very circumstantial statements made by Tokyo journals on the 3rd instant with regard to the sale of fifty million *yen* worth of bonds in New York at 90, are to say the least premature. We thought it necessary when reproducing the statements to add a caution that we did not vouch for the correctness of any of the assertions, and we are not surprised now to learn from the same sources that matters have not proceeded by any means so far as was asserted. There has not been any actual failure in the matter of the sale but neither has there been anything like final success. All that can be said is that the negotiations are proceeding tolerably satisfactorily. The *Hochi Shimbun*, nevertheless, having been conspicuous in publishing the original statement, now stands manfully to its guns though they fire blank ammunition. It assures its readers that the transaction has been completed, and it even undertakes to tell them how the proceeds of the sale are to be applied.

MONTHLY SUMMARY OF JAPANESE CURRENT LITERATURE.

In the *Gakuhō*, an organ of the Keiōgijuku, Professor Matsunami publishes a comparison of England and Germany, of which the following is the gist:—An examination of German life and institutions tends to show that there is far more organisation of every kind in Germany than in England. It is seen in their army, their schools, their towns and cities, and their police. The reason of this difference between the two countries is not far to seek. The English being a thoroughly united people with strong traditional and conservative instincts, manage to get on without a multiplicity of rules. But the Germans being a nation that has been formed by the combination of some 28 small states, with rival claims, and much jealousy, it is quite necessary that everything should be settled by rule. There is no such agreement in sentiment, interests and taste as exists in England, hence the necessity of relationships being put on a thoroughly business basis. Mr. Matsunami furnishes some illustrations of the jealousy with which the different sections of the nation regard each other. This is explained on the principle that recently formed unions are never as stable as those that have existed for centuries. The German is well aware that upon the due observance of the minutest regulations peace and order depend. I cannot say, proceeds Mr. Matsunami, that I am at all pleased that we have made Germany our model in the matter of multiplying rules. Following in the wake of China, we had already erred in the direction of over-legislation. Though in outward form England is in no way equal to Germany, in actual attainment and efficiency she occupies a higher place. The Englishman dislikes being bound down by petty regulations. Freedom of action he demands for himself and for others as far as possible. He is practical and usually cares not a straw by what means the end is reached so long as it is reached. And he has no belief in great enterprises being accomplished by mere rule of thumb. He believes in men rather than in written laws. The action of the nation in the Transvaal war has been very striking. At the commencement England met with nothing but reverses. If this had happened to Germany or to Japan, the Cabinet would have been blamed and turned out forthwith. But the English stuck to their Cabinet and trusted them to right matters, which they speedily did in a most marvellous manner. The reverses were all taken in the coolest manner by the nation. Only when the news of the relief of Ladysmith arrived did the English people forget themselves for a little while, for which they were severely reproved by their own moralists. But there was a reason for this rejoicing, as the event was no ordinary one. The gallantry of the little Ladysmith garrison appealed to the hearts of Englishmen in a special way. I was in London at the time, and was there later on when the Transvaal was annexed. As the English were so excited over the relief of Ladysmith, I expected tremendous festivities on the day that the annexation was made public by Royal Proclamation. But nothing whatever took place. A few lines announcing the fact and signed "Victoria" was posted on a notice-board and there the matter ended. No flags were hoisted, no arches made, no illuminations were to be seen. The nation took the event in its normal, undemonstrative fashion, in the light of a foregone conclusion. The Englishman's calm amid events that would cause no end of demonstration elsewhere is full of significance and is something which we Japanese should imitate. And as for the mutual trust that exists in England it is not to be found elsewhere. Once I observed to Mr. Katō Takaaki, our Minister in London, that it was difficult to get people to give receipts for things entrusted to them for repair, such as watches and the like. Mr. Katō, smilingly replied, "Why, that is nothing. I once paid 80 million yen into the Bank of England, and when I asked for a receipt I was told that as the money had been handed over to one of the Bank's responsible officers, no receipt was required." This kind of thing permeates English life. They trust far more to character and to love of conformity

to usage than to written rules and regulations and this difference from Germany is to me fraught with significance.

* * *

Mr. Minakami Umehiko, the translator of Captain Mahan's recent work on Sea Power in the Pacific, has published a book of considerable interest and usefulness entitled *Nichi-Ro Kaigon no shōrai* (The Future of the Japanese and Russian Navies). It covers 236 pages and is issued by the Keiseisha, Uneme-chō, Kyōbashi, Tōkyō. The following short review will convey some idea of the contents of the work:—The future independence of Japan must depend principally on the efficiency of her fleet. When Russia's Siberian Railway is in working order and her connection with the Pacific coast well established, she will most certainly increase her fleet in these waters and make a bid for supremacy. It is reported even now that she proposes to have 61 ships of war at her disposal in the Far East. If she carries out this intention, other European nations will have to follow suit, in order to preserve the balance of power. The chief Powers concerned in the undue growth of Russian influence in the Pacific are England, America and Japan. As yet it cannot be said that our people are thoroughly conscious of the vital importance of increasing the Navy. Mr. Minakami, after dealing with such general questions as those referred to above, settles down to the discussion of certain definite plans and proposals in the following manner:—I. *The Secret of Naval Defence*. In time of war it is usually optional whether a fleet acts on the defence or whether it proceeds to attack. In our war with China we were confident that our fleet was superior to that of the Chinese and so we were the first to attack, with the most satisfactory results. This consciousness of superiority in the point of ships, in the personality of the men, and in general organization and knowledge of tactics is essential to a nation's safety. This then is the secret of successful naval defence. II. *Japan's position as regards other Naval Powers*. When asked whether it is possible for Japan to ally herself with Russia, we unhesitatingly say, no. According to European opinion a conflict between Japan and Russia is hard to be avoided on account of the rival interests of the two countries. However this may be, alliance with Russia is quite out of the question. How about England? From many points of view an alliance with her would be advisable, but as things are now, the interests and circumstances of the two countries are so different that there is little prospect of their uniting in the Far East. It seems to me that four conditions are essential to the effecting of an alliance between the two Powers:—(1) The English and Japanese must be brought into closer friendship with each other. (2) The two countries must each maintain a navy and an army that shall command the confidence and respect of the other party to the alliance. (3) The two Powers must come to an understanding as to what territory each shall defend or attack if necessity arises and they should also be prepared to act together in emergencies. (4) In China they should determine their spheres of interests and enterprise in commerce and make an agreement that on no account shall their nationals trespass on each other's spheres. But at present it is quite evident no such conditions would be agreed to by the two peoples and hence to speak of an Anglo-Japanese alliance is premature. As things are now, it cannot be effected, and it will take time for the situation to alter. If an alliance is to be lasting, it must grow up naturally and be founded on well understood mutual interests. III. *The extent of our Naval power*. We must have a fleet strong enough to defend our shores from any combined attack that may be made by foreign ships. There is no doubt that all the great Western Powers will largely increase their fleets in these waters at no distant date, and we must prepare ourselves for the new situation by furnishing ourselves with a thoroughly efficient fleet. IV. *The increase of the Navy and Finance*. Here statistics are given to show the extent to which all the Naval Powers are increasing their fleets and Mr. Minakami goes on

to show that Japan cannot afford to be left behind in the race. The financial difficulty is not so great as many suppose. The increase should be stretched over the next six years. During that time 150 million yen should be spent on new ships, on docks, and the like. Japan must gradually render herself quite independent of Western Powers in the matter of shipbuilding. V. *Russia's fleet in the East*. The number of ships required by Japan must be determined by Russia's action. Here statistics are given bearing on Russia's probable rate of increase. The book ends with a collection of the opinions of leading Western writers on sea power and the way to preserve it. Mr. Minakami has certainly succeeded in producing a most up-to-date volume on a subject of primary importance.

* * *

The following books have recently been published:—

The *Eibungakushi* (A History of English Literature) by Dr. Tsubouchi Yūzō. This is a very elaborate work covering no less than 900 pages and selling at 2 yen a copy. It is issued by the Waseda Semmon Gakkō. The following notice of the work we find in the *Kokumin Shinbun*. Next to Chinese literature in the influence it has had on our national life stands English literature. Up until now no good history of English literature has existed in the language. Dr. Tsubouchi has succeeded in writing a book that it is a pleasure to read. His manner of relating incidents in the lives of the authors chosen for treatment is most entertaining. The biographical part of the work may be said to be stronger than the historical portion. Dr. Tsubouchi is always clear, and his language is usually happily chosen. The author has spent much labour over the task of showing the connection between English literature and religion, English literature and philosophy and English literature and politics.

The 三音四聲字貫 *San-on Shisei Jikwan* is a most thorough work in its line. The three different modes of pronouncing the Chinese characters known in Japan as the Kan on, the Go on and the Shin on are first treated. Then the four leading tones in use in China are dealt with. The book is printed in Japanese style, covers 1,640 pages, and deals with no less than 44,741 characters. The author, Mr. Takai Shinmei, spent five years in compiling it. Mr. Ho, the Chinese Minister to Japan, contributes a preface to the work, which is issued by the Hakubunkan.

The *Rinrigaku Seigi* (精義) is a translation of an English book on Ethics, by MacKenzie. The translator is Mr. Noguchi Entarō. The work covers 700 pages and sells at the Fuzambō and elsewhere at 1 yen and 40 sen per copy.

The *Kokusaihō Yōron* is a translation of Professor Westlake's work on International Law, Mr. Fukai, the translator, has furnished notes and explanations. The book is published by the Min'yōsha and sells at 1 yen 50 sen per copy.

The *Sekaishi* (Universal History) by Mr. Sakamoto Kenichi is to consist of two volumes, the first of which has appeared. Vol. I. covers no less than 1,100 pages and sells at 1 yen 60 sen at the Hakubunkan.

The *Bushidō Hattatsushi* (A History of the development of the Bushidō), by Mr. Adachi Ritsuyen, contains a preface by Dr. Inoue Tetsujirō. It gives a concise account of ancient Japanese ethics. It is published by the Kaihatsusha, Mitoshirō-chō, Kanda, Tōkyō, and sells at 40 sen per copy.

The *Kokusai Kōhō*, a work on international law, has been prepared by a specialist, Mr. Fujita Rinzaburō, who has lectured in the Naval Academy and the Tōkyō Hōgakuin. It covers 490 pages and sells at 1 yen a copy at the Meihōdō, Kanda, Tōkyō.

The *Kokusai Shina* (China's relation to other Powers) is a translation of what Mr. Arthur Desjardins has written on this subject in various French periodicals. Mr. Fukumoto Sei is the translator and the book sells at 25 sen per copy at the Bunkensha office.

The *Tōkyō Asahi Shinbun* publishes some recent utterances of Count Okuma on Japanese

newspapers, the salient points of which can be stated in a few words as follows:—The columns of newspapers are mostly filled with gossip of the most worthless kind. It is difficult to find a newspaper with strict principles strictly adhered to. The *Niroku Shinbun*, under the editorship of Mr. Akiyama, was doubtless started with the intention of leading the public in the right direction and of protesting against popular abuses, but of late it has grown slack (*taga ga yurumū*) and lost its distinctiveness. And as for the *Mainichi Shinbun*, its old ideal is quite gone and it has fallen to the level of a panderer to low public taste. Its circulation has been greatly reduced and it may be said to be doing no more than holding on. The literary merits of journals show a marked falling off in recent years. Few such articles as were penned years ago by Messrs. Suehiro, Fukuchi, Yano and Fujita are forthcoming to-day. The novelettes that appear daily are of a most inferior type, despite promising titles. Writers with anything like a thorough knowledge of finance, foreign affairs, diplomacy and business are very rare. The press of the country is in every way disappointing and does not repay study.

* * *

The *Kokumin Shinbun*, whose great hobby at the present is Imperialism, has just published an article entitled *Teikoku Shugi to umi* (Imperialism and the Sea) of which the following is the gist. Although in the past Japan has invariably been successful in land warfare, she has by no means been so successful afloat. Her repulsion of the Mongolians was due more to the storm that prevailed at the time than to the skill with which her junks were handled. Towards the close of the Ashikaga era some Japanese junks approached the coast of China and landed men that punished the Chinese severely, but there was little or no sea fighting. When Hideyoshi was at war with Korea our fleet was badly worsted in an encounter with Chinese vessels. So that our success during the war of 1895 may be said to be the first that we have scored on the ocean. Japan's interest in the sea in past centuries cannot be considered great, as her works of art undoubtedly show. It is true that glimpses of the sea appear in the pictures of Sesshū, Tanyū, Motonobu and others, but in these the sea only appears as a kind of set-off to the land and it is a different sea from the ocean of which such writers as Byron discourse so eloquently. The taste of the nation has hitherto not been in the direction of a life afloat and the number of persons dependent on navigation for a living has always been small. Those who have gone on the sea for pleasure have hugged the land or kept to inland waters, and no such battling with the waves for excitement's sake as is so common in the West has been witnessed here. While this aversion to life on the ocean exists it is idle to be talking about Imperialism. Imperialism means an extension of the empire by means of commerce in islands and continents separated from Japan by miles of sea. The *Kokumin* argues in another article that the remedy for the above-named defect is to be found in education. Both in the primary and middle schools more attention should be given to the cultivation of a taste for the sea. Aquatic sports and rowing specially should be more encouraged. All boys should be taught to swim and tales of sea life should be related to the young. Thus gradually the desire to traverse the great outside world at will would grow up in the minds of the rising generation.

* * *

Some little time ago Dr. Takata Sanaye published an article in the *Kyōiku Kōhō* in which it was maintained that radical changes in the whole method of Japanese education are necessary before the nation will be qualified to make use of its opportunities to the full. A writer signing himself "Dokusei Koji" has recently discussed the same subject very thoroughly in the columns of the *Kokumin Shinbun* in four articles, an epitome of which we now proceed to give. The title of the articles is *Anglo-Saxon Misnoku no Kyōiku*. (The education of the Anglo-Saxon race). It is a recognised fact that the Anglo-Saxons are specially adapted for colonisation. They take to it naturally and expect to succeed.

This is no accidental circumstance, but the result of education fundamentally different from that received by Japanese in the land of their birth. We will proceed to enumerate the points of difference between the training of an English lad and a Japanese boy. (1) In Japan children are regarded as existing for the sake of their parents, as their special property, as at their disposal to a very large extent. Every effort is made to keep up the dependence of the child on its parent for as long a time as possible. In England the great object of parents is to make their children, specially their boys, independent as soon as possible. In Japan the parent undoubtedly loves the child, but there is a large element of selfishness in the love. The parent reaps a number of benefits from the service rendered by the child and is quite averse to its acting in an independent manner. (2) In England and America the parent entrusts the boy with responsibility as early as possible, instils into him a sense of duty, develops his individuality to the utmost. Here the opposite is the case. (3) The eyes of the English and American parent are on the future and he tries to convey to his boys some notion of the ways in which they can make positions for themselves in the future. But the Japanese parent is full of the past and never wearies of relating to his children what the good ancestors thought and said and how the sons and daughters of days gone by revered their fathers and mothers and remained subject to them all their days. (4) The Anglo-Saxon parent pays great attention to the physical development of children, sees that they take regular exercise, looks after their food and clothing and watches their habits of life; while in Japan little attention is as a rule paid to these things. (5) The Anglo-Saxon boy is brought into contact early in his life with various lines of life and is given an opportunity of choosing a profession for himself, or he is allowed to try his hand early at some special business. But in Japan in all cases the choice lies with the parent, and the boy is seldom consulted. (6) Among Anglo-Saxons no occupation is despised. Even manual labour is considered sacred. But here occupations are graded and, speaking generally, all kinds of labour are despised and considered beneath the dignity of a gentleman. (7) The object of parents in England and America is to acquaint their children with all the most recent discoveries and inventions and to turn their minds to the application of the great forces of nature and art in new ways. French newspapers are compiled to please and tickle the fancy of the public, but English and American newspapers make it their chief object to instruct the reader. (8) The cases in England and America in which parents assert their authority are very few. Persuasion of a gentle kind and exhortation are chiefly resorted to. But in Japan the opposite is the case. (9) In England and America when once children have been started in life they do not expect their parents to be continually assisting them. They object to be dependent on their parents in any way. But in Japan after marriage even there is constant interference. (10) Here the chief gifts of the parent to the child are money and property. In England and America efficiency in some line of life, the ability to maintain itself is what each right-minded parent seeks to impart to his child. Educated as indicated above, the Anglo-Saxon goes out into the world with self-confidence and courage and does battle with his competitors in a most spirited manner. Compared with the go-ahead Anglo-Saxon youths our young men appear young no longer; their lethargy savours of old age (*genki naku tashiyori no gotoshi*). The great competitors and rivals of the Japanese race are not the Russians who are overrunning Manchuria, but the Anglo-Saxons. It is not war that Japan has to fear, but overpowering Anglo-Saxon business energy. There is nothing for it but to begin at the beginning and educate our people up to the Anglo-Saxon standard of life and thought. The effects are not to be had without setting in motion the cause.

* * *

In the *Tōkei Shinshi* (Statistics) we find some interesting details bearing on the conferring of

degrees in Japan. According to existing regulations the degree of doctor is given for proficiency in 9 distinct subjects, namely: (1) Law. (2) Medicine. (3) Pharmaceutics. (4) Engineering. (5) Literature. (6) Science. (7) Agriculture. (8) Forestry. (9) Veterinary Science. One way of obtaining a degree is for the candidate to send in an application to the University accompanied by an original essay on a special subject; or degrees may be conferred after certain fixed examinations held at the University. There is too what is called a *Hakase-kai*, a Doctor's Association, that has the power to recommend persons to the Minister of Education for a Doctor's degree. The President of the University also has the power to recommend professors of the University for the same degree. According to Statistics published on Aug. 8th last, there were in all 297 gentlemen holding doctors' degrees. The distribution as regards subjects is as follows:—Law, 43. Medicine, 58. Pharmaceutics, 3. Engineering, 91. Literature, 34. Science, 43. Agriculture, 11. Forestry, 6. Veterinary Science, 7. Comparison with a list published at the end of the year 1899 shows an increase of 60 persons in the 2½ years. The total number of persons who have received degrees since the first issue of the Monbushō order bearing on degrees in 1888 is 322; 25 of these having died.

* * *

A strongly worded letter appears in the *Taiyō* signed "Kyukō," advocating a change of policy in this country as regards the adoption of German methods and institutions. The writer maintains that Japan is doing herself harm by making a model of a nation which in many respects is despotically governed, and goes on to cite evidence to show that there is a very strong anti-Oriental feeling throughout Germany. The speeches of the Emperor William on China are quoted and so are the utterances of the *Lokal Anzeiger* on the fire in Peking, which, according to the writer we are quoting, make it quite plain that Asiatics are held in contempt by leading Germans as in every way inferior to themselves. Why does Japan worship a people who fail to recognise her merits and who are intensely narrow-minded and prejudiced? asks this writer. At the present time Germany has gone mad on militarism, and learning no longer occupies the first place in the minds of the people. Not long ago the Emperor in speaking at a University observed that it was not scholars so much as soldiers that Germany needed. The sentiment was applauded on all sides. The German educational system turns out human machines rather than men, and hence Germany is not the country to which we should send the majority of our young men. To think in a groove and act in a mechanical manner are not what our youths need to be taught. The Germany of to-day is not Luther's, Goethe's, and Wagner's Germany, but King William's Germany. Hence it is no suitable training school for our people.

* * *

Dr. Nishimura Shigeki contributes to the *Taiyō* a thoughtful article on the financial condition of the Japanese people, from which we cull the following facts:—According to investigations made by the Bureau of Statistics connected with the Cabinet a short time ago, the total value of the property owned by the Japanese people is 10,414,717,000 yen and the annual proceeds of this is 1,640,764,000 yen. According to investigations carried on by other parties the total value of property is placed at 11,806,000,000 yen, and the annual income realised at 1,525,000,000 yen. This is about 35 yen per head of the population. Comparing these figures with those of the richest and poorest of Western countries, Japan's poverty is made apparent. The total value of property in America is stated to be 163,500,000,000 yen and the annual income therefrom 31,116,000,000 yen, averaging 445 yen per head of the population. In England property is valued at 118,060,000,000 yen and the annual income yielded at 14,230,000,000 yen, or 364 yen per head. Coming to Spain, property is valued at 25,000,000,000 yen, and the income at 2,730,000,000 yen or 155 yen per head. The figures for Portugal are, property, 4,100,000,000 yen, income 640,000,000 yen, that is 136 yen

per head. Taking the taxes paid in various countries in the year 1896, the figures for America were 896,640,000 yen; those for England 1,048,000,000 yen; those for Japan 231,350,000 yen. When the taxes paid by us are compared to our earnings, it at once appears that we are a most heavily taxed people. Were the rate of assessment followed in America followed here, our total taxes would not exceed 19,560,000 yen. If England's rate were to be followed then they would amount to 73,140,000 yen. If Japan's rate of assessment were followed in England and America, England's taxes would run into 2,313,600,000 yen and America's to 2,876,300,000 yen. Yet notwithstanding the disproportion already existing between our earnings and our taxation, our Budgets are growing in bulk year by year. Four years ago local taxes and national taxes together amounted to 296,500,000 yen. If this year's Budget passes the Diet, the figures reached will be 344,600,000 yen. Yet for some time past the Government has been trying to make out that we are lightly taxed compared to other countries. The following table is supposed to demonstrate quite clearly how lightly we are taxed.

COMPARATIVE TAXATION.

	Army and Navy.		Executive.		Diplomatic and Consular Services.		Total.
	Yen.	Yen.	Yen.	Yen.	Yen.	Yen.	
Japan	2,210	2,953	0,865				5,839
England ...	10,607	15,999	6,018				25,606
America ...	9,411	8,094	1,278				19,330

This leaves out of account altogether the earnings of the tax-payers and the proportion of the taxes to those earnings. If the average income be taken as a basis then, as the earnings of the English tax-payers are ten times that of the Japanese, where he pays yen 5.839, the Englishman should pay yen 58.390 and the American should pay yen 70.068. In addition to the weight of our taxes, we have to contend with such difficulties as the undue outflow of specie, the excess of imports over exports and a foreign trade that in recent years has been anything but steady and reliable. A foreign loan is recommended by some as the panacea for all our financial trouble, but the exercise of greater economy and thrift and the development of our resources in a more thorough manner is a safer course to follow than to burden the country with a heavy national debt.

LITERARY NOTES.

Mr. Henry Frowde informs us that the whole of the edition of the Oxford University Press Colloquy facsimile of the First Folio Shakespeare was subscribed for within six weeks of the issue of the preliminary prospectus. We understand that the volumes cannot be ready for distribution until the Autumn of 1902.

A marriage will shortly take place between the Rev. Roland Allen, chaplain to the Bishop of North China, youngest son of the late Rev. Charles Fletcher Allen (author of *The Siege of the Peking Legations*, which was recently reviewed in these columns) and Mary Beatrice, elder daughter of the late Admiral Sir John Walter Farleton, K.C.B.

It is reported in Brisbane that Mr. John Edward Courtney Bodley, barrister, political writer, and author of Bodley's *France*, the very best book on the subject in the English language, has been offered the Governorship of Queensland. Mr. Bodley, who is 48 years of age, was private secretary to the President of the Local Government Board (Sir Charles Dilke) from 1882 to 1885, and secretary to the Royal Commission on Housing of the Working Classes in 1884-5. He married in 1891 a daughter of Mr. John Bell, of Rushpool Hall, Yorkshire, and has resided for many years past in France.

A complete pocket edition of Dickens's Works will shortly be issued jointly by Messrs. Chapman & Hall, the owners of the copyright, and Mr. Henry Frowde of the Oxford University Press. It will be printed on the Oxford India Paper and

tions. Upwards of six hundred illustrations will appear, being reproductions from the original drawings by Seymour, "Phiz," Cruikshank, Landseer, Leech, etc. At the beginning of each book a list of the principal characters mentioned in the volume will appear.

Mr. George Moore is the most seriously discussed novelist of the hour. Opinions of his performance differ greatly. Mr. G. S. Street, Mr. William Archer, and Dr. Barry are all enthusiastic about "Sister Teresa," which is compared not unfavourably with the achievements of Tolstoi and Flaubert. Mr. Clement K. Shorter pronounces a contrary opinion in the *Sphere*, and says that Mr. Moore is a man of only moderate talents, whose novels spring less from native ability than from his adoption of many French novels which, it is suggested by Mr. Shorter, he has absorbed and recast.

In his own peculiar way Mr. Bernard Shaw has put on record a tale against the "deserving poor." He gave a copying commission at the British Museum to a well-qualified but destitute schoolmaster, the fee being £2. Having got an advance of 5s., this man sublet it for £1 15., and went back to his books. The second man borrowed 1s. 6d. from the schoolmaster to buy the paper, and in turn sublet the contract for £1 13s. 6d. So the job passed on, until it got into the hands of the least sober and least competent copyist in the room, who, adds Mr. Shaw, "actually did the work for five shillings, and borrowed endless sixpences from me from that time to the day of her death."

BASEBALL.

Y.C. AND A.C. VERSUS COMMERCIAL SCHOOL.

The baseball match on Saturday between teams from the Y.C. and A.C. and the Yokohama Commercial School proved an interesting contest, and the Club only won by 2 runs. The teams were:—Y.A. and A.C.—McChesney, l.f.; Edwards, r.f.; Swan, p.; Blake, 3b.; Merriman, c.f.; Hellyer, 2b.; McGowan, 1b.; Thorne, c.; Kilby, s.s. Commercial School.—Amano, l.f.; Nozaki, s.s.; Kusanawa, 2b.; Furuhashi, p.; Kono, c.f.; Ito, 3b.; Horiuchi, c.; S. Ito, r.f.; Ozaki 1b.

The first innings were barren for both teams, the fielding being smart all round. In the second the Yokohama Commercial School opened their score with three runs, Horiuchi bringing in Ito and Kono, while an error on the part of pitcher enabled the third one to be made. It was not until the 4th innings that the Club knotted a point, Edwards scoring the run, having made two bases off his own hit, then moved to third on catcher's error, and home on a fine strike by Swan. The fifth innings saw another run made for the Club, McGowan being the man to reach the plate: the School were still leading by a point. In the sixth innings the Club romped away with the field and four runs went down on the score sheet to the credit of Edwards, Swan, Blake and Merriman. This substantial lead the school boys were never able to pull down altogether, although they scored a run in the sixth and three in the eighth innings, making them 7. The Club, though they failed to score in the seventh, managed to get two men home (Blake and Merriman) in the eighth and one (McChesney) in the last innings. This left the School two to tie and three to win. The task was beyond them, however, and the game concluded in rapid fashion, three splendid catches being made in succession by Hellyer, Blake, and Edwards, putting out the side in short order. Score by innings:—

	1	2	3	4	5	6	7	8	9
Y. C. & A. C.	0	0	0	1	4	0	2	1	—9
Y. C. S.	0	3	0	0	0	1	0	3	—7

Mr. A. Tanaka was umpire, Mr. H. W. Kilby scorer.

The *Rosetta Maru* made another fast trip down from Japan, said the *Hongkong Telegraph* of Sept. 24th. We congratulate...

DEATH OF AN OLD NAGASAKI RESIDENT.

The funeral of Mr. S. F. Lawrence, for many years constable in H.B.M.'s Consular service, took place at Nagasaki on the 26th ult. It was attended by Mr. R. G. E. Forster, H.B.M.'s Acting-Consul, Mr. E. L. S. Gordon, Assistant, and Mr. G. Kircher, Shipping Clerk at the British Consulate, as well as by a large number of Japanese and Foreign Residents. A detachment of Bluejackets from H.M.S. *Pigmy* was also present. At the conclusion of the opening portion of the service for the Burial of the Dead, which was held at the English Church, the following address was given by Mr. Forster:—

"We are met here this afternoon to pay the last tribute of respect to our departed friend Simeon Frost Lawrence. Many of you present here to-day have doubtless known him longer than I have, but during the fourteen years that I have known him, I have had opportunities of observing his character; opportunities which can only exist between those in the same office and in the same service. Some forty-five years ago, Lawrence enlisted into the old 10th Regiment of Foot and from that time up till two years ago, when he retired on a pension, he served his Queen and Country with that devotion to his duty which characterizes the British soldier and sailor of the highest class. Shortly after joining, Lawrence went with his regiment to India, and was afterwards present at the attack on the Peiho Forts and the occupation of Peking. Later on, the Regiment was moved to Japan, and Lawrence, then a Sergeant, was placed in charge of the guard at the British Legation when Sir Harry Parkes was Minister. Some time after, Lawrence was appointed Constable at the British Consulate at Hakodate and about twenty years ago was transferred to Nagasaki, where he has resided ever since. Throughout his long service he enjoyed the respect and esteem of his superiors for his devotion to his duty. Duty was his watchword and I know that all here present to-day, can testify to the willingness with which he would spend long hours in the office, after the usual closing time, if business was to be transacted. Four years ago, Lawrence attained the age of sixty; the same year in which Her Majesty Queen Victoria celebrated the Sixtieth Anniversary of her Accession to the Throne. I was not in Nagasaki at the time, but I read in the newspapers that Mr. Longford, H.B.M.'s Consul here, invited some of Lawrence's friends round to the Consulate to celebrate what was called 'Lawrence's Jubilee.' Early this year the Sovereign he had served so long passed away, and now, only a few months later, we are gathered round the grave of as faithful a servant as that Gracious Lady ever possessed. I trust it may be some alleviation of the sorrow of his widow to see the respect and esteem in which her husband was held by all classes of the community, as evidenced by the attendance here to-day, and to know that although he is no longer with us, his memory will be affectionately treasured by his many friends. I think I cannot better conclude these few remarks than by quoting some lines addressed by an old General Officer to the sword he had carried throughout his career, and which seem to me specially applicable to our departed friend:

And now, my treasured sword, come forth,
Since time hath marred thy beauty,
I, like thee, by toil am worn,
We both have done our Duty."

A procession was then formed, headed by the Boatmen of the Consulate and the sailors from H.M.S. *Pigmy*, all carrying wreaths. Then followed the coffin draped with the Union Jack and surmounted by a large wreath sent by the Staff of H.B.M.'s Consulate, Nagasaki. The widow and Mr. Massie followed as chief mourners, behind whom were Mr. Forster and the Staff of the Consulate and a large number of foreign residents. On arrival at the Cemetery at Urakami, the coffin was borne to the grave by the

PIRACY AT NEGISHI.

The fisherfolk and other residents of the usually quiet village of Negishi were thrown into a state of considerable excitement on Saturday morning by the discovery that a large fishing boat or junk had, during the previous night, been cut away from her moorings in the Creek just outside Negishi bridge and made away with. At 12 p.m. on Friday night the boat was safe at her moorings but at 1 a.m. on Saturday she was gone. At daylight several fishing boats put out in search of the missing craft and the police being communicated with telegraphed the news to all the coast stations in the neighbourhood. During the same night the mainsail, booms and halyards of a small yacht owned by Mr. J. L. O. Eyton, which was lying at anchor on the beach opposite his house at Negishi—a mile or so this side of the bridge—were carried away, nothing else in the yacht being taken. On Saturday morning a fishing boat on returning to Negishi, reported having seen off Kannonzaki a large fishing boat pursuing a very zig zag course under a foreign style triangular sail, scarcely big enough to give her steering way. It was therefore conjectured that the gang which stole the fishing boat annexed the mainsail of Mr. Eyton's yacht with the view of utilising it in place of the fishing boat's own sail until the characters or number marked on the latter could be cut out and a patch put in, to avoid identification. Of course this is merely a surmise but there appears to be some grounds for its being entertained. According to the Negishi fishermen the fishing craft would require at least five men to man her, while the sail and booms of Mr. Eyton's yacht would be a good load for two men. Probably if the above guess is correct the fishing boat was yulohed or poled round the coast till close up to the spot where the yacht now is lying and a party then waded up to her and carried the latter's rigging aboard the former. Up to Monday morning, we believe, no clue had been found as to the whereabouts of the stolen boat.

THE LAST HALF-YEAR'S TRADE.

In a review of the foreign trade of Japan for the first half of the current year, a Tokyo journal remarks that in January 38,000 bales of raw silk had to be taken over from the previous term—and this following upon a period of great disproportion between exports and imports (with the excess on the side of the latter). The depression in trade which had been felt during the autumn and winter showed every sign of becoming worse, and domestic industries became very dull in consequence of the disturbances in North China. Also there had been a combination of circumstances tending to attract and absorb wealth from European and American centres. The Transvaal war had lasted for nearly a couple of years; no one could see the end of the North China affair; Great Britain had been collecting specie to meet the expenses of her South African campaign; both wars had caused much dislocation in means of communication, and the allied Powers had been compelled to send much gold and silver to North China for the use of their troops. All these conditions combined to intensify the dullness in Japan's trade. There had thus been a natural tendency to shrinkage both in imports and exports; of the former an immense quantity remained in godown; the movement of raw silk was slow and sluggish; money became scarce and many failures were reported. Matters improved after a time, however, and in May it was satisfactory to note that exports exceeded imports by yen 1,351,370.87, the respective values being:—yen 22,796,077.71, and yen 21,444,706.84.

The following table is reproduced:—

	Exports. Yen.	Imports. Yen.	Total. Yen.
January	16,273,551	18,379,529	34,653,080
February	17,759,852	21,165,672	38,925,527
March	19,852,958	25,322,269	45,175,228
April	19,822,374	22,772,777	42,595,151
May	22,796,077	21,444,706	44,240,784
June	18,855,221	21,514,601	40,369,822

Grand total. 115,340,036 130,599,018 245,939,055

At the end of December last the notes issued by the Bank of Japan amounted to yen 288,570,032, of which yen 41,220,000 was extra issue, against reserves of 228,750,032, but towards the close of January the extra issue was reduced to yen 21,964,149, due doubtless in some measure to repayment of loans and advances. We give the following table:—

Date.	Convertible notes issued Million yen.	Reserve in specie. Million yen.	Reserve for insurance. Million yen.	Extra issues. Million yen.
End of Jan.	206	64	141	21
" Feb.	205	62	142	22
" Mar.	187	61	125	5
" Apr.	181	60	126	6
" May	185	61	124	4
" June	197	61	135	15

The reserve fund of specie was decreased by yen 4,960,000 up to March inclusive, but as, at the same time discount diminished also by yen 13,850,000, loans were repaid to the amount of yen 17,540,000. The consequence was that the amount of convertible notes issued contracted and increased the ratio to reserve from 30 per cent. to over 33. In April, not only were the extra issues restored, but the surplus amounted to yen 5,920,000 at one time and yen 4,840,000 at another. Besides the Bank of Japan, the various banks in the provinces also endeavoured to bring about the restoration of loans; the movement of funds became sluggish and trade became generally dull and inactive. There were some who, assuming that the sugar consumption tax law would be put into operation after April, imported goods in expectation of gain; but these were unfortunate and were doomed to disappointment and loss.

THE MARQUARDT CONCERT.

A fair house greeted Madame Breitschuck-Marquardt and Herr Marquardt on their second appearance at the Public Hall, Yokohama, on Tuesday evening, being drawn thither doubtless in large measure by the presence on the programme of several well-known local names, and also of course by the desire to hear and see the professional visitors. We had an opportunity on a former occasion of recording our opinion of Madame Breitschuck-Marquardt's performance on the harp. It may be sufficient therefore to merely state that her contributions to the concert were a solo, "The Chimes of Sydney" succeeded, in response to an insistent recall by a "Cascade" by Zabel; the exquisite "Au rive de la Mer" of Obethuer, similarly followed by a "Mazurka" of Schuecker; and that in addition she accompanied on the harp Mr. Sanford in the song "Tender and True," and took part with Herr Marquardt in a duet consisting of the "Elegy" of Ernst and Sauret's "Le Ruisseau." It is needless to say that she held her audience spell-bound so long as she sat at her instrument. Mrs. Mollison's share in the programme consisted of (a) "Love Song"—MacDowell, and (b) Serenade "La Berceuse" by Gounod, the latter lovely number (which was charmingly sung and accompanied on violin and piano with rare taste by Herr Marquardt and Mr. Richter) being followed, on recall, by Lassen's "All Souls' Day." On each fresh occasion that Mrs. Mollison consents to delight her fellow-residents they seem to find some new beauty in her voice. Mr. Sanford, though perhaps a little more power might have been desirable, gave a very expressive and melodious rendering of "Let all Obey," and was also heard to great advantage in "Tender and True" the accompaniment of which was played on the harp by Madame Breitschuck-Marquardt. Mr. Richter rendered the piano accompaniments with his usual success, and took part with Herr Marquardt and Mr. R. Schmid (cello) in the opening number, a trio in G. Major (adagio and finale) of Haydn which was splendidly rendered. Herr Marquardt's violin solos were listened to with deep attention; being recalled after playing Bach's Prelude and Fugue, he gave a gavotte by the same composer; later in the evening he similarly augmented the programme with a Theme and Variation by Leonard. The concert as a whole was quite a treat to music-lovers and deserved a far larger attendance than was accorded to it.

1. Trio for Piano, Violin and Cello...in G. Major Haydn (Adagio and Finale)
 2. Harp Solo... "The Chimes of Sydney"...Marquardt
 3. Violin SoloPrelude and Fugue.....Bach (Unaccompanied)
 4. Soprano Solo... (a) "Love Song"...MacDowell (b) "Serenade" "La Berceuse" Gounod (Violin obligato) Mrs. J. P. MOLLISON.
 5. Violin Solo... (a) "Romance"...Beethoven (b) Scherzo Fantastique "Hologoblin dance"...Bazzini
- INTERMISSION.
6. Harp Solo... "Au rive de la Mer"...Obethuer
 7. Violin Solo (Andante and Finale) "Concert" Mendelssohn
 8. Baritone Solo "Let all obey"...Leach Mr. SANFORD.
 9. Violin and Harp Duet... (a) "Elegy"...Ernst Argument.—Ernst, the famous Violinist and Composer, sung for the hand of his first love, was refused by her father who was rich and arrogant. He said, "Go into the world, make your name, then ask." Ernst returned with much renown, but found his sweetheart had died of a broken heart. Hence the celebrated "Elegy." (b) "Le Ruisseau" (The Brook)...Sauret

On Wednesday evening Herr Marquardt and Madame Breitschuck-Marquardt gave a concert at the Hotel Metropole, Tokyo.

INTERPORT CRICKET.

NOTES AND ANTICIPATIONS.

The Interport Cricket Matches between Yokohama and Kobe have been arranged for Tuesday, Oct. 15th, Wednesday, Oct. 16th, and Thursday, Oct. 17th. A friend who is deeply interested in cricket matters generally sends us the following notes regarding the "probables" for the home eleven, with the remark that Yokohama players must take a more genuine and active interest in their cricket during the next few days if they hope to have any success against Kobe.

A. F. Cratford.—Although perhaps not in such good form as last year (when unfortunately he could not play) is good enough for all purposes. Is perhaps our most dependable bat. If he has a fault it is that he is too modest regarding his bowling powers.

C. M. Duff.—The veteran of the band. Is in much better form behind the stumps than he was last year.

E. B. S. Edwards.—Made a poor show last year but had practised little owing to trouble with his eyes. Rapidly returning to his old aggressive style. We want more "forcing bats," as some one remarked the other day. In bowling has lost some of the "vim" he formerly had.

E. G. Fraughtley.—Our best fast bowler without a doubt, and on his day most difficult to play. Would be a fair bat if he would only lose a portion of the unaccountable nervousness he shows when first going to the wicket. Several kind friends have, however, undertaken that he shall have a "small bottle" before each innings and confidently expect huge results.

E. H. Kilby.—Little has been seen of this player this season. Rumour says that he is busy, which is no doubt true. Unkind friends say that he is avoiding all exercise in order to put on sufficient beef to become an oarsman. Let us hope he will turn out at his best on the day.

H. H. Kilby.—Began the season by playing a much freer game than heretofore with considerable success, but has now returned to his old style. A player with his knowledge of the game (to say nothing of an accurate eye) should not always play a merely defensive game. Often has chances to score which are utterly disregarded although perfectly safe; to a worse player they might not be safe, to him they are. Has improved vastly as a bowler.

F. Lammert.—His first season here. Has nice easy action as a bowler and his natural ball is a good one. Too impatient to take wickets and on that account inclined to give a loose one occasionally. Should stick to his length. As a batsman can hit and will always make runs if not too impatient.

E. W. Maitland.—A China veteran who has

not shirked practice, consequently has got into very fair form. As a bowler has done well, bowling mostly "off theory." A little apt to get tired if kept on too long. Has a safe pair of "saucers" attached to his wrists.

F. O. Stuart.—Has been diligent but still "streaky" as a batsman. A slow bowler, straight but fairly easy. Useful man against batsmen of medium calibre but "hae me doots" regarding his success against real cricketers.

E. W. Townsend.—Another slow bowler with a natural break. Tricky and might do well with good wicket-keeping.

Has style as a batsman but seems far more at home with fast bowling than slow; in fact cannot play the latter. Is worth watching.

S. Wheeler.—Played in last year's team. Is a bit of a stickler and not really easy to get. A fair change, but only fair, and should be far more spry in the field.

F. E. Wilkinson.—On form of two years ago would be one of the first picked. Now,—well I don't know, but there is still time. All would be pleased to see him take the game more seriously. A little more energy is all that is required.

F. E. White.—Has been away most of the season but that need not count, as practically no cricket was played during his absence. This was partly his fault, partly the fault of others. In good form with the ball—quite up to the old standard—but wants a lot more practice in batting to attain anything like his old form.

VETERAN.

LAW CASES.

The three gentlemen, Messrs. Suzuki, Kimura and Kurobe, who were apprehended at Mr. Ito Hei's villa in Kanagawa—where Mr. Kimura resides—on a charge of gambling, were brought up for trial on the 30th ultimo, and having been found guilty, were sentenced to 2 months' major imprisonment and a fine of 20 *yen*. They immediately appealed against this sentence, which, indeed, seems very severe. There must have been specially aggravating circumstances, for the general punishment for gambling is a month's imprisonment and 5 *yen* fine.

In the Yokohama Chihō Saibansho on Friday, Judge Kano gave judgment for defendant in the suit brought by Mr. A. M. Weale, of Messrs. Cornes & Co., against Mr. Kobayashi Keisuke, of Otamachi Ichome. The plaintiff's case was that on May 8th, 1900, he received an order from defendant to import 100 piculs of zinc powder. Half arrived on September 2nd and the remainder on Oct. 15th, and the fact was notified to defendant in both cases. The latter, however, refused to take delivery of the goods, on the ground that the quality of the article was inferior to sample, and proposed the cancelling of the contract. Plaintiff, therefore, prayed the Court to order defendant to take delivery of the goods or otherwise claimed payment of *yen* 2,344.48 with interest at the rate of 12 per cent. during the time he failed to take delivery, as provided by the contract.

The hearing was resumed in the Yokohama Chihō Saibansho on Saturday before Judge Yasuda, of the case instituted by Messrs. James Martin and C. K. Marshall-Martin against J. H. Ranger, claiming payment of *yen* 372.50 with interest of 5 per cent. from March 1st, 1900, until the execution of judgment. Plaintiffs produced an exhibit to the Court to prove that defendant must pay the claim on the ground that he received 350 shares from the Maples Hotel at the time of the re-organization of the Hotel to meet liabilities. Defendant contended that he simply got the shares by way of reward, claims of creditors having been paid by money invested by partners of the hotel. Mr. P. B. Clarke, examined as a witness, said that defendant entered into a contract to meet the liabilities of the hotel until April 30th, 1900, and stated that the shares had not been given to defendant as a reward.

would be better to see the contract form made between defendant and the partners of the hotel. The case was adjourned.

In the Yokohama Chihō Saibansho on Saturday the hearing was resumed of the suit brought by Mr. T. Kern, of Messrs. Silber, Wolff & Co., against Mr. Okawa Sahei, drug merchant of Otamachi Nichome. Plaintiff claimed from defendant payment of a promissory note for *yen* 1,380, payable on the 28th July last. Judgment was reserved.

In the Yokohama Chihō Saibansho judgment was given by Judge Yasuda for plaintiff in the action brought by M. Loire, of Lyons, France, against Mr. J. F. Wagen. The Court ordered defendant to pay plaintiff *yen* 501.90, the price of cotton antiseptic bandages supplied by plaintiff, with interest of 6 per cent. per annum from April 1st to Nov. 30th, 1896, and also the costs of the Court.

In the Yokohama Chihō Saibansho on Monday, the hearing was resumed of the case in which Mr. Tom Thomas seeks to secure payment from Ting Shon-kang of the sums of *yen* 8,000 and *yen* 4,000 due on two promissory notes. The first note was dated November 23rd, 1899, the second, Feb. 9th, 1900. They were each to run for a year, but neither had been redeemed at maturity. Defendant, while admitting having received loans from plaintiff, pleaded that the money thus obtained was not upon promissory notes, and that in the promissory note loan he was only jointly liable with another Chinaman. The hearing was again adjourned.

The case in which Mr. Arai Kildolye seeks to recover from Messrs. Ahrens and Co. the balance of the purchase money, etc., of the Phoenix Saw Mill, was advanced a stage on Monday in the Yokohama Chihō Saibansho, a witness being called to depose to the delivery of certain timber at the mill in 1898.

Two Japanese are to be prosecuted on a charge of stealing *yen* 280 worth of oil-cake from the C.M.S.N. Co.'s steamer *Yungtze* in Yokohama harbour on Sept. 10th.

Arguments of Counsel were heard on Wednesday in the Yokohama Chihō Saibansho, before Judge Yasuda, in the case in which Messrs. Carl Rhole and Co., sue for the delivery of 800 cases of Swedish iron by Mr. Okagi Naotaro, which said iron they claim has been fraudulently made over by him to Yamada Tatsuzo by a fictitious commercial transaction. Judgment will be given on the 7th inst.

A claim for the payment of *yen* 1,225.60, with interest at the rate of 6 per cent. per annum from the 1st of August, brought by Mr. Esabhyoy against a Mr. Lloyd, was called in the Yokohama Chihō Saibansho on Wednesday, but was postponed at the request of plaintiff who wished to make farther investigations into the legal status of the defendant.

In Kobe the McGlew divorce case came up again on Monday and applications were made for the calling of various witnesses and the production of an American expert who could depose as to the conditions governing divorce cases in the State whence appellant came.

It is understood that the Public Procurator in Yokohama has dismissed the charge of assault preferred by Mrs. Frances Carroll against a waiter employed at the Yokohama railway station restaurant, and a Japanese policeman, on the ground of insufficient evidence.

The case in which Messrs. Lowder and Akiyama sued Messrs. M. N. Gobhai and Co. to recover *yen* 200, and *yen* 13.44 costs, a legal fee for demanding payment of a promissory note, was decided in favour of the plaintiffs in the Yokohama Chihō on Thursday. One-fifth of the costs were taxed to the plaintiffs.

In the Yokohama Chihō Saibansho on Thurs-

only recognised *yen* 25 as being borrowed from plaintiff, the rest was a loss incurred in a business transaction which plaintiff should wholly assume. Neither party were present in Court and the case was adjourned to the 8th October.

The case in which Mr. Tom Thomas seeks to recover payment of two promissory notes given by a Chinaman, was again called on in the Yokohama Chihō Saibansho on Thursday. Defendant admitted payment of monthly interest on both notes but he urged that the case should not legally have been brought against him. The case was again adjourned.

THE AMERICAN MARITIME REVIVAL.

Lieut. Carlyon Bellairs, R.N., who will be remembered by many cricketers in Yokohama for the excellent game he always played, has now turned into a "man of letters." We find him writing to the *Commercial Intelligence* as follows:—

The attention drawn in *Commercial Intelligence* to the revival of the American mercantile marine is my excuse for sending the following extracts from Presidential messages, showing that it is only the outcome of a policy long advocated by the greatest men in America. The decay of the American mercantile marine had begun prior to the American Civil War, and the process of decay was undoubtedly accelerated by that war, not only through the operations of the *Alabama* and her consorts, but also by the withdrawal of over one million tons, representing 600 vessels and 70,000 men from the mercantile marine for the purposes of the most successful and greatest commercial blockade in history. The decisive factors however, were not so much the war, but, as you point out, the more remunerative outlets for the capital that railways and internal expansion afforded, and the inability to compete for some time with the better organised resources which England possessed for iron and steel shipbuilding. It is probable that these conditions have now passed away. In order to show how close at heart the American Governments held this question, I propose to quote in succession from the Messages of Presidents Grant, Arthur, and Cleveland. We can take as our starting point the Message on December 4, 1854, of President Pierce to the Senate and the House of Representatives, that "the United States foreign commerce has reached a magnitude and extent nearly equal to that of the first Maritime Power of the earth, and exceeding that of any other." We may note in passing that the first subsidy to steam ships was one granted by the United Kingdom to the Cunard Company for £81,000 in 1838. The United States established subsidies for the carriage of mails in 1847, so that by 1852 the subsidies paid by the United States Exchequer to American steamships amounted to \$2,000,000 per annum for mail services alone. It was at this time that Congress put an end to the mail subsidy, which was not revived again until 1891, since which time the subsidies have been increased without at first meeting with any corresponding increase in the American mercantile marine:—

"It is a national humiliation that we are now compelled to pay from 20 to 30 million dollars annually (exclusive of passage money, which we should share with vessels of other nations) to foreigners for doing the work which should be done by American vessels, American built, American owned, and American manned. This is a direct drain upon the resources of the country of just so much money, equal to casting it into the sea, so far as this nation is concerned.

"I regard it of such grave importance, affecting every interest of the country to so great an extent that any method which will gain the end will secure a rich national blessing."

(President Grant's Message to Congress. "Messages and Papers of the Presidents." Vol. vii., p. 54.)

"The continuing decline of the merchant marine of the United States is greatly to be deplored.

"There must be some peculiar hindrance to the development of this interest, or the enterprise and energy of American mechanics and capitalists would have kept this country at least abreast of our rivals.

"The substitution of iron for wood and of

not have been adverse to America if we had given to our navigation interests a portion of the aid and protection which have been so wisely bestowed upon our manufactures. I commend the whole subject to the wisdom of Congress, with the suggestion that no question of greater magnitude or further reaching importance can engage their attention."

(President Arthur's Annual Message, December 6, 1881, "Messages and Papers of the Presidents," Vol. viii., p. 63.)

"The Secretary forcibly depicts the intimate connection and interdependence of the Navy and the commercial marine, and invites attention to the continual decadence of the latter and the corresponding transfer of our growing commerce to foreign bottoms. This subject is one of the utmost importance to the national welfare. Methods of reviving American shipbuilding, and of restoring the United States flag in the ocean carrying trade should receive the immediate attention of Congress. We have mechanical skill and abundant material for the manufacture of modern iron steamships in fair competition with our commercial rivals. Our disadvantage in building ships is the greater cost of labour, and in sailing them, higher taxes, and greater interest on capital, while the ocean highways are already monopolised by our formidable rivals. These obstacles should in some way be overcome, and for our rapid communication with foreign lands we should not continue to depend wholly upon vessels built in the yards of other countries, and sailing under foreign flags. With no United States steamers on the principal ocean lines or in any foreign ports, our facilities for extending our commerce are greatly restricted, while the nations which build and sail the ships and carry the mails and passengers obtain thereby conspicuous advantages in increasing their trade."

(Annual Message of President Lincoln, Dec. 4, 1862. "Messages and Papers of the Presidents," Vol. viii., p. 140.)

"Shipbuilding, which has been protected to strangulation, should be revived by the prospect of profitable employment for ships when built, and the American sailor should be resurrected and again take his place—a sturdy and industrious citizen in time of peace and a patriotic and safe defender of American interests in the day of conflict."

"The ancient provision of our law denying American registry to ships built abroad and owned by Americans appears in the light of present conditions not only to be a failure for good at every point, but to be nearer a relic of barbarism than anything that exists under the permission of a statute of the United States. I earnestly recommend its prompt repeal."

(President Cleveland's Annual Message, 1894. "Messages and Papers of the Presidents," Vol. ix., pp. 552-553.)

This last message is a fitting commentary on the whole history. Up to the time of the repeal of the Navigation Acts, British shipping was "protected to strangulation." Capital gravitated only into those branches of shipping where it was protected. To-day we stand as the first maritime power on earth, although we afford freedom of port to the whole world. The position of British shipping as a whole, apart from individual interests, is being undermined by protection organised by great and powerful shipping rings. So it is with American shipping. Protected in a home market, so that none but an American vessel can carry cargo from New York to San Francisco, American capital has hitherto refused to venture into channels where there is open competition.

WORD-COINAGE BY LIVING AMERICAN AUTHORS.

The English language continues to grow. Most of us can remember when the number of words as recorded in "Webster's Unabridged" first reached the hundred thousand mark. Now some of the dictionaries include over 300,000, and to keep near that number they are compelled to discard 200,000 words because they are no longer "alive," or are ultra-technical, or for some other reason. Most of this growth has been, of course, in the line of technical words. Many of the new words come from the streets, where they are called slang until some reputable speaker or author gives them countenance and they pass into the language as duly credentialled additions. Others are minted by our poets and essayists and novelist striving to express some shade of meaning or some appearance of nature in a single word.

Mr. Leon Mead has been conducting an in-

vestigation in regard to the last form of additions to the language, and he has secured communications from a number of living authors. "Some of the most facile as well as the boldest writers in the guild of American letters to-day," he writes in *The Chautauquan* (August) "have never coined any words; they do not believe in such experiments; they say that the English language of Shakespeare, Burke, Ruskin, and Washington Irving is good enough for them." But Mr. Mead regards this as the purist's point of view, and thinks that if all men assumed that inflexible attitude our language would be at a standstill. Indeed, he discovers that some of the purists have themselves sinned, if coining words be a sin, for he finds evidence of it in their published works in spite of their disinclination openly to father new words. Some of those who have disclaimed or do not remember having coined any words are: Theodore Roosevelt, Lew Wallace, D. C. Gilman, Prof. Walter A. Wyckoff, Richard Henry Stoddard, F. Marion Crawford, Henry James, W. D. Howells, Charles Dudley Warner, John Burroughs, Owen Wister, Frederick J. Stimson, Donald G. Mitchell, Oscar Fay Adams, Mrs. Amelia E. Barr, Mrs. Margaret Deland, Mrs. M. E. W. Sherwood, Mrs. Margaret E. Sangster, Kate Douglas Wiggin, Mrs. Ella Wheeler Wilcox, and Margaret Sutton Briscoe.

The list of self-confessed "coiners," however, is equally strong, numerically and otherwise. Edmund Clarence Stedman "has a distinct recollection of only one of his 'coinages'—*lyronym*, an assumed name under which a poet may write." Thomas Wentworth Higginson likewise owns up to using one new word when he wrote, "As the spring comes on and the *densening* outlines of the elm give daily a new design for a Grecian urn." Prof. Henry A. Beers, of Yale, once used the noun *chumlock*, in analogy to wedlock, and the word *sphinxxy*, dealing in riddles. Somewhere he employed also the verb *troll*, to ride on a trolley-car. He pleads in extenuation that these were all playful suggestions. Thomas Dunn English once said in an oration that the French people "form a *metropoliarchy*." Clinton Scollard wrote of "The tiny king-cup that upon the floor of emerald meads *unurns* its ample gold," has had something to say about "bold *warfarers*," and has told of something that happened or didn't happen "on a morning *moany*." Edgar Saltus believes evidently in free coinage. He can not recall all his own new words, but he admits that "there are a lot of them." His most recent achievements are *monopolian* and *automobilically*. Mrs. Gertrude Atherton's confessed coinages are *littelist*, as descriptive of the would be realist, and *United Statesman*, in lieu of American, the latter being "a descriptive term to which all North and South Americans have an equal right." Ernest Ingersoll recalls only *quoted*, to designate a paragraph marked as quoted by the use of quotation marks. Prof. J. H. Hyslop has coined *conferentia* in contrast with *differentia*; *vellqity*, for the lowest kind of desire; *univulism*, the "theory of volition that denies alternative choice," and *kakistocracy* as the antonym of aristocracy. Captain Alfred T. Mahan once used *erentless*. Henry Van Dyke says, "There was once a little river that could not be described by any other adjective than *water-fally*, and a bird whose song seemed to me *wild-florery*." Lloyd Milfin has placed thistle finch "on the mullen's *tipmost* top." Joel Benton also has forgotten most of his verbal coinages, but remembers *hypethral*, in the sense (adjectively) of out-of-doors; *dendral*, for woody growths; and *poethood*, analogous to priesthood. Richard Burton acknowledges *cynophiles* to characterize lovers of dogs. *Vieapoint*, *watchpoint*, and *guide*—in place of "guidance"—are words which Edgar Fawcett is willing to father, and Robert Burns Wilson "stands for" *unimpressed* and for *brif*, which, he says (and he ought to know), means grating harshness.—*Literary Digest*.

Ishida Sadashichi, living at Takata, Nara Prefecture, has been arrested on a charge of forging 24 shares issued by six railway companies, Hoshu, Sanyo, Hankaku, Bantan, Nankai, and Nara.

SIKHISM: THE CREED OF A MILLITANT RACE.

Sikhism, the faith of the hardy race who disputed the sovereignty of the Punjab in India with the English during the first half of the past century, contains much that has proved attractive to students of religious development. Some facts about it are given by Sir Lepel Griffin, for many years connected with the Indian civil service. It had its origin, he points out, in a passionate revolt against the chains of form and priestly caste which its founders believed had been fastened by Brahmanism about the feet and hands of every Hindu. Singularly enough, Nanak, the founder of this East Indian Protestantism, was a contemporary of Martin Luther, having been born in 1469. Although Brahmanism is in its essential philosophy a tolerant and all-embracing religion, with elements of theism, polytheism, and pantheism, and while to the elect, Sir Lepel remarks, it provides conceptions of Deity "as noble and exalted as those to be found in any religion of East and West," yet like many other high faiths its common exoteric form had become encrusted with many superstitious and grievous burdens. For the mass of the Hindus, philosophical and ethical ideals counted for little or nothing, says the writer, and the strict observance of the rules of caste, with the Brahman or priest as the head of the social pyramid, was everything. "The greedy Brahman demanded his fees at birth and marriage and death, and to feed Brahmins," says Sir Lepel, "was a virtue far above devotion to mercy, truth, and justice." We quote further:

"It was against this privileged hierarchy that Nanak directed his attack; and, although he did not preach the abolition of caste, as was subsequently done by Govind Singh, his writings are filled with acknowledgments of the brotherhood and equality of man, and he admitted all classes as his disciples. Nor did his gentle and quietist nature attempt a direct assault on the Brahman class, other than by the denunciation of the idol worship on the profits of which they lived. He even allowed and approved the use of Brahmins as private and domestic priests, to perform such ceremonials as was unobjectionable; though he rejected their teachings, together with the doctrine of Vedas and Puranas, the Hindu sacred books."

The Sikh gospel, known as the *Adi Granth*, forms an enormous volume written in exceedingly obscure Gurmukhi. It has been translated into English by a German professor, Dr. Ernest Trunpp, who spent seven years of labour upon it. Sir Lepel speaks of its contents as follows:—

"There are, it is true, many puerilities and vain repetitions from which the books of no Eastern religion are free; but it is scarcely possible to turn a single page without being struck by the beauty and originality of the images and the enlightened devotion of its language. No Catholic ascetic has ever been more absorbed in the contemplation of the Deity than was the prophet Nanak when giving utterance to his rhapsodies."

"The monotheism of Nanak is often not to be distinguished from Pantheism; and unless a creed be provided with a personal and anthropomorphic deity, it is always difficult to draw the line between the two. Sometimes Nanak represents God as a self-conscious spirit protecting the creatures He has made; an ever-present Providence, who can be approached through the Guru, the heaven-appointed teacher, and ready to bless and emancipate the soul which worships sincerely and humbly. At other times, man and the universe and all that exists are but a part of and an emanation from God, who produces all things out of Himself and to whom all finally return. In the same way, it would seem that Nanak in no way denied the existence of the lower deities of the Hindu mythology; for the poetic pantheism on which his belief in the one supreme God was based could hardly exist without the symbolism which inspired all nature with life, and found a spiritual force behind and within every manifestation of natural energy. Yet all such deities he asserted to be indifferent and unworthy of regard, much as the early preachers of Christianity treated the gods of Greece and

Rome, in whose existence they believed, but whose dominion was to be overthrown by Christ. Idolatry he condemned, and the service pleasing to the Deity was that of the heart: neither vain ceremonies nor the austerities which the Hindu ascetics had been wont to consider as the key which unlocked the highest and most secret mysteries, but a pure, unselfish life, a faith in God revealed through the instrumentality of the appointed Guru or spiritual guide. Charity and good works were commendable and the worthy fruits of an unselfish life; but they were not of themselves sufficient to release the soul from its bondage to sense and illusion, or to save it from transmigration, the ever-present dread of the Hindu, or to insure its reunion with God. These results could only be attained by meditation on God and through the saving grace of His name. . . .

"He was a true prophet, and accomplished worthily an exalted mission. His system, like all systems, had many imperfections; and chief of them were those which equally belonged to Calvinism, in the substitution of one tyranny for another, and the over-shadowing of all human joy by a predestined lot which no faith or virtue could modify. But the good far outweighed the evil. Nanak taught the wisdom and omnipotence of one Supreme God, and the equality of all men, of whatever race or creed, in His sight; purity of life, charity, humility, and temperance. He enjoined kindness to animals, and forbade both female infanticide and the burning of widows. He condemned idolatry and asceticism, and preached the wholesome doctrine that the state of the worker and householder was the most honourable condition, and that, to find God and serve Him, it was not necessary to practise austerities or retire from active life."

After Nanak's death, about 1538, other leaders of inferior capacity arose, but in spite of this Sikhism made great progress, and the famous city of Amritsar was founded, with the Golden Temple, which forms a centre for the Sikh worship. Sir Lepel appears to think, however, that its period of growth has ceased. A spirit of laxity of faith has followed the restless vigor of its militant period, and it seems likely that the old sacerdotal spirit of Brahmanism will reabsorb Sikhism. The recuperative power of Brahmanism is very great, the writer points out: "History records how it overthrew and expelled the creed of Buddhism for Hindustan, and it seems likely to repeat the process with Sikhism."

YOKOHAMA LITERARY SOCIETY.

SECRETARY'S REPORT: SEASON 1900-1901.

During the past Season, the Society has lost the usual number of Members through departure and other causes, but this loss has been more than balanced by the addition of new Members, who number 41, bringing the present membership up to 252 and nine families, of which total, however, 42 are at present absent.

In the programmes presented to the Society, the past Season has been equally successful with preceding ones, and we have been favoured with some particularly interesting papers and readings, amongst which may be mentioned Admiral Beardslee's personal reminiscences of "Young Japan and Her Early History," and Miss Ackerman's description of her journey across Iceland. Another pleasing novelty was an entire evening devoted to Shakespeare.

From the Treasurer's Report, it will be seen that the Society is in a more prosperous condition than ever. A projecting lantern, accessories, and lime-light apparatus have been added to the assets, with the consent of the members, at an expense of yen 366, and the Committee hope to have the pleasure of exhibiting it, in conjunction with a lecture, at an early date. It might also be as well to here mention that it is the intention to hire the lantern and apparatus to any lecturer or individual who may have need of one, and so reimburse ourselves, in a measure, for its cost. The main object of its purchase, however, was to ensure our being in a position to exhibit under the most favorable conditions, lantern slides illustrative of lectures on distant countries or subjects which we may have the opportunity of securing,

instead of as in the past having to rely entirely upon whatever lantern we could, at the moment obtain in Tokio or elsewhere, which in most cases have been unsatisfactory.

With the approbation of the members present at the last Annual Meeting, it was decided to do away with one of the old features of the Society, to wit the Refreshments, the Membership having expanded to such proportions that it was found all but impossible to keep up this institution, established originally when the "Yokohama Literary Society" was merely a social gathering of but 15 or 20 members. In spite of some feeling of dissatisfaction expressed at the outset, the innovation does not appear to have in any way affected the membership or attendance.

The following is a summary of Papers and Lectures given before the Society during the Season:

1900.		
Nov. 2nd	"Meteors"	Mr. J. I. Plummer, M.A., F.R.A.S.
Nov. 16th	"Common Sense in Education and Education in Common Sense"	Miss Alice M. Bacon.
Nov. 28th	"Young Japan and her early history"	Rear-Admiral Beardslee, U.S.N. Cox.
Dec. 14th	"Hedging and Ditching"	Prof. W. D. Cox.
Dec. 28th	"Recitations"	Miss Schereschewsky.
1901.		
Jan. 11th	"Japan in 1800 and 1900"	Prof. E. W. Clement.
Feb. 2nd	"Personal Reminiscences of the Tonkin Campaign of 1883-4"	Mr. A. W. Quinton.
Feb. 22nd	"Woman in Literature"	Miss Edith Wilkinson.
	"Woman in the Professions"	Mrs. E. C. Jellows.
	"Woman in Philanthropy"	Mrs. W. K. Wilson.
Mar. 8th	"Notes on Shakespeare's Life"	Mr. N. G. Maitland.
Mar. 22nd	"Music: its Origin and Influence"	Mr. W. K. Vincent, Mus. Bac.
Apr. 12th	"Eight Hundred Miles on Horse-back over Iceland"	Miss Jessie Ackerman.
Apr. 26th	"Burmah and Her People"	Mrs. A. M. Apcar.

The hearty thanks of the Society are due to the numerous ladies and gentlemen who have so kindly assisted in both musical and literary capacities throughout the season.

O. M. POOLE.

Hon. Secretary.

TREASURER'S ACCOUNT, SEASON 1900-1901.

	Yen.	
To Balance from last Session	296.21	
To Members Subscriptions—		Yen.
110 Gentlemen at yen 3	330.00	
101 Ladies at yen 2	202.00	
9 Families at yen 10	90.00	
To Interest on Current Deposit Account	4.52	
	922.73	
EXPENDITURE.		
By Postages, Coolie Hire, &c.	51.31

E. & O. E.

Yokohama, September 30th, 1901.

N. G. MAITLAND,

Hon. Treasurer.

Examined with vouchers and found correct.

H. A. POOLE.

Dr. Kikuchi, Minister of the Educational Department, accompanied by other officials, visited the Aoyama Normal School at 10 a.m. on Oct. 2nd. On the 3rd he paid a visit to the Koishikawa Girl's Normal School.

NEWS OF THE WEEK.

A great improvement in the health of Count Okuma is reported.

Princesses Tsune and Kane visited the Palace on the morning of the 30th.

The famous actor Bando Shucho died on the morning of the 29th Sept. in hospital at Kōzu.

Baron Kodama, the Minister for War, paid a visit to General Yamagata at his villa in Mejiro, Tokyo, at 8 a.m. on the 1st inst.

It is now probable that the Interport Cricket Match with Kobe will be played in Yokohama on the 14th, 15th and 16th of this month.

His Imperial Majesty has presented the sum of 1,500 yen to the bereaved family of the late Viscount Shishido.

Mr. Kato Masakiyo, Vice-President of the Nippon Yusen Kaisha, will leave Nagasaki for South China by the French mail on the 29th inst.

The new Hongo Industrial and Commercial Supplementary School was opened on Oct. 1st, and the work of the institution will begin on the 3rd.

Mr. Nerii Kikuma has been appointed chief of the Yokohama Post and Telegraph Office in succession to Mr. Aoki Daizaburo, who has been ordered abroad.

A private letter received in Kobe states that Sir Claude MacDonald will return to Japan by the *Empress of India*. She arrives in Yokohama on the 21st prox.

The 15th infantry regiment, 5 officers and 200 men, arrived at Shimlashi station by the 1 p.m. train on their way to Takasaki barracks. They have just come back from Formosa.

The funeral of the late Baron Shishido will be held at Somei according to *Shinto* rites on the 5th inst. The procession will leave his residence at Sugamo at 1 p.m. the same day.

According to news from Amiens, Jules Verne, the famous author, has become completely blind. His eyesight had been failing for some time, and now has completely disappeared.

Suzuki Kamejiro (16), employed in a weaving shop at Tenjincho, Hongo, Tokyo, stole from his employers several rolls of silk, valued at over 255 yen, on the 26th inst., and disappeared.

Leo XIII. is 91. Three Popes have lived longer: Agabus, died in 683 A.D., aged 107 (probably not correct); Gregory IV., died in 1242, aged 99, as stated; and Celestine III., died 1198, aged 92.

The daughter of a waste-paper dealer at No. 17 Shinfukuicho, Asakusa, Tokyo, found seven 10, and seven one yen notes while sorting waste paper on Sept. 28th. She reported the matter to the police.

Mr. E. H. Burrows has resigned the post of Registrar and Magistrate of H.B.M. Supreme Court for China, and accepted the appointment of Assistant Secretary of the Great Northern Railway in London.

Viscount Katsura, Prime Minister, was received in audience by the Emperor at 11.30 a.m. on the 1st inst. After reporting matters of importance to His Majesty, he took his leave and proceeded to the Cabinet office.

The meetings of chiefs of police from various parts of the country were concluded on Oct. 2nd; but previous to returning to their posts they will attend a garden party given by the Minister of the Home Department on the 3rd.

On the 30th of last month at 7.20 p.m., a violent earthquake was felt in the Mutsu provinces and considerable loss was sustained by the Nippon Railway Company. The permanent way sank some two inches over a distance of 37.3 miles between Ichinohe and Fukuoka; but the

damage was immediately repaired and traffic was maintained. The stations at Shiraiuchi and Hachinohe and several residences of officials were much shaken.

Perhaps the most interesting article in the *Saturday Review* of August 17th is a sketch "The Moors," to which is appended a name well-known in Japan—Alexander Innes Shand.

The Kobe Foreign Traders' Association has presented its views to the Minister of Agriculture and Commerce, concerning the sending of commercial students and inspectors to foreign countries from Japan.

A smoking concert was given on Saturday evening at the Public Hall by the members of the Reliance Wheelmen. It was largely attended by members and their friends and a capital programme was gone through.

An armed burglar entered a temple known as Hoshoji, Hizuremura, Tsukugori, Kanagawa Prefecture, on the night of the 26th inst. and stole several articles of money. Afterwards he attempted to assault a woman but was discovered and killed by the temple-keeper and his wife.

Asagawa Kyutaro, living at Tobe Sanchoke, Yokohama, attempted to commit suicide on the railway on the morning of the 26th inst. He waited until a train left the station and then lay down on the rail. The engineer saw him, however, and, stopping the train, handed the man over to the police.

We are indebted to the courtesy of the Secretaries of the Shanghai Race Club and the Nippon Race Club for copies of the programmes of their respective autumn meetings. The Yokohama Races take place on Monday, Tuesday and Wednesday, Nov. 4th, 5th and 6th. The Shanghai races begin on the Tuesday in the same week.

Two foreigners dressed as sailors, who hired bicycles from Mr. McGill, No. 81, Yamashita-cho on Monday morning, have been arrested on a charge of stealing the wheels. They have confessed that one was lost and one left with a hotel at Kamakura as security for a bill of yen 3. The missing bicycle was found on the Recreation Ground a day or two ago and handed back to Mr. McGill.

A *jirikisha* man named Suzuki Tomekichi (age 50) living at Sueyoshi-cho, found a purse containing 102 yen on the road in Yamashita-cho, Yokohama, at 6 p.m. on the 1st of this month. On reporting the matter to the Kaga-cho police, he was informed that it belonged to a man named Suzuki Hirozo living near the place where it was picked up. The possessor gave 10 yen by way of reward to the *jirikisha* man.

A good story is being told about Lord Marcus Beresford which, if not true, at least deserves to be, says the *Road* (Aug. 10.) It appears that some time ago Sir Ernest Cassel asked him what he should have painted on his horse-boxes. "Should it be Sir Ernest Cassel or Sir Ernest Cassel, K.C.M.G.?" "Oh!" replied Lord Marcus, "I should put Sir Ernest Cassel, K.C.M., outside and put the G. inside."

The British battleship *Goliath* will be here on Oct. 3rd or 4th, and will remain in Yokohama until the 23rd when both the *Barfleur* and the *Goliath* go to Kobe to meet the *Glory* with the Admiral on board. The three battleships then come here for the Emperor's birthday on 3rd Nov., and remain over the Races. H.M.S. *Dido* leaves Nagasaki to-day for Yokohama direct.

The C.P.R. is building a fourth *Empress* boat to place on the Pacific line. It is understood, says the *Shanghai Mercury*, that endeavours are being made to unite the Canadian Pacific Mail and the Imperial German mail lines into a combination which will result in a regular weekly fast mail service across the Pacific. We learn that the German lines interested are now building light new fast steamers on lines approaching those of the *Prinz Heinrich* for the Indian ocean route, and that the fine new steamers lately placed

on this run will be put on the Pacific route in the near future.

A nurse named Yasui Tenru, of Fukui, in the trained nurse section of the medical college, Imperial University, was attacked with hysteria on the 25th inst. She used a morphine injection to relieve her pain, but, taking too much, died the same night.

The British Customs collections for the fiscal year, 1900-01, (according to a statement published in London on Aug. 31st) were £26,270,959. This is £3,227,487 more than for 1889-1900, and £2,650,959 more than the Budget estimate. The Inland Revenues collected by the Customs were £7,227,977, an increase over those of 1889-1900 of £942,081. The principal Customs increases were:—Tobacco, £1,952,656, and tea, £1,635,569.

A young priest named Kobayashi Kashitaro, living in a temple at Yamado-cho, Yokohama, picked up a purse containing eight yen and a key in Nigiwaicho street, Yokohama, on the 11th inst. He did not report the matter to the police, however, but bought cakes and sweets with the money. On the evening of the 25th inst. while cleaning up the garden of the temple he dropped the purse, and the temple-keeper, catching sight of it, made enquiries, whereupon the lad confessed.

Since the end of the Japan-China War, no less than 200 Chinese youths have come over to this country to prosecute their studies. The majority of these have entered the Seijō Gakkō (Military Preparatory School), the Military Boys' School, and the Military Academy. Others are studying at the Imperial University and in various private institutions: and only one student devotes himself to the study of jurisprudence.

The Alpine Club has issued the following statistics relative to fatal accidents in the Alps:—In 1895 nineteen people lost their lives, while the following year saw twenty-four victims. Again, in 1897, the number increased to thirty-four; to thirty-seven in 1898; to forty-seven in 1899, and last year the record was reached with forty-eight fatal accidents. Unfortunately this year points to an increase of victims, as up to date a higher percentage of accidents has been attained than in former years.

On Thursday evening, Sept. 21, at the Masonic Hall, Shanghai, the four several bodies of the Ancient and Accepted Scottish Rite of Freemasonry for the Southern Jurisdiction of the United States of America were consecrated. The officers were installed by Ill. Bro. J. T. Griffin of Yokohama, the Deputy Plenipotentiary of the Legate for the Grand Consistory of Japan, Dr. Stuart Eldridge, 33°. Ill. Bro. Eldridge left Yokohama on his way to Shanghai to perform these ceremonies, but was taken seriously ill before reaching Kobe and was compelled to leave the vessel at that point and entrust the performance of those duties to his Deputy, who most impressively worked the 32nd degree and consecrated and installed the office-bearers.—*Shanghai Mercury*.

It is presumed that recent affrays between sailors at Nagasaki have called forth the following order, which was issued from Division Headquarters on Sept. 14th at Manila:—"Under instructions contained in endorsement from the War Department, dated Adjutant General's Office, Washington, D.C., July 20, 1901, discharged civilian employees and discharged soldiers, entitled to transportation from the Philippine Islands to the United States, will not be permitted to land from any transport in the harbour of Nagasaki, Japan. The chief quartermaster of the Division will cause a copy of this order to be placed in the hands of quartermasters of all transports before departure for the United States."

Mr. Miyoshi Taizo, Chairman of the Tokyo Barristers Association, has appointed the following twenty gentlemen, in conformity with the resolution passed on the 28th of last month, to act as a committee to investigate the present penal code: Messrs. Kurosu Ryutaro, Okamoto Ko, Haneda

Hikoshiro, Miura Daigoro, Hirooka Uichiro, Koide Goro, Makino Mitsuyasu, Maruyama Masana, Miyata Shihachi, Serizawa Kotaro, Seki Naohiko, Kawashima Kamero, Sasaki Mosaburo, Moriya Konosuke, Uzawa Somei, Ryokado Hikokuro, Asakura Tomotetsu, Hiraoka Manjiro, Sakurai Kumataro, and Ishii Tamekichi.

The London *Globe* announces that H.M.S. *Glory*, the new flagship on the China Station, has already developed defects in her boilers, six of these being disabled owing to leaky condensers.

The Nippon Yusen Kaisha steamer *Inaba Maru*, which left Hongkong on Sept. 27th for this, brings with her from England five stallions and sixteen bulls and cows, all of which have been specially selected by experts. The *Inaba Maru* struck the South-West monsoon just outside Socotra and carried it with her for several hundred miles, to the discomfort of the valuable animals aboard. This shipment, says the *Times of Ceylon*, somewhat inaccurately, is one of the first which has so far been made from the United Kingdom to Japan, but other consignments will follow in due time. When the *Inaba Maru* arrives in Japan the animals will be landed at Yokohama and Kobe, and these ports will be used as distributing centres for the various studs which the Government has organised in different parts of the country.

The following is the list of the names of, and the amount of tax paid by, the candidates in Yokohama for the Upper House of the Diet, as investigated by the City Hall preparatory to the election to supply vacant seats:—

Names.	Yen.
Watanabe Fukuasaburo.....	2,567
Hiranuma Senzo	2,024
Otani Kahei	1,999
Ono Kohel	1,793
Kimura Ruyemon	1,544
Higuchi Tokujiro	1,330
Takashima Kahei	1,264
Asada Masashichi	1,230
Hiranuma Nohjiro	1,227
Wakao Ikuzo.....	1,160
Soda Kinsaku.....	1,130
Ishikawa Tokumemon	965
Hiraki Sennosuke	731
Nishimura Kisaburo	586
Takase Saburo	548

Mrs. Russell, wife of a planter in Ceylon, is out on police bail of rupees 500, on a charge of assaulting a *jirikisha* coolie. It appears that the lady, while riding in 'rikisha on her way to the races, opposite Galle Face Hotel, asked the coolie to go faster, but the man refused to do so. Asked again, he refused a second time and became cheeky, when she, it is said, gave him two blows on the head from a cane with a silver handle which she was holding, and the man fell down. Then the lady got into another 'rikisha and rode away. The man gave information to the police, and, as he was severely wounded, he was removed to the hospital. The medical authorities found his skull fractured, and a piece of bone embedded in the brain. An operation was performed by Dr. Chalmers, and as the man was in danger of his life, information was sent to the judicial authorities and the additional magistrate, Mr. Cooke, visited the hospital and took down the man's depositions. Mrs. Russell voluntarily appeared before the police and the enquiry has been adjourned.

The evils due to the presence of professional gamblers on the big transatlantic steamers have grown so acute recently that the captains are considering the adoption of drastic measures to put down the cause of complaint. These professionals travel across the ocean for the sole purpose of fleecing unwary passengers whom they inveigle into card games. Captain Albers, of the Hamburg-American steamer *Deutschland*, announces that he has taken precautions to prevent gamblers from obtaining berths on his steamer hereafter. Should they succeed in getting tickets they will not be permitted to play. Captain Albers has further announced his intention of establishing a "rogues' gallery" on board by exhibiting in the card and smoking rooms photographs of those who are known to be professional gamblers.

AMERICAN TOPICS.

In is announced that Professor Fiske's death will not delay the publication of his "History of the Two Americas," to which his last few years had been devoted. He had already finished reading the proofs of the first two volumes, entitled severally "The Colonization of the New World" and "The Independence of the New World." The third volume, "The Modern Development of the New World," was also completed by him with the exception of the index. These volumes form part of a series of twenty-four volumes entitled "A History of All Nations," by various authors, under the editorship of Professor Wright, of Harvard University. The whole series will be published together this autumn.

"An interesting trend of affairs," says *The Railway and Engineering Journal*, "is emphasized by the fact that the Massachusetts Institute of Technology has had enough applications for admission from students in England to warrant it in announcing that it will hold entrance examinations in London this year. This is probably due, not to any high appreciation of American methods in engineering education *per se*, but to a desire to find out the whys and wherefores of the success of American manufactures and engineering in foreign countries. Then, too, it is generally recognized in England that this is the country of opportunities for young men; and many of those who are coming here to study probably expect to remain here and enter business life."

Practically all the newspapers that attempted at the beginning of September to predict how the steel strike would end expressed the belief that the strikers had lost the battle. The trust was gradually but steadily starting mill after mill with non-union labour, and had rejected the offer to settle the strike by arbitration. The Amalgamated Association started the fight with a much smaller force and with smaller resources than had been commonly supposed; and *The Labour World* of Pittsburgh called for the impeachment of President Shaffer "for plunging the Amalgamated into a strike that was unwarranted," and declares that "the fight against the steel trust is lost." The secrets of the membership and the receipts and expenses for the past twenty-five years have leaked out, with the result that it is now known that when the Amalgamated Association entered upon its present warfare it had but 160 active subordinate lodges with a total of 13,892 members and a balance of only \$74,898 in its treasury. Yet with this pitiful showing of strength, the infatuated leaders rushed into a war with the strongest and ablest managed corporation in the world. Small as the army was, all the force could not be controlled, and of the 9,302 employed by the steel trust probably not over 8,000 have gone out, though in all some 80,000 or 90,000 labourers were made idle.

According to recent reports, Mexico is gradually becoming Americanized. American capitalists are investing large sums of money in Mexican mines, railroads, factories, and steamship lines, while American business methods and machinery are steadily coming into use in that country. Says the *Philadelphia Bulletin*:—"It is strange that Mexico was not largely Americanized long ago. Here is a country which stands in the very front rank in the matter of mineral resources. In her soil can be found in abundance silver, gold, copper, iron, coal, and, indeed, practically every desirable mineral that can be found in the United States. Mexico has a population of about 13,000,000, more than that of the Philippines, Hawaii, Guam, Porto Rico, and Cuba combined; her political institutions are, nominally at least, much like our own; person and property are reasonably secure within her borders and her people are steady increasing in intelligence. Yet this inviting field, which lies at our very doors, was almost completely neglected for years. We have been of late expending a vast amount of money in the hope of tranquillizing and developing a group of islands, with a semi-civilized population, on the other side of the globe. Mexican exports

and imports amount to as much in one year as the exports and imports of the Philippines do in seven. It is gratifying to note that there is now a disposition on this side of the border to make up for this neglect. The more American capital there is invested in Mexico the closer the two republics will be drawn together. Whether this may result ultimately in political annexation is a problem for the future to solve, but it can hardly fail to make for the prosperity and advancement of both nations."

A copy of the first folio Shakespeare was sold in London last month for the record-breaking price of £1,720. *The Sun* (New York) gives the following table of prices from the date of publication down to the present day:—

Date and Name of Sale.	Price.
1628.—Now the Sheldon copy; owned by the Baroness Burdett-Contts.....	£ 3 15s.
1787.—Dr. Wright's copy	10
1790.—Duke of Roxburghe paid	35 14s.
1799.—Thomas Allen's copy	40 19s.
1812.—Roxburghe's copy, now the Duke of Devonshire's (13½ inches high)	100
1818.—Saunders's copy (Blindin said: "The highest price ever likely to be given")	121 16s.
1847.—Wilks's copy (the Hilbert copy)	155
1854.—Gardner's copy (from the Wilks and Hilbert sales, now in the Alfred H. Huth collection) ..	250
1864.—Daniel's copy (the Moore, Booth and Rokewood copy; cost Daniel £150; now in the library of the Baroness Burdett-Contts)	716 2s.
1884.—Copy purchased by Mrs. Dope (cost her £795 9s. 6d., with commission and expenses) ..	750
1888.—Copy sold privately by Quaritch (now Mr. Church's)	1,200
1891.—Ives's (the Fite, Robinson, and Cooke copy, now Mr. White's) ..	\$ 4,200
1899.—Copy discovered in Belgium, 12½ x 8½ inches (now Mac-George's)	£1,700
1199.—Toovey's copy (now Mr. Morgan's)	1,000
1900.—Daly's copy (now Mr. Ellisworth's)	\$ 5,400
1900.—Copy purchased by the younger Quaritch	£ 1,720

More good copies of the first folio says *The Sun*, are now to be found in New York than in any other city of the world.

EUROPEAN TOPICS.

The Austro-Hungarian manoeuvres in Croatia this year are expected to be of greater interest than any that have taken place for some considerable time. The interest will be chiefly concentrated on the field-firing exercises, which will take place in the neighbourhood of Fünfkirchen, in the course of which the new guns will be finally experimented with, and bridging manoeuvres will be carried out on the River Drave.

The great international cycling race from Paris to Brest and back ended on Sunday, August 18th, in a victory for Garin, who covered the whole course (750 miles) in 52hr. 11min., and the last kilometre in 2min. 10sec. Riviere was second, almost two hours behind, and Antouric and Frederick arrived almost together about forty minutes later. Miller was fifth, making the best time for the final kilometre, which he covered in 1min. 25 4-5sec.

Rear-Admiral Sir Bouvier F. Clark, R.N., the officer to whom Great Britain is indebted for the able manner in which the Army Corps were despatched to Table Bay at the commencement of the present campaign, is about to retire from the post of Director of Transports. He has held the appointment for five years. His predecessor therein (the late Admiral Sir William Mends) was permitted to occupy it for just four times this period.

The extraordinary development of the German mania for picture postcards is attested by the total number of cards which passed through the

post in 1900, no fewer than 736,000,000. In a single week of the holiday session the daily average posted of these souvenir cards amounted to nearly a million and a half. Though this form of memento has been for some time introduced in England, it happily does not seem to be likely to gain anything like its Teutonic popularity. Most of the cards which deck the shop-windows are purchased by the foreign consumer on a visit.

Few people other than miners have any idea of the quantity of explosives used in coal mines. From the latest report it appears that in the South Wales coalfield, which employs over one-fifth of the mining population of this country, rather more than 1,000,000lbs. of explosives were used in 1900, of which almost one-half was ordinary gunpowder, one-seventh bull-dog gunpowder, one-tenth anvis, the rest consisting, in order of quantity, of carbonite, bellite, gelnite, and ammonite. More than 2,000,000 shots were fired during the year, half of them by ordinary safety fuse, and the other half by other methods, chiefly electricity.

Mr. R. W. Perks, M.P., who tells the story of the Wesleyan Twentieth Century Fund in the *Mail*, calls it "a triumph of organisation." And so it is. At the moment the million guineas have very nearly all been promised, more than half the amount has been paid, and no less a sum than £600,000 has come in guineas from individual donors. "A penny a week and a shilling a quarter," said Wesley when he founded his early Methodist societies. "One person one guinea," said Mr. Perks, who has, we believe, the honour to be the originator of the latest Methodist fund. Herein, with a united body, lies the secret of the "triumph," and it is a striking tribute alike to the sincerity and the generosity of the Methodist rank and file.

Next year the young King of Spain will be sixteen years old and take the reins of government into his own hand. According to a recent visitor to Madrid, Alfonso XIII. has greatly developed in the course of the last year. He is very tall for his age, and bears a striking resemblance to his mother. Unlike the former Spanish kings, who from the age of five years have always worn a field marshal's uniform, the young King only wears a plain military uniform, "since I am only a learner," as he puts it. Just now the King and the Queen-Regent are again at Miramar, their beautiful castle by the sea, living in the simplest possible style and going about the little Basque village of San Sebastian, snap-shooting like any tourist or tripper, and enjoying every moment of their well earned holiday.

The new book upon Russia which Mr. Henry Norman, M.P., author of *People and Politics of the Far East*, *The Real Japan*, &c., has been preparing for some time, will be published in October by Mr. Heinemann in England, and by Messrs. Charles Scribner's Sons in New York. It will be entitled *All the Russias*, and will contain travel sketches and studies of contemporary conditions and prospects in European Russia, Finland, Siberia, the Caucasus, and Central Asia. The volume will be lavishly illustrated, chiefly from the author's own photographs, and will contain several maps specially drawn to illustrate railway and national development. Mr. Norman has visited Russia four times during the last two years to collect his material, and during one visit alone he travelled more than 20,000 miles. He had previously visited Eastern Siberia while travelling in the Far East. He was afforded every assistance by the highest Russian authorities, extending to such courtesies as a special train, and on another occasion to a personal escort of Cossacks. Mr. Norman paid special attention to such important questions of the day as the commercial and industrial development of Russia, her financial situation, and the employment of foreign capital in Russian enterprises.

CORRESPONDENCE.

THE MORMON CREED AND ITS EXPONENTS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—During my absence in the country you published at the request of "American" a two column article regarding the Mormon people from the pen of Gen. John Eaton. I shall be pleased to have you, in the interest of fair play and justice, publish my reply, which I hope the Japanese papers will copy. Many of the statements of Mr. Eaton I know to be false, and will, therefore, be sure to deceive his readers regarding the true status of affairs in Utah.

The gentleman who signs himself "American," for the reason, no doubt, that he prefers to hide himself behind that name, or is ashamed of his own, takes it upon himself to refer to our people as the "dangerous Mormon plague." We are accustomed to abuse, but abuse is not argument. Our reputation, because of falsehoods told regarding us, may be bad, but thank heaven the character of the Latter-day Saints is good. The reputation of our Saviour was bad among the religious people of His day, and at their solicitation He was nailed to the cross, but His character and His teachings were above reproach and will live forever. He said:—"By their fruits ye shall know them. Do men gather grapes of thorns or figs of thistles? Can an impure fountain send forth pure water?" We are at the defiance of the world to judge the Mormons by the standard given by our Saviour and not be under the necessity of according to them the highest character for honesty, industry, and virtue.

"American" gives Mr. Eaton a very fine character. I have no one here to do the same for me, and being desirous that your readers should have a good opinion of me so that they will give attention to my refutation of Mr. Eaton's statements, I respectfully ask you to publish extracts from letters "To whom it may concern":—from Utah's two United States Senators, Mr. John Claffin, Pres. of the H. B. Claffin Co., the largest wholesale dry goods house in New York, also from W. S. McCormick and John E. Dooly prominent bankers in Salt Lake City. All of these gentlemen are non-Mormons. Senator Joseph L. Rawlins says:—"I have had the pleasure of the acquaintance, at times intimate, of Mr. Heber J. Grant, during most of his life time and know him to be a man of integrity, intelligence, and great force of character. His standing in the community has always been of the best. I earnestly commend him as worthy the confidence, esteem and kindly consideration of all with whom he may come in contact. Senator Thomas Kearns says:—"The bearer of this letter, Mr. Heber J. Grant, is an old and respected citizen of the State of Utah. I have been intimately acquainted with him for twenty years and take pleasure in recommending him as an honest, upright, sober, straightforward; and trusty gentleman."

Mr. Claffin says:—"We have known Heber J. Grant for a long time, and have had business relations with him involving at times very large sums of money. We have found Mr. Grant in every way trustworthy and reliable, and we should have no hesitation in placing important matters in his charge." Mr. McCormick says:—"I have been intimately acquainted with Mr. Heber J. Grant for the last twenty-eight years. During said time I have had a large amount of business with him, all of which has been most satisfactory. Mr. Grant has been actively engaged in different kinds of business in Utah during the last twenty years; he is a man of unquestioned honesty and integrity; his word is as good as his bond, than whom Utah has no better citizen."

Mr. Dooly, of Wells, Fargo & Co., says:—"During the past ten years he (Grant) has transacted a large portion of his business at this bank, and it affords me pleasure to state that he is a gentleman of unquestioned integrity."

What was the object to be gained by Mr. Eaton in writing his article? I feel that any one with the least particle of discernment can see only too plainly that it is for the purpose of securing money for the Christian schools in Utah. I do not in the least blame the gentleman for trying to obtain funds for this purpose, but I most emphatically object to his maligning an entire community in his efforts to do so. He never seems to forget the "main chance," that of securing funds. After a full quarter of a column regarding Asia, Africa, etc., all of which is so much slush, he very appropriately says:—"This condition furnishes the added reasons for those who are raising twentieth-century funds, to safeguard the future with institutions for Christian education." No doubt it was the natural modesty of the man, which modesty by the way, is very plainly(?) shown throughout his entire article, which prevented him from adding, "The Sheldon Jackson College, of which I have the honour to be President, will be pleased to receive as much of these funds as possible."

"There is not space here to rehearse the so familiar history of the Mormons, from their origin in

the arch-impostor, Joe Smith; through their migrations from Palmyra, N.Y., first to Kirtland, Ohio, then to Nauvoo, Illinois, where Smith was shot; and finally under Brigham Young to the valley of Salt Lake, Utah." One would think that a gentleman who has space for two columns, in small type, of abuse and falsehoods regarding an entire community might have found space to state a few facts, but facts would not secure money for his school, and so he passes them by. I cannot blame him for not wanting to relate anything about the history of the "Mormons," and their drivings and persecutions and finally their expulsion from the United States, after their prophet had been murdered with his brother Hyrum, in cold blood, while under a pledge of protection from the Governor of the State of Illinois. The history of our people is a good thing to leave untold, by all those who dare not tell the truth. Mr. Eaton, however, finds time to refer to the prophet Joseph Smith, as that "arch-impostor Joe Smith." Mr. Josiah Quincy, in his "Figures of the Past," says that Joseph Smith "is not to be disposed of by pelling his memory with unsavory epithets." I give the opinion of Mr. Quincy regarding Joseph Smith, and place it against that of Mr. Eaton. He was an author, educator, lawyer, statesman, and philanthropist, and fully as great a man as the President of a College which has graduated "One Scholar" during the past four years. Mr. Quincy says:—

"It is by no means improbable that some future text-book, for the use of generations yet unborn, will contain a question something like this:—What historical American of the 19th century has exerted the most powerful influence upon the destinies of his countrymen? And it is by no means improbable that the answer to that interrogatory may be thus written: Joseph Smith, the Mormon Prophet."

"And the reply, absurd as it doubtless seems to most men now living, may be an obvious commonplace to their descendants. History deals in surprises and paradoxes quite as startling as this. The man who established a religion in this age of free debate, who was, and is to-day, accepted by hundreds of thousands as a direct emissary from the Most High, such a rare human being is not to be disposed of by pelling his memory with unsavory epithets. Fanatic, impostor, charlatan, he may have been, but these hard names furnish no solution to the problem he presents to us. Fanatics and impostors are living and dying every day and their memory is buried with them; but the wonderful influence that this founder of a religion exerted and still exerts throws him into relief, not as a rogue to be criminated, but as a phenomenon to be explained. The most vital questions Americans are asking each other to-day have to do with this man and what he has left us."

Joseph Smith, claiming to be an inspired teacher faced adversity such as few men have been called to meet, enjoyed a brief season of prosperity such as few men have ever attained, and, finally, forty-three days after I saw him, went cheerfully to a martyr's death.

"A fine looking man, is what the passer-by would have instinctively murmured upon meeting the remarkable individual who had fashioned the mould which was to shape the feelings of so many thousands of his fellow mortals. But Smith was more than this, and one could not resist the impression that capacity and resource were natural to this stalwart person."

"Of all men I have met, these two (Elisha R. Porter of Rhode Island and Joseph Smith) seemed best endowed with that kingly faculty which directs, as by intrinsic right, the feeble or confused souls who are looking for guidance. 'This it is just to say with emphasis.'"

"He (Brigham Young) was at one time Governor of the Territory and Indian Agent and yet was well known to encourage, to the utmost, disloyalty to the flag. His treatment of the military expedition which he forced to winter at Fort Bridger cannot be forgotten. Perhaps the one Mormon act that gave greatest shock to the public was the Mountain Meadow Massacre."

Mr. Eaton simply tells a number of falsehoods in the above statement. When the "Mormons" were coming to Utah, after twenty thousand of them had been driven from Nauvoo, Ill., part of them in the dead of winter, a call was made upon them by the Government for five hundred men to fight in the Mexican war, and Brigham Young said:—"You shall have your battalion," and in three days these exiled patriots furnished a force of five hundred and forty-nine souls. The history of the world does not furnish a parallel. Think of a people, driven and stripped of their all and expelled from their homes and country, furnishing a battalion to fight the battles of the country from which they were being driven! The history of this incident, the hoisting of the United States flag on Ensign Peak by Brigham Young and the Pioneers as soon as they reached Utah and taking possession of the land, then Mexican soil, in the name of the United States, give the lie to all such slanderers as Mr. Eaton. As to the military expedition which was forced to winter at Fort Bridger, I am not surprised that this also was passed by without giving an account

of it and stating why the army was kept there until the final settlement of the matter. I will give the history which has been omitted. The army was sent to Utah because of the false charge made by Judge Drummond and his associate Federal officials, to the effect that the United States Court records had been destroyed by the "Mormons." Our people knowing the charge to be absolutely false; having suffered because of falsehoods in the past; having been expelled from Nauvoo, Ill.; and fearing a repetition of former outrages, detained the army until an investigation could be had. Col. Thos. L. Kane, having been sent from Washington, D.C., as the representative of the Government, upon his arrival in Utah found the records intact, and the charge, therefore, without foundation. No more dastardly thing on earth could a man do than to charge that terrible crime of the Mountain Meadow massacre to the "Mormon" people and their leaders, for the reason that the Court records in Utah shows the very opposite. It would be equally as proper for the "Mormons" to charge the people of the United States with the terrible slaughter at Haun's Mill, one of the places in Missouri from which they were expelled, and with many other crimes committed in that state; and finally for their expulsion from Nauvoo, Illinois, and the killing of their Prophet and Patriarch. Mr. Eaton's charges are a direct thrust at the Government and its officials, and carry the lie on their face, because if the guilty parties were not brought to justice the Government was responsible, as it had its own officials in Utah and all the machinery of the Courts in its hands. I again give the facts, for which Mr. Eaton seemed to lack space, and these facts brand him with the outrageous attempt to fasten a terrible and heinous crime on an innocent community.

John D. Lee was convicted of this crime on "Mormon" testimony and a verdict of guilty was brought in by a "Mormon" jury. Sumner Howard, Ex-Chief Justice of Arizona, and the United States Prosecuting Attorney at the second trial of John D. Lee, repeated again what he had said at a former trial, that he had come for the purpose of trying John D. Lee, because the evidence led and pointed to him as the main instigator and leader of the Mountain Meadow Massacre, and he had given the jury unanswerable documentary evidence, proving that the authorities of the "Mormon" Church knew nothing of the butchery until after it was committed, and that Lee in his letter to President Young a few weeks later, had knowingly misrepresented the actual facts relative to the massacre, seeking to keep him still in the dark and in ignorance. He had received all the assistance any United States official could ask on earth in any case. Nothing had been kept back and he was determined to clear the calendar of every indictment against any and every actual guilty participant in the massacre.

Mr. Eaton's talk of the "Danites," "Avenging Angels," etc., is simply a lot of falsehoods pure and simple. Nothing of the kind ever existed in Utah, and such a charge is on a par with the claim that Brigham Young was responsible for the Mountain Meadow Massacre and can be classed, therefore, with all charges that are absolutely without foundation and without proof.

We plead guilty to having High Priests, Seventies, Elders, Deacons, and other officers working with energy for the Church of Christ; also to having Sunday Schools, with 120,000 enrolled in that good cause. We also plead guilty to having thousands of "little tots" in our Primary Associations, where they are taught, the pure principles of the Gospel of our Lord and Master Jesus Christ. We also plead guilty to having over 50,000 young men and young ladies in our Mutual Improvement Associations, all of whom are studying the Gospel of our Lord Jesus Christ, and a great majority of whom, both young ladies and young gentlemen, would be perfectly willing to meet Mr. Eaton or any of his highly educated Christian friends and discuss either of the following propositions: "The Gospel of Jesus Christ as taught by the Latter-day Saints can be substantiated by the Bible," or contrariwise; "The doctrines of so-called Christians cannot be substantiated by the Bible," and I will guarantee that Mr. Eaton or his friends will be "knocked out," if you will please pardon the expression, by thousands of these boys and girls.

"Methodists, Episcopalians, Congregationalists, Baptists, Presbyterians, Christians, unite in one deplorable testimony. The preaching of the Word found little encouragement among the adult Mormons. After all the hard work and all the money which has been raised time and time again to reform the dreadful "Mormons" it almost makes me sad to read this "united" and "deplorable testimony."

"It was sad, it was pitiful,
Near a whole city full,
Friends she (they) had none."

That which follows the above "deplorable testimony" plainly shows that Mr. Eaton does not lose sight of the "main chance" by stating some excuse for the securing of funds. He therefore adds, "but the children, the growing youth, could be reached and so

schools were added." I brand it as a cowardly thing after admitting that they can do nothing with the adult "Mormons," for our Christian friends to try and steal our children from us and break up families, yet I have not the slightest fear of their success, but expect to read in years to come another "deplorable testimony" in which they will all unite in saying they have had no encouragement among the children as well as the adult "Mormons." Those fearful institutions, the Sunday School, the Primary, The Improvement Associations, which are among the Mormons, will do their work and prevent any success attending their efforts with our children.

It is a part of my duty when at home to meet with and give instructions to the missionaries who are going to preach the gospel and I have never failed to instruct them that they were not, under any circumstances, to baptize a child without the free and full consent of its parents, and never a woman without the consent of her husband. We Mormons are willing to do our preaching by appealing to the Bible and to men's reason, and have no necessity to try and steal children from the faith of their parents.

"Know this, that every soul is free
To choose his life and what he'll be
For this eternal truth is given;
That God will force no man to heaven.
He'll call, persuade, direct aright,
And bless with wisdom, love and light;
In nameless ways, be good and kind,
But never force the human mind.
Freedom and reason make us men,
Take these away, what are we then?
Mere animals, and just as well,
The beasts may think of heaven or hell."

Mr. Roberts was not elected by polygamists, but after being regularly nominated by the Democratic party, was elected by that party, and received as high, and in some places, higher majorities in precincts where the non-Mormons were in the majority. No attempt was made to introduce a law in the legislature to protect polygamy; the State Constitution prohibits polygamy. A law was introduced simply to protect the men who had more than one wife prior to statehood, from a hired informer who was trying to make them trouble. The Governor vetoed the bill to prevent just such men as Mr. Eaton from mis-stating the law and its effects. Non-Mormons on the floor of the Legislature proclaimed themselves decidedly in favor of the law, but said they voted against it for the very reason that they knew it would be misused by men, whose stock in trade and only hope to secure money was by misrepresenting the "Mormon" people. "The Mormons wished it understood that they had given up polygamy. The secrecy of marriages rendered proof difficult. Plural marriages have been given up, and a non-Mormon paper in Utah, published a standing card offering a reward for proof of a single plural marriage as an off-set to the libel that the "Mormons" were not true to their promise that there should be no more plural marriages. No one claimed the reward.

We are much obliged to Mr. Eaton for telling that the Governor of Idaho testifies of the excellence of our people as citizens. There are some men, (who do not have funds to raise for schools), who are willing to tell the truth about us. Not only does the Governor of Idaho speak well of us, but I am pleased to give the testimony of the Governor of Arizona: "All concede that we need an energetic, industrious, economical, and self-relying people to subdue and bring into use the vast unproductive lands of Arizona. These Mormons fill every one of the above requirements. Tea, coffee, tobacco, and spirituous liquors they do not use. They are spoken of by those living nearest to them as the kindest of neighbours, and all strangers receive a hearty welcome among them. They have a splendid robust looking lot of children, and are very desirous of having schools."

It may be interesting to know that the Governor of Wyoming also has a good opinion of the "Mormon" people and at present there are a very large number of them making settlements in the Big Horn country in that State, and they are doing so at the special request of his Excellency. Not only do the Governors of three States want our people as citizens, but the officials of Canada have gladly welcomed us, and gentlemen from there have come to Salt Lake a number of times and solicited colonists. A month or so prior to my departure for this land one of our Apostles visited the City of Mexico, and was welcomed kindly by President. Diaz, who spoke in the highest possible terms of our people located in that Republic, and hoped we would send more settlers. It is an absurdity that men like the Governors of three States, President of the Mexican Republic, and officials of Canada would be wanting men as settlers from a class like Mr. Eaton would make the "Mormons" out to be. If we were "Danites" and approved of horrible crimes like the "Mountain Meadow Massacre," we would not be sought after as citizens. Facts stamp Mr. Eaton's attempt to

blacken our character as beneath the contempt of honest men, and were it not that the facts are not known in this land I would not take so much time to refute what he has said.

There are some men who have laboured as missionaries in Utah who are honest and have been willing to tell the truth about our people. I quote from Bishop Daniel S. Tuttle of Saint Louis, who for many years was an Episcopal clergyman in Salt Lake City. He says: "I know that the people of the east have obtained the most unfavourable opinion of them (the 'Mormons') and have judged them unjustly. They have many traits that are worthy of admiration, and they believe with a fervent faith that their religion is a direct revelation from God. We of the east are accustomed to look upon the Mormons as either a licentious, arrogant or rebellious mob, bent only on defying the United States Government and deriding the faith of the Christians. This is not so. I know them to be honest, faithful, prayerful workers, and earnest in their faith that heaven will bless the Church of the Latter-day Saints."

As to the ten reasons that have been adopted by the "Presbytery of Utah" why we Mormons can not be received as Christians, and which said resolutions have been adopted by "several other evangelical bodies," I am reminded of a story. A man once said: "It is a good thing that we do not all see alike or everybody would want my Sarah Jane for a wife." "Yes," responded his friend, "it is a good thing, because if all saw as I do no one on earth would have her, and she would have to die in single blessedness."

It will be time enough for our friends to reject us when we make application for admission to their fold. As to our aspirations in this direction I quote the words of the Savior to the Prophet Joseph Smith at the time of his (Smith's) first vision, to show that we have none:—

"When the light rested upon me, I saw two personages, whose brightness and glory defy all description, standing above me in the air. One of them spake unto me, calling me by name, and said (pointing to the other): This is my Beloved Son, hear him."

"My object in going to enquire of the Lord, was to know which of all the sects was right, that I might know which to join. No sooner, therefore, did I get possession of myself, so as to be able to speak, than I asked the personages who stood above me in the light, which of all the sects was right (for at this time it had never entered into my heart that all were wrong), and which I should join. I was answered that I must join none of them, for they were all wrong, and the personage who addressed me said that all their creeds were an abomination in his sight."

Mr. Eaton says the "Mormons" have in their hands the system of State Courts, the police and the schools from the smallest district organization to the University. All of the Supreme Court Judges are non-Mormons and have been from the day we secured Statehood. The President of the State University and a majority of the professors are non-Mormons.

"They have one vote in the national House of Representatives, three in the Presidential College, and two in the Senate." The Representative in Congress and both United States Senators are non-Mormons, and the "Mormons" do not have three votes in the Presidential College. Such glaring mis-statements as the above brand Mr. Eaton as one whose other statements are unworthy of respect from honest men.

"The resident Christian missionaries may be expected to see things as they are," but others who have business with the "Mormons" and learn to know by contact and from experience as to their honesty are in the opinion of Mr. Eaton "unfitted to receive the truth." Following the above libel on the non-Mormons of Utah, who testify of the honesty and integrity of the "Mormons" from actual knowledge, it is well for Mr. Eaton not to lose sight of the "main chance" and so he tells of the graduation of "One Student" from his (Shelden Jackson) College. O that mighty one! who was graduated at the end of four years. It almost makes me tremble to think of the consequences to "Mormonism" because of his graduation. We have very many Church academies in Utah, Arizona, Mexico, Canada, Idaho, and Colorado, and one University and two Colleges in Utah that are strictly "Mormon" and are supported by "Mormons" without one dollar from outside sources and we have thousands in attendance at these temples of learning. Therefore, the "One Student" which Mr. Eaton's College has had the honor of graduating does not frighten us very badly, as we have graduated hundreds in our Church schools during the same period, to say nothing of the fact that while we have not the President and a majority of the professors in the State University, we do have a majority of the students and graduates.

"Their use of terms means one thing to them and another to their Christian hearers. One of their tracts, which happens to be before me, is filled with Bible quotations and declares that the 'first' step toward salvation is to believe in the Lord Jesus Christ;

the second step is to repent and turn from sin; the third is to be baptized by immersion for the remission of sins; the fourth is to receive the Holy Ghost through the laying on of hands by those having the authority to confer it. Thus step by step, those who go with them are led on until they are completely in the hands of those who claim to have the right to confer the Holy Ghost.

Our tracts mean just what they say, and we plead guilty to all of the above, word for word, and we do have divine authority to bestow the Priesthood, as Joseph Smith was ordained an Apostle under the hands of Peter, James and John, the Apostles of our Lord Jesus Christ.

Following the above quotation Mr. Eaton says, "This self surrender is not to God but to the Priesthood. We claim that the surrender is to God, and our people prove their devotion to God and the gospel of His Son Jesus Christ by leaving family, friends and business and going without money and without price and at their own expense to the ends of the earth to proclaim its truths. We do have respect for the men who hold the Priesthood which has again been restored to the earth. This priesthood, according to a prophecy of Joseph Smith, should only be used as follows:— "No power or influence can or ought to be maintained by virtue of the Priesthood, only by persuasion, by long suffering, by gentleness, and meekness, and by love unfeigned; by kindness and pure knowledge, which shall greatly enlarge the soul without hypocrisy, and without guile."

Mr. Eaton tells that the "Mormons" see their operations going on in Canada, Mexico and all over the United States. Yes, we do, and they will be going on when Mr. Eaton has passed away. "Fanatics and imposters are living and dying every day, and their memory is buried with them."

"Truth dreads no scrutiny, shields herself behind no breast-work of established custom, but proudly stands upon her own merits."

Yours respectfully,

HEBER J. GRANT.

EDUCATED MEN AND CHRISTIANITY.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Statements are frequently made in this country to the effect that in Western lands it is only the ill-educated and ill-informed that nowadays hold the Christian faith, and that almost all men of thought and education have given up belief in that and every other form of religion. And many of the Japanese, especially of the student class, accept these statements as true, having no means of disproving them, and naturally conclude that there is no call for them to spend time in examining the claims of Christianity. The accompanying letter, lately received from Sir G. G. Stokes, Lucasian Professor of Mathematics in the University of Cambridge, and sometime President of the Royal Society, will, I think, be of interest to many of your readers, and may help to steady the faith of some both amongst Foreigners and Japanese whose religious convictions have been shaken by assertions of the kind referred to above.

Yours faithfully,

P. K. FYSON, Bishop.

Hakodate, September 26th, 1901.

My position in the University, and in the Royal Society of London and other scientific bodies has of course brought me into contact more or less closely with a large number of scientific men both of my own country and of others. Naturally our intercourse for the most part related to matters of science. It is only with those that one knows well that one is, or may be disposed to speak about one's inmost convictions relating to religious matters. Yet even without this, according to the proverb, "A straw shows how the wind blows," little things, incidental remarks, &c., leave one who himself accepts the Christian Faith no reasonable doubt as to whether the other accepts it or rejects it. However these "little things" come out incidentally in an acquaintance extending over some time.

In expressing my belief as to the opinions of others on this subject, I will confine myself to my own countrymen, though in some few cases I happen to know the opinions of foreigners. From motives of delicacy I will refrain from speaking of men still living, and for a different reason from speaking of those who lived many years before me, namely, because in their case I have no means of forming an opinion beyond what is open to the public. Still under the limitations of confining myself to well-known scientific men who were my own contemporaries, whom I personally knew, and in several cases was intimately acquainted with, there are a good number with respect to whom I can form a judgement. I have no hesitation in expressing my conviction that the great bulk of them sincerely accepted the Christian Faith, that if any rejected it they formed rare exceptions to the general rule.

My own studies have brought me more into contact with scientific men in the department of mathematics and physics than that of biology. I will name four of first-rate eminence whom I knew very well, they

were Faraday, Cayley, Adams, and Clark Maxwell. I know they were all believers in the Christian Faith.

I believe what I have said as to the opinion of first-rate scientific men applies to those in the biological department, with which I am not myself so well acquainted. There is, however, one eminent man on that side who is supposed by many to have been a rejecter of Christianity, whom I knew very well, and loved and respected, I mean Huxley. He was undoubtedly a theist, but his attitude as to Christianity I should rather suppose to have been that of an agnostic, neither accepting nor rejecting, but waiting for further light. His friend and ardent admirer, the late Kitchen Parker, went, I knew, to great lengths in the way of evolution. I did not at first know whether he was even a theist. One day when we were together in the tea room of the Royal Society I made some remark to him calculated to draw him out in case he felt so inclined, and found that at any rate he was a theist. He expressed himself somewhat in this way:—"For my own part I cannot do without a personal God: I look on evolution as God's mode of working. Man makes a poker or a shovel, but God's way of working is so different, with all the forces at His command." Some time later in a letter to me he expressed himself in a way which showed that he was not merely a theist but a believer in Christianity.

My long connection with scientific bodies, especially the Royal Society, of which I was for 31 years President, combined with the fact that I can at the same time sympathize with Christianity and with science, gives me I think rather exceptional opportunities of forming a judgment (at least so far as my own country is concerned) as to what amount of truth there is in the assertion not unfrequently made in non-Christian countries that scientific men generally reject Christianity.

SHOOTING REGULATIONS.

As the shooting season will commence on October 15th, the following police regulations will be put in force on and after that date:—

I.—Persons who shoot game without having a government license will be prosecuted by the police.

II.—Persons who shoot game out of season will be punished according to the nature of the infringement. The season commences on the 15th October and lasts till the 15th of April in the following year, (except in Hokkaido where it begins on the 15th of September); but the shooting of pheasants is prohibited from the 1st of March to the 31st of October.

III.—Localities will be selected by the authorities where shooting may be engaged in.

IV.—Privileges in connection with shooting shall be extended to none; school teachers who without paying tax engage in shooting under the pretence that they do so in the cause of education by collecting specimens of birds, shall not be exempt from the above rule.

V.—Protected birds must not be caught, or bought or sold.

VI.—Traps, pitfalls, explosives, or poisonous substances are strictly prohibited in the catching of birds.

YACHTING.

The 39-raters had a race to the Quarantine Buoy off Nagahama *via* the Lightship and Widow Buoy on Saturday with the following result:—

	Finish.	Club Alliance.	Corrected.
	h.m.s.	m.s.	h.m.s.
Mary	4:38:55	—	4:38:55
Havilee	4:47:30	—	4:47:30
Kingfisher	4:44:00	—	4:44:00
Maid Marion	gave up	4:18	—
Golden Hind	4:46:20	4:18	4:42:02
Spray	gave up	9:06	—

Mary was thus first and had 2 record points, Golden Hind being second with one point.

The cruising class went over the usual course and the times were:—

	Finish.	Handicap.	Corrected.
	h.m.s.	h.m.s.	h.m.s.
Seanhild	4:25:35	—	4:25:35
Dainyo	4:29:00	—	4:29:00
Mosquito	4:40:20	25	4:15:20
Surprise	4:59:50	28	4:31:15
Asagao	4:31:10	15	4:16:10

Mosquito thus won first prize and Asagao second, the latter taking two record points and Seanhild one.

JUST ONCE.

"Just once to gaze on English landscape fair—
Through deep, green-shadowed lanes to stray;
Just once to breathe the soft-sea-laden air,—
In hallowed English fanes to pray;
Just once to touch the people's ancient life,
Where yet it lingers far from toil and strife."

Thus oft we crave—we of the English race,
Our souls deep-rooted in the past—
Not loving less our own abiding-place—
The young land where our lot is cast—
Our heritage—a good land fair to see.
Through all the years still this her glory be—
Unbroken faith—unshaken loyalty.

Toronto. M. ALGON KIRBY in the *Spectator*.

FIRES.

Fire occurred in a house occupied by Kimura Jintaro, at Naito Shinjiku, Tokyo, shortly after one o'clock in the morning of the 27th inst. Thirteen houses were destroyed and four damaged. One fireman was killed.

An extensive fire occurred at Takamori-machi, Asogori, Kumamoto Prefecture, on the morning of the 27th ult. Twenty-eight streets were visited and one hundred and fourteen houses were destroyed.

The Governor of Kumamoto Prefecture, reporting to the Home Department, states that a big fire occurred at Takamori, Asogori, on the night of the 25th inst. One hundred and fifty houses were destroyed and one man hurt.

WEATHER AT SHOJI.

Below will be found the weather report compiled at the Hotel, Shoji, last week:—

		Air	Temp.	State of	Remarks in
		Max.	Min.	Lake.	General.
Sunday, 22nd	71°	61°	72°	Fine....
Monday, 23rd	72°	59°	72°	Fine....
Tuesday, 24th	73°	59°	72°	Fine.... Tuesday night
Wednesday, 25th	71°	58°	71°	Fine.... first snow on
Thursday, 26th	64°	56°	71°	Cloudy Fuji and rain
Friday, 27th	64°	56°	76°	Cloudy here.
Saturday, 28th	65°	58°	69°	Cloudy

THE LATE PRESIDENT MCKINLEY.

The citizens of the United States residing in Sendai held a Memorial Service, Sunday, 22nd September at which prominent Japanese, including the Governor and Mayor as well as many ladies, were present to the full capacity of the Tohoku Gakuin Hall. The services were in English, followed by an address of thanks in Japanese to the distinguished guests for such an expression of sympathy. The Governor, in behalf of the audience read a message of condolence. The sermon was as follows:—

"How are the mighty fallen!" and Sam. i. 19.—A great sob breaks forth from the human heart when one of the mighty falls. If he falls in battle, shedding his blood for some noble cause, the feeling of sorrow is tempered by the consolation that the blood of the hero is spilt for righteousness' sake, and that the victory is sure. But when the mighty one falls by the base hand of treachery, as far and wide as the deed is known, so far and wide, regardless of differences of nationality or race, is profound sorrow mingled with unutterable regret at the insane act.

We, a few citizens of the United States, meet today in this foreign, but friendly land of Japan, and in the especially sympathetic city of Sendai, to join with our fellow citizens all over the world in honouring the memory of our beloved President William McKinley, and to contemplate his lofty spirit of courage and hope, faith and love. We need not tarry over the steps by which he became prominent, first as a soldier then as a lawyer, and later on as a trusted statesman, whose influence is now felt in every land. Our words shall be few, and shall attempt only to state how this great and good man, in whose memory we hold this service, was a product of, and a representative of, the ideals and spirit of our nation.

Our minds turn first of all to the home training he received. He was started right in life in a home where was deep faith in God. A profoundly religious atmosphere surrounded his early days, and as he grew into manhood there developed in his heart, naturally and with force, a faith in God that was the dominant principle of all his after life. At the early age of sixteen he had those strong religious convictions that are of infinite value to a young man, and he

publicly manifested his faith in Christ by uniting with the Methodist Church.

Knowing by experience the priceless value of the Christian home, when the time came to make his own, he found in Miss Ida Saxton, not only a woman of rare culture, but a wife of like religious convictions with himself. Everything seemed to promise an ideal home. A child was born, as if to gladden the hearts of these young parents, but its death brought them their first great sorrow. Another child was born, as if to make good the first loss, but this too was taken. More than that the wife was left an invalid for life. In the words of another:—"He saw before him the tragic vision of a childless life and the companionship of an incurable invalid. Yet no man ever accepted such a situation with more cheerful abnegation. He made himself the faithful and skillful nurse of his unfortunate wife, and gave her every hour he could spare to lighten her sorrows and cheer her broken life."

Ah, here is the ideal husband. It is such men that exalt our American homes and keep them absolutely pure and holy. It is such homes that save our mixed society from abiding corruption, and that make our beloved land a trusted power among the nations of the world. It is in these homes that we glory, and for which we give God ceaseless praise.

But to return to the early days of the President, his first school was his home with its positive Christian influences. His collegiate life was broken off by his enlistment as a private soldier, when that terrible civil war broke out—a war that brought extreme and prolonged peril to the very existence of the Republic. Although only eighteen years old, he had strong convictions as to the wrongs of slavery, so that his four years of soldier-life were to him the great school, the university wherein, amid hardships and battles, he thought deeply on far-reaching moral and national problems, and thus laid the foundation for becoming, not a politician, seeking selfish ends, but a statesman of principle and purity and experience, who knew how to work for the good of society, and for the lasting honour of our nation.

We need not here consider his fourteen years of unsullied life and active effort in Congress; nor his two terms as Governor of the State of Ohio; nor his election five years ago to the highest office—of President of the Republic; nor his re-election last year to the same exalted position. But we would take a few moments of this sacred hour in contemplating the fact that the spirit of the people of the United States is signally manifested in the life of our martyred President. Just what this spirit is may be difficult to state satisfactorily in words, but it surely means love of individual liberty and individual responsibility based on faith in God; it means Representative Government, "Government of the people, by the people, and for the people"; it emphasizes universal education, for "free schools make free men"; it stands also for wide international justice.

This spirit our President fostered and magnified. It is sometimes said that Americans worship the almighty dollar, but we point with pride to our noble line of twenty-four presidents among whom has been no millionaire. Rather men like Lincoln and Garfield and Grant and McKinley, men born even in poverty, but rising by force of character, and embodying the spirit of the fathers of the nation;—so long as such men as these are elected to the Presidency of the United States, no base spirit of materialism shall ruin our ideals.

To be sure we are a nation of vast resources, but we believe that these are entrusted to us for the sake of humanity—just as we believe that the far more priceless treasures of liberty and knowledge and respect for man and national power are given of God in his infinite goodness and wisdom that they may be used for the good of the whole world. For example, the recent war with Spain was to deliver Cuba from the barbarous cruelty of Spain. Just as soon as that was done, our President had a thousand Cuban teachers invited to the halls of Harvard University at Government expense, that the future teachers of Cubans might drink in the spirit of liberty and self-government and of wide learning, that has been such a blessing to us. And one of the last acts under his administration was the sending to the Philippines of five hundred and fifty graduates of our colleges and universities as teachers to prepare the people as soon as possible for the largest measure of self-government and progress. The spirit of Americans is not one of conquest and self-aggrandizement, but it would extend the light and blessings of true liberty and justice as widely as God in his providence may direct.

On this occasion it is preeminently fitting that we emphasize what has already been alluded to—the religious nature of the President. I do not say the religious side of his nature, as though his great heart were divided into sections, only one of which could be labeled religious, but his whole nature was dominated by an unwavering faith in God. Not in any narrow or bigoted sense, but in an all round completeness. From his youth up he knew the deep moral power and the wide intellectual vision that come from faith in God.

So when this busy President accepted the invitation of the students of the University of Pennsylvania to address them, he forcibly told them how the first official act of the first President, Washington, was his "fervent supplication to the Almighty Being who rules the universe." Then he added:—"Never should we forget the great moral and religious principles of the fathers of our nation. Never should we abandon faith in Almighty God as recognized by Washington and the first Congress."

Our beloved President well knew the value of faith in God for the young, and his words at the Christian Endeavour Convention in California were such as these mottoes here on these walls: "He who serves the Master best serves man best. He who serves truth serves civilization." And his lofty idea of patriotism is that of moral and spiritual help to those about us:—"When you are serving man by helping him to be better and nobler, you are serving your country."

His speeches also to the people, and his official messages are marked with this faith in the living God. It was no mere form with him when at his recent inauguration he laid his hands reverently on the Bible and told the assembled thousands that he, "invoked for his guidance the direction and favour of God." His heart always throbbled with full and strong religious affections. When three thousand missionaries, representatives of all the missionary societies of the world, met in New York, our President again left the duties of his high office for a day to give on behalf of a Christian nation a welcome to these men and women. We here to-day cannot but feel a renewed responsibility to realize his ideal of the missionary, unworthy though we are of the generous praise set forth in these words of his:—"The missionary, of whatever church or ecclesiastical body, who devotes his life to the service of the Master and of men, teaching the truth of the common Fatherhood of God and Brotherhood of Man, deserves the gratitude, the support, and the homage of mankind. The noble, self-effacing, willing ministers of peace and good-will should be classed with the world's heroes. The missionary contribution to the onward and upward march of humanity is beyond all calculation." When a man with a religious nature like this faces death, in the blessed hope of eternal life, it is not surprising that his last words were:—"Good by all, good by. It is God's way. His will be done."

We believe that this deep religious nature of our martyred President is representative of the religious nature of the Republic. The very fact that these dying words have been cabled to every nation is a proof that the people share in the faith that prompted their utterance. We know, also, that there are grievous evils in our great cities; that there are those who have no lofty ideals, but are selfish, seeking mainly for money and the power it gives; that there are corrupt politicians. There are sometimes assassins of the great and good. But none the less do we gratefully and humbly believe that the spirit in which our nation was founded, the spirit in which its Government has been carried on, the controlling spirit of its universal education, and of society, is the Christian spirit, which is so nobly exemplified in the life and death of our martyred President.

A closing thought is this:—A nation of seventy-five millions mourns this tragic death. Yet even this manner of death shall not be without its compensations. True, the hands of misguided and morally insane men have slain three of our noblest Presidents. No nation is absolutely safe from such tragedies. The value we set upon personal liberty in our land and the confidence we feel in man, make assassinations possible anywhere and as easy to effect as hand-shaking. But the blood of these martyrs has brought out all the more impressively and powerfully the exalted character and moral worth of their lives, and has enthroned them forever in the affections of the people. The blood of great men, is, in the Providence of God, one of the most potent agencies for the reformation of society, for the exaltation of the noblest moral motives, and for uniting the hearts and efforts of the best people in the world. Our Christ was the first to clearly enunciate this universal principle—"I, if I be lifted up on the cross will draw all men unto me." It is sacrifice, even if accomplished by wicked and worthless men, it is the sacrifice that is exalted and forever remembered.

It is also a source of great comfort to us to-day to have the sympathy of other nations in this national calamity. Of course, we expect it from the nations to whom we are historically related, but it is an exceptional satisfaction to have this nation of Japan send its Imperial message of condolence, and the various Chambers of Commerce also cable their regrets, on this occasion of mourning. Twice this year, once when the universally beloved Queen Victoria passed away, and now when our lamented President McKinley falls, have these national messages of condolence been sent from the Far East. God grant that the bonds of brotherhood, will that are bringing the whole world and blessed

until justice and righteousness shall be universally exalted, and until there shall be no people nor tribe, no kingdom nor island, that shall not be a part of the kingdom of God.

TELEGRAMS.

(REUTER'S SERVICE TO THE "JAPAN MAIL.")

A BOER DECLARATION.

Shanghai, Sept. 27.

The Boer officials on the Continent declare that the Cape rebels number 15,000 and that Botha's force is 5,000.

INTERNATIONAL ATHLETICS.

The Harvard and Yale athletes have beaten the Oxford and Cambridge team in New York by six events to three.

GERMAN MINES IN SHANTUNG.

Fifty German miners engaged for the German mines in Shantung are to sail for China on November 1st.

THE ASSASSIN'S PUNISHMENT.

The murderer of President McKinley has been sentenced to be electrocuted.

PRESIDENT ROOSEVELT AND THE BOERS.

The *Chronicle's* correspondent at Washington telegraphs that President Roosevelt has determined to maintain absolute neutrality and that he will refuse to receive any Boer mission officially.

THE AMERICA CUP RACES.

Shanghai, Sept. 28.

Yesterday the race for the "America Cup" which was sailed over an outward course of 15 miles and return, was unfinished, the wind having fallen. The *Columbia* rounded the mark half a mile ahead, and finally led by upwards of one mile.

THE BOER WAR.

Yesterday King Edward had a long and serious conversation with the Right Hon. St. J. Brodrick, Secretary of State for War, with reference to the situation in South Africa, and also on matters concerning the recruiting and the Yeomanry.

LORD KITCHENER AND THE WAR.

The *Pall Mall* learns on the best authority, that Lord Kitchener finds his hand tied, and is seriously reconsidering his position. He desires that the rebels shall suffer capital punishment. He also advocates the employment of better seasoned recruits and the establishment of martial law throughout Cape Colony.

NEWS FROM SOUTH AFRICA.

Shanghai, September 29.

The garrisons at the forts of Itala and Prospect, on the Zululand border, have gallantly repulsed an attack by Botha in force, inflicting heavy losses.

THE AMERICA CUP RACES.

Shanghai, Sept. 30.

In the yacht race for the America Cup, with a beat of 15 miles out and home, the *Columbia* crossed the line 37 seconds a head of *Shamrock II.*, thus winning even without her time allowance.

TROUBLE IN THE PERSIAN GULF.

Shanghai, Oct. 1.

A British Naval Force is concentrating in the Persian Gulf.

Turkey is reported to be massing troops at Bassale (? Bassorah) with the supposed intention of seizing Koweit (Koweit).

[Note.—Koweit is situated at the head of the Persian Gulf on the west coast. It is in Asiatic Turkey.—Ed. J.M.]

SOUTH AFRICAN NEWS.

Groblaar, with 1,500 men, made an

attack upon Fort Prospect during the whole of the 26th of September. He reattacked the place on the 27th. The Boers admit that 19 were killed in the attack.

Later.

Concerning the attack upon Fort Itala, the casualties among the defenders were, Kane, of the South Lancashires, and 11 men killed; 5 officers, including Commandant Chapman, of the Dublins, and 38 men wounded; and 63 missing, whereof many are known to have been killed or wounded; 153 horses and 82 mules killed.

THE FIGHT AT ITALA.

Shanghai, Oct. 2.

Reuter's agent telegraphing from Eshowe says that the Boers left 305 on the field at Itala Fort.

Reuter's correspondent telegraphing from Ladysmith, says that 200 of the enemy were killed at Itala, and that over 300 wounded were captured.

THE STRAITS SETTLEMENTS.

Later.

Sir Frank Swettenham has been gazetted Governor of the Straits Settlements.

THE ITALA CASUALTIES.

Commandants Potgeiter, Schalk, and Opperman were killed at Itala.

Delarey and Hemp attacked General Kekewich in the camp to the westward of Magatopan (?) in force on the 30th but were repulsed.

THE AMERICA CUP RACES.

Yesterday's yacht race in the America Cup contest was unfinished owing to there being no wind.

SOUTH AFRICA.

Lord Kitchener reports that the Boers were removing their dead and wounded during the 26th and 27th ult., round Itala Fort, and that the fighting lasted 19 hours.

SOUTH AFRICA.

Shanghai, October 3.

A strong force of Boers surprised a Volunteer post at Talana Hill on the 26th September.

JOCKEY WARNED OFF NEW-MARKET HEATH.

The license of Lester Reiff, the rider of the winner of this year's Derby, has been withdrawn. He has been warned off the New-market course.

PRINCE CHUN.

Prince Chun has sailed from Genoa for home.

FIGHTING IN SOUTH AFRICA.

Lord Kitchener reports that a night attack was made on General Kekewich's camp by the enemy who were 1,000 strong. They were repulsed with considerable loss. Two officers and 31 men were killed; 14 officers and 114 men wounded. General Kekewich was slightly wounded.

(RECEIVED AT THE LEGATION OF FRANCE.) LEGION OF HONOUR PROMOTION.

Saigon, Sept. 27.

General Florentin has just been made Grand Chancellor of the Legion of Honour.

GENERAL VOYRON'S RECEPTION.

General Voyron has arrived at Marseilles, where a solemn reception was given him. M. de Lanessan, Minister of Marine, the civil and military authorities and the members of the municipality, proceeded to the quay to receive him. In his answer to M. de Lanessan, General Voyron attributed all the praises of which he was the

first in China, and he strongly praised M. Doumer. The crowd, which was enormous, cheered the General. The town was decorated with flags.

THE LATE PRINCE HENRI.

Saigon, Sept. 29.
The late Prince Henri of Orleans has been buried at Dreux.

PLAGUE AT NAPLES.

Some quarters of Naples have been attacked by plague.

TURKEY AND FRANCE.

A speedy settlement of the difficulties between France and Italy is expected and this will be followed by the resumption of diplomatic relations.

THE PERSIAN GULF.

Saigon, Oct. 2.
The English are sending ships into the Persian Gulf. They desire to occupy Rovret (?). The Turks are massing troops to prevent the occupation.

(RECEIVED IN TOKYO.)

ARMY STATISTICS.

The total number of men in hospital in China belonging to the Fifth Division and to the other troops sent to Chili in June, was 69 on the 31st of August. This extraordinarily favourable state of affairs is not paralleled by the record of any other forces. The detailed numbers were 13 in Tientsin, in Peking 29, and in other hospitals 25.

The sufferers from contagious diseases—typhoid and dysentery—were only 13. The ratio of sick for Japanese troops in Japan during August averages 18 per cent., whereas the ratio in Chili was only 16. Even when the invalids in the Hiroshima Hospital are added the per-centage does not exceed 25.

KOREAN NEWS.

Various alarmist rumours have been circulated with reference to the doings of an United States citizen, Mr. W. H. Crumb, who is now travelling in Korea with a companion and several Korean attendants. His party has 10 horses carrying provisions and they never enter an inn but always camp out in tents. These exceptional proceedings have led to the circulation of statements that the party is endeavouring to stir up sedition, but its real purpose seems to be prospecting for mines.

(RECEIVED AT THE NAVAL DEPARTMENT.)

The British ship *Hipsan* (?), which left Yokohama for Kobe on the 23rd of September, ran on a rock the afternoon of the same day near the second fort at the entrance of Tokyo Bay. A steam-launch was immediately sent from Yokosuka to communicate with the Master, who expressed great thankfulness and begged for assistance. Accordingly when the tide was making three vessels were despatched from Yokosuka. At the request of the master of the ship, the Japanese officer took charge, and the vessel was pulled off at midnight. She had not suffered any damage, and she proceeded on her voyage the next morning.

(FROM THE "N.-C. DAILY NEWS.")

THE H. & S. BANK ROBBERY.

Hongkong, Sept. 26.
The Bank note robbery trial at Singapore lasted eleven days. Two of the accused were sentenced to seven years, and four were acquitted. It was a memorable trial, the Court being packed.

Singapore, Sept. 26.

In the Hongkong Bank note robbery case six of the accused were found guilty on all charges.

Abdul Kader and Nuia Mahomed were sentenced to seven years' imprisonment; Hajitydin to four years; Singaram, Mutukumaren and Anamoonipilly to three years. Haila, Kupensis, Noor Mahomed, and Abubakar were acquitted. There was great excitement in the Court when the verdict was known. The acquittal of the last three accused was by a majority of six to one.

(FROM THE "OSTASIATISCHE LLOYD.")
NEWS FROM THE NORTH.

Peking, Sept. 23.

The Italian Minister, Marquis Salvago Raggi, left Peking to-day for Europe via Kalgan and Kiachta.

Captain Truppel has arrived here in order to present himself to the German Minister, Baron von Mumm, after his appointment as Governor of Kiaochow. He will remain here several days visiting the places of interest about Peking.

NEWS FROM EUROPE.

Berlin, Sept. 23.

The Tsar and the Tsarina have again arrived at Kiel.

The *Reichsanzeiger* to-night publishes the notification conferring the Grand Cross of the Red-Eagle upon Prince Chun.

A new strike of the dock-labourers has broken out at San Francisco.

The special auditing committee appointed to investigate the state of the "Pommersche Hypothekbank" at Berlin reports a loss of 20,428,745 Marks.

PRINCE CHUN.

Berlin, Sept. 26.

Prince Chun has visited during the last few days several large mines in Germany. He will arrive on the 29th inst. at Genoa, from whence he will sail for China.

PLAGUE AT NAPLES.

Twelve cases of plague have been reported at Naples.

GERMAN TROOPS FROM CHINA.

The German troops returning from China via Austria, have met with an enthusiastic reception both at Trieste and Vienna.

GENERAL VOYRON.

General Voyron has arrived in France.

ENGLISH NOTES.

The Corporation of Lincoln recently invited tenders for a boring 2,176ft. deep, lined with 30in. tubes for a depth of 400ft., and terminating not less than 12in. diameter. Seven tenders were received for the work, and the Corporation, on the advice of the engineer, have accepted that of a Salford firm, amounting to £14,605. The time allowed for the completion of the work is four years, but it is anticipated that a shorter period will suffice.

The death of the Empress Frederick has caused a very large amount of leasehold property in England to fall into the hands of the freeholders. The life of the Empress, as Princess Royal, was put into a great number of leases during the forties, as was then a common practice, and in most of these she was the last survivor of the original three lives. It is understood that the leases of very considerable properties belonging to St. Cross Hospital, at Winchester, have thus reverted to the trustees of that charity, the income of which will therefore be much augmented.

The Great Northern Railway Company are the owners of an express engine which is believed to own the world's record for the number of miles run. This is No. 1, stationed at Peterborough and employed daily on express trains between Peterborough and London, or Peterborough and Doncaster. The engine, which belongs to the single driving wheel type, was built at Doncaster in 1870, being the first to be fitted with outside cylinders. From careful calculations made the engine has just recently completed its four millionth mile. The engine still runs on its original wheels and is capable of holding its own against the newest con-

structed. In its long life No. 1 has not met with an accident of any serious nature.

Dr. Monson, the Dairy Commissioner for the State of Colorado, has volunteered to subject himself to the infection of animal tuberculosis with a view to settling the controversy over Dr. Koch's theory recently put forth in London, that animal tuberculosis cannot be communicated to human beings. Dr. Monson makes as a condition of his experiment that a satisfactory annuity be provided for his family in the event of the infection being fatal.

While trolling on Loch Garve last month (says a correspondent of the *Scotsman*) I was fortunate enough to hook and land a 10lb. pike. As the abdominal development seemed to me to be very abnormal, I had the fish opened, and found inside a large rat, measuring about 6in. This had been swallowed absolutely intact. The head and neck were slightly lacerated, evidently done in order to kill it. I have from time to time heard of, and seen, tackle taken out of pike, but nothing of such a large order as a rat.

In pursuance of the provisions of the Finance Act, the Institute of London Underwriters has now formulated the following continuation clause:—"Should the vessel at the expiration of this policy be at sea, or in distress, or at a port of refuge or of call, she shall, provided that previous notice be given to the underwriters, be held covered, at a pro-rata monthly premium, to her port of destination." It will be observed that whereas previously the continuation clause only provided for a vessel at sea on the expiration of the policy, it now provides for vessels in other positions which, although perhaps within the spirit of the old clause, were not within its letter.

BANK OF JAPAN.

BANKING ACCOUNT.

On Saturday, Sept. 28th:—

COTTON YARN.

Nos. 16/24, Singles ... V. 135.00 to 145.00
Nos. 28/32, Singles ... 155.00 to 165.00
Nos. 38/42, Singles ... Nominal
Nos. 32, Doubles ... Nominal
Nos. 42, Doubles ... Nominal
Nos. 2/60, Plain ... 160.00 to 170.00
Nos. 2/80, Plain ... Nominal
Nos. 2/100, Plain ... Nominal
Nos. 2/60, Gassed ... 240.00 to 260.00
Nos. 2/80, Gassed ... 290.00 to 320.00
Nos. 2/100, Gassed ... 420.00 to 440.00

RAW COTTONS.

American Middling ... 27.50 to 28.00
Indian Broach ... 24.00 to 25.00
Chinese ... 24.50

METALS.

A moderate business continues.

Round and square 1/2 inch and upward ... V. 4.30 to 4.60
Iron Plates, assorted ... 4.80 to 5.20
Sheet Iron ... 5.30 to 6.70
Galvanised iron sheets ... 10.25 to 11.00
Wire Nails, assorted ... 6.70 to 7.00
Tin Plates, per box ... 7.80 to 8.30
Pig Iron, No. 3 ... 2.00 to 2.15
Hoop Iron (5/8 to 1 1/2 inch) ... 5.50 to 6.00

KEROSENE.

There is an improved demand at unchanged prices. The increased duty came into effect on Oct. 1st with, in at least one case, considerable inconvenience and loss to the importer in consequence of a belated cargo. From July 1st to Sept. 30th imports were: American, 621,450 cases; Russian, 200,720 cases; Borneo, 233,152 cases.

American ... \$2.79
Russian ... 2.50
Langkat ... 2.45

SUGAR.

There is a good demand for Hongkong Refined, and small business has been done at higher rates. No further imports can arrive under the duty and the course of trade may reasonably be expected to be more regular.

Brown Takao ... V. 5.90 to 6.55
Brown Manila ... 6.35 to 7.30
Brown Daitong ... 4.80 to 5.00
Brown Canton ... 5.00 to 7.40
White Java and Penang ... 7.60 to 9.10
White Refined ... 9.50 to 10.95

EXPORTS.

RAW SILK.

There has been a brisk demand and prices have advanced and close firm. Total settlements from July 1st to 28th Sept. last (including 4,760 bales shipped direct by Japanese) were 20,500 piculs against 12,623 for the corresponding period last season. Stocks at Sept. 30th were 10,000 piculs against 14,900 piculs last year.

CUTICURA

REMEDIES

THE SET

Consisting of CUTICURA SOAP, to cleanse the skin, CUTICURA Ointment, to heal the skin, and CUTICURA RESOLVENT, to cool the blood, is often sufficient to cure the most torturing, disfiguring skin, scalp, and blood humours, rashes, itchings, and irritations, with loss of hair, when the best physicians, and all other remedies fail.

Millions of Women Use Cuticura Soap

Exclusively for preserving, purifying, and beautifying the skin, for cleansing the scalp of crusts, scales, and dandruff, and the stopping of falling hair, for softening, whitening, and soothing red, rough, and sore hands, in the form of baths for annoying irritations, inflammations, and chaffs, or too free or offensive perspiration, in the form of washes for ulcerative weaknesses, and for many sanative antiseptic purposes which readily suggest themselves to women, and especially mothers, and for all the purposes of the toilet, bath, and nursery. No amount of persuasion can induce those who have once used it to use any other, especially for preserving and purifying the skin, scalp, and hair of infants and children. CUTICURA SOAP combines delicate emollient properties derived from CUTICULA, the great skin cure, with the purest of cleansing ingredients and the most refreshing of flower odours. No other medicated soap ever compounded is to be compared with it for preserving, purifying, and beautifying the skin, scalp, hair, and hands. No other foreign or domestic toilet soap, however expensive, is to be compared with it for all the purposes of the toilet, bath, and nursery. Thus it combines in ONE SOAP at ONE PRICE, the BEST skin and complexion soap, the most

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. What is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, OCTOBER 12TH, 1901.

BIRTH.

At Tokyo, on the 6th inst., the wife of EDWIN DUN, of a Son.

DEATH.

At No. 57, Yamashita-cho, on Wednesday, the 9th inst., M. M. KUHN, aged 69 years.

SUMMARY OF NEWS.

THIRTY Government bills will be brought before the Diet during the coming session.

MR. KAYETSU NOBUYUKI, ex-M.P., of Kumamoto Prefecture, died on the 2nd inst.

THE damage caused by the last inundations in Hokkaido are estimated at some 140,000 yen.

VISCOUNT KATSURA, the Prime Minister, visited Hayama on the morning of the 6th of October.

THE Governor of Kanagawa has issued a notification prohibiting fishing in Yokosuka harbour.

SOME 122,790 salted salmon were imported into Yokohama on the 5th of Oct. from Saghalien.

THE opening of the Maidzumi Admiralty Office will be held on Nov. 3rd, the Emperor's Birthday.

MR. HAYAKAWA SENKICHI is to take Mr. Na

Mr. NA TUNG and suite paid a visit to the Osaka Mint on the 5th of Oct. and then proceeded to Kobe.

JAPANESE emigrants to Hawaii for the future must only take passage by regularly recognised mail steamers.

MR. YAMADA TAKESHI, M.P. for Tochigi Prefecture, died at the Red Cross Hospital on the night of the 6th inst.

MR. CHINDA, Minister to Russia, is said to have started for home on Oct. 5th, having been recalled by the Foreign Office.

A GREAT archery meeting will be held in the grounds of the Hachiman shrine at Kanakura on Sunday, the 12th inst.

TWO hundred Chinese residents gave an entertainment to the new Chinese Minister at Kobe on the evening of the 5th inst.

GENERAL KODAMA, Governor-General of Formosa, is to start for Formosa in the *Tainan Maru* from Kobe on Oct. 10th.

THE manoeuvres which are to take place in the north-eastern provinces in November will be under the command of the Emperor in person.

THE new building for a Middle School at Toyoura, Yamaguchi Prefecture, was destroyed by the storm on the morning of the 8th inst.

VISCOUNT MATSUDAIRA NORIYORI, who has been travelling for some time in Europe, arrived at Shimbashi by the 9.9 a.m. train on Oct. 3rd.

COUNT INOUE proceeded to Hakodate on the 6th of Oct. to inspect some reclamation work there. He will stay some time in the North.

HIRANUMA station, which will for the future be the place of departure for Yokohama passengers to Kobe, was opened for traffic on the 10th Oct.

AN explosion of fire-damp occurred in No. 2nd Komatsu coal mine, at Tagawa-gori, Fukuoka Prefecture, on the 3rd inst. Two men were badly injured.

MR. NA TUNG, the Chinese Envoy of Apology, received for travelling expenses 30,000 taels. The sum was remitted through the Mitsui Bussan Kwaisha.

THE seven years' official term of Marquis Kuroda, Vice-President of the House of Lords, having expired on Oct. 6th, he has been re-appointed to the post.

CAPTAIN SPENCER V. V. de HORSEY, so well-known on the China Station as a lieutenant and lieutenant-commander, is appointed to command H.M.S. *Iphigenia*.

TWELVE miles of railway between Kumagaya and Yorii, Musashi Province, on the Jobu railway was recently finished and officially opened to traffic on the 7th of Oct.

AN explosion of fire-damp occurred in a coal mine at Komatsu, Yugeta-mura, Tagawa-gori, Fukuoka Prefecture, on the 9th inst. Two coolies were badly injured.

PRINCESS KITASHIRAKAWA and suite will leave Tokyo by train on the morning of the 20th inst. for Yokohama and thence proceed on board the war-vessel *Asama* for Formosa.

DURING the heavy rain on the 28th and 30th ult. several rivers overflowed their banks in Miyagi Prefecture and ten houses were washed away in Oginohama; ten landslips occurred, one

away, and several houses damaged in Ayukawa-mura.

THE Tokyo Coast Defence Artillery Corps will engage in manoeuvres in the vicinity of Takamaru, Miuragori, Kanagawa Prefecture, during three days beginning on the 9th of Oct.

JAPANESE papers report that the Tokyo banks are very chary these days in making advances, and so no inconsiderable amount of capital is lying idle, to the detriment of trade generally.

THREE young women of Nagasaki were arrested by the Isezaki-cho police on the 2nd inst. at Yokohama railway station charged with attempting to smuggle out of the country to Penang.

A MAN living at Iizakamachi, Kahogori, Fukuoka Prefecture, murdered his mother, his wife, and badly injured another man on the night of the 7th inst. He afterwards committed suicide.

MR. KOIKE, former secretary to the Foreign Minister, is to be succeeded by Mr. Honda Kumataro, attaché in the Japanese Legation in Belgium, who has consequently been ordered home by the Government.

THE foreign department of the Yokohama Post and Telegraph Office was transferred to the new premises, in Yamashitacho, on the 6th of Oct. Postal money orders will be dealt with as before at the principal office.

THE number of law cases brought in the courts of Japan during August of this year stood at 66,461 civil, 942 more than the previous year; and 24,981 penal, showing an increase of 1,179 as compared with the previous year.

THE flagship *Hatsuse*, with Vice-Admiral Tsunoda, the newly appointed Commander-in-Chief of the Standing Squadron on board, has left Yokosuka with other men-of-war, on a cruise to Nagasaki, Saseho, and Kagoshima.

THE funeral of the famous actor Bando Shucho, took place in the Buddhist temple, Ryu Kokuji, at Kita Inari-machi, Shitaya, Tokyo, on the morning of the 4th inst. Over 500 actors and others were present. Danjuro and Kikugoro sent representatives.

AN extensive fire occurred in the town office at Iizodo-machi, Nishikanbara-gori, Niigata Prefecture, shortly before twelve o'clock on the night of the 5th inst. It was extinguished at five o'clock the following morning. Eight houses were destroyed.

THE Osaka Shosen Kaisha steamer *Tenryukawa Maru* lost her propeller early on the morning of the 3rd inst. in Takamatsu bay. The company on receiving information at once sent the *Buko Maru* in her place. The *Tenryukawa Maru* returned to Osaka the following night for repairs.

TO the surprise of everybody, Mr. Otani, President of the Yokohama Chamber of Commerce, has presented his resignation. In answer to some friends who visited him at his villa to ascertain his motives, Mr. Otani said that his resignation had no political significance, but was purely personal.

MR. EGI TASUKU, a Councillor of the Kanagawa Prefectural Government, and Mr. Minoda Chozaburo, of Yokohama, have been decorated with the Fourth Order of the Red Eagle, and Mr. Takagi Kaku, Assistant Municipal Official, and Mr. Kato Naoyuki, a Technical Official, with the Fourth Order of the Crown, by the German Emperor, as reward for their services in connection with the building of the German

CHINESE AFFAIRS.

Saturday, Oct. 5.

The delay in the setting out of the Chinese court for Peking is now said to be reduced to two or three days. Everything is ready for the return but owing to indisposition on the part of the Empress Dowager there is to be a brief interval. Such is the latest intelligence. The Court will also make a sojourn of 10 days *en route*.

A rising of the Triad Society is reported from the neighbourhood of Canton. The rioters burned a church and the missionaries escaped to Hongkong *via* Swatow.

The Chinese Government has appointed Mr. Sheng to represent it in the negotiations for the revision of the commercial treaties. He will be assisted by Messrs. A. E. Hippisley and F. E. Taylor, of the Imperial Maritime Customs. Viceroy Li, Chang, Liu and Tau will form a board of reference. Shanghai will be the scene of the negotiations and they will be conducted by the Powers independently.

The *Fiji Shimpo* publishes a telegram to the effect that Count Lamsdorff recently informed a certain Foreign Representative that the Manchurian question is between China and Russia alone, and that no other State will be allowed to interfere. That would certainly be a very convenient arrangement for Russia, but events have shown that the other Powers are not inclined to sit with folded hands.

It is stated that the Japanese Government will reduce its troops in Chili to the lowest possible number compatible with guarding the positions assigned to them, and that Major-General Yamane, now in command, will be relieved by Colonel Akiyama of the Cavalry. Japan's proximity to the scene renders this course feasible, and its advisability from every point of view can not be questioned.

Japanese newspapers declare that keen satisfaction is felt by the Japanese residents of Shanghai in consequence of the Government's resolve to station a force in that settlement. It is thought that when England, Germany, and France are strongly represented in a military sense, the balance of power in China would be palpably disturbed unless Japan also had a place in the arena. The sentiments of the Japanese in this matter can be easily appreciated. What does China think of it all, we wonder. The Yangtze Viceroy might justly object that after they had completely succeeded in preserving order throughout the Boxer crisis, it is but a poor reward that a big garrison consisting of the troops of four States should be planted in their midst. China's independence is becoming more and more illusory. The seizure of Kiaochow was the beginning of the end.

Monday, Oct. 7.

It appears that the *China Gazette* is responsible for the story that Russia is seeking to purchase from China—not to sell to her, as was stated in our last issue—three cruisers and three torpedo-destroyers now under construction in England, the cost price of the vessels being 30 million *yen* and the sum offered by Russia 10 millions. The *China Gazette* wants to know why Japan does not step in to avail herself of the opportunity to get a bargain. But of course it must be obvious that the tale is a canard, in the main at any rate. We do not know of any three second-class crui-

sers and three torpedo-destroyers that would cost three millions sterling, and supposing that China has really ordered such vessels and is unable to take delivery, how would the financial situation be eased for her by selling the ships for ten million *yen* and remaining herself liable for the remaining twenty million without anything to show for the money.

Major-General Song, who has come to Japan to witness the autumn manoeuvres, has a retinue of over thirty persons. He commands the Chinese forces in Fuhkien, which, he says, consist of 13 battalions, each 140 men strong; namely, 10 battalions of infantry, 2 of artillery and one of engineers. He also speaks of another force of 18 battalions, mustering in all 3,000 men. France, he thinks, used to have her eyes fixed on Fuhkien, but has turned her attention further south since America took the Philippines. At Amoy the American Consul is always opposed to his French colleague, and the Japanese Consul is opposed to the American. General Song does not offer any explanation of this latter relation.

The Tientsin correspondent of the *Asahi* telegraphs that on the 7th instant there is to be a meeting of the Foreign Representatives and the Chinese Plenipotentiaries for the purpose of discussing the Tientsin and the Manchurian questions. Russia, however, is not at all likely to bring the Manchurian problem before any such tribunal for solution. She will simply "sit tight" until the very unlikely conjuncture of an united protest from all the Powers. Assured of France's cooperation and Germany's tacit acquiescence, she can afford to await the trend of events with quiet confidence.

In the *Yomiuri Shimbun* we find a leading article the gist of which is that so long as the Manchurian question remains unsettled Japan can not sell her bonds abroad at a profitable figure or obtain foreign capital on reasonable terms, the belief in the West being that the Manchurian problem will involve her in a quarrel with Russia. Our contemporary is persuaded that the matter could be disposed of in such a manner as not to injure the interests of either Japan or Russia, and it urges that no time should be lost in effecting a settlement.

The great activity shown by France in Southern China is about to take the form of laying lines of telegraph from Kwan-chow Bay to Amoy on the one hand and to Canton on the other. Will France make a success we wonder of this new outburst of colonizing enthusiasm? It does not appear that French citizens are emigrating to China for the purpose of utilizing the opportunities provided for them by their Government.

Tuesday, Oct. 8.

The Viceroy telegraphs from Canton that the place of the recently reported outrage was Hin-ming and that the building destroyed was a German church. The Triads subsequently attacked the town and killed about a hundred of the inhabitants. Troops have been sent against them, and they are under assault from two directions. It seems that there is never to be an end of these outrages in China.

News from China says that Mr. Sheng has been appointed Minister of Customs, and Viceroy Chang and Liu have been nominated chief councillors. With what reform these changes are connected we do not know. Previous intelligence showed that Sheng was to have charge of the negotiations relating

to the new commercial treaty, but the names of the offices now mentioned appear to indicate quite different duties.

Wednesday, Oct. 9.

The Chinese court did actually leave Hsian on the 6th instant "as advertised." There is to be a sojourn of some days at Kai-fong. Perhaps it may be extended into several months, but that is not likely. We can only repeat that the Court deserves great credit. It is giving a signal proof of its confidence in the *bona fides* of the Powers.

Concerning the departure of the Court the *Asahi* has a telegram which says that the Emperor and Empress Mother set out in the forenoon, and were followed in the afternoon by the Empress Dowager, the Prince Imperial, and the Ministers of State. The Imperial Party is travelling in great state, large sums being lavished *en route*. Apparently that means that a triumphal character is being given to the Court's progress. Such, at least, is the light in which a great display will naturally be interpreted by the Chinese under the circumstances. On the other hand, we can easily conceive that Their Majesties are unwilling to create the impression of returning to their capital in a manner suggesting humiliation or defeat.

It appears that Mr. Na Tung was not able to land at Nagasaki owing to the very stormy weather that prevailed at the time of his arrival, and that he was to proceed direct from that place to Tientsin so soon as the gale moderated. He says that he has been ordered to go to Peking, there to await the return of the Court, and he adds that he will never forget the kindness of the reception given to him in Japan.

It is alleged that Governor Yuan Shih-kai has been nominated Viceroy of Chili, though the appointment has not yet been published. Li Hung-chang at present holds the Viceroyalty. It may be presumed, therefore, that he has asked to be relieved on the ground of broken health.

Thursday, Oct. 10.

Governor Yuan is at last setting out for Peking. It is confidently affirmed that he is to be the new Viceroy of Chili but that his appointment will not be announced until after the Court reaches Peking. He is certainly the man of the hour, for not merely as Viceroy of the Metropolitan province but also as commander-in-chief of the troops that guard the Court and the capital his power will be very great. Li Hung-chang held just such a position fifteen years ago, both men being similarly circumstanced even in the matter of having enemies at Court. Telegrams say that Prince Ching and Viceroy Li have wired a message of hearty congratulation to the Emperor and Empress Dowager in connexion with the return to Peking, and that they represent all Chinese subjects as anxious to see the Court in its old place; also that Her Majesty's birthday is to be celebrated after her return. But there must be a large section of officialdom to whom this news is very unwelcome. Wang Wen-shiao, Prince Twan, General Tung and many others have disappeared temporarily from the stage, but are behind the scenes all the while, ready to emerge at any moment.

Rumour now finds material at Kai-fong. That is the new point of uncertainty. It is alleged that their Majesties propose to spend the winter there and that Prince Ching and Viceroy Chang are proceeding thither to urge the immediate continuation

of the journey to the capital. Viceroy Li, in consideration of his enfeebled condition, has been excused from attending at Kai-fong.

It is stated that Russia has agreed to surrender the Newchwang Railway to China. Her tenure of this line has been a subject of just remonstrance from the British Government. The line is virtually the property of British capitalists and no valid or even plausible reason could be alleged for its seizure by Russia. The Blue Book recently issued in London stops short of reference to any definite arrangement of this matter, and *The Times*, commenting on this section of the Blue Book, says:—

It brings the history of the portion of that line within the Great Wall down to Count von Waldersee's official intimation to General Gaselee that this section would be handed over by the Russians to the Germans and by the Germans to us, on January 13. This arrangement, we know, was carried out, although, by a characteristic omission, the Foreign Office have forgotten to say so. But the correspondence closes without recording any similar settlement about the portion of the line beyond the Great Wall, the portion, namely, which lies between Shan-kai-kwan and Niu-chwang. Lord Lansdowne stated the views of the Government on this subject with clearness, firmness, and dignity so far back as last November, but, although the Bluebook comes down to May, it leaves that section, with much of the rolling stock, still in possession of the Russians. The Russian military authorities, who, as Lord Salisbury observes, seem habitually to have paid but little attention to the avowed policy of their Government, boldly asserted that they held the whole line to Niu-chwang "by right of conquest"—an assertion, as Lord Lansdowne notes, in flagrant contradiction with the repeated assurances of the St. Petersburg Foreign Office that Russia would refrain from territorial encroachments on China. Count Lamsdorff disclaimed any intention of permanently retaining the line, but he refused to restore the section beyond the Wall to its "rightful owners," as Lord Lansdowne calls them, until Russia had been repaid all her expenditure for repairing and working the entire line from Peking to Niu-chwang. This refusal, the Foreign Secretary very justly observes, might easily involve an almost indefinite postponement of that restoration. It has in fact involved such a postponement to the present time. This section, as Lord Lansdowne remarks, was constructed with British capital, and its earnings are included in the security of the British bondholders. The interests of the bondholders have been already seriously injured, that they should be still further injured by the retention in Russian hands of this part of their security. The subject is, no doubt, not free from difficulties, but the country will rely upon the union of decision and patience shown by Lord Lansdowne to see that this acknowledged injustice is redressed within a reasonable time.

The attitude of the Russian Foreign Office throughout the negotiations is not encouraging to the Englishmen who cherish hopes that we may one day effect a comprehensive settlement with our great Asiatic neighbour, satisfactory both to her and to us. Sir Charles Scott's despatches, it is true, abound in testimony to the amiable and conciliatory tone of Count Lamsdorff and to the very friendly character of his conversations. But, notwithstanding their friendliness, they are not calculated to instil into the British Government and the British people that confidence in Russian good faith which alone could form the foundation of a permanent understanding between the two States. Satisfactory assurances Sir Charles Scott obtained for the asking, but as Lord Salisbury at an early stage reminded the British representative in St. Petersburg, the conduct and language of Russian officers in the Far East and the way in which the Russian military authorities dealt with the property of British subjects were quite incompatible with these suave statements, and "caused much perplexity to Her Majesty's Government." The tactics adopted were rudimentary in the extreme. Sometimes, as in the cases of the burglary of the railway company's safes when in Russian custody and of the seizure of a quantity of railway material owned by a British firm, our complaints were ignored. In other instances, as in regard to the painting of the locomotives on the railway in the distinctive colours used on the Siberian line, our statements were boldly denied. The fact of the burglary by skilled operators, while the safes were under the charge of the Russians, and before the fire which destroyed the railway offices, is proved by the statement of Mr. Kinder, the chief engineer, and by Mr. Bruce, the chief accountant of the company. The loss is serious, as the safes contained not only money and private securities, but some of the title-deeds of the

blocks of land seized by the Russians in Tien-tsin. Lord Salisbury instructed Mr. Hardinge in October that the Russian authorities must be held responsible for that loss, but the compensation for it does not seem to have been yet made. When the question of the repainting of the rolling stock was pressed, Count Lamsdorff calmly remarked that the story was "evidently an invention," as he was informed that the colour had not been changed. Lord Salisbury did not accept this "decisive" refutation, as the Russian Minister termed it, and he sent Mr. Hardinge a later telegram from Shanghai fully confirming the fact. Another favourite device of the Russian Foreign Office is to shuffle off its responsibilities on to the War Office or to the Russian authorities in China. Occasional misunderstandings between the servants of an autocratic Government are intelligible, but when, like the misunderstandings between Mr. Spenslow and Mr. Jorkins, they invariably enure to the profit of the firm, they naturally excite suspicion in the most ingenious of diplomatists.

The pretext on which the Russians seized the Tien-tsin-Peking portion of the line is also characteristic. A majority of the Admirals had decided, against the votes of their British and American colleagues, that the Tongku-Tientsin section should be temporarily handed over to them. On the strength of this decision they proceeded to seize the other section, which had not been assigned to them at all, and they were supported as to part of that section by Count von Waldersee, notwithstanding the protest of General Gaselee, who was again supported by General Yamaguchi, the Japanese General, and General Chaffee, the American. The Russian General even lodged a protest against the action of the British and Japanese in repairing part of the road which had been built by British capital. The Russians gladly recognized the authority of the German Commander-in-Chief when it was exercised in their favour, as on this and other occasions, of which one deserves mention. Only a few weeks after the signature of the Anglo-German Agreement that officer took it upon himself to enter into an arrangement with the engineer of the Peking-Hankau line, to which the Russian, but not the English, General was a party. That arrangement, as Lord Lansdowne observes in a despatch to Sir Frank Lascelles, was very imperfectly described in the communication made by the German Foreign Office to our Ambassador. It closely affected the interests of the British bondholders, and the Foreign Secretary instructed His Excellency to point out to the German Government that, in the view of Ministers, it should not have been made without consultation with the representatives of the bondholders or previous communication with Her Majesty's Government. But when, on the other hand, as in the Tientsin incident, Count von Waldersee intervened in a sense disagreeable to Russia, she had no hesitation in flinging over his authority as Commander-in-Chief. Count Lamsdorff explained to Sir Charles Scott that the authority of the German Field Marshal "did not extend to the small Russian detachments left in Pechili, but only to the troops actually operating in that province." "When all else fails, the Russians have recourse to a general explanation. That which they issued in the present controversy caused His Majesty's Government to record their regret at the publication of a document so inaccurate in detail and so misleading in its general tendency." Nobody who takes the trouble to peruse it, with Lord Lansdowne's comments, will feel surprise that it had this effect.

A telegram to the *Jiji Shimpō* says that Russia is working for a special settlement in Shanghai. One does not see clearly who would live there, but at any rate the speculation might be profitable. Of course no Power is taking advantage of the present situation to acquire territorial advantages in China. All are in just such an excellently virtuous mood as that of Mr. Pecksniff when Tigg Montague tempted him in the Dragon. Settlements are not territorial acquisitions in the sense usually attached to the term. They are only landed property obtained for commercial purposes and forming the basis of many claims in the future. They never revert to their original owner and they may be extended though they are never contracted. But they have nothing to do with aggression, and really Russia must be beginning to feel a little out of it when she sees what a fine figure France and Germany are cutting in Shanghai.

KOREA.

Saturday, Oct. 5.

The Korean Customs have engaged three Japanese graduates of the High Commercial School to serve in the capacity of clerks. This idea is said to have originated with Mr. McLeavy Brown but it is probable that Mr. Gubbins had much to say to it.

Monday, Oct. 7.

A telegram from Sōul says that the Wolmi-Island complication has been settled, the Korean Government having paid bargain money on account of the repurchase of the Island. Wolmi was bought, some two years ago, by a Japanese subject, who, failing to obtain possession of his property or to arrive at any practical understanding with the Korean Government which had undertaken to buy back the Island, recently had recourse to the device of expelling the stubborn tenants. These latter appealed to Sōul, and the upshot of the trouble is that the Korean Authorities have handed over bargain money and undertaken to complete the repurchase in due time.

Tokyo newspapers publish a statement to the effect that Russia has found a new means of opposing obstacles to the progress of the Sōul-Fusan Railway. In the original charter it is provided that the shares of the line may not be sold to any persons except subjects of Korea and Japan or the Governments of the two empires. That restriction was inserted in view of the projectors' idea that the best plan would be to make very small calls on the shareholders and raise the bulk of the necessary funds by means of debentures. Subsequently, however, it was deemed more advantageous to sell the shares to foreigners, and application was made to the Korean Government to have the charter altered in that sense. Russia, however, apprehending that the only foreign shareholders would be British, and that a community of material interests would thus be created in Korea between England and Japan, brought pressure to bear in Sōul against the change desired by Japan, and the result is that the Korean Government has not yet made any answer to the directors' request. If this story be true, Russia's obstructiveness is not particularly astute, for it is evident that the Korean Government can not be held to an internationally illiberal policy merely for the sake of Russian convenience.

Thursday, Oct. 10.

Rumours so persistent as those recently circulated about Russian activity in Korea can not be altogether without foundation. The latest of them is that she is pressing the Korean Government to construct a line of telegraph between Kyōng-sōng and the Tūmēn River, and that she threatens to build it herself unless Korea does so speedily. Speaking generally, there is no plausible reason why Russia should make herself conspicuous in promoting railway or telegraph construction in Korea. Her commercial interests there are scarcely worth considering. She must be prepared, therefore, and doubtless is prepared, to find that a sinister significance attaches to her doings. But if she is justified in agitating for any telegraph, it certainly is for a telegraph to the Tūmēn, where her own subjects and the Koreans come into direct contact, and where incidents of cardinal importance may occur at any moment. Korea is gradually going the way of China. She appears to think that a State has the right of option, now-a-

itself with the paraphernalia of civilization. An Occidental State may have that option but assuredly an Oriental State has not. An Oriental State has got to hustle along, the alternative being to "march to its own funeral."

THE PROGRESSISTS AND THE CABINET.

There have been rumours lately of an alliance between the present Cabinet and the Progressists. Rumours of unions or disruptions have constantly floated in the political atmosphere for the past half dozen years, and sober-minded people have learned to pay little attention to them. With regard to this last tale the *Fiji Shimpō* quotes, without endorsing, an explanation given by an anonymous politician. He says that the rumour probably had its origin in a meeting between Mr. Yuan of the Russo-Chinese Bank, and Mr. Inugai Ki, who, after Count Okuma, is the most prominent figure in the Progressist Party. They happened to come together at the residence of Marquis Ito and on their way back conversed about the Chinese problem, Mr. Yuan expressing great satisfaction at the attitude of the Progressists and the Domei-kai, whom he regarded as an unit on the subject of the preservation of China's integrity. At the same time he confessed surprise that a leading politician of the *Seiyūkai* should have openly advocated an understanding between Japan and Russia on the lines of a Korea-Manchuria exchange, since that would be distinctly a partition of China. Mr. Inugai replied that the irresponsible statements of politicians were not to be taken too seriously. Men spoke very differently when in office and when out of it. There was not much agreement between Marquis Ito and the Progressists, yet he ventured to affirm that Marquis Ito does not advocate the partition of China and the same is true of the present Cabinet.

It is difficult to find in these remarks any basis for an idea that the Progressists and the Cabinet are about to join hands, but small grains of sand suffice to build mountains of rumour.

The *Jimmin* declares frankly that the Progressist leaders, Messrs. Inugai and Oishi, proposed an alliance with the Cabinet, but that their overtures were politely rejected, the Cabinet replying that it had no objection to their support but that it purposed standing severely aloof from all connexion with political parties. The article containing this news has for heading the proverb, "wasps sting a crying face," or misfortunes never come singly, but we do not think that the *Jimmin's* statements on such a subject may be taken without large reserve.

On the other side, the *Niroku Shimbun* gives publicity to a vehement denial said to emanate from a Progressist politician. He avers that a Party like the Progressists, who make the people the basis of their policy, can not be reasonably suspected of seeking to ally themselves with a Ministry which had its origin in nothing particular; a Ministry born nobody knows of what, whether the earth, the sky, or the fork of a tree. This affirmation goes a little too far. It smacks of chagrin.

THE "NICHU NICHU SHIMBUN."

The *Nichi Nichi Shimbun* celebrated the publication of its nine-thousandth number by an issue of 128 pages, profusely illustrated, and accompanied by a fine map of the Japanese empire. A newspaper of such extraordinary dimensions is indeed a

rarity, and we can not but complement our contemporary on its remarkable enterprise. It is to be congratulated too on the profusion of advertisements secured for this jubilee number; no less than 53 pages. The illustrations represent the present members of the Cabinet, three celebrated Russians of the present day, the prominent leaders in politics and business, the greatest painters and technical artists of the time—in short nearly all the celebrities of the era. The conception of the issue is excellent and the manner of working it is good, though we can not say that all the portraits are speaking likenesses. Much as the courage of such an undertaking must be admired, it presents to our mind a certain incongruity, for the newspaper is of all forms of literature the least convenient for voluminous issues. The labour of unfolding sixteen journals of eight pages each is more than the ordinary mortal can be expected to undertake in these busy times. Besides, what is to be the limit of competition on such lines? If the *Nichi Nichi* sets the example of celebrating a jubilee by issuing 128 pages, we may expect the *Fiji Shimpō* and the *Asahi* to do something still bigger by way of rivalry.

Among the many interesting matters published in this colossal issue of the *Nichi Nichi* there is an interview with Viscount Katsura in which that distinguished officer compares Germany and Japan, pointing out that the really progressive eras of the two countries are nearly synchronous in many respects, but that in military matters Japan may be said to have entered the field nearly 30 years later than Germany, since the Franco-Prussian war did for Germany what the China-Japan war did for Japan. The Viscount recalled how, at the beginning of the *Meiji* era, the affairs of the Army and the Navy were managed by one Department, the Hyobusho, which had an allowance of thirty thousand *koku* of rice, or about 1½ millions *yen* for both services. Thereafter separate Departments were organized with a total appropriation of about 4 millions of *yen*, and in 1885 the allowance for the War Department alone was six millions. But after the war with China the War Office grant suddenly sprang up to 32 millions and the Naval Department's to 12 millions. What is now wanted before everything is education. The army is short of non-commissioned officers, and the fact is due to the insufficient education of recruits. Germany has given the world a lesson in this matter, and her example is now beginning to be followed. It is not for military purposes alone that education is needed in Japan. The great wealth-producing factor now-a-days is a system of instruction such as shall turn out not what may be called staff officers for the industrial and manufacturing army, but non-commissioned officers.

THE LITTLE PRINCE IMPERIAL.

The 28th of August was the 120th day after the birth of the little Prince Imperial. That day is celebrated in Japanese households as the *hashizume no itadaki*, or first using of chopsticks, which means that the baby is allowed to eat rice for the first time. As, however, the little prince was absent in Nikko from the latter part of July, it was decided that the fete should be postponed until the 5th of October. After the ceremony, the Prince was taken first to the Imperial Palace to see the Emperor and Empress and subsequently to the Aoyama Palace to meet his parents. He is said to be remarkably healthy.

RUSSIA AND JAPAN.

Russia and Japan are compared by the *Fiji Shimpō* to a loafer and a man of property, respectively. It need hardly be said that our contemporary does not intend any discourtesy to the Great Northern Power in making this comparison. The reference is solely to the relative positions that the two States would occupy in the event of war. Russia has practically nothing to lose. Even supposing that she were defeated, might lose Kiu-shiu, or Hokkaido or Shikoku. It is the *Fiji's* opinion that the *vacuus viator* among nations is always ready to fight, whereas the country with large material interests is careful to avoid a quarrel, just as is the case with the loafer and the gentleman meeting on a highway. For that reason England is always peacefully disposed. As the wealthiest country in Europe with the largest and most extensively ramified material interests, even victory is not altogether a gain to her; whereas a comparatively poor State like Russia or Germany draws the sword readily enough, hoping to take ample advantage of success and having little to apprehend from defeat. Russia is circumspect enough in Europe where her interests are seriously involved, but in the East she occupies, especially towards England and Japan, a position which may be compared with that of the loafer *vis-à-vis* the man of property. From that point of view the *Fiji* welcomes the announcement recently made by Mr. de Witte that Russia intends to devote 20 or 25 million roubles yearly to the development of Siberia. The more she spends there, the less disposed will she be to risk the losses of war.

BRITISH SHIPS.

Mr. Poultney Bigelow, writing in the *Independent*, describes a trip recently taken by him from Newhaven to Caen in the steamer *Calvados*, which is "the property of one of the greatest railway companies in England, a twin-screw modern craft comparing favourably with the average cross-channel passenger steamer." One rubs one's eyes in astonishment on reading his account. The vessel was advertised to sail on the evening of a certain day, but when Mr. Bigelow arrived at Newhaven he found that she would not sail that night and probably not the next morning, as the Tuesday of her intended sailing was the day after a bank holiday and all wage-earners were recovering from their "drunk" on Monday. Unable to procure any accommodation in the steamer and not even allowed to leave his baggage on board until the cargo was cleared out, which operation promised to be very long as the pier-hands preferred going and getting drunk to working even at a shilling an hour, the traveller betook himself to the town and sought a meal at a hotel which had enjoyed the honour of entertaining Louis Philippe in 1848. His description of the reception he found there is ugly reading, but has a strong smack of truth. The only hot dish he could obtain was fried ham and eggs, and the few persons that entered the coffee-room while he was there behaved as though to hold any converse with a solitary stranger would have assured for them damnation in the world to come. Then Mr. Bigelow went back to the steamer to pass the night. He

for sheets and pillows, but the steward "had never heard of such strange luxuries," and it ended in his sleeping on the cushions of the cabin with a ship's rug over him and a handkerchief round his head. When he awoke in the morning, he found that several ladies were taking their breakfast "in the stuffy cabin wherein men were sleeping in various stages of undress and not even protected by a curtain from the general public." Tea and coffee seem to have been the only refreshments obtainable on board, and they were both execrable. Mr. Bigelow's comment is:—"What I write is merely to indicate the strange atrophy of British enterprise, that curious lack of imagination, that extraordinary dullness of natural spirit which permits British commerce and manufacture to lag many years behind the age, while Germany and the United States march forward to new industrial victories."

POST OFFICE SAVINGS BANKS.

The total deposits in Japanese postal savings banks at the close of 1899 were 23,455,065 *yen*, having increased to that figure from 19,514,844 *yen* in 10 years. The corresponding figure for Great Britain and Ireland is now to hand. It is £137,549,636. In Japan's case we have 23 millions of *yen*; in Great Britain's, 1,375 millions, or nearly sixty times as much.

It is an interesting fact that the people of Ireland use the postal savings banks more than the people of Scotland. In each country one person in every 13 deposits money, but whereas each Irish depositor has £21 2s. 1d. in the banks, each Scotch depositor has only £13 15s., the consequence being that Ireland's total deposits are eight million pounds sterling against five millions for Scotland. In England and Wales one person in every five deposits, their average being £15 18s. 5d., and their total 122 millions.

The number of mail packages dealt with by Japanese post offices in 1900 was 8,462,990; the corresponding number in Great Britain and Ireland was 3,723,817,000. In other words 440 times as much matter passes through the post offices in the United Kingdom as through those in Japan.

THE HAWAIIAN AFFAIR.

Probably in reply to the comment published on the 7th instant by several newspapers to the effect that undue delay is taking place in the settlement of the Hawaiian affair, the *Jiji Shimpō* writes that, according to intelligence received from Mr. Takahira, the *pourparlers* are proceeding most satisfactorily, and an arrangement will be speedily effected.

This incident gives prominence to a special feature of Japanese journalism, namely, the use of news agencies. There are two or three organizations in Tokyo, and they supply items of news to various journals at a fixed monthly charge. It is a poor business. The income collected by an agency can not possibly suffice to procure the services of really good reporters, and the consequence is that many of the items of intelligence furnished by the agencies are of the flimsiest and least trustworthy character. That is bad enough. But much worse is the fact that the subscribing newspapers refrain carefully from stating the source of the intelligence.

not only assume full responsibility

ordinary weight and importance are given to an item by its simultaneous publication in the columns of several journals, the impression inevitably produced upon the public mind being that the news is already widely bruited abroad and generally credited. No such misapprehension would be created if the item were openly accredited to its *provenance*, for then, in however so many journals it appeared, readers would know that its origin was an ordinary news agency. The only apparent explanation of this strange procedure on the part of the journals is that they desire to palm off the intelligence as their own, a feat which is doubtless frequently successful, since the average Tokyo resident subscribes for not more than one vernacular newspaper and is therefore unable to compare its contents with those of another.

PRICES OF ART OBJECTS.

Three thousand three hundred and fifty pounds for an oval gold snuff-box, 3¼ by 1¼ inches, sounds an almost incredible price. Yet that is the figure obtained for "the Heckscher," a Louis XV. snuff-box, recently sold at one of the London auctions. It cost originally £1,500. We read in an American magazine that at the head of all London sales for the past two years stands that of a pair of pieces of decorative furniture of the Louis XV. period signed by the *ebéniste* Joseph with mounts executed by Caffieri. "They are of oak, veneered with king and tulip-wood, the latter inlaid parqueterie-wise in the panels, forming a background for the branches of floral ornaments that decorate the front and sides, the whole most elaborately mounted with chased ormolu, and each being 51½ in. wide, 24½ in. deep, and 35 in. high." These two articles were sold in June last for £15,000. Mr. Roberts, writing in the *National Review*, says:—

"Within the last few years the demand for portraits of pretty women has developed into a perfect craze, and prices out of all proportion to artistic merit have been paid, season after season. Male portraits by the same artists, and of far higher corresponding artistic value, have excited very little attention, and realize ridiculously smaller prices. This is one of the many curious anomalies which prevail in the sale-room; it can not be explained in a tangible and logical manner, but the fact remains. For a time the supply of Reynolds, Gainsborough, and Romney portraits of pretty women—it would perhaps be ungallant to say the portraits of women whom these and other artists have immortalized as beautiful—seems to have almost given out. The natural consequence of this is that collectors are satisfying themselves with the next best articles. A few years ago four or five figures for a Hoppner or Raeburn would have been regarded as almost beyond the range of sanity. But the absurdities of one generation become the religious faith of the next. In the case of Romney, one of the pictures in the list I am about to give realized nearly as much as the artist earned in three of his best years of hard work! Even when his charges were highest, Romney appears to have received only about twenty guineas or twenty-five guineas for a head and shoulders, and about forty guineas for a half-length. One would willingly risk even the possible change of fashion in the near future, and gladly lay in a stock of Romneys at these figures. Romney's charges appear to have been less than Sir Joshua Reynolds', but they may be taken as being about the prices at that time paid."

During the present year portraits of women by Hoppner, Raeburn and Romney brought, respectively, 14,050 guineas, 2,000 guineas, and 5,600 guineas. But there are some lucky bargains, as witness the purchase of a genuine Reynolds this season by two Americans. The story is told in *Harper's*:—"The two visitors [at Christies'] wandered around, catalogue in hand, somewhat oppressed with the dullness of the occasion, and finally paused in front of No. 71, 'Portrait of Dr. Johnson, by Sir Joshua

Reynolds.' This they promptly repudiated as a copy, and a mighty poor copy, too. The next number in the catalogue, 72, read, 'Reynolds (unframed) Robinetta.' It was a most unprepossessing canvas, black, grimy, and sooty in aspect, an uncared-for, frameless outcast among a multitude of characterless associates. The face of a young girl could be discerned, very dimly, and through the veil of dirt it seemed to be illuminated by light reflected from an arm bared to the sunshine. Then presently the eyes seemed to reveal themselves, and after a long hard look one of the transatlantic visitors said to the other, 'That's a scandalous-looking thing, but I've got to have it!'"

He did get it for £5, and it turned out to have been misnamed, the real Robinetta being in the National Gallery. This was a picture entitled "The laughing Girl" and its fortunate purchaser has since refused £5,000 for it.

THE CABINET AND THE HOUSE OF PEERS.

Tuesday, Oct. 8.

On the evening of the 7th instant, the Prime Minister entertained at dinner representatives of the six sections of the House of Peers, for the purpose of submitting to them a statement of the Budget as proposed by the Government for next year. This action of the Premier's is applauded by the press. It is claimed that when a party in the House of Peers sought information from Marquis Ito of a similar nature, the Marquis declined to discuss the details of the Budget with any private association, and in that way provoked the hostility of the House, but there can not be any doubt that had the House been desirous of supporting the Ito Cabinet, such an incident would not have rendered it anti-pathetic.

Nothing is yet publicly known of the details submitted by the Premier to his guests, but there is an apparently well founded rumour to the effect that the Budget shows a surplus of 21 million *yen*, which, together with the regular sinking fund of 10 millions, will be applied to reduce the national debt. Provision is also to be made for an increase of pay to junior officials of the judiciary and other branches of the Administration and to soldiers, the funds for that purpose being obtained by economies effected in various directions.

Thursday, Oct. 10.

Tokyo journals report the result of the meeting at the residence of the Prime Minister on the 7th instant, when representatives of the six sections of the House of Peers were invited by Viscount Katsura to hear a statement of the Government's financial programme for next year. It appears from what they were told that the Ministry intends to ask the Diet for 6½ million *yen* as a fund for constructing a steel factory at Kure, which project was submitted in parliament by the Ito Cabinet but rejected. A sum of 4 million *yen* will also be requisitioned for building barracks in Formosa. It has long ago been recognised that such a work is of paramount importance, the troops being at present quartered in old temples or other buildings equally unsuitable and palpably deficient as to sanitary facilities. There is further to be a supplementary budget of 3 million *yen* for the Iron Foundry at Wakamatsu, an enterprise which seems destined to cost a very large sum before it begins to be really productive. Altogether the expenditures will exceed those of last year by from 15 to 20

million *yen*, and the total on the site of outlays will be 260 millions. There will not, however, be any sensible addition to the ordinary expenditures. Concerning administrative reform, the Cabinet does not yet find itself in a position to make any announcement of a comprehensive nature. But it has decided to effect an increase of salaries in accordance with long evident needs. The projected increases have already been outlined; namely, raising the salaries of junior judicial officials from 600 *yen* annually to 800 *yen*; those of local head-men from 600 to 900; those of junior officials of the Central Government by a little over 21 per cent. (every 33 *yen* becoming 40), and those of junior local officials by over 32 per cent. (every 18½ *yen* becoming 24½). These increases will amount to three million *yen*, which sum will be attained by economies effected in the contingent allowances of the various Departments, *i.e.* the allowances for fuel, lighting, travelling expenses, stationary, &c. Thus the gist of the financial policy is that only unavoidable enterprises will be carried out; that expenses connected with administrative reform will be confined within the limits of the "fixed expenditures," and that there will not yet be any extensive reconstruction of the official machine. It does not appear that the representatives of the House of Peers made any comment on this programme or raised any objection to it. They simply listened and then went to dinner with their official hosts. Of course Opposition journals are endeavouring to prove that the Government had no intention of satisfying the curiosity of the Peers, whose real desire was to find out something about the financial and administrative reforms so long talked-of by the nation and so earnestly contemplated by the last Cabinet. But truly it seems to us that the Peers have obtained all the information they can reasonably expect. They have been told exactly what the official financial programme is, and they have been told that in the matter of administrative reform the Government intends to confine itself for the present to making a much needed increase of official salaries in the junior ranks. It is certainly true that the programme announced at the Prime Minister's house on Monday does not contain much which can be placed to the credit of *saiei seiri* and *giyosai seiri*, as the people have been led to conceive of those measures. But it is a prominent feature of politics, and has been a prominent feature for the past ten years, that everybody in office and out of office has talked magniloquently of financial reform and administrative reform, but that no one out of office or in office has ever been able to draft an intelligible or considerable programme.

MR. KOYAMA KIUNOSUKE.

The death is announced of Mr. Koyama Kiunosuke, who attained extraordinary notoriety three years ago by instituting legal proceedings to recover on a promissory note which he acknowledged to have received as a bribe in the Lower House of the Diet, and who openly advocated the doctrine that it is right to take bribes from one's political enemies and then to disappoint them by not carrying out the purpose of the bribe. Mr. Koyama died of a malignant ulcer in the throat. It appears also that his teacher, Mr. Nakaye Tokusuke, is declared by physicians to have only a year and a half to live, and Tokyo journals somewhat heartlessly comment on the fact that while the stalwart pupil has gone the way of all flesh, the old master has still 18 months before

him. It may be mentioned here that when Mr. Nakaye's sentence was pronounced by his medical advisers, he compiled and published a political brochure called *Ichi-nen Yu-han*, in which he delivered his opinions on present-day politics and their representatives with a degree of freedom prompted by his outlook. The book nevertheless indicated a straightforward, well balanced mind, and showed that the intemperate life led by its author must not be taken as a proof of his moral condition. Nakaye is commonly called the Rousseau of Japan.

DEATH OF MR. NAKAMIGAWA.

We greatly regret to announce the death of Mr. Nakamigawa, Manager of the Mitsui Bank, which took place at his Nagata-cho residence on the 7th inst. His illness developed very serious symptoms in the forenoon but ultimately yielded to the remedies applied, and hope had begun to be again entertained when at 1 p.m. a crisis came and death followed quickly. Mr. Nakamigawa was only in his 48th year and until quite recently he appeared to be in robust health. A nephew of Mr. Fukuzawa, he received his education at the Keio-gijiku, and subsequently spent some years in England, obtaining an appointment in the Foreign Office after his return. It may be said that he first became known to the public as one of the editors of the *Fiji Shimpō* in the early days of its prosperous career. From the office of the leading journal he passed to the service of the Mitsui, and soon afterwards received the appointment of Manager of the Mitsui Bank, in which position he showed himself an able man of business. His loss will be keenly felt by the great firm and mourned by a wide circle of friends. The funeral leaves his residence in Nagatacho on the 10th inst. at 1 p.m. and proceeds to Aoyama Cemetery. The family begs that no flowers will be sent.

The Nippon Yusen Kaisha presented *yen* 500 towards the funeral expenses of the late Mr. Nakamigawa, and ordered all the vessels of the company to fly at half-mast on the 10th inst.

THE DEATH OF ABDUR RAHMAN.

The death of the Amir of Afghanistan may involve some unpleasant complications. It happens at an inopportune time, when England's attention is pretty fully engaged elsewhere, and if Russia chooses to take advantage of the occasion, it is in her power to cause trouble. Curiously enough, Lord Curzon, whose views about the Afghan problem are so lucid and resolute, happens to be Viceroy of India precisely when this crisis arises. His words on the subject in "Russia in Central Asia," have vivid interest to-day:—

Without recapitulating ancient history, it may briefly be stated that our relations with Afghanistan in the forty years between 1838 and 1878 were successively those of blundering interference and of unmasterly (I have always supposed it to be a *lapsus calami* to write 'masterly') inactivity. The first period, which is perhaps the darkest page in English history, culminated with the restoration of Dost Mohammed, the sovereign whom we had forcibly deposed and defeated, but who ended by forcing his recognition upon us. The policy of the second period found some slight justification during his life-time—for an abler ruler never controlled a tribal federation—but was foolishly prolonged after his death into a very different era, when rival chieftains were contending for a supremacy, which we did nothing whatever to decide, and when finally Shir Ali, the successful combatant,

already estranged from England by a course of neglect, was known to be lending an ear to honeyed words from Russia. Then the policy of unmasterly inactivity broke down with a crash. The second Afghan war ensued; and after the now familiar display of mingled valour and incapacity, which might have been directly modelled upon the pattern of 1841, England, having enthroned a new Amir, found herself confronted with the question, what was to be the character of the new *regime*. Lord Beaconsfield, it is known, favoured the adoption of an advanced or scientific Indian frontier, committing the border passes to British custody; and despairing of another Dost Mohammed, leaned towards a partition of Afghanistan among separate chieftains; while he is even said (though such shortsightedness is scarcely conceivable) to have meditated the surrender of Herat to Persia. Mr. Gladstone, coming into power in 1880, before the close of the war, declined to endorse so forward a policy, and an alternative suggestion was required. No one had a word to say for the old unmasterly inactivity, which was buried without a sigh, and over whose gravestone, as above the nameless friar in Worcester cloisters, might be written the epitaph "Misericordia." The new theory of a Buffer Afghanistan, independent though subsidised and friendly though strong, was evolved. The British retired; Kandahar was surrendered; and Abdur Rahman was left to carve out his own fortune. Accident has produced in him the very man for the purpose, the sole type of character that could give stability to so precarious a structure, and endow a stunted figure with the semblance of life.

Cruel, vindictive, overweeningly proud, but of inflexible purpose, fearless heart, and indomitable energy, he has spent a reign of nine years in incessant fighting, has broken down and drenched in blood every revolt of his mutinous subjects, has extended his dominions over all and more than the lands ruled by Dost Mohammed, and has even established his power in the difficult regions of the upper Oxus, in Badakshan, Wakhan, Shighnan, and Roshan. He has never been friendly to Russia since his return from Samarkand in 1880; and, though suspicious of English interference, and loth to see foreigners in his country, has given the British Government no reason to question his loyalty. The actual dependence of Abdur Rahman upon England and his increasing willingness to admit it to his subjects, were significantly illustrated during the Ghalzai rebellion in August, 1887, when a royal proclamation was posted in the Bazaar at Kandahar, to the effect that the British were holding in reserve six infantry divisions (of nine regiments each), as well as cavalry and artillery, ready to march into Afghanistan to assist the Amir against his enemies. There was of course not a grain of truth in the assertion.

So long as Abdur Rahman lives, a Buffer Afghanistan may continue to figure in the list of independent states. His health is, however, extremely precarious: whilst at any time a ruler thus feared, and in parts detested, is exposed to the danger, which he recently so providentially escaped, of assassination. His two sons are not of royal blood, and would therefore not appeal to the loyalty of the Afghan tribes: nor has either of them shown any capacity to succeed his father. Upon the death of the latter it is to be feared that a time of trouble will again recur, more critical than any of its predecessors, inasmuch as Russia notoriously looks to such an emergency as providing an excuse for her next advance. Rival candidates for the throne will at once be forthcoming—Is-hak Khan from Samarkand, possibly Ayub Khan from India, and very likely some other claimant in the country or from the Afghan army—and in the state of civil war thus engendered, it will not be Russia's fault if she does not pull some chestnuts out of the fire.

DEATH OF A KOBE CRICKETER.

It is with very deep regret that the *Kobe Herald* records the death of Mr. Campbell Lucas. The sad event occurred in California on the 2nd, it is believed (the telegram was passed on from London on the evening of the 2nd). The news naturally cast a shadow over local cricketing circles, in which the deceased gentleman was deservedly held in high esteem. As a mark of respect the week's fixtures for cricket and baseball were cancelled and the Canoe and Dinghey Club (of which, Mr. C. Lucas was a popular member) postponed the race set down for Saturday. While it is not definitely known, it is supposed that consumption was the cause of death. Mr. Campbell Lucas left Kobe for California for his health's sake some months ago—he had previously made a journey thither as well as to Australia, without gaining full relief—and late letters received by the members of his family

encouraged the hope of an ultimate recovery. The melancholy tidings now to hand is therefore a cruel blow to the relatives, for whom sincere sympathy will be felt.

THE ENGLISH LANGUAGE.

Mr. Julian Ralph says in *Harper's Magazine*, with reference to differences between English as spoken in England and English as spoken in America:—

"If you ask a guest at your home in England whether he likes his meat rare, he asks what you said, because he does not understand you. He calls meat underdone when it is not thoroughly cooked. If you tell him you fear the asparagus is canned, he is at a loss again, because he would have said it was tinned. To ask him to pass the powdered sugar will again set him wondering, for he calls it icing sugar, though he knows that it is sometimes called castor or sifted sugar. And if you have candy on the table you may not call it so without betraying your foreign origin, for he calls candy 'sweets,' abbreviated from 'sweetmeats,' and used to designate all preserves, puddings, pies, candies, and jams.

"To go farther along the eccentricities of English at the dining-table, most persons know, I suppose, that the beet is called beet-root, cornstarch is corn flour, corned beef (or a particular cut of it) is called 'silverides of beef,' and napkins are serviettes.

"If in a shop I say, 'I want a paper of pins,' the clerk says, 'Thank you. A great many Americans in London, now, aren't there?' 'Oh yes,' I say: 'I meant a packet of pins.' To ask for a spool of cotton is to set a clerk to staring at you, and to speak of baby-carriage is to speak of the unknown, because spools of cotton or silk are called reels, and baby-carriages are known as perambulators—shortened to 'prams' in the speech of millions."

It is strange to be told that "rare" is not applied to underdone meat in England, and as for the term "icing sugar," it sounds very novel in our ears: "crushed" or "powdered" seems to us the common form of speech. Who again, unless it be some very affected person, talks of a "napkin" as a "serviette," and what Englishman would be at all perplexed to understand the expression "a spool of cotton"? It appears to us either that the manner of speaking English must have changed recently in England, or that Mr. Ralph's experience has been singular.

GERMAN NOTES.

It is noted by German journals that the Czar's visit to Danzig was in consequence of an invitation from the Kaiser which could not have been refused without some suggestion of unfriendliness. It thus follows that the visit does not constitute any evidence of Russian acquiescence in the tariff changes proposed by Germany.

The Czar's attendance at the German naval manoeuvres was on the same day as the King of England's visit to the Kaiser at Wilhelmshöhe. This is taken as signifying that amicable relations with England need not impair Germany's relations with Russia. Prince Bismarck, it is added, did not desire to make a choice between the two Powers but to cultivate the goodwill of both equally. Unfortunately recent events in China have clearly showed that wherever there is occasion to choose, Germany selects Russia in preference to England. And, indeed, that is very natural. Russia is within easy striking distance of Germany whereas England is practically beyond reach. Russia is a constant military menace to Germany; England is merely a commercial rival.

The *Times'* Berlin correspondent sends the following interesting telegram:—

Dr. von Miquel, the former Minister of Finance, declared in an interview to-day that the present financial system of Germany is monstrous.

Treasury. Furthermore he thinks that Imperial finance should be raised by Imperial taxation. Dr. von Miquel points out that at present a German subject pays only five marks direct taxation, while a Frenchman pays 72. He believes that the fault in the system is partly due to the factions in the Reichstag. The former Finance Minister sees in all this a want of true Imperial feeling throughout Germany.

There has been a curious libel case in Germany. During the debate on the Boer war last December in the Reichstag, professor Hasse alleged that the *Cologne Gazette* had opened its columns to the influence of the De Beers Company, because it did not join the pro-Boer outcry. His utterances in parliament being privileged, no legal measures could be taken, and it was found impossible to get him to repeat his words outside the Reichstag. Mr. Liman, however, the Berlin correspondent of the Pan-German and Anglophobe *Leipziger Neueste Nachrichten*, alleged that a secret balance-sheet of the De Beers Company contained an item of £60,000 for "agitating purposes" in Cologne, and added "comment is superfluous." There could be no doubt that this was intended as an insinuation that the *Cologne Gazette* had been bribed, and indeed he subsequently declared that the *Cologne Gazette* would be disgraced for ever if it did not proceed against him. But the *Cologne Gazette* saw that such a vague accusation could not form the text of an action for libel, and so it adopted the expedient of publishing a series of attacks on Dr. Liman to show how untrustworthy his statements were. Thereupon the doctor himself instituted proceedings and the *Cologne Gazette* pleaded justifiable self-defence. But Liman went into the witness box and swore solemnly that he had never intended to refer to the *Cologne Gazette* at all. No one believed him, but the Court was bound to accept his testimony. Accordingly the editor and another member of the *Cologne Gazette's* staff were condemned to nominal penalties for libel. They appealed but the appeals were unsuccessful. Incidentally, however, the accusation against the newspaper fell to the ground for no attempt was made by Dr. Liman to substantiate his statement.

Under the will of the Empress Frederick, Friedrichshof Castle is bequeathed to her Majesty's youngest daughter, Princess Frederick Charles of Hesse. The personal fortune of the late Empress is divided equally among her six children, each of whom, including the Emperor, receives 1,000,000 marks. Legacies have been bequeathed to Count von Söckendorff and many other members of her Majesty's household. It is stated that the only letters and other documents which have been destroyed are such as were of a strictly private character. The others will be incorporated in the library of Friedrichshof Castle.

At the time of the accession of the present Emperor of Germany, his country did not possess a single first-class battle-ship, but in 1916 she will have 38 first-class battle-ships and 72 cruisers on which she is to spend 73 million pounds sterling. Mr. H. W. Wilson, writing in *Harper's Magazine*, says:—

Turning from the fleet as it is to be to the fleet as it is, the German ships are excellent in design and workmanlike in appearance. The battle-ships built and building fall into four groups: in the first are five new triple-screw ships, all on the stocks, of 12,000 tons, each; in the second, five rather small ships of the Kaiser Friedrich III. class, with triple screws, of which two are now complete. These ten ships are practically homogeneous, and all agree in their armament, which is of exceptional power. The big gun has been deliberated

weapons. This is a terrific battery, though hardly so powerful as that of the newest American ships of the same class. The armour protection is about the same as that given in American ships. Thirdly come four ships of the *Brandenburg* class, now on the China station. They are unique in carrying six heavy 11-inch guns in three barbettes. They are fair sea-boats, and gave no trouble on their voyage to the Far East. In the fourth group are eight small but modern coast-defence ships of the *Siegfried* class, heavily armed, which are now being cut in two and lengthened by twenty-three feet; four old ironclads of the *Baden* class, all reconstructed, and a similar but smaller ship, the *Oldenburg*. These last thirteen vessels are designed for service in the Baltic, not in the open sea. Besides these there are three old ironclads of small value. The cruiser list includes three modern armoured cruisers, the best of which, the *Bismarck*, is virtually a fast battle-ship; the other two are building; five fine protected cruisers of moderate size, with powerful batteries behind thin armour—the *Freya* class; and twelve other modern cruisers, of which the *Kaiserin Augusta*, a triple-screw ship of twenty-one knots, and the *Gefion*, of twenty knots, are the best known. There are eight torpedo gun-boats, twenty-four destroyers, and ninety-six first-class torpedo-boats. In the construction of these ships wood has been practically eliminated, and in the newer type every conceivable improvement has been introduced.

The personnel of the German navy is admirable in every respect. It is well organized, excellently instructed. The officers are in professional capacity second to none, combining in the happiest manner theory and practice. Then they are young: the age for a vice-admiral's retirement in England is sixty-five; in Germany it is fifty-six. Captains are retired in England at fifty-five; in Germany at fifty.

The German strategy will be the offensive at all costs. Any success gained by the fleet, which will attack resolutely and furiously, will be followed up by the magnificent army. Even an invasion of England is considered by von der Goltz to be perfectly practicable. The army is being steadily trained to act in combination with the navy. Year by year a number of military officers embark for a period of service afloat, so that they may gain a grip of the practical difficulties with which the seaman has to contend. Year by year the navy is, in exchange, to send selected officers to serve with the army.

All these points enhance the apparently insignificant strength of the German navy. Unless her rivals copy or improve upon Germany's organization, they are likely to experience some unpleasant surprises in war. The Anglo-Saxon race in this generation, in this hour of common danger, is still content to entrust the administration of its fleet to politicians, who possess no specialist knowledge of the engine which they have to control. They are confronted by a navy which has been made, organized, and controlled by experts. If there is anything in Pericles' famous saying, "Naval science is not a thing to be cultivated at chance moments or odd times; it is a mistress jealous of every other pursuit," then, indeed, Germany has a signal advantage over us, which she will use to the utmost.

It has been found that whereas the entire purchases and sales made by the United States in South America for the last fiscal year amounted to 155 millions of dollars, Germany's purchases and sales in six of the South-American States out of the 13, reached an equally large figure. The *Boston Herald*, quoting these figures, observes that in the event of certain international complications Germany might easily contend that the United States have not the least right to interfere with the natural development of German trade.

A British Blue Book just issued contains a report on trade conditions in Germany by the British Consul General at Frankfurt. It includes the following remarks:—

Germany has become the land of syndicates. Though some of the giant trusts in the United States may enjoy greater power than single trusts in Germany, there can be no doubt that syndicates in Germany are more numerous than elsewhere. There hardly remains a branch of trade the members of which have not combined for the regulation of prices or even for the regulation of the quantity of their output, which, of course, is only a means whereby syndicates endeavour to dictate their own prices. This system of excluding foreign competition is rendered even more perfect by the fact that the members of the syndicates undertake to strike out of their list of cus-

supply from members of the syndicate find themselves boycotted. But even here the present German system is carried further. Two or more syndicates combine for this purpose of boycotting, e. g., the "wire rod" (Walzdraht) syndicate refuses to supply all those manufacturers of wire tacks (Drahtsift) who are not members of the wire tack syndicate. Thus the man of business is considerably limited in the choice of his source of supply, and the importer thereby finds himself further handicapped; nor must it be forgotten that the very serious policy of maintaining high prices at home is effected by throwing the goods which find no purchaser at home on the foreign market at a low or even any price that can be obtained.

THE BANK TROUBLE.

Mr. Koyama has declined to continue his services as mediator in the trouble between the 130th and the Russo-Chinese Bank. His alleged reason is that matters have been carried by the Russo-Chinese Bank beyond the region of compromise or conciliation, and that it is impossible to discuss the terms of a friendly understanding while proceedings in a court of law are actually in progress. We do not follow that line of reasoning. Many a case has been settled out of court after the inauguration of proceedings. There remains a slender possibility of Mr. Koyama's reconsidering his decision, inasmuch as he has not yet reduced it to writing, but his view of the matter is said to be that unless the Russo-Chinese Bank takes the initiative in asking him to renew his mediatory efforts he must stand aside altogether.

The Osaka Court has decided in favour of the Russo-Chinese Bank. It orders the 130th Bank to pay the amount of the disputed note, namely, two hundred thousand yen, with interest at 6 per cent. from the 22nd of August to the day of payment, and also to pay the costs of the Court. The main pleas of the 130th Bank were that Mr. Kondo, manager of its Kyoto branch, who endorsed the note, did not act in the capacity of the Bank's duly accredited agent, and that, as the money did not pass through the hands of the Bank but was paid direct to the Toyokawa Railway, the Bank could not be held liable. As to the former point, the Court ruled that the entry of the profits of the transaction in the books of the Bank constituted a complete answer, and as to the latter, it decided that no proof had been furnished. There was still a point with reference to the place of payment of the note, but we can not clearly follow the reasoning of the Court as reported by the telegram. At any rate it was merely a matter of jurisdiction, and the Court decided in favour of the plaintiff. The paltry attempts made by the defendant's counsel to have the document invalidated on the ground that the foreign Manager of the Russo-Chinese Bank figured in two characters, as an individual and as the representative of a company, and that his name had been variously transliterated—these attempts were treated by the Court with the contempt they deserved.

After the decision of the Court had been given, the directors of the 130th Bank held a meeting, and decided that although there were grounds of appeal, it would be better, in the interests of banking economy in general, to pay the money at once. They accordingly telegraphed in that sense to the Russo-Chinese Bank. The only pity is that they did not take this course sooner. They never had a leg to stand on, and it seems wonderful that sober men of business should have allowed themselves to be betrayed into such suicidal procedure.

It appears that various efforts were made

to induce the Manager of the Russo-Chinese Bank to apply for a brief postponement of the public trial in order that some kind of compromise might be arranged, but Mr. Benedickter remained obdurate—wisely as we think, for truly one can not see where any reason for compromise presented itself.

A telegram says that this affair produced a run upon the Kobe branch of the Specie Bank, many foreigners drawing out their deposits, in the belief that the loss suffered by the 130th Bank would affect the Specie Bank also. They must be singularly timid persons who imagined that the stability of the Specie Bank could be influenced by such an event.

A POLITICAL WAVELET.

In the somewhat monotonous calm that broods over the face of the political sea at present the newspapers are glad to welcome, and do what they can to swell, a wavelet that has appeared in an unlooked for quarter. It seems that a pamphlet compiled by a Russian Minister of State setting forth the evils of representative government, has been translated into Japanese, printed at an office which is under the control of the Home Department and circulated with the latter's sanction, a laudatory preface being added by the printing office. The pamphlet is a scathing criticism of party cabinets and parliamentary institutions. It marshals their abuses and disadvantages in powerful language—not a difficult task in truth—and it is altogether eminently calculated to render the representative system unpopular. Naturally the political parties do not like to be, thus assailed. Several journals descant upon the incident, and it has been brought up at a meeting of the *Seiyukai's* general committee, with what result we do not yet know. There can scarcely be any second opinion, we think, that officialdom goes outside its proper course when it undertakes the printing and circulation of such literature in a country where parliamentary government exists by virtue of an Imperial Constitution. Some one has erred and some one will have to be sacrificed. But of course so paltry an event can not be construed into a ground of complaint against the Cabinet *en masse*.

THE MORMONS AND THE WOMEN OF JAPAN.

A petition has been presented to the authorities against allowing the Mormons to propagate their creed in Japan. The petitioners are the three principal societies for the reform of customs with regard to women, namely, the *Nippon Fujin Kyofu-kai*, the *Tokyo Fujin Kyofu-kai* and the *Yokohama Fujin Kyofu-kai*. They set forth various reasons. In the first place they allege that when the Mormons publicly announce abandonment of the doctrine of plural marriage, they are guided merely by political considerations, and that in fact they continue to practise the doctrine though they profess to have eschewed it. In the second place, the petitioners charge the Mormons with holding an extreme form of the principle that the end justifies the means, and say that the history of the propagandism of the creed is disfigured by shocking deeds. In the third place, the Mormon organization is declared to be subversive of submission to legally constituted authorities, for at their head are elders and a prophet whose com-

obey implicitly. In the fourth place, their method is to remove to their own settlement at Utah all proselytes who are prevented by the laws of the country in which they live from yielding unqualified obedience to the Elders and the Prophet. The petitioners claim that any one of these four reasons is sufficient to condemn the Mormons, and that the cumulative effect of the four is overwhelming. They add that the authorities are understood to be taking steps for the control of evil sects at home, and that no hesitation should be shown in refusing admission to an evil sect from abroad. They conclude with the proverb *wakabi no uchi ni tsumazareba ono zao mochuru kui aran* (unless the sapling be plucked up the axe will have to be used at last).

THE WEATHER.

Tuesday, Oct. 8.

With regard to the weather there is a difference of opinion which will probably be resolved before these words are in print. Some authorities hold that we are about to be visited by a severe storm; others that although a storm is coming, its violence will be comparatively insignificant. What is certain is that on the 6th instant a gale of wind and rain swept over Shimosaki, and if it intends to travel northward, it should be at our doors on the 8th at latest. This has been altogether an exceptional year. In no one instance have the forecasts of the Meteorological Department been verified by events, though they generally prove trustworthy in nine cases out of ten. At the present moment—Monday morning—while all the Japanese newspapers with the exception of the *Jiji Shimpō*, are predicting a blow of great violence, the glass in Tokyo and Yokohama shows no marked downward tendency, and none of the indications that usually precede a typhoon are visible.

Wednesday, Oct. 9.

The path of the storm is now tolerably clearly defined. On the 5th, the centre reached Formosa; on the 6th, it was at the Riukiu Islands, and the morning of the 7th, it arrived at the South of Kiushu, thence travelling up the westerly coast. The prediction now is that it will be at Yokohama and Tokyo on the 9th at latest. The whole country has been warned by the Meteorological Bureau and the market price of rice has leaped upward, though one storm is not likely to effect any appreciable damage at the present time.

Thursday, Oct. 10.

The storm did great damage in Fukuoka Prefecture on the 8th instant. It reached that district on the night of the 7th, and left in its track many houses injured, bridges broken and roads devastated. Kagoshima also seems to have suffered severely. The strange thing is that Hitachi and Shizuoka also telegraph the advent of the gale, whereas Tokyo and Yokohama remained immune. The idea on the morning of the 8th was that the storm had divided into two branches at Shikoku, one branch travelling towards Korea and the other moving up the east coast of Japan, in which case Yokohama and Tokyo should have felt its full brunt on the forenoon of the 9th. But after a blustery night and a squally morning, during which the temperature rose considerably, in Yokohama, and after a quiet steady downpour in Tokyo, the weather cleared at noon-day, and the afternoon was bright and sunny. All appearances seem to indicate that the storm has

left more southerly regions unscathed. Its progress was remarkably slow throughout, only 8 miles an hour.

Friday, Oct. 11.

The storm is now seen to have divided into two, as was reported in our last, one centre travelling into the Pacific, the other crossing the South of Japan and emerging at Sado Bay. Kiushiu suffered most, not the south however, but the north of the island. The rice crop is little damaged.

What seems to have been the fringe of a severe depression passed over Yokohama in the twenty-four hours ending about 4 a.m. on Thursday morning. The weather was exceedingly unsettled and rainy on Wednesday morning, but by mid-day had cleared up and a great deal of blue sky was visible, the glass remaining stationary. Towards evening, however, another change set in and about eleven a heavy blow and thunderstorm began. The lighting was for hours appallingly vivid, and the thunder-peals were frequent, the din at times being tremendous. Indeed persons qualified to speak declare that in violence the electric part of the affair surpassed anything experienced in Yokohama during recent years. Rain fell very heavily in the course of the night and the wind blew at times with great force.

A NEW YORK JOURNAL ON JAPAN.

A monthly newspaper called *Japan and America* is now published in New York. The first number appeared in July. The proprietor and publisher is a Mr. Hoshi Hajime; Mr. Stanhope Sams is the foreign editor, and his staff consists of four "associate editors" called Anraku Yeichi, Kinoshita Yetarō, Matsuo Otojiro and Omura Shigeru. It appears on the 1st of each month and sells at 10 cents a copy or \$1 a year. The printing is first-class and the few illustrations that are inserted are well executed. This is about all that can be said in praise of the new literary enterprise, for a paper more carefully edited, more prejudiced and more ill-informed it would be hard to find. It consists of two parts, one written in English and the other in Romaji Japanese. We have looked through the first two numbers and find them full of such statements as the following:—"Yale University will confer the degree of L.L.D. upon Marquis Hirobumi Ito, Vice-Secretary of Finance, Inaziro Taziri, and the Honorable Kazuo Hatoyama." "We have done far more than any other people to make Japan Western in its ideas and its civilization." Taking the authorised statistics of the foreign residents in this country and assuming that every Occidental resident exercises considerable influence on the Japanese, is it true to say that America is ahead of every other nation? "As *Japan and America* takes up the work of this tremendously important reform in the writing and printing of Japanese, it may greet its first readers with the characteristic Japanese salutation 'Ohayō! it is honourably early.'"

Speaking of Japanese who have studied in America *Japan and America* informs its readers that Mr. Toyama, A.M., is the Dean of the Faculty of Literature in the Imperial University and that Mr. Yatabe is in charge of the Botanical Department both of

of the article makes the following astounding statements: "The Japanese have one great advantage in studying a foreign language. Their own tongue is so exceedingly difficult that the mastery of English or even Russian, seems no very formidable task. . . . It may be astonishing to many, who have not looked into the matter, to learn how rapidly the Japanese are mastering the English language. It has been made the subject of careful estimate, and it is thought that at least 100,000 Japanese in the empire can speak and write English with fluency. A half million more can read it well and make themselves understood sufficiently to get along. Besides these there are about three million Japanese who can read the Romanized Japanese." Both in the English and the Japanese part anti-English bias is very marked and there is much spread-eagleism everywhere. A Japanese article comparing England and America opens thus: *Ei-koku no ryūsei wa sudeni sono chōjō ni tasshite, ima yōyaya kudari-zaka ni oru no sugata ga aru. Kore ni han shite Bei-koku wa jitsu ni hinode no ikioi wo motte chiyaku-chiyaku sasekai no shōken too shuwaku sen to shite oru.* The gist of which is that England has passed its zenith and is on the decline, but that America is on the upward path—her sun having only just risen. It is a great pity that the Romaji part of the new journal should be printed in such a slovenly and ignorant manner. Diacritical marks are seldom used, but when they are resorted to they are repeatedly put over the wrong letters, and as for the division of the words and the use of hyphens they follow no system whatever. A few specimens will show what we mean: *Bei-koku no Keigai-kai wa izure no hōnen yori mite no sukoburu kōtsugō de aru. Saku nen do ni okeru, etc. Sate Roma-jin no uchi ni mo Virgil oyobi cecero yō na shijin ga atta, keredomo. Italy-jin, etc. "The Fourth of July wa Gasshū-koku no dokuritsusai de Chōdo Nihon-jin ga Tencho-setsu wo iwau gotoku, etc. Robert Syōgun—Lord Robert. One title is Kane-muchi to Rōde-kuniji, the latter term being put for Rōdō-kuniai. One of the serious statements of the Japanese part of the journal is to the effect that the British Government is in the greatest state of alarm owing to the popularity of the pro-Boer speakers in London. What with the misprints and what with the unintelligible division of the words some passages convey no meaning at all to any but the adept in riddle-reading. An instance: *Bunshō wa bokotoba tai nitsuruka, jirai no bunshō tai ni suru ka wa, ōi ni kenkyū subeki mono de aru to shingi masu.* But we have said enough to show the character of this new departure in literature. The paper contains some useful information but as a whole will certainly meet with little support in New York or elsewhere. Judging from their writing the Associate editors must be very young men.*

A POLICE INCIDENT.

Japanese papers say that on the 8th inst. 39 men went ashore without leave from British and American men-of-war in harbour. Twenty-three of them were arrested and returned to their ships the same evening, but when the police, learning that some were in the Yokohama Imperial Billiard Rooms, proceeded thither to effect their

FRENCH NOTES.

The enthusiasm awakened in France by the coming of the Czar was most significant. It is plain that all the talk circulated some time ago about the French having begun to tire of their *exigant* ally was wide of the mark. France values the Russian alliance as much as she ever did. The incident has also enhanced M. Loubet's popularity and prestige to an extraordinary degree. His receptions by the crowds wherever he went subsequently to the announcement of the Czar's visit were boisterously demonstrative.

It is worth nothing that, as in 1895, so in 1901, sentinels were placed at 20 metres distance from each other all along the railway from Dunkirk to Compeigne and from Compeigne to Rheims, when the train carrying the Czar passed while a large force of police commissaires was brought together from all parts of France.

In the context of these precautions it is appropriate to quote the manifesto issued by the Socialists' General Committee, though little political importance was attached to the document in France:—

"With whatever colours they are decked out, and whatever their shade, all Governments are alike under a capitalist *régime*. All are inevitably the defenders of the interests and aspirations of the class that they represent. After the Méline Government, the Ministry of Republican defence, on the very morrow of the atrocious repressions which have decimated the manual and intellectual proletariat of Russia, invites the Czar to come and pass in review men who are being trained for future massacres. Cynically oblivious of the promises of The Hague, the Czar has eagerly agreed to figure in this apotheosis of war. At a time when Republican France is being thus disgraced, it is the duty of the General Committee to utter its protest against what it considers a challenge to the ideas of progress and humanity which will one day unite the peoples in a fraternal union. It emphatically affirms its sentiments of sympathy with all the victims of the odious Czarist tyranny, and invites militant Socialists to hold aloof from all the humiliating demonstrations of which the arrival of the Russian despot will be the occasion. It calls upon the Socialist representation of the people to refuse all credits for his reception on pain of losing all caste with the revolutionary proletariat."

The French authorities are showing much solicitude about the comfort of the travelling public. The issue of strict regulations against smoking in ordinary carriages was reported in one of our recent numbers, and a further decree now prohibits smoking in waiting rooms or compartments not marked *fumeurs*, as also spitting except into spittoons. What a blessing it would be if these regulations could be enforced everywhere.

The effects of the Congregations Law are beginning to show themselves in France. At first there was talk of the Jesuits opening a college in Tunis, but that project has been abandoned. The Lourdes Carmelites have decided to make Scotland their asylum and the Versailles Clarists have chosen Holland. Thus far the Dominicans alone seem disposed to apply for authorization under the provisions of the Law.

Happily seldom do such terrible tragedies occur in the life of any one as that of which M. de Braz, the "poet of Brittany," was the victim. M. de Braz arrived at Treguier on the 20th of August to join his family, and there learned that his father, his mother, his two daughters and his sister-in-law had just lost their lives with nine other persons

have landed her in a deficit of fourteen million francs, and she cut them down by 55 per cent. from the beginning of September.

The French and the Germans are beginning to engage in friendly rivalries which should contribute to the complete burying of the hatchet. There have been two rowing matches between Paris and Frankfurt. The second took place on the 25th of August at Courbevoie, and ended in a victory for Paris by two lengths.

The exodus of religious Orders from France continues. No one supposed that female religious Orders would be refused authorization under the new Law, but the members of the Orders do not themselves share that confidence. The Dominican nuns at Oullins, near Lyons, are about to move to Amsterdam, and the Dames de Nazareth are going to Switzerland. The nuns of Jésus Marie de Lyons will take refuge in England.

England will receive some others also of the religious Orders whom the Congregations Law drives from France. The Assumptionist Father Bailly has accepted Cardinal Vaughan's invitation to take charge of a parish in London and some of the Benedictines are going to England, which Father Bailly describes as a country of toleration and liberty eager to give them hospitality, and yet others will cross to the Isle of Wight.

Even the artistic French have succumbed to that most inartistic proclivity of the age, self-praise. General André, in a speech at Toulouse, descanted on the part taken by French troops in China, and declared that "by their fearlessness, their discipline, and their gallantry they won the admiration of the foreign contingents." Very likely they did, but how incomparably more graceful it would be if the General left some other national to say so!

France is inclined to regard the visit of the Czar as due to M. Loubet's influence. But in Germany there is an idea that to M. Delcassé belongs the chief credit. The French Minister of Foreign Affairs is said by the *Cologne Gazette* to have made a very good impression on the occasion of his recent visit to St. Petersburg, and to have removed any prejudices that lingered in the Czar's mind. The same journal predicted that the full effect of M. Delcassé's journey to St. Petersburg would not be appreciated until Count Lamsdorff returned his visit. That forecast seems to have been verified.

According to Leroy-Beaulieu there is room for 53 millions of people in France and her population is only 38 millions. He urges that foreigners should be induced to settle since the French themselves are unprolific.

In five years the French garrisons in Algiers have increased by 40,000 men.

It is a curious fact that although the press of Europe outside Russia had been discussing for several days the projected visit of the Czar to France, the Russian press preserved absolute silence. The explanation is that an old order exists forbidding Russian newspapers to make reference to any journey or act of the Imperial family before an official announcement is made. The consequence was that many of the Russians remained ignorant of their Sovereign's projected journey though all other nations were fully informed.

When the Russian press became free to

speak of the Czar's visit, one of its chief comments was on the unmistakable *rapprochement* that has recently been taking place between France and Germany. The *Novosti* writes thus:—"We must take this *rapprochement* into account in considering the present situation in Europe and the impending political interviews. The situation is not only clear and definite, but also highly gratifying. Russia, Germany, and France, all three alike desire a peace based upon the maintenance of the *status quo* and upon respect for their mutual interests. The visits to Danzig and France are very closely connected with each other, and we have the best ground for expecting that both will be attended with beneficial results in the incontestable consolidation of European peace."

There is a not unimportant movement in France in favour of granting an amnesty to the political exiles among are whom M. Déroulède and Marcel Habert. The former declares, however, that even such an act of clemency would have no effect on his enmity to M. Loubet, and to the Republic.

THE DIET.

It is stated that the Diet will meet for its 16th session on the 23rd of December. No official announcement of the fact has been made, but the Cabinet is believed to have decided in that sense. If so, the Diet will not transact any business this year. The 23rd and 24th will have to be devoted to internal organization, and the official opening will be on the 25th, which is the regular day of rising for the New Year's recess.

This Diet will not be influenced in its attitude by any apprehension of dissolution, for in the regular course of things a general election must take place next summer.

NOTES ON CURRENT EVENTS.

A very remarkable discussion has been going on in the correspondence columns of *The Times* with regard to the military force required by England for purposes of defence against invasion. The discussion was started in connexion with the very large scheme of army expansion proposed by the War Office. Some critics support the scheme and some condemn it, and it is to the arguments of the latter that interest chiefly attaches. The gist of their contention is that so long as England has command of the sea, or so long as her navy is not defeated and disabled, the greatest force that could be thrown upon her shores—and to despatch any force at all under such circumstances would be an act of desperate rashness—the greatest force would be five thousand men. It is indeed very doubtful whether even so many could be sent, but at any rate that would be the maximum. If the British fleet were destroyed or crippled, however, then the fall of the British empire might be regarded as an accomplished fact and no military force on shore could save the situation. Such is the line of argument. South Africa seems to furnish an answer. Great Britain had the complete command of the sea for the purposes of the South African campaign. Yet it has taken her two years to subdue the Boers, if indeed they can be said to be subdued. Did the Powers of Europe know that by crushing the British fleet they would have the United Kingdom immediately at their mercy, the situation would certainly be more perilous than it is now.

Her Imperial Highness Princess Tomi, relict of the late Prince Shirakawa who lost his life in Formosa, is to proceed to that island on the 20th instant, for the purpose of attending a memorial service at the shrine erected in memory of her husband. The Princess will travel by the *Asama*, and will be attended by a large suite.

The Divisions taking part in the special manoeuvres next month will be commanded by their own officers, as a full General is not nominated for that purpose unless three or more Divisions are engaged. Field Marshal Marquis Oyama is to be umpire in chief, and General Baron Sakuma will act as assistant. There will be larger facilities than usual for spectators, but those applying for permission to view the manoeuvres are warned that they must not expect to be luxuriously provided for, and that they had better take with them bedding and other necessities.

One of the features of the manoeuvres will be the trial of a device for tapping the enemy's telegraphic messages. If wireless telegraphy is employed that will be easy enough, as was shown during the recent British naval manoeuvres.

Viscount de Bondy, Secretary of the Legation of France in Tokyo, has been appointed Consul at Hanoi and will proceed to his post in about two months. Hanoi is now one of the most important centres of French influence in the Far East, and as, further, the emoluments of the office are very good, Viscount de Bondy is to be congratulated, as also is his country on having such a capable official for a position so cardinal. But the departure of the Viscount and Madame de Bondy from Tokyo will be sad news for a very wide circle of friends.

In connexion with the collision between the *Isu Maru* and *Calanda*, which occurred on the 22nd of September last year as the *Isu Maru* was leaving Nagasaki harbour for Shanghai, the owners of the *Calanda* have instituted proceedings in the Tokyo Local Court against the Nippon Yusen Kaisha, the damages claimed being 330,000 yen. The Company declines to recognise any responsibility and will probably bring a countersuit, it is thought.

The *Hochi Shimbun* thinks that England is gradually losing her influence in the Far East. Some years ago it might have been truly said that the whole of the Far East was her sphere of influence, but she has allowed herself to be displaced by Germany, Russia and France, working in combination. A most signal proof is furnished by Shanghai. There, if anywhere in China, Great Britain was bound to assert her supremacy, and upon her devolved the prime duty of preserving peace. Yet she has allowed France and Germany to place troops in Shanghai and convert the settlement into a military station. These things offer a striking contrast to the state of affairs that formerly existed.

According to the scheme said to have been adopted by the Cabinet, the salaries of junior judges and public procurators are to be increased from 600 yen annually to 800, and the salaries of local headmen from 600 yen to 900 yen. On the average, the proposed increase of official salaries will convert every 37 yen of present payments into 40 yen. The money required for this purpose will be obtained by economizing the contingent expenditures of the various Departments and by reducing the number of

officials. The latter step is to be on the lines of a twenty per cent. diminution of numbers, but as very few of the Departments have now their full complement of officials, the actual reductions will be small.

Marquis Ito and his party arrived at Seattle by the Nippon Yusen Kaisha's steamer *Kaga Maru* on the 28th ult. The telegraph says that they received a most hearty welcome and that the Marquis' malady of the throat is well, but we should imagine that the latter assertion is slightly optimistic.

During the Satsuma rebellion the rebels managed to steal a considerable sum in Government paper-notes. Recently it was whispered abroad that five hundred thousand *yen* worth of these notes had remained concealed in the house of a certain wealthy man of Satsuma, who was negotiating for their sale at a very reasonable figure—fifty thousand *yen*. Then came news that a sanguine individual has proceeded to Kiusshu to effect the purchase, and that, after he had paid bargain money to the extent of twenty-three thousand *yen*, the alleged holder of the obsolete notes absconded. With regard to this wonderful yarn it is now stated that, inasmuch as the notes had long ceased to be exchangeable, the hopelessness of presenting them in a Japanese name was recognised. Therefore the services of a foreigner—an American citizen whose name we refrain from re-producing—were enlisted, and had the notes been obtained, they would have been carried to the Treasury by this individual. But what an incredible yarn it is! Conceive the idea of keeping half a million of *yen* concealed for 24 years, and allowing the notes to lose all exchangeable value. Nevertheless the proverbial grain of truth is not wanting for somebody has been arrested, the absconder, it is said. Truly if the story of the notes was a fraud, its victims deserve to suffer.

The beautiful shrine of Yasukuni in Kudan Park has at length been completed. It has been for a long time under construction, and as it is dedicated to the spirits of military and naval men whose lives on service, large contributions to the building fund were expected from the public. But the total subscribed was only 3,643 *yen*, whereas the shrine has cost 178,500 *yen*. There is to be a festival of consecration on the 1st of November, and a sum of fifteen thousand *yen* has been set apart to meet expenses. General Viscount Nozu will be the principal to officiate at the ceremony.

Marquis Saigo and Count Itagaki have founded a society called the *Fuzoku Kairyokai* (Society for the Improvement of Manners), by which a number of excellent rules have been issued; for example, that hours of calling should be limited; that calls should always be short; that at business visits the conversation should be confined to business; that tea and cake should not be given to callers on ordinary occasions; that every caller should send in his card, whether he gains admittance or not; that cards should be without ornamentation of any kind; that in passing along the road the left side should always be taken; that if people stop to talk to each other in the street they should withdraw from the throng of way-farers; that every possible attention should be paid to promote the convenience of women and children in public conveyances; that no one should undress in a railway carriage or take up space so as to incommode others, or scatter parcels about,

and so on through a list of most useful reforms. We wish this society every possible success.

Detailed Regulations for the operation of the new election law have been promulgated. The law goes into force next year, when the first general elections under the new system will take place.

The British and other European as well as the American residents of Hongkong have subscribed a sum of thirty thousand dollars towards a memorial to her late Majesty Queen Victoria, and the Chinese community have contributed thirty-five thousand dollars for the same purpose. The monument ought to be something very handsome.

The Mormons have amended their application and presented it again to the Prefectural Authorities of Kanagawa. Their first application was in English and it failed in some other respects to comply with the requirements of law. Its rejection, therefore, was not on the merits of the case but merely because of technicalities. Christianity is becoming a many-mansioned institution in this country. For our own part we trust that technical blunders may long impede the inception of Mormon propagandism.

Some amusement has been caused in Tokyo journalistic circles by a rumour as to the contents of the Mormons' application for permission to propagate their creed in Japan. They ask leave to erect tabernacles, to preach by the way-side, and to visit at least one hundred houses daily. The "at least" (*hiakken ijo*) is a quaint ebullition of zealous energy. It appears that the Later Day Saints intend to be very busy, which goes to the credit of their earnestness, but the citizens of Tokyo and other towns may be excused if they look forward with some trepidation to this vehement invasion of their domiciles. A Saint with a contract on hand to visit at least a hundred houses daily, and preach or pray in each one of them, must be as smart as a gale of wind and will not be much more welcome.

Recently Japanese journals confidently asserted that a sale of fifty million *yen* worth of bonds had been effected in America. They even went so far as to name the selling price and to institute various comparisons between that figure and ruling quotations of previously floated bonds. They are now equally confident that the whole attempt to dispose of bonds has proved a failure, that the Cabinet has virtually given up hope, and that official opinion is turning in the direction of a domestic loan.

Mr. Uchida, Japan's new Representative in Peking, is to leave Japan on the 28th instant for his post. He will be accompanied by Mr. Konoike, hitherto Private Secretary in the Foreign Office but now nominated Secretary of Legation in Peking. These two officials will be a great loss to the Foreign Office in Tokyo, where they are among the most zealous and competent officials. Mr. Uchida will have important business to discharge in connexion with the revision of the Commercial treaty and the collection of the indemnity. The newspapers say that he is to be accompanied by Mrs. Uchida.

Judges of the Court of Appeal have proceeded to Tochigi Prefecture for the purpose of conducting an examination *in loco* into the damage inflicted on arable land by the working of the Ashiwo Mine. On the 6th instant these Judges and their assistant clerks, &c., numbering about twenty, held a Court in the open air under heavy rain. They

wore overcoats and sheltered themselves with umbrellas, and the audience were protected by waterproofs and straw mantles. The only business done was to summon experts and commission them on oath to conduct such investigations as would enable them to answer certain questions which the Judges formulated.

This action of the Appeal Court has caused much satisfaction. The people think that they are now certain to have their complaints honestly and impartially considered, and the extent of their sufferings clearly defined.

Under the heading of "fashionable local weddings," an English journal announces the marriage of Mr. W. R. Coleridge Beadon, eldest son of Mr. Robert J. Beadon, who formerly resided in Tokyo as legal adviser to the Japanese Government, and Miss C. L. Maude Onslow, daughter of Mr. Douglas A. Onslow. There was a numerously attended reception at the house of the bride's father after the wedding, and the happy couple went off in an electric coupe, kindly placed at their disposal by Mr. Paris Singer. The list of presents occupies the greater part of a column. Many in Japan send the best of wishes to the son of their old friend and to his bride.

The *Jiji Shimpō* represents the *Seiyu-kai* as being in a somewhat divided condition. One section opposes the Cabinet and the other supports it. The former is said to be in a minority. Our contemporary gives various details, but the broad fact will probably be sufficient for our readers.

There is trouble in the Tokyo City council. A vote of want of confidence is to be introduced against Mr. Urata, one of the Council's officers. The grounds are not stated, but it is understood to be another instance of the scandals which recently disgraced the Municipality. Mr. Urata is recommended to resign, but is reported as declining to do so in the absence of any definite charge; a not unnatural attitude. Mr. Urata is a paid official and holds office for 6 years. Public report associates his name with the purchase of a kerosene well under shady circumstances, but it is all very vague.

The Judicial officials who are engaged inspecting the scene of the damage caused by the Ashiwo Mine, have hard luck. All their journeyings to and fro seem to be taking place amid deluges of rain, and to crown the discomfort they were upset from a boat when crossing the Akiyama River. No serious harm resulted, but their honours had a bad ducking, which probably contributed not a little to the desolation of the scene they are said to have visited.

Torpedo-destroyer No. 15 was launched in England on the 1st instant and called the *Shirā-kumo* (white cloud).

Mr. Komura, Minister of State for Foreign Affairs, made a most practical speech at the meeting of the Political-Economic Society on the afternoon of the 8th instant. He invited the Society to consider by what means the trade of Japan with China might be increased, and he suggested that the question might well form the subject of a prize essay. In the military operations in Chili, Japan had won the approval of foreign Powers and although it did not become him to speak of diplomacy, he thought that she might fairly claim to have discharged her duties. But the problem of trade development remained unsolved, and unless trade development followed in the

THE "AMERICA" CUP.

THE result of the races for the *America* Cup, which is now to hand, cannot fail to disappoint those who hoped that at last a change would vary the apparently endless monotony of these contests. In previous matches people were usually content to assign the cause to superiority of American design, but it is difficult to find any such reason in the present instance. A very interesting article by Mr. HENDERSON in *Outing* for August, while setting forth the influence of the *America* Cup on the art of designing, takes a great deal of credit which, we should imagine, British yacht designers will in some degree accord reluctantly. But Mr. HENDERSON'S *resumé* of the various efforts made to win and to defend the Cup is quite readable. We learn from this that it was not till 1885 that the designing of yachts to fight for the Cup really began. Then there came Sir RICHARD SUTTON'S challenge for the *Genesta* and the preparations to meet her. It may be taken for granted that the Americans learned a useful lesson from the Scotch cutter *Madge*, which arrived on the deck of an Anchor line steamer in 1881. *Puritan*, which met *Genesta*, opposed to the extreme type (*Genesta* was 81 feet long, 15 feet beam and 13 feet draught) some of the best ideas of the cutter rig. She had less beam, her draught was lowered and she used outside ballast to a large extent. It is unnecessary to dwell upon the gradual development which brought the two types together so far that now *Shamrock II.*'s measurements may almost be taken as those of her opponent. The principal measurements of *Shamrock II.* may be seen at a glance in the following table:—

Length on the water line	89.9 feet
Length over all	137 feet
Extreme beam	25 feet 6 inches
Extreme draught	21 feet 4 inches
Forward overhang	21 feet 4 inches
After overhang	25 feet 3 inches
Bowsprit outboard	33 feet
Mast from upper side of the main to the topsail halliard block	146 feet 2 inches
Extreme length of mast	158 feet 8 inches
Length from forward side of mast to the forward point of measurement	75 feet
Length of main boom	112 feet
Length of gaff	69 feet
Length of topmast	70 feet
Excess of gull over 80 per cent. of topmast	13 feet
Sail area	14,741 square feet
Square root of sail area	121.39 feet
Racing length	105.65 feet

A glance at one of the sketches giving the dimensions of *Shamrock II.* and *Columbia* shows the former to have a tremendous spread of sail as compared with the American yacht, her water line being 89.9 feet with 21 feet draught as against *Columbia*'s 89½ feet water line.

It seems indeed to have been largely a question of sailing. Capt. BARR, of the *Columbia*, enjoys a reputation, to which people are not slow to attribute *Constitution*'s rejection, and personally we had not heard much of Capt. SYCAMORE till he assumed command of *Shamrock II.*

As every one interested in the subject knows, the race really first began to figure in

yachting history in 1851, when the *America*, a schooner-rigged yacht, carried off at Cowes a cup presented by the Royal Yacht Squadron for open competition. After adorning the winner's side-board for many years, it was eventually given by this patriotic American to the New York Yacht Club as a perpetual challenge for friendly rivalry between foreign countries; and America has managed to retain it, as the following record shows:—

- 1870.—*Magic* (winner), American, Schooner rig, 98 tons, owned by Mr. F. Osgood; *Cambria* (challenger), British schooner, 198, Mr. J. Ashbury.
 1871.—*Columbia* and *Sappho* (winners), American schooners, 220 and 310, Mr. F. Osgood, and Mr. W. P. Douglas; *Leonia* (challenger), British schooner, 280, J. Ashbury.
 1875.—*Madeline* (winner), American schooner, 155, Mr. J. Dickerson; *Countess of Dufferin* (challenger), Canadian schooner, 139, C. Grefford.
 1881.—*Mischief* (winner), American, sloop, 79, Mr. J. R. Busk; *Athalia* (challenger), Canadian sloop, 84, Mr. A. Cuthbert.
 1885.—*Puritan* (winner), American Cutter, 140, Mr. Forbes; *Genesta* (challenger), British cutter, 80, Sir R. Sutton.
 1886.—*Mayflower* (winner), American cutter, 161, General Payne; *Galatea* (challenger), British cutter, 90, Lieut. W. Henn, R.N.
 1887.—*Volunteer* (winner), American cutter, 152, General Payne; *Thistle* (challenger), British cutter, 149, Mr. J. Bell.
 1893.—*Vigilant* (winner), American cutter, 178, Mr. Morgan; *Valkyrie II* (challenger), British cutter, 155, Lord Dunraven.
 1895.—*Defender* (winner), American cutter, 202, Mr. Iselin; *Valkyrie III* (challenger) British cutter, 210, Lord Dunraven.
 1899.—*Columbia* beat *Shamrock I.*
 1901.—*Columbia* beat *Shamrock II.*

THE CHINESE COURT.

A TELEGRAM from Shanghai says that Hsian intelligence reports the Court as on the verge of setting out for Peking, the day of departure from Hsian being that originally fixed, namely, the 6th of October. The same telegram adds that Viceroy CHANG CHIH-TUNG has been absolved from the necessity of going out to meet the Court in transit. This intelligence, it will be observed, does not show that the Court has actually set out, but it does indicate that the intention of setting out has not undergone any of the changes recently recounted by rumour. Every one interested in the peace of the East must hope that the news will prove well founded, for the Court's return to Peking would be a trustworthy indication of sincere intention to carry out all China's newly made engagements and to re-establish friendly relations with the outer world. It is difficult to think that an European Court would take such a step under similar circumstances. With his metropolitan province and his metropolis itself virtually in the hands of foreign forces, a SOVEREIGN might be excused did he decide to take up his residence elsewhere. The Chinese Court will deserve great credit if it returns to Peking, and will show a degree of confidence in foreign good faith very largely in excess of any confidence reposed in the Chinese Government by foreigners.

RACIAL ANTIPATHY.

"A DULL, unconquerable unmitigated distaste of Asiatics for white men" is the ultimate and basic reason assigned by Mr. Townsend for the impossibility of any final fusion between Europe and Asia. Mr. Townsend is the gentleman whose wonderfully erroneous ideas about Japan have often been exposed by the English local press of this settlement. He possesses unfortunately a most attractive manner of expressing himself. The reader follows him through all his pin-points of fact and mountains of inference without perceiving the flagrant discrepancy between data and deduction, Mr. TOWNSEND'S easy, graceful style acting as a species of lubricator which makes the wheels of thought run smoothly over the most rugged paths of psychology. He has worked a great deal of mischief. So far as it is in the power of any one man labouring with nothing mightier than the pen, he has contributed materially to dig deeper and wider that gulf between East and West which he now applies himself to prove unbridgeable. In the columns of the *Spectator*, the *Contemporary Review*, the *National Review* and other periodicals, he has obtained currency for opinions which smack so much of earnest philosophy and are presented in such agreeable guise that probably many tens of thousands of people have learned to regard in his company the Asiatic as a being outside the pale of genuinely civilized potentialities and doomed ultimately either to crush the Occident or to be crushed by it. Now we would ask any of our readers who have passed, say, two decades of their lives in the East, to frankly answer the question, first having calmly reflected on their reply, whether "a dull unconquerable unmitigated distaste of Asiatics for white men" is truly the fundamental cause of the partition between the West and the East. Is it not at least equally true that the "dull unconquerable unmitigated distaste" for brown men is on the side of the white? Our own observation, thirty-five years of it, teaches us that the aloofness, the disdain, the dislike, are mainly on the side of the European. If an European associates with an Oriental it is on sufferance. He believes that he is performing an act of charitable condescension, and that the practice of that virtue averts the degradation which the act itself would otherwise entail. This is not true of the missionary. It is one of the beautiful traits of the missionary's disposition that he has laid aside racial prejudice completely, and that he adopts in spirit as well as in practice the grand doctrine of the Nazarene, "all men are brethren." But it is true of the average layman. There are but two classes of Europeans in this country, for example. The one includes ninety-nine out of every hundred foreign residents; the other, the remaining fraction. In the eyes and life of the former class everything genuinely Japanese is genuinely faulty and disagreeable. If there be a redeeming quality it is so partial and insignificant as to be scarcely worthy of a place in the account. The other

class, the one per cent., consists of men who avowedly regard the country and its people with warm friendship, but who condemn it and them in sweeping terms. They save their own reputation for perspicacity by sacrificing the reality of their good will. Whether all this be justified or not is not the point now. The point is that such sentiments prevail widely and demonstratively, and that their obvious prevalence renders it palpably unjust to assign "a dull, unconquerable, unmitigated distaste of Asiatics for white men" as the chief cause of the division between East and West.

CRICKET.

MR. BUGBIRD'S FIFTEEN VERSUS MR. WHITE'S ELEVEN.

Lord Bacon, in one of his immortal essays, declares that punctuality is the courtesy of great princes. We fain would have the members of the V.C. and A.C. bear this in mind, for we think it would result in their showing a greater courtesy than that now prevailing among them towards the men who labour to arrange their matches. Saturday's game fairly demonstrated what can be lost by unpunctuality, for instead of play beginning at 1.30 as the Captains desired, the teams did not start in to work until 2 o'clock. This wasted half hour was never made-up and in the end the game had to be abandoned for want of light when only 16 runs were required to win. There can be no excuse for this sort of thing.

Saturday was a hot, moist day, the temperature not falling very much even when the sun retired behind a bank of heavy grey clouds, and players felt the inconvenience somewhat. A very fair muster of ladies gathered, the presence of the fine band of H.M.S. *Burford* no doubt being the attraction, while the lower portion of the Pavilion also had a crowd at times.

THE GAME.

Play began at 2 o'clock, Mr. F. H. Bugbird's fifteen going in to bat; P. B. Clarke and F. E. Wilkinson facing the bowling of Lammert and Fradgley, Duff being behind the wicket, in his old position. A leg bye from Lammert, first ball, opened proceedings; and Clarke got him away for a single to leg with the last delivery of the over. With the second ball of Fradgley's initial over P. B. Clarke, with his favourite stroke, sent the leather to the fence for 4. But the next ball saw this batsman caught by Firth at square-leg—6-1-5. Wilkinson now received Com. Hickley as partner and the new-comer began with a single off Fradgley with the first ball sent down to him. Wilkinson punished the last ball of the over for 4, to the fence, and 10 was hoisted. A maiden by Lammert followed; then with the fourth ball of Fradgley's over Wilkinson was prettily held by H. W. Kilby, in the slips, close to the ground—11-2-4. P. R. Scott played out the over. The second ball from Lammert found Hickley, an old Somersetshire county man, of whom something was expected, l.b.w.—11-3-1. Arthur Kingdon took his place and made two pretty cuts, which were smartly fielded and resulted in nothing, ere the over closed. Then Fradgley had a maiden over, after which Kingdon broke his duck with Lammert's second delivery. A single by Kingdon off Fradgley was followed by Scott giving a chance in the slips, which was missed, and 2 resulted. He followed this with another couple next ball, the last of the over. For a while things were very slow, two maiden overs going down on the score-sheet, and one leg-bye. Then Maitland took over the trundling from Fradgley, and Scott making a couple off his second ball, 20 was hoisted. Play had lasted 27 minutes. At the change of over Stuart went on to bowl in place of Lammert and Scott knotted a single off him with the fifth delivery. A 4 by Scott off Maitland was the only feature to record in the next over. Then Kingdon skied the second ball

sent down by Stuart, which Lammert held—25-4-3. Upon Cornabe joining Scott runs came a little more quickly and 30 was hoisted, and soon after 40, Cornabe contributing one 5 to this total. At 45, Edwards relieved Maitland at the trundling, but Scott seemed fairly set, and a maiden over was sent down by the new-comer. Stuart also went off, Edward Kilby taking over the leather from him. His first ball was played by Cornabe for 2, but the rest of the over produced nothing. Scott making 3 off Edwards, 50 was hoisted. A leg-bye from Kilby cost 3 and the same bowler sent down a wide two balls later. The partnership continued to make additions to the score, and at 56, Harry Kilby relieved his brother. Cornabe lifted his fourth ball over the fence for 5, but with the following, Kilby found Scott's middle stump—63-5-28. The retiring bat's score reads—2, 2, 1, 1, 4, 3, 3, 2, 4, 1, 1, 1, 3; he made the best stand of the day.

With the entry of E. C. Smith, two naval men were partnered and a maiden over by Edwards resulted in the sequel of careful play. Then Smith was given a life by Crawford at short leg, only to lose his partner, Cornabe, next ball, caught by Crawford off a similar stroke to the last—64-6-14. Brady filled the vacancy and almost lost the number of his mess at the outset; he was saved by the bungling of the field, the ball being badly returned and unaccountably missed. The score slowly mounted by singles, but at 68, Edwards dismissed Brady with a yorker—68-7-2. The next to bat was Pumfrett. He opened promisingly with a single off Edwards, but his stay proved very short, for putting up Kilby's third ball he was held by Crawford—69-8-1. Libeaud now partnered Smith, and was cleaned bowled by Kilby before breaking his duck—69-9-0. Kilby had taken two wickets in this over for none. Upon Strome joining Smith, the latter made a single off Edwards and 70 went up on the telegraph. With the last ball of the over Smith stole a run, and a little later he was badly missed by Stuart in the long field. After this Fradgley relieved Edwards and sent down a leg-bye with his first delivery; Strome broke his duck with a single off this bowler ere the over closed. A maiden by Kilby followed. At a quarter to 4 o'clock 80 went up on the board, Smith having made most of the last ten runs. Then Lammert went on to bowl again at the Pavilion end, relieving H. W. Kilby, and Firth took over the leather from Fradgley. The change soon proved productive, for Strome was held at mid-on by Fradgley off Firth's fifth ball—88-10-2. The next man in, Philip, walked out only to return first ball, cleaned bowled by Firth—88-11-0. The twelfth to bat was Bugbird and he lost Smith directly upon joining him, the visitor being caught in the slips very neatly by Fradgley, off Lammert—88-12-10. Lieut. Kennedy was the last man to go in, and he had the melancholy luck of seeing Bugbird at once dismissed by Lammert—88-13-0. Score—

Mr. White's eleven began to bat at five minutes

past four o'clock, A. R. Firth and S. Wheeler facing the bowling of P. B. Clarke and Kennedy, with Cornabe wicket-keeping. The first over was a maiden, and then with the fourth ball of Kennedy's, Firth got him away for 4. S. Wheeler began his score with 3 off Clarke. At 8, Kennedy found Firth's wicket, the ball glancing off the batsman's pads—8-1-4. E. W. Kilby now partnered Wheeler, and he began with a 3 off Kennedy, only to lose Wheeler next over with a full pitch from Clarke—12-2-3. The new-comer was Stuart. With the second ball from Kennedy, Kilby made 3 to the fence, but nothing further resulted in the over. Then Kilby made a single off Clarke, and Stuart followed suit two deliveries later, followed by another single by Kilby with the last ball of the over. At 18 Kilby was held by Libeaud in the slips, off Kennedy—18-3-9. Edwards went to bat but lost Stuart at once, clean bowled by Kennedy—18-4-1. Then Crawford partnered Edwards and the latter opened with a 4 off Kennedy's fifth delivery; and Crawford at last got his opportunity and made a single off him. After this Kingdon took the leather from Clarke and sent down a leg-bye first ball. Edwards made a single off Kennedy next over. Crawford making a couple off Kennedy, and following it with a single, 30 went up. A leg-bye sent down by Kingdon cost a couple; then in the following over Edwards made 3 off Kennedy, and this was followed by a boundary by Crawford for 4. Edwards next got a single off a full pitch by Kingdon and 40 went up. At 43, Bugbird went on to bowl in place of Kennedy and Edwards got him away for 2 first ball. The third delivery saw Edwards dismissed, being caught by Kennedy at long slips—45-5-14. Duff filled the vacancy and opened with a single to leg off Bugbird. Then Clarke went on to bowl again and Duff sent his last ball away to the fence for 3. A chance given by Crawford to Libeaud, off Clarke, was missed at a cost of 2 and 50 was signalled. It was now 5 o'clock, and the light rapidly growing bad. After a single by Duff, a bye for 2 was followed by another for 2, both being sent down by Bugbird. A single by Duff off Clarke preceded a 3 by Crawford, and this was followed by a single by Duff off the last ball of the over. Bugbird had a single made off him by Duff next over. Then Brady went on to bowl and Duff made 3 off his first ball. At the Pavilion end Pumfrett took over the trundling from Bugbird and sent down a maiden. At 5.15, 70 was hoisted, Crawford punishing Brady for 4. At 7.3 the game was abandoned, five wickets having fallen, two men carrying out their bats, and four still having to go in. Score—

V.C. AND A.C. VERSUS THE FLEET.

This match, played in glorious weather on Thursday afternoon, was somewhat of a disappointment, the Naval visitors not being in a position to put in a very strong team. Still the game afforded some much needed practise for the Inter-port team and for that reason is not to be despised.

THE GAME.

Play began fairly punctually, W. E. Cornabe and E. C. Smith going out for the Navy, opposed to the bowling of F. E. White and F. Lammert. Cornabe opened proceedings by snicking White's sixth ball for one. In the next over, Smith made a single off Lammert, and another with the last ball of the over. With the first delivery from White in the fifth over Smith was dismissed—4-1-4. G. L. Browne took his place and soon lost his partner, Cornabe, who was bowled by White with the score standing at 5. McKinlay, who filled the vacancy, stayed a very short time,

White sending down a ball which beat him and disturbed the bats—5-3-0. The incoming bat made a single off White and then was bowled by Lammert—6-4-1. Soon after Lynes joined Browne, the latter was given a life by Fradgley, who was playing in the slips, and three balls later the new comer made a couple off White. With the last ball from Lammert, Browne got the leather away for a couple, and 10 was hoisted. Browne retired at 14, being caught by Fradgley off White—14-5-3. Haycock now partnered Lynes, and White sent down a leg-bye with the last ball of the over. Fradgley at this point took over the trundling from Lammert and with his first ball dismissed Haycock—15-6-0. The visitors continued to treat the bowling very gingerly and runs came slowly, even with the help of a bye or two. At 16 Lynes was dismissed by Fradgley, the ball breaking in from the off—16-7-5. It was now five minutes to 2 o'clock, and the play so far must be described as tame. Rawlings, who joined Coleridge, began his score with a single off Fradgley's last delivery, and made another single, off White, in the following over, but with the second ball of Fradgley's third over, this batsman retired—18-8-2. The vacant place was taken by Allen, who had but a short life, being bowled by Fradgley with the third ball of the over—18-9-0. The tenth man to go in was Longhurst, at 5 minutes past 2 o'clock. White now went off, being relieved of the leather by Maitland. Coleridge got him away for three with the third ball of the over, and in the next over the same bat made the first boundary hit of the match off Fradgley. The next ball saw him sent back to the Pavilion by this bowler—25-10-7. The last man in was Tatham, and he saw Longhurst caught by White at point, off Maitland, before a chance presented of breaking his duck—27-11-0. Score:—

The home side went out at half past two, E. W. Maitland and P. B. Clarke facing the bowling of McKinlay and Rawlings, Cornabe being behind the wicket. Clarke got McKinlay away, in the first over, fourth ball, for a single, and he punished Rawlings for 3 next over, following this with a single. Maitland opened with a couple off McKinlay. Rawlings was hit by Clarke for a couple, and 10 was reached a moment later, Clarke making the stroke. Clarke continued to score freely and eventually punished Rawlings for 4. In Rawlings' next over he sent down a wide, which cost 2; then Maitland cut McKinlay for a couple. At 19, Coleridge relieved Rawlings and Clarke put him away for a couple, second ball. Twenty went up at ten minutes to three. The partnership continued to produce runs and at five minutes to 3, Maitland, making a three, brought the total to 28, thus beating the visitors' score. Coleridge eventually secured a separation; Maitland, putting up the first ball of his third over, was held by Lynes at point—34-1-7. E. W. Kilby went in to bat and began with a single off Coleridge, Clarke followed suit two deliveries later. A boundary by Clarke for 4, off McKinlay, was the next event of interest, and 40 went up. Runs came fast from Clarke, who was once badly missed by the field, until at 55, Kilby was caught by Browne in the long field off Haycock—55-2-7. Crawford partnered Clarke, who had been hitting out freely, but his career was draw-

ing to a close, for trying to take a delivery from Haycock he pulled the ball on to his own wicket—55-3-37. Crawford began with a single off Haycock, upon White joining him; then White made a couple, followed by another single by Crawford, off the same bowler. A maiden by Rawlings next went down on the score sheet, after which White made a four off Haycock and 60 was telegraphed.

At twenty minutes to 4, 70 went up, and Allen went on to bowl, relieving Haycock. He sent down a maiden to start with, after which E. C. Smith took over the trundling at the other end. A leg bye was sent down first ball; White made a single off the second, and the last ball of the over was cut by Crawford for one. Mostly by singles the score mounted till 80 was reached at 7 minutes to 4. A boundary by Crawford for 4 was followed next ball by the dismissal of White, caught by Browne at cover-point off Smith—90-4-19. Edwards partnered Crawford and began with a single off Smith. Nothing more was made that over. Edwards got Allen's fifth delivery away for 4, next over, and two balls later gave a hot chance in the slips which was declined. Two more lives were given to Edwards in the next over, and then he punished Allen to the corner fence for 4, allowing the century to be hoisted. At 103 Crawford was cleverly caught by Rawlings, off Smith's fifth delivery—103-5-15. The incoming bat was Lammert. He played the last ball of the over, and then McKinlay went on again at trundling in place of Allen. Edwards made three off his third ball. At the change of over, Edwards made a single off Smith, then Lammert opened his score with a boundary hit for 4, and Edwards punished the next delivery for 2, following this with a single next ball—a costly over. Another change in bowlers was now resorted to, Coleridge relieving Smith. But runs still continued to be made by Edwards, and 120 appeared on the board. At 124 Lammert was clean bowled by McKinlay—124-6-5. Fradgley partnered Edwards, and at the change of over Longhurst took over the bowling at the Settlement end. Edwards snicked his first delivery for 3, and Fradgley made 2 off the next ball. This was followed by a couple by Edwards, and then by a 4—another expensive over. To vary things a bit, McKinlay sent down a maiden. A couple by Fradgley, a single by Edwards, and another single by Fradgley were made off Longhurst next over. With the first ball of McKinlay's over, Edwards made a 4 to the off. This batsman continued to score, and Allen went on to bowl bats again. Edwards made a single off the second and Fradgley one off the third. Nothing more was made that over. McKinlay was punished by Edwards for 3, first ball, and 150 went up. Cornabe, going on to bowl at the Pavilion end, was sent to the fence for 3 by Edwards and soon 160 was reached. The shadow of the Pavilion was now stretching far across the pitch, but the light remained fairly good, and Edwards and Fradgley continued to pile up the runs, though several changes of bowlers were made. With the score at 190, Fradgley was dismissed by Haycock, first ball of the over—190-7-25. Kingdon now joined Edwards—who had compiled 59 by judicious hitting—and began with a single, off Browne, which Edwards followed up with a 4. Then Kingdon was bowled by Haycock—197-8-1. The light was failing fast when Moss joined Edwards. He began with a couple and then made a hit for a single which brought the score up to an even 200. At a quarter past 5 Edwards was held by Harper off Haycock—213-9-74. The new comer was Brady. He saw Moss depart—214-10-6 but making a boundary himself the game concluded for 218.

The cricket eleven selected to meet Kobe next week is composed of Messrs. H. W. Kilby, E. W. Kilby, K. F. Crawford, C. M. Duff, F. E. White, E. B. S. Edwards, E. C. Fradgley, F. Lammert, E. W. Maitland, P. B. Clark and F. E. Wilkinson.

The following have been selected for the Kobe Team:—Messrs. F. J. Abbott, A. J. Buckley, W. Braess, W. D. S. Edwards, A. H. Gillingham, H. Hancock, C. H. Lightfoot, G. C. Murray, C. E. Stephens, H. S. Thompson, J. P. Warren. The 12th man is Mr. P. L. Spence.

YACHTING.

Two races were set down on the programme of the Yokohama Yacht Club, one for 21-raters and the other for 12-raters.

The 21-raters started at p. m. and after a rather unexciting race finished as follows:—

	Finish.	Time.	Cor'cted Time.
	h.m.s.	m.s.	h.m.s.
Edna.....	4:10.35	—	4:10.35
Vixen.....	4:05.30	4:58	4:00.32
Viggo.....	4:29.15	3:12	4:26.03
Saleska.....	4:35.05	4:58	4:30.07
Abnail.....	4:29.05	4:58	4:24.07

Vixen therefore won the first prize with two record points, Edna was second with one point.

Three twelve raters started and the result was that *Titania* came in first and gained two record points, *Folly* being second with one record point, *Madeline* which got home first being disqualified for fouling a mark.

A private race took place on Saturday afternoon starting at 2.15.00 in which the ordinary cruiser class participated with the addition of *Molly* and *Undine*, the latter of which, we observe, is now being raffled off. They started pretty well together with a good strong southerly breeze and *Undine* on the reach out to the Lightship seemed to be doing very well, having passed all but *Scamhill*. Soon after she got round the Lightship, however, and hauled on a wind she had trouble with her mainsail and finally had to return. *Dainyo* and *Scamhill* made a close match of it in the windward work to the Widow Buoy, which was rounded by *Dainyo* first as the result of a judicious piece of tacking in shore. *Scamhill* overhauled her on the trip back with sheets checked, and they rounded the Lightship together. Reaching in to the harbour entrance *Scamhill* forged away and at the harbour entrance she was 45 seconds ahead. But in the tacking *Dainyo* held on to the leader except at the very close when, 100 yards from the starting line, they crossed tacks. *Scamhill* on the starboard tack had two courses open to her: she could stand on, crossing the line at a very prolonged angle or she could tack. But both courses meant slow business, while *Dainyo*, even after bearing away to comply with the rules, was going faster over a shorter course for the line. *Scamhill* elected to tack and before she had gathered way after staying *Dainyo* was crossing the line, having made a half board for the purpose.

The times were:—

	Finish.	Handicap.	Corrected.
	h.m.s.	m.s.	h.m.s.
Scamhill.....	4:25.45	—	4:25.45
Dainyo.....	4:25.40	—	4:25.40
Undine.....	—	—	—
Angao.....	4:35.20	10	4:25.00
Molly.....	4:45.20	15	4:30.20
Mosquito.....	4:41.40	18	4:23.40
Surprise.....	4:53.30	23	4:30.30

Six more of the cattle in quarantine on the *Papenburg*, outside Nagasaki harbour, were discovered suffering from disease on Thursday morning, says the *Press*, and were consequently destroyed by the authorities the same afternoon. A total of 32 cases have occurred since the animals were landed on the island from the *Samoa*. The cattle now in quarantine number 93.

AMERICAN TOPICS.

Mr. T. P. Mowbray, of the New York *Evening Post*, offers the following explanation of lynching:—

I was in a scattered community in Georgia when a lynching was proposed. I happened to be at an out-of-the-way shanty boarding-house in a district where I was prospecting some pine lands, and I had the opportunity to see how the lynching proposition worked. Well, gentlemen, it worked a good deal like an approaching circus with a brass band, spotted horses, and a fairy rope-walker. The men didn't ask what the Nigger had done—they wanted to know where the show was, and they wanted front seats. They dropped their tools and gave up their jobs and got together in knots. It promised just the kind of excitement that their dull, imbruted natures could thrill at. It's a fact gentlemen. Even the Niggers and the women felt the thrill of it. Why, two years before, when I was in Texas, and a lynching was in progress, proof came from some of the officials that a mistake had been made in the man, but rather than disappoint the crowd they burnt the wrong Nigger first, and then started in to catch the right one. Now, I don't think that the kind of animals I saw ever wasted as much time in defending the honour of their families as would an ordinary alligator. And they enjoyed the fun. Yes, sir, I don't discount the words. They enjoyed it, and they let the children see it.

One of the latest instances of newspaper enterprise is that of the New York *Herald*, which publishes shipping news obtained by wireless telegraphy. It is now beginning to be discussed whether the system can not be used so as to establish a continuous patrol of the Atlantic all the way from New York to Liverpool. There is hope that it can, in which case no ship in distress will call for help in vain nor will any be lost without a report of any kind coming to hand. "In a few years every vessel going to sea will be properly equipped, and when in trouble instead of waiting for some vessel to heave in sight will simply scour the ocean by telegram for a hundred miles in search of aid. Also it is promised that in time it will be impossible for collisions to take place by reason of automatic signals which will announce the approach of any vessel, and communications can be established."

The prosperity of the new South is indicated in the fact that the State of Mississippi has a surplus of \$1,000,000 in its treasury this year.

The Agricultural College of Connecticut has evidently run to seed, remarks a local journal, for, with a faculty drawing \$25,000 a year from the State, there is no entering class in sight. The college opened in September without a freshman class.

There is, perhaps, no part of the United States which has been so little explored as the Great Dismal Swamp, unless it be the everglades of Florida. This great body of land, covered with forests growing in six to ten feet of water, extends over an area of about 2,400 square miles, its greatest width being forty miles and its greatest length 60 miles.

The *Boston Globe*, in reviewing the early organization of labor unions in Massachusetts, notes that in 1849, during the first strike on record at Lowell, the women were as vigorous as the men, and states that a girl only 11 years old was characterized as the "ringleader." That case might be truly classified as a part of the infancy of strikes.

Records of executions occupy some space in Manila papers. The first white man to suffer hanging in the Philippines is to be an American ex-soldier, who will suffer the extreme penalty of the law on the 27th inst. the respite asked for by his lawyer having been refused. An American negro soldier, who indiscriminately opened fire on several Filipino boys, killing one and wounding three, was hung on the 20th ult., at Fort Malate, Manila.

The statistics of imports and exports to and

from the Philippines show an enormous increase of trade since the American occupation. The average value of imports for 10 years prior to 1895 was \$22,237,507 and of exports \$28,722,592. Since the American occupation, the average statistics are—Imports, \$48,258,419; Exports, \$45,987,793. Of course, this increase of trade has sent up the shipping tonnage statistics enormously. If the Filipinos would only accept this lesson and settle down to work, their general prosperity would soon produce contentment.

The Philippines Constabulary are to be armed with .45 Remington double-barreled shot-guns. These guns are said to be more effective for the purposes required than rifles.

It is said that the late President McKinley carried from \$100,000 to \$200,000 of insurance on his life. One big new New York company is said to have a single policy for \$50,000. Mrs. McKinley is understood to be the beneficiary named in all the policies.

Galveston has recovered from the disaster which the hurricane of a year ago produced, and, strange to say, all the vessels which were stranded on that occasion have been saved and are again engaged in traffic.

A sea-going suction dredge has been specially constructed at Richmond, Va., for use in the southwest pass of the Mississippi river. The craft is able to steam at the rate of ten knots an hour. If it can be operated in rough water, which no dredger yet invented has been able to do, it may solve the problem of reaching the gold-bearing sands underlying the ocean off Cape Nome.

The new Gathman gun, on which the U.S. Government has spent a mint of money, will soon be tested at Sandy Hook on a target representing a turret section of the battle-ship *Iowa*, made of Krupp process armour plate 11½ inches thick, backed by five inches of wood. The gun is supposed to have a range of about twenty miles. It is of 18-inch calibre, 44 feet long, and weighs 59 tons.

It is estimated that no less than 650,000 words were sent out of Buffalo by the telegraph companies on the day of the assassination of President McKinley. As set and displayed by the newspapers that received them these 650,000 words filled nearly 500 columns. If one newspaper had received all the specials sent out it would have had about eighty solid pages of matter concerning the President, exclusive of illustrations and headlines.

The old-time alarmist theory that the opening of the Chicago drainage canal would lower Lake Michigan has been completely exploded this year, for the lake is said to be higher at the present than it has been for many years, notwithstanding the volume taken by the canal. It is now proposed to open a canal 250 feet wide from the lake to the north branch of the Chicago river to scour and purify that stream. If it is carried out it will extend the drainage system of the city thirty miles to the north, increase the frontage available for shipping and add to the security of the city's water supply against pollution.

President Roosevelt has informed Mrs. McKinley through Secretary Cortelyou that in pursuance of the intention of the late President McKinley and in recognition of devoted services, as well as because of eminent fitness, Medical Inspector P. M. Rixey will be appointed Surgeon-General of the Navy upon the expiration of the term of Surgeon-General Van Reyepen. The naval lists show that Surgeon-General Van Reyepen will not retire in the ordinary course until November 14, 1902. Dr. Rixey stands No. 28 on the list of naval surgeons. Though Surgeon-General Van Reyepen's retirement from active service does not occur for more than a year, his commission as Surgeon-General, which was for a period of four years, will expire December 18th, and Dr. Rixey's appointment may be expected then.

According to the Seattle *Post-Intelligencer* the

outlook for Nome and neighbouring districts has distinctly improved since the first reports of the season were received. The production of gold from the Seward peninsula for this season is now conservatively estimated at \$8,000,000. It will be considerably greater if the season continues long enough to compensate for the delay caused by the backward spring. The report of the discovery of coal in the vicinity of Nome, apparently well authenticated, will simplify the problem of winter work, and by another season the peninsula should become one of the greatest gold-producing districts of the world. Withal, the future of Alaska, from a mining point of view, never appeared so bright. Sensationalism, stampeding and wild speculation have given place to consistent prospecting and rational development. The vast area of the territory has been scarcely scratched by the miner's pick, and the possibilities are limitless.

A writer in *Everybody's Magazine* reasons that the family of the average American lives on a scale and a daily diet which would be regarded in Europe as lavish, such a one as can be afforded there only by the rich. His table is spread with abundance, not only with articles of domestic production, but of imported foodstuffs. For example, his family consumes annually 1,250 pounds of wheat flour, and 600 pounds of oat and corn meal, 750 pounds of meat, or about two pounds per day; 750 pounds of potatoes, 100 pounds of butter and 300 pounds of sugar. He is the greatest coffee drinker on earth, one pound a week being required for his family's consumption. Of tea, however, he uses little, five pounds per year sufficing for his needs. His table costs him \$16 per month. He eats three meals per day, taking his dinner at noon. He retires between nine and ten at night, and rises at six in the morning.

Some idea of the extent to which the pardoning power is exercised by the President may be gathered from the report of the pardon attorney of the Department of Justice for the fiscal year ended June 30th last. It appears that during the year 762 applications for executive clemency were filed, 45 cases were pending at the close of the preceding fiscal year and 34 cases were reopened from other years. There was thus a total of 841 cases brought before the office. Of these 448 were not considered by the President, having been reported on adversely by district attorneys, judges and the pardon attorney himself. The cases acted upon by the President numbered 343, of which 117 were denied, while pardons were granted in 107 cases. The other instances comprised cases of conditional pardons, restorations of civil rights, commutations and remittances. Nearly a third of the pardons were granted solely on the ground of ill health. In the cases of restoration of civil rights, a considerable period had elapsed after the applicants had been discharged from prison or had otherwise complied with the sentences of the courts. Taking everything into consideration, the instances in which the pardoning power is exercised are not particularly numerous, and the intervention of the chief magistrate is carefully hedged about so that the likelihood of his acting on insufficient information is minimized.

Bishop Henry B. Whipple died at 6 o'clock on the morning of Sept. 16th, at his home in Faribault, Minn. He had a severe attack of angina pectoris about a week ago, but seemed to recover after the first days' illness. Bishop Whipple was one of the most picturesque figures in the Episcopal church. He was known as the "apostle" to the Indians, and called by the Indians "Straight Tongue" because he never lied to them. He was born in Adams N. Y., in 1823; educated in the public schools and ordained deacon in 1849. After having occupied several pastorates he received the degree of D.D. and that of LL.D. from the universities of Cambridge, Oxford and Durham. He inaugurated the free church system in Chicago, was the founder of St. Mary's Hall at Faribault, Minn., Shattuck Military School and Seabury Divinity School, and he laid the corner stone of the cathedral at Faribault in 1862, the first Protestant cathedral in the United States. But
